Work will secure local gas supplies for decades to come
Road closure needed in Risley Lane

National Grid will be carrying out a vital gas mains upgrade in Risley Lane, Derby, in August and September.

The work starts on Monday 17 August and will help secure safe and reliable gas supplies to local residents and businesses for many years to come. The project is scheduled to take four weeks to complete.

Engineers will be renewing the iron gas mains in Risley Lane between number 10 to the Garden Centre. The existing iron mains will be replaced with tough, hardwearing plastic pipes that will last at least 80 years.

To carry out the work safely for all concerned Risley Lane will be temporarily closed from outside number 10 to the Garden Centre. A signed diversion route will be in place.

The Garden Centre will be open for business as usual.

National Grid Authorising Engineer Paul Patrick said: “We are sorry for any inconvenience this work may cause but it is vital that we replace ageing gas mains so that local residents and businesses can continue to enjoy safe and reliable gas supplies for many years to come.

“The project has been timed so that the bulk of the work coincides with the school summer holidays to reduce the impact on traffic.”

If anyone has any queries or concerns they can contact National Grid customer services on 0800 096 5678.
Notes to Editors:
National Grid is pivotal to the energy systems in the UK and the north eastern United States. We aim to serve customers well and efficiently, supporting the communities in which we operate and making possible the energy systems of the future.

National Grid in the UK:
- We own and operate the electricity transmission network in England and Wales, with day-to-day responsibility for balancing supply and demand. We also operate, but do not own, the Scottish networks. Our networks comprise approximately 7,200 kilometres (4,474 miles) of overhead line, 1,500 kilometres (932 miles) of underground cable and 342 substations.
- We own and operate the gas National Transmission System in Great Britain, with day-to-day responsibility for balancing supply and demand. Our network comprises approximately 7,660 kilometres (4,760 miles) of high-pressure pipe and 618 above-ground installations.
- As Great Britain’s System Operator (SO) we make sure gas and electricity is transported safely and efficiently from where it is produced to where it is consumed. From April 2019, Electricity System Operator (ESO) is a new standalone business within National Grid, legally separate from all other parts of the National Grid Group. This will provide the right environment to deliver a balanced and impartial ESO that can realise real benefits for consumers as we transition to a more decentralised, decarbonised electricity system.
- Other UK activities mainly relate to businesses operating in competitive markets outside of our core regulated businesses; including interconnectors, gas metering activities and a liquefied natural gas (LNG) importation terminal – all of which are now part of National Grid Ventures. National Grid Property is responsible for the management, clean-up and disposal of surplus sites in the UK. Most of these are former gas works.
