

St Helen's gasholder to be dismantled

11 Apr 2019

National Grid is starting work to dismantle an unused gasholder on its Navigation Road site in St Helen's.

The site will be cleared as part of National Grid's on-going nationwide gasholder dismantling programme. Gasholders are no longer required due to investments made to improve the national network, meaning gas can be stored in the pipe system underground. Work is expected to be complete by the autumn.

The Coleman Group, specialist contractors appointed by National Grid, will first remove and treat any water from the gasholder, before removing the sludge and any other debris from inside. The holder will then be dismantled.

When removing the sludge, an unpleasant smell, similar to diesel, is sometimes noticed. This smell is not harmful to people who live in the surrounding community or the environment. National Grid will do everything they can to make sure it does not become an issue, including using odour suppressants. National Grid's gas safety guidance remains unchanged by the work. If anyone thinks they can smell gas they should contact the freephone gas emergency number 0800 111 999. All reports will be investigated by gas engineers to check if there is a gas escape.

The site will remain securely fenced at all times with full CCTV coverage. The work will be strictly controlled to minimise any potential disturbance for people who live and work close by.

Hannah White, Land Regeneration Manager for National Grid, said: "We will remove the gasholder as safely, quickly and efficiently as possible to minimise the impact on the local community and the environment.

"We have written to people who live and work in the local area to explain what we will be doing. If anyone has any questions about the project they can contact our community relations team on 0800 8199 071."

Notes for editors

Notes to Editors:

National Grid is pivotal to the energy systems in the UK and the north eastern United States. We aim to serve customers well and efficiently, supporting the communities in which we operate and making possible the energy systems of the future.

National Grid in the UK:

- We own and operate the electricity transmission network in England and Wales, with day-to-day responsibility for balancing supply and demand. We also operate, but do not own, the Scottish networks. Our networks comprise approximately 7,200 kilometres (4,474 miles) of overhead line, 1,500 kilometres (932 miles) of underground cable and 342 substations.
- We own and operate the gas National Transmission System in Great Britain, with day-to-day responsibility for balancing supply and demand. Our network comprises approximately 7,660 kilometres (4,760 miles) of high-pressure pipe and 618 above-ground installations.
- As Great Britain's System Operator (SO) we make sure gas and electricity is transported safely and efficiently from where it is produced to where it is consumed. From April 2019, Electricity System Operator (ESO) is a new standalone business within National Grid, legally separate from all other parts of the National Grid Group. This will provide the right environment to deliver a balanced and impartial ESO that can realise real benefits for consumers as we transition to a more decentralised, decarbonised electricity system.
- Other UK activities mainly relate to businesses operating in competitive markets outside of our core regulated businesses; including interconnectors, gas metering activities and a liquefied natural gas (LNG) importation terminal – all of which are now part of National Grid Ventures. National Grid Property is responsible for the management, clean-up and disposal of surplus sites in the UK. Most of these are former gas works.
