

# Considering different scenarios

We recognise that the Friston substation has not yet been consented. We participated in the Development Consent Order (DCO) Examinations for East Anglia One North and East Anglia Two as an Interested Party and continue to monitor the outcome. Parallel to our siting and routeing work, we are continuing to consider the potential coordination opportunities associated with our connection area<sup>1</sup>.

MPIs present the opportunity for coordination of multiple projects. For Nautilus this means both providing a connection opportunity for offshore wind farm (integration) and exploring the ability to co-locate with projects to reduce potential impacts both onshore and offshore (collaboration). Currently, our work involves exploring different scenarios for potential coordination.

This work ongoing and we are not able to share further details during this consultation. However, the feedback you provide now will help inform our work on this.

<sup>1</sup> Our connection agreement for Nautilus relates to a new National Grid Electricity Transmission (NGET) substation on the Sizewell 400 kilovolts (kV) network in the 'Leiston area'. The connection agreement therefore relates to an area rather than a specific location.
