Liverpool school boy helps National Grid spread the safety message

Liverpool school boy wins competition to design a poster to promote site safety.

16 May 2018

A Liverpool primary school student got his reward for helping National Grid spread their message about site safety.

Connor Prendergast, age 9, of St. Hugh’s Catholic Primary School, won a competition run by National Grid to design a poster to promote site safety during its works to dismantle four unused gasholders on its site off Spofforth Road in Wavertree. His prize was to see his poster installed on the site gates along with a framed version for him to keep.

Chris Taylor, Land Regeneration Manager at National Grid, said: “The team was really impressed with Connor’s design as it got across the main message of staying off our site to make sure you stay safe. It was a lovely, clear simple design – just the job.”

The competition was launched at a safety assembly held at the school by National Grid to explain their works and to highlight to local children the importance of staying off the site during the project.

Work on the Wavertree site is being undertaken on behalf of National Grid by The Coleman Group and is expected to be complete later this year, with no plans at this stage for how the land will be used in the future. Any future development would be subject to planning. Local residents with questions about the work can contact National Grid on 0800 8199 071.
Notes to Editors:
National Grid is pivotal to the energy systems in the UK and the north eastern United States. We aim to serve customers well and efficiently, supporting the communities in which we operate and making possible the energy systems of the future.

National Grid in the UK:
- We own and operate the electricity transmission network in England and Wales, with day-to-day responsibility for balancing supply and demand. We also operate, but do not own, the Scottish networks. Our networks comprise approximately 7,200 kilometres (4,474 miles) of overhead line, 1,500 kilometres (932 miles) of underground cable and 342 substations.
- We own and operate the gas National Transmission System in Great Britain, with day-to-day responsibility for balancing supply and demand. Our network comprises approximately 7,660 kilometres (4,760 miles) of high-pressure pipe and 618 above-ground installations.
- As Great Britain’s System Operator (SO) we make sure gas and electricity is transported safely and efficiently from where it is produced to where it is consumed. From April 2019, Electricity System Operator (ESO) is a new standalone business within National Grid, legally separate from all other parts of the National Grid Group. This will provide the right environment to deliver a balanced and impartial ESO that can realise real benefits for consumers as we transition to a more decentralised, decarbonised electricity system.
- Other UK activities mainly relate to businesses operating in competitive markets outside of our core regulated businesses; including interconnectors, gas metering activities and a liquefied natural gas (LNG) importation terminal – all of which are now part of National Grid Ventures. National Grid Property is responsible for the management, clean-up and disposal of surplus sites in the UK. Most of these are former gas works.
