

**STANDARD CHARGES FOR FINAL
CONNECTION OF UIP/IGT
INFRASTRUCTURE TO NATIONAL GRID'S
GAS DISTRIBUTION NETWORK**

**NORTH WEST
WEST MIDLANDS
EAST OF ENGLAND
LONDON
DISTRIBUTION NETWORKS**

**STANDARD CHARGES EFFECTIVE FROM
1 NOVEMBER 2006**

1. INTRODUCTION

This document sets out the various standard charges used by National Grid when completing the final connection of Utility Infrastructure Provider (UIP) pipework or the final connection of an Independent Gas Transporters (iGT) network to our gas distribution network.

National Grid Gas plc is the GT Licence holder for Gas Distribution in the four Distribution Networks shown below.

The geographical layout of our four networks is illustrated here.

Where charges vary by network, the relevant Distribution Network is identified by means of the customer's Post Code.

2. STANDARD CHARGES

The standard charges set out in this document include overheads, but are stated before VAT is applied. VAT will be applied to charges at the appropriate rate.

The standard charges do not include any costs for National Grid Gas apparatus that may require protection, abandonment or diversionary works and the application of each type of standard charge set out in this document is subject to;

- i. the UIP/iGT carrying out all excavation and backfill and laying their infrastructure back to the National Grid parent main at the agreed point of connection
- ii. the payment of any applicable adoption of asset charge (non GIRS only) as set out in the Gas Distribution Connection Services Charges document
- iii. the payment of any applicable reinforcement or enhancement costs

The charges will be reviewed periodically and any subsequent changes will be subject to 2 month's notice consistent with the treatment of other standard connection charges.

Further information on our gas distribution services is available on the National Grid web site <http://www.nationalgrid.com/> . Any enquiries or comments regarding this document should be forwarded to our gas distribution Pricing Team:
