Network Modelling Software Review January 2009 by Pöry Energy Consulting

Dear Mr. Boyle,

Pöry Energy Consulting concluded in their report to National Grid that SIMONE was fit for the purposes of network modeling and that it would satisfy the license obligation.

Among the findings of the consultants was an erroneous configuration of compressor temperature calculations in SIMONE that was considered a minor issue due to the extreme test scenario and the small practical implications.

We are happy to inform National Grid that this observed problem has been corrected with SIMONE V5.7 servicepack 1. Now the correct suction gas temperature is used in all cases. The corrected software has been implemented at National Grid in February 2009, and is in use since that time.

Yours sincerely

LIWACOM Informationstechnik GmbH
