- Employees set to raise £40,000 for Macmillan Cancer Support
- 12 hours to scale Pen-y-Ghent, Whernside and Ingleborough

An intrepid National Grid Hinckley duo are gearing up for the daunting Yorkshire Three Peaks Challenge, this weekend, to help raise over £40,000 for charity.

Jodie Carnall and Stephanie van Rosse will be joining 40 National Grid colleagues from across the country as they scale the peaks of Pen-y-ghent, Whernside and Ingleborough on Saturday (22nd August), in aid of Macmillan Cancer Support.

The gruelling challenge, which covers a distance of 24 miles, is equal to scaling Ben Nevis nearly twice in just 12 hours.

The duo have already raised more than £1,300. They hope their efforts and those of their colleagues will help generate over £40,000 for people living with cancer and their families.

Jodie, of Barwell, said: "I enjoy fitness and walking and cancer charities are close to my heart. I couldn't think of a better way to spend the weekend than raising money for charity and it could be fun!"

People can donate to Jodie's fundraising efforts through Just Giving at: www.justgiving.com/jl-carnall

National Grid Head of Cable Tunnels David Luetchford will be leading the team. He said: "I'm proud that so many of our employees have volunteered to take on this challenge. All the money we raise from this event will fund heating grants for people living with cancer. At National Grid we are aiming to raise £500,000 for Macmillan and our generous employees have already raised an impressive £390,000. Events like this one will undoubtedly help us to hit our target."

National Grid has pledged to match every penny raised by employees taking part in the event. The company has a two-year fundraising partnership with Macmillan and this one of many challenges employees have undertaken to support the charity.

National Grid is confident that employees will reach their half a million pound fundraising target by the end of the partnership in December. This money will be used to pay the energy bills of almost 2,000 patients and families living with cancer.

Notes for editors

## Notes to Editors:

National Grid is pivotal to the energy systems in the UK and the north eastern United States. We aim to serve customers well and efficiently, supporting the communities in which we operate and making possible the energy systems of the future.

#### National Grid in the UK:

- We own and operate the electricity transmission network in England and Wales, with day-to-day responsibility for balancing supply and demand. We also operate, but do not own, the Scottish networks. Our networks comprise approximately 7,200 kilometres (4,474 miles) of overhead line, 1,500 kilometres (932 miles) of underground cable and 342 substations.
- We own and operate the gas National Transmission System in Great Britain, with day-to-day responsibility for balancing supply and demand. Our network comprises approximately 7,660 kilometres (4,760 miles) of high-pressure pipe and 618 above-ground installations.
- As Great Britain's System Operator (SO) we make sure gas and electricity is transported safely and efficiently from where it is produced to where it is consumed. From April 2019, Electricity System Operator (ESO) is a new standalone business within National Grid, legally separate from all other parts of the National Grid Group. This will provide the right environment to deliver a balanced and impartial ESO that can realise real benefits for consumers as we transition to a more decentralised, decarbonised electricity system.

• Other UK activities mainly relate to businesses operating in competitive markets outside of our core regulated businesses; including interconnectors, gas metering activities and a liquefied natural gas (LNG) importation terminal – all of which are now part of National Grid Ventures. National Grid Property is responsible for the management, clean-up and disposal of surplus sites in the UK. Most of these are former gas works.
