National Grid Ventures – supporting vulnerable people from the West Midlands during Covid-19

01 May 2020

As the region copes with the impact of the virus, NSV has pledged support for some of Solihull’s most vulnerable people by donating 1860 face masks and more than 500 hand sanitizers to care homes and a hospice in the town. Marie Curie Hospice, Age UK, Royal Star & Garter Care Home and JCB Close Residential Care Home in Knowle have all benefited from the supplies of personal protection equipment.

Employees have also sponsored nearly 500 hand creamers which have been distributed to local hospitals and care homes in Birmingham and Solihull. The business has also donated funding to Woodlands School, a special needs setting in Colehill, for specialist equipment ensuring more than 30 families have resources to support the sensory and learning needs of students at home. Meanwhile, employees from National Grid Ventures have been helping Age UK by delivering food parcels or being available to check in and chat with elderly people.

National Grid, the company keeping the lights on and gas flowing, employ thousands of key workers to maintain reliable supplies and is working hard to ensure the country keeps going during these unprecedented times.

Karen Thompson, Safety, Health and Environment Manager for NSV said: “Heroes are putting themselves at risk every day to care for some of the most vulnerable people in our community, we hope this gesture goes some way to keep these brave people safe. I’m also very proud of the team in Solihull, all doing their bit – either running hand creamers, or helping Age UK by telephoning those who are lonely and making sure vital food supplies reach those most in need.”

Cheryl Harbourne, Home Manager at Royal Star and Garter Care Home said: “We can’t thank National Grid Ventures enough for the 500 face masks and 125 bottles of hand sanitizers they kindly donated. During this challenging time, they have been gratefully received by staff at the Home and the residents we care for. Thank you!”

Notes for editors

Notes to Editors:

National Grid is pivotal to the energy systems in the UK and the north-eastern United States. We aim to serve customers well and efficiently, supporting the communities in which we operate and making possible the energy systems of the future.

National Grid in the UK:

- We own and operate the electricity transmission network in England and Wales, with day-to-day responsibility for balancing supply and demand. We also operate, but do not own, the Scottish networks. Our network comprises approximately 7,200 kilometres (4,474 miles) of overhead lines, 1,500 kilometres (932 miles) of underground cable and 342 substations.
- We own and operate the gas National Transmission System in Great Britain, with day-to-day responsibility for balancing supply and demand. Our network comprises approximately 7,960 kilometres (4,910 miles) of high-pressure pipe and 6,818 above-ground installations.
- As Great Britain’s System Operator (SGO) we make sure gas and electricity is transported safely and efficiently from where it is produced to where it is consumed. From April 2019, Electricity System Operator (ESO) is a new standalone business within National Grid, legally separate from all other parts of the National Grid Group. This will provide the right environment to deliver a balanced and impartial ESO that can realise real benefits for consumers as we transition to a more decentralised, decarbonised electricity system.
- Other UK activities mainly relate to businesses operating in competitive markets outside of our core regulated businesses: including interconnectors, gas metering activities and a liquefied natural gas (LNG) importation terminal – all of which are now part of National Grid Ventures. National Grid Ventures is responsible for the management, clean-up and disposal of surplus sites in the UK. Most of these are former gas works.
