Half year results for the period ended 30 September 2019

Report for the period ended
30 September 2019

Highlights
- Announcing today a new target to achieve net zero for own emissions by 2050
- Regulatory progress in US and UK
  - Multi-year agreement for Massachusetts Electric
  - Draft ROE-2 business plans submitted
  - Welcomed Ofgem’s “mindset-to” position on Hinkley-Seabank to move away from Competition Proxy Model
- Cost efficiency programme on track: £50m in the UK and $30m in the US in 2019/20
- Construction of three interconnectors on target
- Completed US Geomimo acquisition
- Received £2bn proceeds for sale of final Cadent stake

Financial performance
- Underlying operating profit up 1% to £1.3bn due to increase in US Regulated profits (statutory operating profit down 1% to £1.3bn reflecting adverse timing)
- Underlying EPS up 2% to 20.3p due to a US tax settlement relating to prior periods
- Statutory EPS of 11.3p, down 11% reflecting adverse mark-to-market remeasurements
- Capital investment £2.7bn up 28% driven by increase in US capital spend and £0.2bn Geomimo acquisition
- Interim dividend 16.57p/share, in line with policy

John Pettigrew
Chief Executive

"In the first half of this year, we have delivered solid financial performance and continued to deliver strong organic growth at the top end of the 5%-7% range. We also made good progress on our strategic priorities, including agreeing a major – over long-term rate case in Massachusetts Electric, submitting our draft business plans for RIIO-2 in the UK and completing our acquisition of Germani. In the second half, we are progressing our priorities across the Group including addressing the gas supply constraint in downstream fuels.

Today's announcement that we are increasing the Group's new emissions reduction target from 50% to near zero by 2030 underlines our commitment to lead the industry towards a cleaner energy future. This objective will be supported by action in other areas, such as offering further energy efficiency programmes for our US customers, proposals for renewable natural gas and hydrogen blending programmes.

¹ Including reclassification to higher deferred export prices, revenue, and amortisation of intangible asset costs. Further details are included in the notes to the financial statements.

If you can view the latest Annual Report and Accounts (AP) and Performance Summary from National Grid reviews at [annualreport@nationalgrid.com](mailto:annualreport@nationalgrid.com).
National Grid is pivotal to the energy systems in the UK and the north eastern United States. We aim to serve customers well and efficiently, supporting the communities in which we operate and making possible the energy systems of the future.

**National Grid in the UK:**
- We own and operate the electricity transmission network in England and Wales, with day-to-day responsibility for balancing supply and demand. We also operate, but do not own, the Scottish networks. Our networks comprise approximately 7,200 kilometres (4,474 miles) of overhead line, 1,500 kilometres (932 miles) of underground cable and 342 substations.
- We own and operate the gas National Transmission System in Great Britain, with day-to-day responsibility for balancing supply and demand. Our network comprises approximately 7,660 kilometres (4,760 miles) of high-pressure pipe and 618 above-ground installations.
- As Great Britain’s System Operator (SO) we make sure gas and electricity is transported safely and efficiently from where it is produced to where it is consumed. From April 2019, Electricity System Operator (ESO) is a new standalone business within National Grid, legally separate from all other parts of the National Grid Group. This will provide the right environment to deliver a balanced and impartial ESO that can realise real benefits for consumers as we transition to a more decentralised, decarbonised electricity system.
- Other UK activities mainly relate to businesses operating in competitive markets outside of our core regulated businesses; including interconnectors, gas metering activities and a liquefied natural gas (LNG) importation terminal – all of which are now part of National Grid Ventures. National Grid Property is responsible for the management, clean-up and disposal of surplus sites in the UK. Most of these are former gas works.

Find out more about the energy challenge and how National Grid is helping find solutions to some of the challenges we face at [https://www.nationalgrid.com/group/news](https://www.nationalgrid.com/group/news). National Grid undertakes no obligation to update any of the information contained in this release, which speaks only as at the date of this release, unless required by law or regulation.
