Get More from Your Building Upgrade Project

Bundle Up Your Upgrades and Earn Additional Incentives

Make the most of your heat pump investment by starting with weatherization through our **Bundle Up Bonus Program**. Insulation, air sealing, and other weatherization improvements can reduce heating and cooling demands, improve comfort, and help prepare your building for a properly sized heat pump system.

When completed together, weatherization and heat pump upgrades can enhance overall building performance, lower energy use, and help you qualify for additional incentives, maximizing the value of your investment.

Get More Value From Every Upgrade

- **Heat pump + 1 or 2 weatherization measures:**
  Receive a **10% bonus** incentive on both your heat pump and weatherization projects.
- **Heat pump + 3 or 4 weatherization measures:**
  Receive a **20% bonus** incentive on both your heat pump and weatherization projects.

Ready to Get started?

Contact your National Grid energy efficiency representative to learn more and determine eligibility:

Central NY: Therese.Blum@nationalgrid.com
Western NY: David.Jager@nationalgrid.com
Eastern NY: Megan.Davis@nationalgrid.com
National Accounts: Christopher.Castello@nationalgrid.com

To qualify, the project must meet the equipment requirements of the Commercial Electrification and Weatherization Programs. The incentive is issued only after satisfactory post-installation inspections have been completed for both the heat pump and weatherization work.

Program Rules apply. Customer must be a National Grid customer who pays the System Benefits Charge (SBC).

Discover More Ways to Save

We offer incentives for a wide range of energy-efficient upgrades, including building controls, HVAC improvements, refrigeration equipment, compressed air systems, and other high-efficiency technologies. Programs are available for commercial, industrial, and agricultural customers.
