

National Grid to bring more gas to Birmingham

New gas main for Birmingham city centre

30 Oct 2014

National Grid will shortly be laying a new medium pressure gas main in Birmingham City Centre.

The work is taking place around the Five Ways area. It will start on 3 November and is expected to last for approximately five months. This major project will be carried out in various phases, starting at the junction of Harborne Road and Highfield Road. To make sure this phase can be carried out safely and completed as quickly as possible, four-way temporary traffic lights will be in operation at the junction while the work heads along Harborne Road towards Greenfield Crescent. Harborne Road will be open to through traffic but the bus lane will be suspended during the works.

From here the work will move into Greenfield Crescent, Calthorpe Road, St James Road, Fredrick Road, across Middleway and into Tennant Street.

National Grid will be posting updates on the progress of the project and traffic management changes on Twitter using #fivewaysgas. Alternatively, customers can call the Five Ways helpline on 0114 232 8095 for further information.

The new main will help to meet the increasing demand for gas in the city. Made of hard-wearing plastic, the pipe will last for several generations and will need little or no maintenance meaning future disruption from roadworks will be greatly reduced.

“We know that some of the essential work National Grid has to carry out to bring extra capacity into the city creates disruption and inconvenience, but we are always looking for ways to minimise these problems. In this case we’ve found what we believe to be a very effective joint solution and, as a result, after the present project is finished, we shouldn’t need to go back to Five Ways for a very long time.”

Ends

Notes to Editors:

National Grid is one of the largest investor-owned energy companies in the world and has been named Responsible Business of the Year 2014 by Business in the Community. We own and manage the grids that connect people to the energy they need, from whatever the source. In Britain and the north-eastern states of the US we run systems that deliver gas and electricity to millions of people, businesses and communities.

In Britain, we run the gas and electricity systems that our society is built on, delivering gas and electricity across the country. In the North Eastern US, we connect more than seven million gas and electric customers to vital energy sources, essential for our modern lifestyles.

National Grid in the UK:

- We own the high-voltage electricity transmission network in England and Wales, operating it across Great Britain
- We own and operate the high pressure gas transmission system in Britain
- Our gas distribution business delivers gas to 10.9 million homes and businesses
- We also own a number of related businesses including LNG importation, land remediation and metering
- National Grid manages the National Gas Emergency Service free phone line on behalf of the industry - 0800 111 999 (all calls are recorded and may be monitored).
- Our portfolio of other businesses is mainly concerned with infrastructure provision and related services where we can exploit our core skills and assets to create value. These businesses operate in areas such as Metering, Grain LNG Import, Interconnectors and Property. National Grid Carbon Ltd is a wholly owned subsidiary of National Grid. It undertakes Carbon Capture Storage related activities on behalf of National Grid.

National Grid in the US:

- National Grid delivers electricity to approximately 3.4 million customers in New England and upstate New York
- We own 3.8 gigawatts of contracted electricity generation, providing power to over one million LIPA customers
- We are the largest distributor of natural gas in northeastern U.S., serving approximately 3.5 million customers in New York, Massachusetts and Rhode Island.

Notes for editors

Notes to Editors:

National Grid is pivotal to the energy systems in the UK and the north eastern United States. We aim to serve customers well and efficiently, supporting the communities in which we operate and making possible the energy systems of the future.

National Grid in the UK:

- We own and operate the electricity transmission network in England and Wales, with day-to-day responsibility for balancing supply and demand. We also operate, but do not own, the Scottish networks. Our networks comprise approximately 7,200 kilometres (4,474 miles) of overhead line, 1,500 kilometres (932 miles) of underground cable and 342 substations.
- We own and operate the gas National Transmission System in Great Britain, with day-to-day responsibility for balancing supply and demand. Our network comprises approximately 7,660 kilometres (4,760 miles) of high-pressure pipe and 618 above-ground installations.
- As Great Britain's System Operator (SO) we make sure gas and electricity is transported safely and efficiently from where it is produced to where it is consumed. From April 2019, Electricity System Operator (ESO) is a new standalone business within National Grid, legally separate from all other parts of the National Grid Group. This will provide the right environment to deliver a balanced and impartial ESO that can realise real benefits for consumers as we transition to a more decentralised, decarbonised electricity system.
- Other UK activities mainly relate to businesses operating in competitive markets outside of our core regulated businesses; including interconnectors, gas metering activities and a liquefied natural gas (LNG) importation terminal – all of which are now part of National Grid Ventures. National Grid Property is responsible for the management, clean-up and disposal of surplus sites in the UK. Most of these are former gas works.
