

National Grid set to revamp gas mains in Hampstead to help keep local people warm in future winters

? 22 weeks of vital gas mains replacement work due to start in late January

23 Dec 2014

- **Traffic management measures will be in place**
- **Technology used to minimise disruption**

National Grid is investing in a major gas mains revamp in Hampstead which will help ensure the local community can stay warm in future winters.

Work is due to start in late January 2015 with engineers expected to remain on site until the summer replacing ageing metal gas mains with tough new pipes which should last for many years.

To enable work to be carried out safely and efficiently traffic management measures will be put in place where required while the project is being delivered.

There will be temporary traffic lights and parking bay and bus stop suspensions around Hampstead High Street and Rosslyn Hill. Temporary road closures will also be implemented in Willoughby Road, Green Hill and Downshire Hill.

The latest and most efficient technology is being used to deliver the work with the new pipes being inserted into the old ones wherever possible. This dramatically reduces the need for digging and minimises disruption to road users and residents.

Project Engineer Patrick Nathan, said: "We have already carried out a camera survey of the existing metallic mains and dug investigate trial holes which has enabled us to develop a detailed plan to carry out the work in Hampstead as quickly as possible.

"We're doing all we can, including using the latest technology, to deliver this work with minimal impact to the local community and road users."

He added: "By carrying out this vital gas mains replacement work now we'll be helping ensure that the local community continues to enjoy safe and reliable gas supplies for heating their homes and cooking their food."

For more advice or for more information on the project call 0800 096 5678.

Notes to Editors:

National Grid is one of the largest investor-owned energy companies in the world and has been named Responsible Business of the Year 2014 by Business in the Community. We own and manage the grids that connect people to the energy they need, from whatever the source. In Britain and the north-eastern states of the US we run systems that deliver gas and electricity to millions of people, businesses and communities.

In Britain, we run the gas and electricity systems that our society is built on, delivering gas and electricity across the country. In the North Eastern US, we connect more than seven million gas and electric customers to vital energy sources, essential for our modern lifestyles.

National Grid in the UK:

- We own the high-voltage electricity transmission network in England and Wales, operating it across Great Britain
- We own and operate the high pressure gas transmission system in Britain
- Our gas distribution business delivers gas to 10.9 million homes and businesses
- We also own a number of related businesses including LNG importation, land remediation and metering
- National Grid manages the National Gas Emergency Service free phone line on behalf of the industry - 0800 111 999 (all calls are recorded and may be monitored).
- Our portfolio of other businesses is mainly concerned with infrastructure provision and related services where we can exploit our core skills and assets to create value. These businesses operate in areas such as Metering, Grain LNG Import, Interconnectors and Property. National Grid Carbon Ltd is a wholly owned subsidiary of National Grid. It undertakes Carbon Capture Storage related activities on behalf of National Grid.

National Grid in the US:

- National Grid delivers electricity to approximately 3.4 million customers in New England and upstate New York
- We own 3.8 gigawatts of contracted electricity generation, providing power to over one million LIPA customers
- We are the largest distributor of natural gas in northeastern U.S., serving approximately 3.5 million customers in New York, Massachusetts and Rhode Island.

Notes for editors

Notes to Editors:

National Grid is pivotal to the energy systems in the UK and the north eastern United States. We aim to serve customers well and efficiently, supporting the communities in which we operate and making possible the energy systems of the future.

National Grid in the UK:

- We own and operate the electricity transmission network in England and Wales, with day-to-day responsibility for balancing supply and demand. We also operate, but do not own, the Scottish networks. Our networks comprise approximately 7,200 kilometres (4,474 miles) of overhead line, 1,500 kilometres (932 miles) of underground cable and 342 substations.
- We own and operate the gas National Transmission System in Great Britain, with day-to-day responsibility for balancing supply and demand. Our network comprises approximately 7,660 kilometres (4,760 miles) of high-pressure pipe and 618 above-ground installations.
- As Great Britain's System Operator (SO) we make sure gas and electricity is transported safely and efficiently from where it is produced to where it is consumed. From April 2019, Electricity System Operator (ESO) is a new standalone business within National Grid, legally separate from all other parts of the National Grid Group. This will provide the right environment to deliver a balanced and impartial ESO that can realise real benefits for consumers as we transition to a more decentralised, decarbonised electricity system.
- Other UK activities mainly relate to businesses operating in competitive markets outside of our core regulated businesses; including interconnectors, gas metering activities and a liquefied natural gas (LNG) importation terminal – all of which are now part of National Grid Ventures. National Grid Property is responsible for the management, clean-up and disposal of surplus sites in the UK. Most of these are former gas works.
