National Grid responding to the Prime Minister's announcement that 'We will end UK contribution to climate change by 2050'

12 Jun 2019

Responding to the PM Theresa May that 'WE WILL END UK CONTRIBUTION TO CLIMATE CHANGE BY 2050', John Pettigrew, CEO of National Grid said:

"Government has shown today the right leadership in legislating for a 2050 net-zero target. Britain has an opportunity to cement its global leadership in reducing emissions, and to create new economic opportunities as a result. Industry and government must now work together to make the huge progress needed in the decarbonisation of heat and transport, building on the good work which has begun. As the first major economy to legislate for net-zero, we should all now get behind the UK's bid to host the UN Framework Conference on Climate Change (UNFCCC) COP26 conference next year."

Notes for editors

Notes to Editors:

National Grid is pivotal to the energy systems in the UK and the north eastern United States. We aim to serve customers well and efficiently, supporting the communities in which we operate and making possible the energy systems of the future.

National Grid in the UK:

- We own and operate the electricity transmission network in England and Wales, with day-to-day responsibility for balancing supply and demand. We also operate, but do not own, the Scottish networks. Our networks comprise approximately 7,200 kilometres (4,474 miles) of overhead line, 1,500 kilometres (932 miles) of underground cable and 342 substations.
- We own and operate the gas National Transmission System in Great Britain, with day-to-day responsibility for balancing supply and demand. Our network comprises approximately 7,660 kilometres (4,760 miles) of high-pressure pipe and 618 above-ground installations.
- As Great Britain's System Operator (SO) we make sure gas and electricity is transported safely and efficiently from where it is produced to where it is consumed. From April 2019, Electricity System Operator (ESO) is a new standalone business within National Grid, legally separate from all other parts of the National Grid Group. This will provide the right environment to deliver a balanced and impartial ESO that can realise real benefits for consumers as we transition to a more decentralised, decarbonised electricity system.
- Other UK activities mainly relate to businesses operating in competitive markets outside of our core regulated businesses; including interconnectors, gas metering activities and a liquefied natural gas (LNG) importation terminal – all of which are now part of National Grid Ventures. National Grid Property is responsible for the management, clean-up and disposal of surplus sites in the UK. Most of these are former gas works.
