

Unlocking offshore wind

We expect a **300%** increase
of offshore wind capacity
in the UK by 2030.

A connected future

Our interconnectors will provide nearly 8GW of green electricity, enough to power up to **8.5M homes in France, Belgium, the Netherlands, Norway and Denmark**, as well as up to **8M UK homes**.

Journey to net zero

By 2030, the **GB power sector could reach net carbon negative emissions** and is expected to become a net electricity exporter to Europe by 2050.

Powering the winds of change

Multi-Purpose interconnectors accelerate offshore wind and reduce the impact of infrastructure on coastal communities.
