ATTENDEES.

Members	Wales and the West National Grid Scotia/Southern Northern	Network Integrity Engineer Standards Engineer Network Integrity Engineer Network Integrity Engineer	Wayne Jones John Reader Dominic Cummings John Arnold
---------	--	--	---

Documents modified and approved for publication

GIS/V7 part 1

Minor improvements to align with current manufacturing practice

F13

To include table to specify external dia range of metallic pipe population

Documents change proposals approved

V4 Service isolation valves

To increase the maximum operating pressure of service isolation valves from 2bar up to 7bar.

SER/6 Live service transfer

Lack of clarity in relation to safe working loads of support props

Documents currently under review

PL2-2 and PL2-8

Batch testing under review, discussions ongoing with Suppliers

E34 <7bar

The GIS document requirements should align with the Control of Noise at Work Regulations 2005.

TE/D1.2 – Plug casting

An issue has been raised about the plug casting not being able to be gripped by the plug insertion tool and it was agreed that the GIS wording needs tidying up.
