essential gas mains upgrade

National Grid is advising motorists of a one-way road closure in Sleaford, starting this Sunday (5 February), while essential gas mains renewal takes place.

31 Jan 2017

Grantham Road will be closed to outbound traffic – traffic heading out of the town centre – between the junction with Northfield Road and the A15. Traffic leaving Sleaford town centre will be diverted via London Road, Stump Cross Hill, London Road and the A15. Traffic coming into Sleaford via Grantham Road will not be affected.

The road closure will start on Sunday 5 February and is expected to be finished by 24 February.

National Grid Authorising Engineer Paul Martin said: "We are sorry for any inconvenience caused. We are renewing the gas mains so that local people can continue to enjoy safe and reliable gas supplies for decades to come. The existing iron mains are being replaced with tough, hardwearing plastic pipes that will last for at least 80 years.

"To carry out the work safely we will need to temporarily close Grantham Road to outbound traffic. We will make every effort to complete the work as soon as possible."

For any enquiries about this work people should contact National Grid's customer services team on 0800 096 5678.

Notes for editors

Notes to Editors:

National Grid is pivotal to the energy systems in the UK and the north eastern United States. We aim to serve customers well and efficiently, supporting the communities in which we operate and making possible the energy systems of the future.

National Grid in the UK:

- We own and operate the electricity transmission network in England and Wales, with day-to-day responsibility for balancing supply and demand. We also operate, but do not own, the Scottish networks. Our networks comprise approximately 7,200 kilometres (4,474 miles) of overhead line, 1,500 kilometres (932 miles) of underground cable and 342 substations.
- We own and operate the gas National Transmission System in Great Britain, with day-to-day responsibility for balancing supply and demand. Our network comprises approximately 7,660 kilometres (4,760 miles) of high-pressure pipe and 618 above-ground installations.
- As Great Britain's System Operator (SO) we make sure gas and electricity is transported safely and efficiently from where it is produced to where it is consumed. From April 2019, Electricity System Operator (ESO) is a new standalone business within National Grid, legally separate from all other parts of the National Grid Group. This will provide the right environment to deliver a balanced and impartial ESO that can realise real benefits for consumers as we transition to a more decentralised, decarbonised electricity system.
- Other UK activities mainly relate to businesses operating in competitive markets outside of our core regulated businesses; including interconnectors, gas metering activities and a liquefied natural gas (LNG) importation terminal – all of which are now part of National Grid Ventures. National Grid Property is responsible for the management, clean-up and disposal of surplus sites in the UK. Most of these are former gas works.
