13 Jan 2020

National Grid’s Hinkley Connection Project will connect sources of low carbon energy, including Hinkley Point C, to the UK’s electricity network. As part of its commitment to encouraging the next generation of engineers, National Grid has set up an education fund for schools in areas that will be affected by the project.

Every state funded primary and secondary school in the local authority areas of Bristol City Council, North Somerset Council, South Gloucestershire Council, Somerset County Council, Sedgemoor District Council and West Somerset Council is eligible to apply for a £500 grant for STEM equipment every year of the project.

237 schools were awarded grants in 2018, with more than 55,000 pupils benefiting.

The Redstart Primary School in Chard spent their grant on six advanced, programmable floor robots for children in Key Stage 2 to use.

Teacher, Roger Hunt says, “The children have loved working with their new InO-Bots. Their programming skills have deepened dramatically, and their enthusiasm has been wonderful to see. The application process was very easy, and I’d encourage all schools to apply.”

National Grid has written to all schools with the details. If you are yet to apply, the closing date for 2019/2020 is 14 February. Schools need complete the short form at: https://hinkleyconnection.co.uk/education/

Notes for editors

Notes to Editors:
National Grid is pivotal to the energy systems in the UK and the north eastern United States. We aim to serve customers well and efficiently, supporting the communities in which we operate and making possible the energy systems of the future.

National Grid in the UK:
- We own and operate the electricity transmission network in England and Wales, with day-to-day responsibility for balancing supply and demand. We also operate, but do not own, the Scottish networks. Our networks comprise approximately 7,200 kilometres (4,474 miles) of overhead line, 1,500 kilometres (932 miles) of underground cable and 342 substations.
- We own and operate the gas National Transmission System in Great Britain, with day-to-day responsibility for balancing supply and demand. Our network comprises approximately 7,660 kilometres (4,760 miles) of high-pressure pipe and 618 above-ground installations.
- As Great Britain’s System Operator (SO) we make sure gas and electricity is transported safely and efficiently from where it is produced to where it is consumed. From April 2019, Electricity System Operator (ESO) is a new standalone business within National Grid, legally separate from all other parts of the National Grid Group. This will provide the right environment to deliver a balanced and impartial ESO that can realise real benefits for consumers as we transition to a more decentralised, decarbonised electricity system.
- Other UK activities mainly relate to businesses operating in competitive markets outside of our core regulated businesses; including interconnectors, gas metering activities and a liquefied natural gas (LNG) importation terminal – all of which are now part of National Grid Ventures. National Grid Property is responsible for the management, clean-up and disposal of surplus sites in the UK. Most of these are former gas works.
