- 3.5.10 The draft Order Limits then passes through HECZ 4.3: Ford Street and River Colne Valley, which comprises a rural landscape and part of the Colne valley, including the small historic settlement of Ford Street. The historic settlement pattern is highly dispersed with farms and cottages on the edge of the valley slopes. The fieldscape largely comprises irregular fields of ancient, probably medieval origin, some may be even older, interspersed with areas of later enclosure of common fields. Areas of meadow pasture survive along the edges of the River Colne. Within the zone there is a high potential for surviving palaeoenvironmental deposits in the base of the Colne Valley. Cropmark complexes on the valley slopes indicate the potential of prehistoric activity. Cropmark ring ditches suggest ploughed out Bronze Age barrows and an Iron Age spearhead has been found in Ford Street.
- 3.5.11 Moving south, the draft Order Limits then passes through HECZ 9.2: Aldham, Eight Ash Green and Fordham Heath, which consists of a rural landscape including the historic Fordham Heath. Historic settlements are highly dispersed with church/hall complexes, moats, halls, farms, and cottages represented. The fieldscape largely comprises irregular fields, of ancient, probably medieval, origin, though some may be even older, interspersed with areas of later medieval or early post medieval enclosure of common fields. There has, however, been considerable field boundary loss across the zone. The heath survives at Fordham, now flanked to the east by the modern, nucleated settlement of Eight Ash Green. Little archaeological work has been undertaken within the zone, however, the prehistoric period is represented by flint surface finds and dispersed cropmarks complexes including a concentration south of the A12 comprising a range of enclosures and ring ditches, as well as linear features representing many periods of field-systems.

- 3.5.12 Turning west-south-west, the draft Order Limits then enters HECZ 9.1: Great Tey Area. This zone comprises a rural landscape including the historic settlements of Great Tey and Little Tey, and the church/hall complex at Marks Tey. Further settlement is represented by highly dispersed church/hall complexes, moats, halls, farms, and cottages. The fieldscape largely comprises irregular fields of ancient, probably medieval origin, though some maybe even older, interspersed with areas of later medieval or early post medieval enclosure of common fields. Areas of historic meadow pasture survive along the edges of the Roman River, and the basic structure of the historic landscape survives well although there has been field boundary loss during the 20th century. The zone is bisected by the valley of the Roman River from which there is a high potential for surviving palaeo-environmental deposits. Cropmarks complexes are recorded along the northern side of the Roman River including a range of sub-rectangular, sub-square and irregular ditched enclosures. The southern boundary of the area is formed by the main Roman Road from Colchester to Braughing (Stane Street). Multi-period archaeological deposits have been identified in the area between Great and Little Tey.
- 3.5.13 The landscape of Essex is broken down further into smaller parcels described as Historic Landscape Character Types and defined in The Historic Landscape Characterisation Report for Essex, Volume 2 (Bennet 2011). The HLC Type data has been supplied by the Essex HER and analysis of it has shown that, in Section D, the Project passes through a landscape largely defined by **low value** areas of common post 1950s boundary loss, which accounts for 21.45% of the Essex landscape (Bennet 2011). Also included within the bounds of the Construction Zone in Section D are dispersed parcels of **low value** 20th century enclosure, 18th to 20th century woodland plantation, built-up areas - urban development, water reservoirs and orchards.
- 3.5.14 Elsewhere within the Construction Zone in Section D there are parcels of:
- Common Pre-18th Century Irregular Enclosure (HEX25685, HEX25686, HEX40009, HEX25690, HEX8208, HEX8207), which accounts for 17.69% of the Essex landscape (Bennet 2011). These irregular enclosures vary considerably in size and shape, forming both arable and pasture with sinuous edges and offset corners. They are probably the result of piecemeal enclosure and may originate from the medieval period or earlier
  - Occasional Piecemeal Enclosure by Agreement (HEX25658, HEX39994, HEX8243, HEX8244), which accounts for approximately 8.97% of the Essex landscape (Bennet 2011). These fields were created to subdivide a pre-existing earlier field system and are characterised by straighter boundaries. Dating of origin is difficult but they usually predate the introduction of the later formal Parliamentary Enclosure Acts, and thus may relate in certain parishes to the earlier acts of enclosure
  - Rare Enclosed Meadow (HEX25661, HEX25684, HEX25696), which accounts for 1.69% of the Essex landscape (Bennet 2011). These are sinuous fields that border rivers, often forming part of the flood plain of the river. Many of these areas were established in medieval times
  - Rare Irregular Sinuous Enclosure (HEX19078), which accounts for 2.74% of the Essex landscape (Bennet 2011). These fields have parallel edges which are sinuous, being in a similar orientation, but moving towards and away from each other, with short boundaries cutting across. They appear like co-axial fields, but without the parallel sides. This field type predates the earliest cartographic evidence and probably originate in the medieval period

- Rare Ancient Woodland (HEX16783, HEX16785), which accounts for 2.54% of the Essex landscape (Bennet 2011). Ancient Woodland is defined by Natural England (2018) as 'land that has had a continuous woodland cover since at least 1600 AD'. The predominant species are deciduous, broad-leaf trees and shrubs. In the Essex HLC, this category also includes traditional wood-pasture
- Very rare Formal style Parliamentary Enclosure (HEX19556, HEX18834, HEX19633), which accounts for 0.98% of the Essex landscape (Bennet 2011). Formal style Parliamentary Enclosure is a rigorous rectilinear field system, often with contemporary roads and trackways, that has overwritten any prior landscape enclosure pattern, usually either prior common arable field, or former heathlands, or wastes, associated with the later Parliamentary Enclosure Acts

## Conservation Areas

- 3.5.15 There are three conservation areas in Section D of the Project and their assessment is presented here arranged north to south. They all have a **medium value**.
- 3.5.16 The Little Horkesley conservation area (**CA10**) is situated within a quiet and rural environment, characterized by its pastoral setting surrounded by agricultural fields and grasslands. To the north, it adjoins a dispersed residential settlement, maintaining a tranquil ambiance throughout. The primary portion of the conservation area occupies higher ground, gently sloping southward from the church, which provides excellent southern views. The conservation area's topography adds to its charm, with the main portion situated on elevated terrain. As one meanders southwards from the historic village church, the landscape gently slopes, affording vistas towards the southern horizon. Notably, this elevation variation provides residents and visitors alike with scenic views of the surrounding countryside.
- 3.5.17 Adjacent to the south-eastern corner of the conservation area stands the Kings Farmhouse (**1224018**), a Grade II\* listed building that bears witness to the area's rich architectural heritage. Within the boundaries of this cherished enclave, one can also find the Gatehouse North of Little Horkesley Hall (**1223994**), a Grade II listed structure, and the stately Little Horkesley Hall (**1267036**), a Grade II\* listed edifice. These historic landmarks contribute significantly to the area's cultural and aesthetic value. Furthermore, the presence of the Church of St. Peter and St. Paul (**1266803**), a Grade II listed ecclesiastical structure, serves as a spiritual and historical focal point within the conservation area. Its architecture and historical relevance add depth and character to the overall ambiance of Little Horkesley. Overall, the conservation area has evidential, historical, and aesthetic value derived from its listed buildings. Its topography, offering long views, contributes to its value.
- 3.5.18 The setting of The Little Horkesley conservation area significantly contributes to its value. Located in the picturesque rural landscape of Essex, this conservation area is surrounded by a quiet environment. However, due to the local topography, mature tree lined hedgerows and small woodlands in the intervening landscape, the setting does not extend to the draft Order Limits.
- 3.5.19 The Fordstreet conservation area (**CA9**), designated on 1st October 1980, is situated within a residential neighbourhood, particularly evident to the north and west. This locale is enveloped by expansive agricultural fields and serene pastures, imparting a sense of spaciousness to the conservation area. The land gently ascends towards the south, offering elevated views. However, the presence of a road traversing the asset and an adjacent farm complex/industrial estate somewhat disrupt the prevailing tranquil and rural character.

- 3.5.20 The conservation area encompasses 20 listed buildings, including 16 Grade II listed buildings and four Grade II\* listed buildings as well as several non-designated assets. This area straddles the civil parishes of Fordham and Aldham, nestled in the north-western region of the Colchester District. It is strategically positioned just below the south-west corner of the Dedham Vale National Landscape (an AONB), approximately 4.4 km to the north, thereby encapsulating the north-eastern segment of the landscape. The Colne River meanders through the middle of the conservation area, intersecting the A1124 at the heart of the village. To the north of the river, the settlement of Fordstreet is primarily early medieval in origin, characterized by farmhouses situated within working farmyards, along with associated outbuildings. This northern area encompasses six of the conservation area's listed buildings, consisting of four Grades II and two Grade II\* structures. The landscape here retains a rural character, marked by open farmland and farm buildings. In contrast, the southern part, also lining the A1124, comprises 14 listed buildings, of which 12 are Grade II listed and two are Grade II\*. These structures encompass a mix of residential cottages and larger houses, dating from the Tudor and Georgian periods. The density of development in this region, interspersed with mature trees, distinguishes it from the northern part, lending a more settled ambiance. The conservation area also contains a group of **low value** non designated assets (**4344 - MCC3699/ MEX1034805/ MEX1034806/ MEX1034808/ MEX1038370/ MEX1038695/ MEX34496**) consisting of a medieval garden wall, remnants of World War II structures like a destroyed pillbox, anti-tank obstacles, and a spigot mortar emplacement at Bridge House. The site of Fordstreet Mill and the Smithy's ammunition shelter, though no longer extant, contribute to the area's diverse historical narrative.
- 3.5.21 Surrounding the boundaries of the conservation area is a dense belt of mature trees, while to the west lies a substantial industrial area. Its northern part exudes a rural charm, rooted in the area's agricultural heritage, while the southern portion presents a denser settlement pattern with notable historical structures and verdant surroundings. The landscape here, framed by the Colne River Valley Slopes Landscape Character area, offers scenic views of open farmland, woodlands, and the meandering River Colne. Overall, this combination of natural and built heritage contributes to the area's evidential and historical value. Its setting plays a crucial role in enhancing its value, except the industrial part to its south-west. Due to the proximity with the draft Order Limits (c. 70 m), the setting of **CA9** extends to the draft Order Limits.
- 3.5.22 The Great Tey conservation area (**CA8**), situated in the south-eastern part of Great Tey, spans from the western side of Moor Road, traversing The Street, the Chase, and a portion of Brook Road. Its northern boundary abuts a modern housing estate which, along with the bustling main road, disrupts the prevailing serenity, marking a notable contrast with the peaceful surroundings of the conservation area. To the east, expansive pasture and arable fields contribute to the area's sense of spaciousness. The views are open, meanwhile, residential buildings encircle the western, northern, and southern perimeters, forming a residential backdrop. Within the conservation area are four Listed Buildings: The Old Vicarage (**1223178**), a Grade II structure, stands to the north of the conservation area, while Guildhall Cottages (**1223389**), also Grade II listed, can be found to the west. To the south lies Rectory Cottage (**1223155**), another Grade II listed building, while at the heart of the conservation area is the Grade I listed Church of St. Barnabas (**1223408**), situated in a churchyard on slightly elevated terrain. The conservation area's landscape blends the charm of pastoral surroundings with the presence of historical structures, offering a glimpse into the region's cultural heritage. The juxtaposition of tranquil residential

areas, bustling main roads, and open green spaces characterizes the Great Tey conservation area, creating a unique blend of urban and rural elements within its boundaries. In summary, the conservation area derives its evidential and historical value from its listed buildings, and its open green areas further augment its overall value.

- 3.5.23 The conservation area is situated within an urban setting, characterized by extensive views from both the north-east and south-east directions. Within its immediate surroundings, several smaller green spaces enhance its overall value. While the setting undeniably contributes significantly to its worth, it remains contained within the conservation area's boundaries, not extending to the draft Order Limits due to its somewhat insular nature.

## Baseline Introduction

- 3.5.24 The following historic environment baseline for Section D of the Project is presented by chronological archaeological period and from north to south. Section D is further broken down into geographic parcels to allow the reader to orientate and to locate where on the appropriate figure a particular heritage asset is illustrated. These geographic parcels are largely defined by current settlements but also occasionally by landscape features such as high points and valleys and by anthropogenic features such as roads and railways. Each parcel of Section D is introduced and described only in the first archaeological period where it is appropriate to be used to avoid repetition.

## Prehistoric Period

- 3.5.25 The prehistoric period is well represented in Section D of the Project. Thirty-eight assets, comprising cropmarks, artefact scatters and findspots, represent human activity in the study area dating back as far as the Palaeolithic period through to the Iron Age.
- 3.5.26 In the Colchester Historic Environment Record, there are three identified assets corresponding to general prehistoric period remains, which include cropmarks, rubbing stones, and find spots. However, obtaining more specific dating for these assets has not been possible. Additionally, there are cropmarks listed in the undated section that may also prove to be prehistoric. The following three assets are assessed as of **low value** for their evidential and historical value for probable Prehistoric activity on the periphery or within some settlements of Section D.
- North-east of Fordham were found rubbing stones and four pot boilers (**4094**), 250 m north-west of the draft Order Limits
  - A plain urn, described in Hull's scrapbook in Colchester Museum as 'a further urn, found in fragments, in grave diggings in churchyard', was found in the village of Aldham, at the junction between Green Lane and Brook Road (**4152**). Its location is c.160 m north-west of the draft Order Limits
  - In Aldham, c. 250 m west of the draft Order Limits was found a prehistoric plain urn, Abercromby type LXIX. (**4241**)
- 3.5.27 There is also a scheduled monument, the 'Wissington Ring Ditch Cluster' (**1003758**) located c. 1 km north of Little Horkesley, c. 2.5 km north of the draft Order Limits. It has evidential and historical value and is of high value. Comprising two prominent ring-ditches with diameters ranging from 80 to 100 feet and a cluster of smaller

circles, this asset represents a complex of features indicative of prehistoric activity, possibly associated with burial mounds or ritual structures. The site's historical value is underscored by the scatter of struck flint and weathered brick/tile fragments found along the field's edges. These artifacts suggest human presence and activity, adding layers of historical value to the landscape. Due to the limited visibility from the ground, the aerial perspective becomes crucial in understanding the layout and extent of this prehistoric complex. The discovery of crop-marks and the former owner's observation of these features emphasize the value of the site.

- 3.5.28 Its setting is informed by its location in a rural area surrounding by fields to its north, east and west and by woodlands and the river Stour to its south. To its east, c. 100 m, is the listed building grade II\* 'Wiston Mill' (**1033616**) and c. 350 m to its west is the grade I St Mary Church (**1351854**). Overall, the setting of this asset makes considerable contribution to its value but due to the distance it does not extend to the draft Order Limits.

## Palaeolithic

- 3.5.29 Evidence of Palaeolithic activities in the Section D study area is limited to two artefact findspots found outside the draft Order Limits. There are also deposits from a Hoxnian period lake which cross the draft Order Limits and may have been a focus for Lower Palaeolithic human activity. These lake deposits formed on top of deposits left behind by retreating ice.
- 3.5.30 North-west of Marks Key, in a wooded area, west of the current railway line, c.320 m south of the draft Order Limits is a lower palaeolithic lake deposits (**4187**). This area shows palaeobotanical evidence of a lake formed after the retreat of ice at the end of the Anglian glaciation. Pollen analysis reveals a detailed record of vegetation during the Hoxnian interglacial period, indicating changes in habitats and the return of woodlands. The pollen sequence reflects variations in climate, including periods of open landscapes, deciduous woodlands, and treeless conditions. The sediments' fine layers allow the detection of annual ecosystem changes and provide insights into the duration of the Hoxnian interglacial, estimated to be at least 30,000 years. This lake spanned an area of approximately 57 hectares and is 120 m south of the draft Order Limits at its closest point. The presence of the axe suggests that the lake may have attracted human activity. This area, situated north of Marks Tey and north of the A120/Coggeshall Road, can contribute significantly to our understanding of the regional environment and the climatic changes that occurred during this pivotal period in prehistory. Therefore, the lower palaeolithic lake deposits (**4187**) is of **medium value** for its evidential and historical value for its contribution to our comprehension of the region's environment and historical developments.
- 3.5.31 North of Great Horkesley, c. 20 m north of the draft Order Limits, is found one unretouched flake which could date anywhere between the Lower Palaeolithic to Late Bronze Age (**4133**) was discovered. This asset is of **low value** for its evidential value for potential presence of a Palaeolithic tool-making activity.
- 3.5.32 Along Boxted Road, east of Tye Green, c. 170 m north of the draft Order Limits, was found one Lower Palaeolithic to Late Bronze Age unretouched flake (**4239**). It has historical and evidential value and is of **low value**.

## Mesolithic

- 3.5.33 There is only one asset recorded from the Mesolithic period, and it is in the draft Order Limits, north of Great Horkesley. It is a pebble macehead which was

commonly used as a handheld weapon or tool during the prehistoric periods and may suggest transient human activity in the area (**4131**). This asset has limited evidential value and is therefore assessed as **low value**.

- 3.5.34 In a field in Tye Green, adjacent to the draft Order Limits were found pebble macehead. Coarse and igneous rock (**4237**). This asset has evidential and historical value and is of **low value**.

## Neolithic

- 3.5.35 There is also only one Neolithic asset recorded in the Section D, which is a stone axe recorded in a field in Lamb Corner, located c. 170 m north of the draft Order Limits (**4142**). Due to its evidential value, this asset is assessed of **low value** due.

## Bronze Age

- 3.5.36 In this section, we aim to address the Bronze Age archaeological potential within the study area. While the Colchester Historic Environment Record (HER) designates certain assets as 'undated,' further examination and assessment have revealed a high probability that these assets may indeed belong to the Bronze Age period. It is important to note that some of these assets may also be discussed in the undated section of this report. Especially, there are some ring ditches near Langham (**4109**), near south Great Tey (**4061**) and near Great Horkesley (**4065**) which are currently undated but may prove to be Bronze Age (see undated section).
- 3.5.37 To the west of Fordham, in a farmyard, 50 m east of the draft Order Limits, a Bronze Age barbed and primed flint arrowhead was found (**4155**). It is **low value** and has evidential value.
- 3.5.38 Approximately 900 m east of Fordham, c. 30 m east of the Order Limit, was found Bronze Age barbed and tanged flint arrowhead from garden (**4242**). This asset has evidential and historical value and is of **low value**.

## Iron Age

- 3.5.39 For context, it is essential to acknowledge the historical value of the Late Iron Age oppidum of Camulodunum (modern-day Colchester) in our examination of Iron Age assets in the surrounding area. The draft Order Limits of our study area pass to the northwest of Camulodunum, which was one of the most prominent Iron Age settlements in southeastern Britain. During the Late Iron Age, Camulodunum served as a hub for political, economic, and social activities and was heavily fortified. Understanding the Iron Age assets within the vicinity of this oppidum provides valuable insights into the pre-Roman history of the region. These assets can help us piece together the complex tapestry of life and culture in this significant Iron Age centre.
- 3.5.40 In this section, we list and assess various Iron Age assets, considering their historical, evidential, and contextual value. By doing so, we aim to shed light on the importance of this period in the development of the region, the activities of its inhabitants, and their interaction with the Late Iron Age oppida of Camulodunum.
- 3.5.41 The Pitchbury Ramparts, a scheduled monument of **high value** (**1019959**), are situated in a quiet and rural location, surrounded by agricultural fields to the south and dense woodland to the north. The monument is located south of Coach Road, c. 500 m south of the draft Order Limits. These ramparts represent a small multivallate hillfort, which are characterized by earthwork boundaries comprising two or more

lines of closely spaced earthworks, often enclosing an interior area, constructed during the Iron Age period, primarily between the 6th century BC and the mid-1st century AD. While these hillforts were typically associated with high-status settlements, recent interpretations suggest that their construction had display purposes alongside defensive ones.

- 3.5.42 The Pitchbury Ramparts have undergone partial excavation, revealing significant archaeological information. The original ramparts' appearance is reflected in the standing section to the north, and the perimeter ditches around the circuit remain well-preserved beneath layers of accumulated soil. Inside the hillfort, buried features related to the period of occupation have been identified, providing insights into the character and duration of its use. Of particular interest is the relationship between the hillfort and the extensive settlement that developed to the southeast during the late pre-Roman Iron Age, offering valuable historical context and potentially indicating a shift in societal focus. The preservation of environmental evidence, especially in waterlogged conditions in the lower ditch fills, offers insights into the ancient landscape's appearance. The presence of artefacts from the Mesolithic, Neolithic, and early Iron Age periods contributes to our understanding of earlier human settlement in the region. Overall, this scheduled monument has an evidential and historical value.
- 3.5.43 While the majority of the hillfort's ramparts were levelled for arable land by the mid-19th century, significant portions remain visible, particularly along the northern arc within Pitchbury Woods. These surviving sections display substantial banks and ditches, with the inner bank measuring up to 2.5 m in height and 10 m across. Its setting is rural and quiet, surrounding by fields and woodland. While from north-east to south this asset has a long view across fields, some wood obstructs the view from the north to the west. Overall, its setting makes a great contribution to its value, however it does not extend to the draft Order Limits.
- 3.5.44 Located 125 meters west of the draft Order Limits, north of Colchester Road, an assemblage of archaeological finds was unearthed, including an Iron Age pot and Roman sherds and a coin (**4129**). While these discoveries bear evidential value, their overall value is considered **low**. Worth noting is the presence of potential enclosures marked by cropmarks, situated approximately 100 meters to the east of this site (**4050**), although their specific date remains uncertain. It is plausible that these cropmarks are associated with Iron Age contexts, enhancing their potential historical importance. This location, spanning 1.8 km south of Little Horkesley, intersects the draft Order Limits, Crabtree Lane, and Viness Road, enriching the area's archaeological landscape with its evidential but **low-value** enclosures.
- 3.5.45 South of Fordstreet, 400 m northwest of the draft Order Limits is an area comprising a range of enclosures and ring ditches of unknown date but that could be Prehistoric:
- Five ring ditches including one double ring ditch (**4078**) are found south-east to Fordstreet. The north-eastern part of this asset is within the draft Order Limits
  - To the east of **4078** and adjacent to Mill Road, are found other cropmarks of a ring ditch and large areas of amorphous cropmarks which may represent ground disturbance (**4103**). This asset is crossing the draft Order Limits. In the same area but further north, is a field where linear features, and a faint enclosure (**4086**) are found, c.100 m east of the draft Order Limits
- 3.5.46 Near Colchester Road, an Iron Age pot (**4130**) was discovered 155 m east of the draft Order Limits. It has evidential value and is of **low value**.

- 3.5.47 An archaeological investigation to the south of Fossetts Lane, Fordham, revealed significant Iron Age occupation features (**4228**), 30 m southeast of the draft Order Limits. These features included an Early Iron Age ditch, pits, and other related structures. At the northern end of the site, an isolated circular pit with a diameter of 1 m and a depth of 0.1 m was observed. It had a primary fill of light brownish yellow clay and a secondary fill containing a substantial amount of burnt flint and Iron Age pottery, suggesting its use and occupation during this period. Also, early Iron Age pottery and a struck flint were found. Overall, the Iron Age features at this site provide valuable insights into the occupation and activities of people during that period. These archaeological discoveries contribute to our understanding of the Iron Age settlement patterns, material culture, and possibly the organization of the surrounding landscape in the Fordham area. Moreover, this asset is found in an area of undated cropmarks of former field boundaries, some of which appear on the OS 1st edition (**4102**) and to the north are identifiable undated ring ditches and a linear feature (**4088**). These archaeological features traverse multiple fields, with the southeastern extent of these features encroaching into the defined draft Order Limits. These two latter assets could potentially date back to the Iron Age, given their proximity to **4228**. Therefore, these three assets have **medium value** based on their evidential value.
- 3.5.48 An archaeological investigation, south of Park Lane, Langham revealed Late Iron Age occupation features dating to the first half of the 1st century AD, specifically the late pre-Roman Iron Age (**4183**). This asset is within the draft Order Limits. The excavation identified three phases of activity within the site. The first phase consisted of a curvilinear gully aligned northeast to southwest. This gully was later truncated by a large boundary ditch aligned north to south. Sherds of late pre-Roman Iron Age pottery were found within the fill of the boundary ditch, providing evidence for its dating. In the third phase of activity, two postholes were identified. These postholes were found to cut into the upper fills of the boundary ditch, indicating a later phase of construction or use. Additionally, one pit yielded 22 sherds of late Iron Age/early Roman pottery, suggesting continued occupation or activity during this period. During the excavation, small fragments of slag were observed, indicating possible industrial activity or metalworking in the vicinity. The presence of these late Iron Age occupation features provides valuable insights into the settlement patterns and activities of the local community during this period. The discovery of pottery, postholes, and boundaries contributes to our understanding of the cultural and social landscape of Langham and its surrounding areas during the late pre-Roman Iron Age. Overall, this asset has **medium value** based on its evidential value.
- 3.5.49 North of Langham Road. During the construction of a water pipeline, archaeological monitoring in the vicinity of Holly Tree Farm, Boxted, revealed the presence of ten charcoal-rich pits scattered across fields (**4184**). This asset is within the draft Order Limits. The use of these pits took place during late Iron Age to early Roman period - 21 BC to 125 AD. The discovery of these charcoal-rich pits provides valuable insights into the past activities and practices of the local community in the Boxted area. While the absence of artefacts limits our understanding of their specific purpose, the presence of charcoal and the radiocarbon dating of one pit indicate intentional burning and suggest a potential connection to early Roman-era activities. Overall, this asset has **medium value** based on its evidential value.
- 3.5.50 During the construction of a water pipeline, an archaeological strip, mapping, and excavation project was carried out near Great Horkesley. This investigation revealed several late Iron Age occupation features in the area (**4186**). This asset is adjacent to the draft Order Limits, on a field along Broad Lane. Of particular interest is a pit which

produced 348 grams of pottery dating to the late pre-Roman Iron Age. An environmental sample from this pit also contained charcoal and slag associated with iron working, indicating industrial activities in the vicinity. These late Iron Age occupation features provide valuable insights into the past human activities and the development of the local landscape in the Great Horkesley area. The presence of ditches, pits, and postholes, as well as the discovery of pottery and ironworking evidence, suggests a complex and diverse occupation during this period. Overall, this asset has **medium value** based on its evidential value.

- 3.5.51 Around the Iron Age occupation features (**4186**) are several undated cropmark complexes. Due to their proximity to this asset, there is a high probability that they date back to the Iron Age too. This includes a cropmarks complex including ring ditches, field boundaries, linear features, pits, and a trackway (**4062**), located c. 90 m south-east of **4219**, c. 350 m east of Great Horkesley and crossing the draft Order Limits. Just like the undated cropmarks complex east of Great Horkesley (**4228**), located along The Causeway and crossing the draft Order Limits. They all have evidential value and are of **low value**.
- 3.5.52 In the countryside between Wormingford and Little Horkesley, c. 80 m of the draft Order Limits is found an Iron Age pot (**4235**). It has historical and evidential value and is of low value.

## Roman Period

- 3.5.53 Colchester, once known as Camulodunum, played a pivotal role as a colonia and the capital of Roman Britain. Today, the region boasts a wealth of Roman archaeology, and the draft Order Limits runs through the hinterland of Roman Colchester. During the Roman era, Camulodunum was a thriving and strategically important settlement, marked by monumental structures, advanced infrastructure, and profound cultural influences. This area is a treasure trove of Roman artefacts, from coins and pottery to structural remnants, each providing a unique window into the past. As we delve into the Roman Period in this assessment, it's crucial to recognize that Roman influence extended well beyond Colchester. These sites not only illuminate Camulodunum's grandeur but also unravel the broader historical and cultural tapestry of Roman Britain.
- 3.5.54 Section D contains a wealth of Roman archaeology including a scheduled monument (**1013516**) and a significant number of non-designated Roman assets as recorded by the Essex HER. Together they shed light on the rich archaeological heritage of the region. These assets encompass a diverse range of discoveries, including cropmarks indicating possible roads and enclosures (**4059**), tiles (**4074**), lead coffins (**4081**), and various other artefacts. The varied nature of these findings provides valuable insights into the Roman occupation and activities in this area of Essex.
- 3.5.55 The line of a Roman road from Colchester to Coggeshall – 'Stane Street', as indicated by assets (**4121**) and (**4123**), serves as a tangible testament to the advanced road network established by the Romans in this region. It also indicates the strategic significance of connecting Colchester, a major Roman town, with Coggeshall, an important rural settlement. This road follows the present A120 road alignment but runs south of the present road from Lexden to TL 986248 in Colchester where it enters the town via the Balkerne Gate. Tracing the course of the Roman road, it can be observed that it runs in a nearly straight line, suggesting careful planning and engineering by the Romans. Overall, this asset is of **low value** based on its evidential and historical value. This road crosses the section E, but runs through the 250 m and 500 m buffer zones in section D.

## Great Tey/ Marks Tey/ Little Tey

- 3.5.56 The Roman villa located 450 m south of Warren's Farm (**1013516**) is a significant scheduled monument with a **high value** situated in a rural area surrounded by agricultural fields and woodland. It is located c. 870 m north of the draft Order Limits and c. 520 m to an draft Order Limits permanent access. Historic England have a heritage at risk site due, principally, to its vulnerability from ploughing. Situated near the Roman River, between Coggeshall Road and Brook Road, this Roman villa plays a crucial role in understanding the Roman history of the region and its connections to ancient transportation routes. The villa complex, although lacking standing structures, is well-preserved below the ploughsoil. It was partially excavated, revealing evidence of a substantial masonry building with tessellated floors and a hypocaust heating system. The villa's layout includes a yard area that likely housed ancillary timber buildings.
- Surface scatters of Roman artefacts, including mortar, painted wall plaster, and roof tiles, have been observed on the site. These artefacts, along with environmental deposits and evidence of industrial activities, provide valuable insights into the villa's inhabitants and the surrounding landscape. Overall, this asset has an evidential and historical value.
- 3.5.57 The setting of this scheduled monument is informed by its proximity to **medium value** cropmarks of a trackway or road, double-ditched on either side which could represent the line of Roman road and a rectangular enclosure (**4059**). This asset is located east of Brook Road, within the draft Order Limits. The trackway cropmark suggests the villa was linked to an ancient transportation route, possibly dating back to the Roman era, adding further historical value to the area. The rectangular enclosure cropmark hints at the potential existence of a settlement or administrative site associated with this road. The setting of the villa instils feelings of peace and tranquillity due to the rural surrounding, and, therefore, it makes a substantial contribution to the asset's value. However, the setting does not extend to the draft Order Limits due to the woodland to its south.

## Great Horkesley/ Little Horkesley/ West Bergholt

- 3.5.58 The Earthwork called Court Knoll (**1003757**) is a scheduled monument with a **high value** located c. 2.7 km north of an draft Order Limits cable compound, and c. 2.9 km north of the draft Order Limits. Its origins are tied to the lordship of Nayland or Eiland, with references dating back to 1768. The earthwork, marked by a D-shaped configuration with a mound in the NE corner, raises questions about its purpose and period of construction. The 1949 excavation revealed a building with Roman tile and Kentish Rag in the northern part of the enclosure. This finding, along with a scatter of Roman tile and Kentish Ragstone in the ditch east of the mound, suggests a connection to Roman occupation. The 1960 description notes a quadrangular earthwork with a low, faint rampart, a ditch, and a circular mound in the northeast corner. The site's strategic location at the old crossing of the Stour adds to its significance, possibly indicating a motte and bailey structure. The presence of a modern drain in the ditch and the controversy surrounding its date add complexity to its assessment. The name 'Court Knoll' implies a connection to a manorial court, possibly replacing an earlier hall. The existence of a motte raises the question of whether it served a defensive purpose, resembling a castle bailey. Overall, this asset has evidential and historical value and is of **high value**.
- 3.5.59 Its setting is informed by its location in a semi-rural, semi-residential area with agricultural fields to the south and residencies to its north-west and north. South-west is the river Stour. The location is quiet, quite off the main village road to the north of

the asset. Overall, the setting makes a considerable contribution to the asset's value. However, the setting does not extend to the draft Order Limits due to the distance and topography.

- 3.5.60 The identification of a Roman tile, along the Colchester Road and 10 m east of the draft Order Limits, suggests the existence of a structure, such as a building or a kiln. **(4074)**. This asset has **low value**.
- 3.5.61 The identification of a Roman road **(4120)** along the Nayland Road indicates a significant transportation route during the Roman period. The study of its alignment, construction techniques, and associated features can provide insights into Roman infrastructure, trade networks, and the movement of people and goods within the region. This Roman road is mapped for 1.8 km in a north and south alignment starting south Great Horkesley. It crosses the draft Order Limits and has **low value**.
- 3.5.62 Roman pottery sherds and a coin were found near Colchester Road, 155 m east of the draft Order Limits. **(4130)**. Tile was discovered about 300 m south of this asset. The tile was discovered from deep ploughing along the west of a small field south of the Colchester road, c.150 m west to the draft Order Limits **(4132)**. This clustering of **low value** Roman artefacts suggests the presence of a settlement or at least structures/ buildings during this period.
- 3.5.63 In the countryside between Wormingford and Little Horkesley, c. 80 m of the draft Order Limits is found Roman sherds and coin **(4236)**. It has historical and evidential value and is of low value.
- 3.5.64 Not too far from **4236**, c. 150 m west of the draft Order Limits, was found Roman tile **(4238)** in deep ploughing along the west of a small field. This asset has evidential and historical value and is of **low value**.

### **Fordham / Aldham / Eight Ash Green**

- 3.5.65 The discovery of two Roman burials during an excavation **(4163)** following the detection of a lead coffin **(4081)** highlights the presence of a burial site or cemetery from the Roman period within the draft Order Limits, east of Mill Road, 700 m east to Fordstreet, around Fordham Hall Farm. The examination of these burials can provide insights into burial practices, funerary customs, and the social structure of the local community. It offers a glimpse into the Roman mortuary traditions and the significance attached to burial rituals. Rectilinear enclosures and pits **(4082)** are found within the draft Order Limits, in the same area, just like a Roman lead coffin and accompanying skeleton **(4093)** were found south of Fordham, within the draft Order Limits. Due to their evidential and historical value, these assets are assessed as **medium value**.
- 3.5.66 Along Brook Road, from Aldham and Marks Tey, were found pottery sherds **(4128)**, including Roman sherds and flint artefacts. This asset is located south of the draft Order Limits, within the 250 m buffer zone. It provides valuable insights into the Roman to post medieval period of the region and therefore has **low value** due to its evidential value.

## **Early Medieval**

- 3.5.67 During the early medieval period the North Essex claylands and North Thames Basin witnessed a relatively dense population, despite the limited visibility of this era in the archaeological record. Saxon settlers were drawn to this region, characterised by fertile and well-drained soils, contributing to the establishment of a particular

settlement pattern. This pattern had largely taken shape by the late 11th century, as evidenced by entries in the Domesday Survey of 1086-1088, which documented settlements like Fordham, Wormingford, West Bergholt, Aldham, Stanway, Great and Little Tey. These places offer a window into the early medieval history of the area, unveiling the agricultural and pastoral economy centred around dispersed settlements and intricate field systems that thrived during this time.

- 3.5.68 While Section D of the Project may appear to have limited direct representation of the early medieval period, it is important to acknowledge that many of the present-day villages, hamlets, and churches within the region likely had their origins rooted in this era, even if these specific origins are not explicitly documented in the HER. The landscape itself bears the marks of early medieval habitation, and the very presence of these settlements suggests their longevity and historical continuity. The layout of these places, their patterns of land use, and their interrelationships often harken back to early medieval beginnings, forming an essential part of the area's historical narrative. Though they may not be individually recorded, these locales provide valuable context and evidence for understanding the early medieval heritage of the region.

## Medieval

- 3.5.69 The medieval period is richly represented in Section D of the Project, offering us a multifaceted view of this historical epoch. The continuity of settlement patterns and agricultural practices from the early medieval period into the medieval era is a defining feature of the landscape. It is characterized by mixed farming, dispersed settlements, and a palpable sense of historical endurance. This continuity is substantiated by the archaeological record, where findings such as charcoal-rich pits, medieval pottery sherds, and evidence of kilns unveil a vivid tapestry of the past. Furthermore, the landscape is graced with the presence of medieval churches, moated enclosures, and other distinctive features that continue to be touchstones for understanding the medieval milieu in this region.

### Great and Little Horkesley/ Horkesley Heath

#### *Designated Heritage Assets*

- 3.5.70 'Church Of All Saints' (**1222737**), is a Grade I am building located north of Greak Horkesley and c.1.3 km north of the draft Order Limits. The Church holds historical, communal, and architectural value. It comprises a blend of architectural styles spanning centuries, including elements from the 12th, 15th, and 20th centuries. Notably, the stone finial crosses and exquisite detailing, featuring abundant fleurons from the early 15th century, demonstrate the structure's historical value. The preservation of these intricate architectural features significantly contributes to the church's overall value. Moreover, the modern lych gate, installed around 1901, adds a layer of historical depth. Overall, the Church of All Saints has **high value** primarily due to its rich evidential, historical, and architectural heritage.
- 3.5.71 The immediate setting of the Church of All Saints is the churchyard, which, combined with the surrounding grassed areas, imparts a sense of openness and tranquillity to the environment. However, the proximity of the busy A134 to the west somewhat disrupts the peaceful ambiance of the area. The wider setting encompasses the A134 to the east, a modern housing estate to the south, the listed building 'The Chantry' to the north, and expansive agricultural fields in the surrounding areas. Because of the presence of mature trees in the churchyard and other vegetation to the south, the setting does not extend to the draft Order Limits. Nevertheless, the

overall setting enhances the value of the church, offering a serene and historical atmosphere.

- 3.5.72 'Church Of St Mary Wiston' (**1351854**) is a Grade I listed building, located near Wissington, c. 2.5 km north of the draft Order Limits. The Norman church, dating back to the 11th century, possesses significant evidential, historical, communal, and aesthetic value. Its architectural features, including the apsidal chancel, timber-framed belfry, and intricately ornamented arches, testify to centuries of local heritage. The church's interior, adorned with well-preserved 13th-century wall paintings and a notable 15th-century octagonal font, provides a tangible link to the past. This ecclesiastical edifice stands as a testament to the enduring spiritual and communal value of Wiston. Therefore, it has **high value**.
- 3.5.73 Its setting is informed by its location and its relationship with its churchyard. Indeed, situated within a spacious garden and gravelled area, the 'Church of St Mary Wiston' enjoys a tranquil and expansive setting. It is bordered by the churchyard to the northwest and an open field to the north, augmenting its sense of space and historical context. To the south, a wooded area enhances the serene ambiance of the location. The church's rural surroundings contribute significantly to the overall enhancement of its value. However, the presence of woodland, varying topography, and surrounding vegetation preclude its setting from extending to the draft Order Limits.
- 3.5.74 West of West Bergholt is the 'Church of St Mary' (**1225120**), a Grade I listed building located c. 400 m south-east of the draft Order Limits. The Church holds **high** historical, aesthetic, and evidential **value**. The asset comprises a nave with a west bell-turret, chancel, south aisle, and south porch. While the original building's north wall dates to c. 1000 AD, subsequent modifications include the addition of a square-ended chancel and the south aisle during the 14th century. The chancel was extended eastward around 1300, featuring Y-tracery side windows, while the south aisle exhibits curvilinear windows. Inside, it boasts impressive architectural elements like massive tiebeams, a gallery at the west end, and notable historical artifacts.
- 3.5.75 The setting of the church is significantly informed by its historical and functional relationship with its churchyard and other listed buildings (**1266531**, **1266508**, **1225131**) belonging to the same area. The setting is also informed by its relationships with a medieval pound found to its south-west. The church stands within a churchyard on slightly elevated ground, surrounded by boundaries comprising hedges, brick walls, or tree lines. There are open views to the east and obstructed views to the west and north due to mature trees. Overall, the church's setting enhances its value, yet it does not extend to the draft Order Limits due to the presence of mature trees to the west of the churchyard and adjacent woodlands. However, it's worth noting that depending on the season, particularly during defoliation, the Project may become more visible.
- 3.5.76 The 'Church of Saint Andrew' (**1225419**), a Grade I Parish Church with Norman origins, features a west tower, nave, lower chancel, and south porch. It is located along Church Road, north of Wormingford, c.2.5 km north of the draft Order Limits. The structure is constructed from coursed rubble with red brick quoins, and the roofs are ridged and gabled, covered in pegtiles. The tower boasts north lancets and bell openings with tuber mid-wall insets and stone sills, possibly original. Most windows are from the 14th century period, showcasing ogee reticulated tracery. The north aisle stands out with its northwest quoin of Roman brick and long-and-short masonry above, while the roofs are Victorian, with the north aisle's roof incorporating early

timbers. This asset has historical, aesthetic, and evidential value and then holds a **high value**.

- 3.5.77 Set in a tranquil rural setting, the church is positioned slightly back from a quiet road, nestled within a churchyard that imparts a feeling of open space to the surroundings. Woodland lies to the west, and to the north, east, and south, the church is surrounded by residential and characterful properties. The church is an integral part of a serene rural community, and it's setting significantly enhances its overall value. However, due to the distance, vegetation, and topography, the setting does not extend to the draft Order Limits.
- 3.5.78 Near West Bergholt is High Trees Farmhouse (**1225133**), a Grade II\* building, located c. 1.75 km from the draft Order Limits. The asset boasts high evidential, historical, and architectural value, spanning various centuries of construction and remodelling. Its structural evolution from the early 15th century to the 19th century reflects its historical value. The timber-framed house with peg-tiled roof and characteristic gabled cross-wings showcases a rich architectural heritage. Notable features include a c. 1600 brick lateral stack and an axial stack with arched panels. Overall, the farmhouse is of **high value**.
- 3.5.79 Its setting is informed by its proximity to the Bergholt Heath and four other post-medieval Grade II buildings located within or adjacent of the heath: **1225136**, **1266528**, **1225134**, **1266510**. Its setting is also informed by its location. Indeed, the property stands within a garden, sheltered by a high hedge and wooden gate, contributing to its historical ambiance. To the west and north-west, the presence of fields enhances the rural ambiance. Nevertheless, the proximity of a busy junction and the accompanying traffic exerts a somewhat negative influence on the overall value of the setting. Additionally, despite minimal alterations to the direct setting of the farmhouse since the first OS map in 1881, the introduction of dwellings on its south-eastern side, across Lesden Road, has altered its surroundings, impacting its setting. Overall, the setting does not extend to the draft Order Limits and makes moderate contribution to the value of High Trees Farmhouse.
- 3.5.80 South-west of West Bergholt are two listed buildings Cooks Hall (**1225091**) a Grade II\* listed building, located c. 860 m south-east of the draft Order Limits, and 'Horsepits Farmhouse' (**1266529**), also a Grade II\* located c.1.2 km from the draft Order Limits. These asset holds **high value** based on their evidential, historical, and aesthetic value. They have medieval origins with subsequent 16th century, 17th century, and 18th century additions. Despite alterations over the centuries, the assets retain their historical character.
- 3.5.81 Their setting is informed by their rural roadside locations. Situated within privately access areas and both surrounded by a farm complex, the hall and the farmhouse enjoy a serene setting. The properties are both surrounded by a garden and open grassland, enhancing their rural appeal. Woodland lies to the east of the hall, while agricultural fields envelop both the assets, further accentuating the properties' countryside ambiance. Their setting effectively amplifies the assets' overall value, but their setting does not extend to the draft Order Limits.
- 3.5.82 North of Great Horkesley, along the Causeway is 'Chapel Cottage' (**1222607**), a Grade II\* listed building, adjacent to the draft Order Limits. It consists of a 15th-century chapel and a priest's residence, once serving as the charity chapel of St. Mary the Virgin, established, and endowed by John Falcon. Constructed primarily from red brick in English-bond style, it features crow-stepped gables and a stone finial cross at the east apex. The building has one diagonal chimney shaft in the

centre of the roof and another square-set chimney at the west gable. This asset has a **high value** based on its evidential, historical, and architectural value.

- 3.5.83 The setting of Chapel Cottage is a complex interplay of various elements that significantly contribute to its overall value. It is in a rural area to the north of Great Horkesley, intimately connected with the surrounding agricultural landscape, bearing testament to a rich historical and functional relationship. The asset's unique position along a Roman Road is a pivotal aspect that enhances its historical value. Although the road can be a busy one, this very characteristic was likely deliberate in its placement, and it contributes to our understanding of its historical context. Consequently, the setting of Chapel Cottage, with its blend of rural surroundings and the historically significant road, makes a noteworthy contribution to its value and extends to the draft Order Limits.
- 3.5.84 Within Great Horkesley, mainly along The Causeway, are two medieval listed buildings: 'Rookery House' (**1225575**), located c. 60 m south of the draft Order Limits and 'Woodland' (**1267713**), located c.50 m north of the Order Limit.
- 3.5.85 Rookery House (**1225575**), designated as Grade II, is an architectural relic with a rich historical lineage. Its origins trace back to the late 15th century, subsequently undergoing modifications and extensions in later epochs. The structure presents a distinctive amalgamation of stuccoed brick and rendered timber framing, characterized by two parallel gabled slate roofs. The front range, added in the late 19th century, is marked by symmetrical features, gable end stacks, and double-hung sash windows. In contrast, the rear range, dating from the late 15th century, exhibits an asymmetrical facade with notable bargeboards and casement windows.
- 3.5.86 Woodlands (**1267713**) is also a Grade II-listed house dating back to the 14th century. Its architecture features an exposed timber frame, jettied crosswings, and distinctive details like cusped vergeboards on the west front. The building includes a 14th-century north wing. The south wing, dating to c. 1400, adds to its historical value. Modern casement windows are now in place.
- 3.5.87 Overall, both listed assets have an evidential, aesthetic, and historical value leading to a **medium value**.
- 3.5.88 Their setting is semi-rural semi residential. It is informed by their roadside location within the settlement and by their relationship with a medieval kiln site (**4069**). This setting enhances the value of these listed buildings. Despite the trees or high hedge around these two assets, their setting does extend to the draft Order Limits.
- 3.5.89 'Breewood Hall' (**1222977**), Grade II listed building, is a timber-framed structure dating from the 15th century, located north-west of Great Horkesley, c. 190 m north of the draft Order Limits. Breewood Hall showcases a blend of historical architectural elements. Characterized by its coved eaves, pegtiled hipped roof, and distinct guilloche plaster details, this building is a testament to its time. The property includes both a crosswing and a later red brick range, while internally featuring chamfered joists and a mantle-beam dating to approximately 1500. Overall, Breewood Hall is assessed as having **medium value**, primarily due to its evidential, historical, and aesthetic value from the 15th century.
- 3.5.90 Nestled within parkland and surrounded by vast agricultural fields, Breewood Hall enjoys a tranquil and picturesque environment. It shares its surroundings with a collection of characterful properties forming a harmonious farm complex. This setting is notably informed by its historical and functional connection with the post-medieval Cart Lodge with Granary over to the south of Breewood Hall (**1222979**), emphasizing

its role within the larger estate. The serene atmosphere, coupled with the presence of mature trees, contributes to the overall character. Despite the presence of these trees, it's important to note that the setting extends to the draft Order Limits.

- 3.5.91 North of Great Horkesley, along the A134, is 'Altire House' (**1222604**), a Grade II listed building, located c.200 m north of the draft Order Limits. This house has features from both the 15th and 19th centuries. While the property exhibits architectural elements dating back to the 15th century, such as the front (west) elevation with painted brick walls and stucco arches, it also underwent developments in the 19th century. During this later period, new elements were introduced to the house, creating an intriguing blend of historical and more contemporary design. This unique amalgamation of architectural styles enhances the property's overall value, making it a noteworthy representation of the region's evolving architectural heritage. These elements collectively bestow upon it a **medium value** based on its evidential, historical, and architectural value.
- 3.5.92 The setting of Altire House is characterized by its secluded nature, sheltered from the main road by a well-established hedge, trees, and fence. The property is set back from the bustling main road, affording it a spacious garden. The busy-ness of the road is a detractor however, these assets would have been placed deliberately by this road. Therefore, the road does contribute to their understanding. Overall, its setting makes great contribution to its value and does not extend to the draft Order Limits.
- 3.5.93 'The Retreat' (**1267502**) and 'Bucks' (**1222998**) are two Grade II listed cottages located close to each other, along London Road and c.670 m north of the draft Order Limits. 'The Retreat,' with its 15th century timber-framed structure, thatched roof, and original hall features, and 'Bucks,' with its 15th/16th century thatched roof and diamond mullion window, both have historical and architectural value. Therefore, they have both **medium values** based on their evidential, historical, and aesthetic value. Furthermore, their presence as a heritage group adds to their overall value.
- 3.5.94 Their setting is informed by their proximity to each other. Both cottages are set back from the quiet and rural road, nestled within gardens that provide a sense of space and tranquillity. A well-established hedge along the roadside helps shield the assets from view. To the north and south, other characterful buildings contribute to the overall charm of the area. Wooded areas and well-established hedges to the west and east, along with surrounding grassland, further enhance their value. The setting does not extend to the draft Order Limits.
- 3.5.95 On the edge of Boxted Heath's edges (**4211**), c.400 m south of the draft Order Limits, is the Grade II listed building 'Otters Brook Cottage' (**1387251**). This building is a heritage asset distinguished by its evidential, historical, and aesthetic value. Dating back to the 15th century, its well-preserved timber-framed structure embodies the architectural style of its time, contributing to its historical value. Moreover, the cottage's charm is enhanced by the seamless integration of late 20th century timber casement windows, which complement its historical character. This blend of historical and aesthetic elements categorizes 'Otter Brook Cottage' as a property of **medium value**, underscoring its importance in the local heritage landscape.
- 3.5.96 Its setting is informed by its relationship with the medieval non-designated Boxted Heath's edges (MCC9149 - **4211**). The setting is further informed by the surrounding agricultural landscape with which the assets have a functional and historical relationship. The setting of the asset makes a substantial contribution to its value. However, due to intervening mature tree growth providing screening, the setting does not extend to the draft Order Limits.

- 3.5.97 South-east of Little Horkesley, along Vinesse Road, is a Grade II\* listed building 'Kings Farmhouse' (**1224018**). It is c.9600 m north of the draft Order Limits. This asset offers substantial historical value, dating back to the 15th century or possibly even earlier. Its architectural value is evident in the timber-framed and plastered structure, enriched by a high-quality red brick truncated central chimney stack crowned with six octagonal shafts, featuring bell-feet. The roof, characterized by its ridged and gabled peg-tiled design, exhibits a distinctive long jetty on the south elevation, further emphasizing its historical value. While the building's original features are preserved, such as the Venetian tripartite window and the central door with six panels, it also showcases elements of evolution, notably a brick extension on the north side. Overall, the house has **high value** based on its evidential, historical, and aesthetic value.
- 3.5.98 The setting of Kings Farmhouse complements its historical and architectural value. Situated a short distance from a quiet rural road, the property is surrounded by expansive agricultural fields and grass fields, contributing to its serene and peaceful ambiance. To the north-west, the conservation area of Little Horkesley (**CA10**) adds to the character of the surroundings, enhancing its overall value. However, due the presence of woodlands to the south, the setting does not extend to the draft Order Limits.
- 3.5.99 'King's Farmhouse' (**1266530**) is a Grade II listed building, located to the west of Colchester Road, c.100 m west of the draft Order Limits. It boasts a **medium value**, primarily due to its evidential, historical, and aesthetic value. This timber-framed and plastered house, dating to the 16th century or possibly even earlier, features an L-plan configuration. However, the fenestration has all been updated and comprises various modern window types.
- 3.5.100 The setting of this farmhouse is informed by its location. It is nestled within a garden featuring mature trees. It is situated along a quiet road, within a serene rural area characterized by woodlands and fields surrounding the garden. This setting plays a significant role in contributing to the property's overall value. Furthermore, thanks to its open southern view, the setting extends all the way to the draft Order Limits.
- 3.5.101 'Maltings Farmhouse' (**1224438**), 'Chestnut Cottage' (**1224017**) and 'Upper Dairy Farm House' (**1223992**) are three Grade II listed buildings located along Holt's Road and c.1 km north of the draft Order Limits. Upper Dairy Farm House, a 16th-century structure, stands along the street with its timber-framed and plastered façade and a red gabled roof, evoking the historical character of the era. Chestnut Cottage, another medieval structure, features a thatched roof and exposed oak frame, while Maltings Farmhouse, dating back to the 16th century, combines timber-framed and painted brick elements, showcasing a fusion of architectural styles. They all have **medium value** due to their evidential, historical, and aesthetic value.
- 3.5.102 Their setting is informed by their roadside location. Maltings Farmhouse is located at a junction and has a front garden bordered by a low hedge. Nestled along a quiet rural road, Chestnut Cottage is surrounded by fields, while Upper Dairy Farm House enjoys a similar rustic setting, with gardens and yards. Their setting significantly contributes to their value but does not extend to the draft Order Limits.
- 3.5.103 'Bottengom's' (**1225432**) a Grade II house that traces its origins back to around 1500, has **medium** value due to its evidential, historical, and aesthetic value. Its timber-framed structure, with plastered walls, embodies centuries of architectural evolution. The exterior has a harmonious blend of modern casements. The red brick gable ends to the north and south provide a striking contrast, highlighting the home's historical value. The asset is c.1.7 km north of the draft Order Limits.

- 3.5.104 Bottengom's is a secluded house within a dense woodland. Surrounded by expansive fields, it enjoys a serene ambiance that enhances its value. However, due to the topography and the vegetation, the setting does not extend to the draft Order Limits.
- 3.5.105 'Wood Hall' (**1225349**) is a Grade II listed building, located in Wormingford, c.1.8 km north-west of the draft Order Limits. It is a medieval house, likely dating back to the 15th century, with an H-plan and a painted brick extension forming a double range to the east. The eastern crosswing is jettied to the north, and the central hall block includes a full-length lean-to addition on the north side. The property is moated and accessed via a bridge. In 1332, it was held by William de Horkesleigh and Emma his wife. Overall, this asset has **medium value** based on its evidential, historical, and aesthetic value.
- 3.5.106 Wood Hall is set back from the road and surrounded by modern development and gardens. To the south and east, there are fields, while to the south and west, residential properties can be found. The asset is situated at the end of a settlement in a quiet and rural location. However, the nearby road can be busy, so the setting adds limited value. Additionally, the setting does not extend to the draft Order Limits due to the distance and vegetation to its southeast.

#### *Non-Designated Heritage Assets*

- 3.5.107 South of Great Horkesley is one non-designated medieval kiln site. It is a kiln site (**4069**) with a large quantity of pottery found in it. It is located c. 425 m south of the draft Order Limits but c. 80 m south of an draft Order Limits pipeline branch. It holds **low value** due to its evidential value, primarily offering insights into the local medieval pottery industry.
- 3.5.108 Further south-east, c. 150 m, is Tye Green (**4189**), a small triangular-shaped area, of 1 hectare in size, located at the junction of Boxted Road and Holly Lane, north-east to Great Horkesley. It is situated 280 m north of the draft Order Limits. This green extends along Holly Lane to the north and is depicted on historical maps such as the 1777 Chapman & Andre Map and the First Edition OS 1 Inch Map from 1800. This asset has **low value** based on its evidential value.
- 3.5.109 During the construction of a water pipeline, an archaeological strip, map, and excavation project was carried out near Great Horkesley. This investigation revealed, amongst other features from various time periods, two medieval pottery sherds, found without clear stratification (**4186**). This asset is adjacent to the draft Order Limits, on a field along Broad Lane. The investigation also suggests the presence of kilns during the medieval period. This asset has **low value** based on its evidential value.
- 3.5.110 Hey Green, located in Little Horkesley (**4208**), holds a significant place in the local history of the area. It is prominently depicted on the 1777 Chapman & Andre Historic Map, situated south-west of the settlement of Little Horkesley. The southernmost part is within the draft Order Limits. The green follows the curve of Workhouse Road and is bordered by several buildings, including Haygreen Farm. The historical map reveals the presence of several buildings along the edge of the green, with Haygreen Farm being one of them. Hey Green, is recognized as common land, serving as a valuable communal resource from the medieval to the post medieval period. It has **low value** based on its evidential value.
- 3.5.111 Boxted Heath (**4211**) is a heritage asset originally depicted on the 1777 Chapman & Andre Historic Map. Located south-east of the settlement of Great Horkesley, where the present-day Boxted stands, the heath exhibits an irregular shape spanning 338.2

hectares. The draft Order Limits crosses the asset in a west to east direction. The map showcases several buildings situated along the heath's edges, including the 'Otters Brook Cottage' (**1387251**) from the 15th century. Notably, the heath is shown to be connected to Horkesley Heath on its western side. However, subsequent representations on the County Series at 1:2500 Scale Epoch 1 Historic Map (1874-1887) reveal a significant reduction in size and a different rectangular shape, amounting to 4.233 hectares. The heath has lost much of its land to farmland and experienced increased urbanization from the expansion of Boxted. Consequently, it is no longer connected to Horkesley Heath. In modern times, the heath seems to have entirely disappeared as urbanization from Boxted has taken over the land. Overall, the heath has evidential value but is of **low value**.

- 3.5.112 A medieval boundary ditch was recorded 65 m east of the draft Order Limits, 2.5 km northwest of Great Horkesley. (**4006**). This asset dates to the 12th to early 13th century. This ditch, aligned in a north-south direction, runs parallel to Crabtree Lane, approximately 80 meters to the west. Excavations of the area uncovered approximately 0.5 kilograms of pottery from the same period, which was retrieved from the topsoil. This asset is of **low value** based on its evidential value.
- 3.5.113 Adjacent to an draft Order Limits permanent access, c. 300 m west of the draft Order Limits is a medieval kiln site (**4351**) with pottery and signs of burning. This asset has evidential and historical value and is of **low value**.

## Aldham and Fordham

### *Designated Heritage Assets*

- 3.5.114 The Grade I listed Church of St. Michael and All Angels (**1274018**) is located approximately 2.7 km south-east of the draft Order Limits and 600 m east of Cosford Green. The building is made from coursed rubble and Romano-British brick. It dates to the 12th century with 13th, 14th, 19th, and 20th century alterations. It holds **high value** due to its historical, evidential, and aesthetic value. It exhibits impressive architectural features.
- 3.5.115 The setting of the church is informed by its presence as a medieval to post-medieval ecclesiastical complex to the east of Cosford Green, designed to be viewable from the surrounding landscape. This asset remains a focal point within the area. The immediate setting is that of the churchyard surrounded by an established deciduous tree border within a wider a rural agricultural landscape. The setting of this asset has predominantly remained within its original rural agricultural landscape setting. Therefore, it makes great contribution to the church's value. The setting of this asset is however confined to its immediate vicinity by its surrounding trees and does not therefore extend to within the draft Order Limits. Any development within the draft Order Limits therefore has no potential to affect the value of this asset.
- 3.5.116 The 'Church of All Saints', a Grade I listed building (**1239789**) is located c. 430 m north-west of the draft Order Limits. The Church, in Fordham, is a significant heritage site with historical, architectural, and communal value. Its origins can be mainly attributed to a rebuilding effort around 1340, marking a historical connection to the medieval period. Architecturally, the church showcases notable features such as its west tower with diagonal buttresses and the use of red brick in closely spaced bands, particularly in the tower buttresses, representing a distinctive architectural style. The presence of a south porch with a side-purlin and rafter-braced roof dating to around 1500 adds to its aesthetic value, offering a glimpse into historical construction techniques. Communally, the church serves as a place of worship and community

gatherings, contributing to the social fabric of the area. Its role as a symbol of community identity and shared faith enhances its communal value. Overall, the Church of All Saints embodies a blend of evidential, historical, architectural, and communal values, making it a **high value** heritage asset in the region. Historic Environment Records made the 14th century west wall of the nave of an earlier build and the west face of the tower repaired in red brick in c.1700 as monument (4357).

- 3.5.117 The setting of the church is informed by its roadside location within the settlement and by its attendant graveyard. They are both on a slightly higher ground. The graveyard is defined by a low hedgerow and low redbrick wall allowing for a clear view of the asset from Church Road to the east. However, the boundaries to the north and south are wooded allowing for glimpsed views in and out. Its setting is also informed by its relationship with six other buildings surrounding the churchyard: The medieval 'Three Horseshoes Public House' (1239808), 'Fordham Hall' (1267740) and 'Granary South-West of Fordham Hall' (1273566); and the post medieval '72, Church Road' (1239819), 'Oak House' (1239790) and 'Barn East of Fordham Hall' (1239812). The first edition OS map of 1881 records the church surrounding by these buildings. During the beginning of the 20th century, according to the OS map edition 1925, these buildings remained the same with no residential development around. Today, residencies are found north to these buildings, but in other all direction it is a rural area. The setting of the church makes a moderate contribution to its value due to its roadside location, but due to woodlands around and the topography, the setting does not extend to the draft Order Limits.
- 3.5.118 Near Hemp's Green is the Grade I listed 'Crepping Hall' (1266574), c.1.9 km west of the draft Order Limits. This asset possesses historical, evidential, and architectural value, and is of **high value**. This medieval structure, originating in the late 12th century, is notable for its well-preserved architectural elements, including remnants of the original open hall design, intricate crown post roofs, and significant historical features such as the Elizabethan-era intrusion and the 1314 arched oak doorway. The Hall stands as an exceptional cultural asset, representing centuries of architectural and historical importance.
- 3.5.119 Its setting is informed by its historical and functional relationship with the post-medieval 'Stable Block And Cottage To East Of Crepping Hall' (1224982) and its location in a farmyard. Its setting greatly enhances its value, with a tranquil and rural location set back from the road, hidden by established hedges, surrounded by farmland, a farm complex to the north, and a wooded area to the southwest. Due to the distance and the vegetation in the intervening landscape, the setting likely does not extend to the draft Order Limits.
- 3.5.120 Within the vicinity of Wakes Colne is 'Old House' (1225029), located c.2.7 km north-west of the draft Order Limits. It is a Grade II\* listed building holding a **high value** due its evidential, historical, and aesthetic value. This is an early 16th-century house, with exposed roof timbers, intricate details such as water jet crossbeams, and visible internal timbers.
- 3.5.121 Its setting is informed by its location in a rural area and within a farmyard with mature trees. The proximity to a noisy road and railway limits its setting's contribution to its value, and it does not extend to the draft Order Limits due to vegetation and topographical features.
- 3.5.122 Within the Fordstreet conservation area (CA9) are four Grade II\* listed buildings holding a **high value**: 'Wash Farmhouse' (1239836) a 13th century house, 'Barnards Farmhouse' (1239874) a 14th century structure, 'The Old House' (1337411) a 16th century house and 'Threshers' (1110885) an early 16th century house. The Wash

Farmhouse is located c.700 m north-west of the draft Order Limits. This is a house with a blend of architectural elements from different centuries. The main part is timber-framed and rendered, while an 18th-century wing adds red brick. Notably, it boasts a unique, well-preserved timber-framed roof with intricate details. Barnards Farmhouse is located c.480 m west of the draft Order Limits and features a blend of architectural elements, with its 14th century timber-framed and plastered structure originally designed as an H-plan but now reduced to a T-plan. The Old House is situated c.300 m from the draft Order Limits and is a structure with an H-plan layout, exhibiting exposed timber framing, peg-tiled roofs, distinctive chimney stacks, a unique door, plastered hall walls, and a crenellated tie-beam in the southern cross-wing. Threshers, also located c.300 m of the draft Order Limits, is a timber-framed house with a central door, sash windows, and a hipped peg-tiled roof. It has an added south cross-wing from the later 16th century, and the roof structures vary. They all hold evidential, historical, and aesthetic value.

- 3.5.123 The setting of these assets is informed by their location in the settlement, all being along the busy and noisy main road. Their setting is also informed by their relationship to each other and with the conservation area (**CA9**). The assets are all visible on the first edition OS map of 1881. Since the first edition, the settlement has grown a little during the 20th century, particularly west of The Old House and Threshers as well as south of Wash Farmhouse, but in general and even today, Fordstreet has retained its rural nature surrounding by fields. However, due to the presence of the bustling road (the A1124) near the assets, their setting makes little contribution to their value. The setting of these listed buildings is limited in its extension and does not extend to the draft Order Limits due to settlement topography and vegetation.
- 3.5.124 Along Brook Road is found the Grade II\* listed building 'Aldham Hall' (**1306270**), located c.100 m south-east of the draft Order Limits. This medieval house boasts remarkable architectural features with evident Elizabethan details. This timber-framed and plastered structure reveals its historical value through well-preserved panelling and an intricately designed fireplace with a pilastered overmantel, showcasing a blend of 14th century framed floors with barefaced soffit-tenons. Notably, it retains a semi-hexagonal tie-beam in the west wing, indicative of a 16th century conversion to two stories. Overall, this hall has **high value** based on its evidential, historical, and aesthetic value.
- 3.5.125 Its setting is influenced by its connection with the post-medieval Grade II 'Wagon Lodge to the north of Aldham Hall' (**1337391**) and the presence of a medieval moat (MEX34244 - **4072**). It is further informed by the surrounding agricultural landscape with which the asset has a functional and historical relationship. Set within a garden and shielded by tall trees from a busy road, its setting significantly contributes to its value, and extends to the draft Order Limits.
- 3.5.126 In the centre of Aldham is 'St Margaret and St Catherine Church' (**1170063**), a Grade II\* listed building, located c.150 m of the draft Order Limits. The medieval Church was reconstructed in 1854 by Hakewill, adopting an early English architectural style and constructed with coursed pebbles dressed in stone. The church features a nave and south aisles, a chancel, a timber south porch, and a west tower crowned with a tall parapet spire made of stone. The tower's parapet is adorned with a string of ballflower and corner buttresses. While the south windows exhibit lancet-style design, the chancel windows are characterized by the perpendicular style. The roofs are gabled and peg-tiled, incorporating reused elements from the former medieval church, specifically seven cents. A decorative south porch, a relic from the earlier church, and a 14th-century door with an ogee head and wrought iron sanctuary

handle reset in the south wall of the tower are notable features. Overall, the church has **high value** based on its evidential, historical, and aesthetic value.

- 3.5.127 The setting of the Church of St. Margaret and St. Catherine is primarily shaped by its location within the settlement. The church is also informed by its location within a churchyard, enclosed by a brick wall, hedges, shrubs, and a wooden fence. The churchyard also features several mature trees. To the south and west of the churchyard lies a road, while beyond the church, the surroundings transition into fields. Despite the presence of traffic noise from the nearby road, the area maintains a relatively quiet ambiance. The churchyard contributes positively to the asset's value and serves as a protective barrier from the road. Although mature trees are present, the setting extends to the draft Order Limits.
- 3.5.128 'Parish church of St Albright' (**1224899**) is a Grade II\* listed building found in Copford, c1.8 km south of the draft Order Limits. The church bears **high value** due to its historical, evidential, communal, and aesthetic value. Originating from the 12th century, the church features a remarkable early 12th-century nave with well-preserved original roofing elements, including scissor-bracing and notched lap joists. The north wall is adorned with distinctive 12th century windows framed in Roman brick jambs and rounded stone heads, alongside a mid-14th-century window and a 15th century window in the south wall, exhibiting detailed craftsmanship. The southern wall boasts a 12th century window and an entrance doorway from the same era with a rounded Roman brick arch. Further enhancements, like the 1826 chancel addition and 15th-century North porch, contribute to the church's historical and architectural value.
- 3.5.129 In terms of setting, the church is situated within a churchyard, creating a sense of space as it stands back from the road and road junction. The asset is a part of a linear settlement, and a residential neighbourhood lies to the east. The church enjoys picturesque views of fields to the north and south. However, it's worth noting that only a low wall separates the churchyard from the road, and traffic noise impacts the asset's overall value. On the positive side, mature trees and the surrounding fields enhance the setting. Due to the presence of infrastructure such as the A12, railway, industrial areas, and residential developments, the church's setting does not extend to the draft Order Limits.
- 3.5.130 'Barn to north-east of Hoe Farmhouse' (**1170078**) is a Grade II\* listed building, located in the Hoe farmyard along Rectory Road, c.500 m north of the draft Order Limits. This asset has a **high value** based on its evidential, historical, and aesthetic value. The 16th century barn displays an impressive oak frame on red brick bases, black weatherboard cladding, peg-tiled roofing, and a north-facing midstrete with a Victorian low-pitched roof. Comprising five bays without aisles, this structure features main posts with jowls, continuous wall studs with exterior wind-bracing, six studs per bay, cambered tie-beams, quadrant-style arch-braces, sturdy compressive collars, side purlins, and wind-braces.
- 3.5.131 Its setting is informed by its location in a farmyard and by its relationship with two post medieval listed buildings belonging to the same farm 'Hoe Farmhouse' (**1337413**) and 'Barn north of farmyard at Hoe Farm' (**1110895**). These assets are visible on the first edition OS map of 1881. The setting is further informed by the surrounding agricultural and quiet landscape with which the assets have a functional and historical relationship. Overall, the setting of the barn enhances its value, and despite some tree lines it extends to the draft Order Limits.
- 3.5.132 Within the Fordstreet conservation area (**CA9**) are two medieval Grade II listed buildings, 'The Malting' (**1110884**) an early 16th century house and 'The Shoulder of

Mutton Public House' (**1239791**) a 14th century pub. The Malting is located c.170 m north of the draft Order Limits, while the other listed house is c.400 m west of it. They have **medium value** based on their evidential, historical, and aesthetic value. They also have group value.

- 3.5.133 Their setting is informed by their location in the conservation area and by their roadside location. The pub is situated along the busy A1124 in a yard or parking area and lies in a residential area surrounded by fields to the west. The Malting is positioned on the same busy and noisy road at the southern end of a residential settlement, with mature trees to its south, east, and north. There is a high probability that the road was already there when the buildings were built. The busy-ness of the road is a detractor however, these assets would have been placed deliberately by this road. Therefore, the road does contribute to their understanding. Their setting is further shaped by the surrounding agricultural fields which has a historical relationship with the assets. Positioned within the conservation area and shielded by tall mature trees from the Project, their setting, however, does not extend to the draft Order Limits.
- 3.5.134 The 'Three Horseshoes Public House' (**1239808**), 'Fordham Hall' (**1267740**) and the 14th century 'Granary South-West of Fordham Hall' (**1273566**) are all Grade II listed buildings located in Fordham, c.400 m of the draft Order Limits. They all have **medium value** based on their evidential, historical, and aesthetic value and as a heritage group.
- 3.5.135 Their setting is informed by their location in the settlement as well as their relationship with each other and with the Grade I 'Church of All Saints' (**1239789**). The first edition OS map of 1881 records these assets. During the beginning of the 20th century, according to the OS map edition 1925, these buildings remained the same with no residential development around. Today, residencies are found north to these buildings, but in other all direction it is still rural. Therefore, the setting of these assets makes a great contribution to their value due. Also, due to woodlands to their east and south, their setting does not extend to the draft Order Limits.
- 3.5.136 'Plummers Farmhouse' (**1239831**) a Grade II listed building, dating back to c. 1500 or earlier, is a timber-framed two-story structure with exposed framing. It is located c.8600 m west of the draft Order Limits. It has a peg-tiled roof and a red brick chimney stack near the centre of the ridge and another at the west end. This asset has **medium value** based on its evidential, historical, and aesthetic value.
- 3.5.137 The setting places it within a garden surrounded by a high hedge, rendering it slightly concealed from the road. While the house is situated along a busy road in a linear residential area, there are open fields to the west and east. Therefore, the setting of this asset makes great contribution to its value. Nevertheless, despite an open view to the east of the asset, the setting does not extend to the draft Order Limits.
- 3.5.138 Along Rams Farm Road, c.400 m west of the draft Order Limits, are two Grade II listed buildings: 'Rams Farmhouse' (**1239837**) and 'Barn to east of Rams Farmhouse' (**1239876**). Both assets hold **medium value** due to their evidential, historical, and aesthetic value. The c. 1510 house, clad with white weatherboards, features a distinctive timber-framed structure with sash-hung windows and a central chimney stack, while the 14th century barn retains its original timber framing, showcasing architectural elements such as jowled posts and a gabled midstrey.
- 3.5.139 Their setting is informed by their roadside location as well as their historical and functional relationship. They are both recorded on the first edition OS map of 1880, but the Rams Farm is called Dean's Farm. Both assets are in a farmyard surrounding

by a small semi-circular woodland from west to east. Further away are fields but to their west is another farmyard. Despite their proximity to the road, their setting makes great contribution to their value. Being shielded by tall mature trees from the Project, the setting of the assets does not extend to the draft Order Limits

- 3.5.140 The Grade II 'Old Hill House' (**1110893**), dating back to the 15th century, holds **medium value** attributed to its evidential, historical, and aesthetic value. It is located c. 180 m east of the draft Order Limits. The property's unique combination of architectural styles, including 15th century framing and 18th century front elevation, serves as a tangible representation of evolving construction techniques over the centuries. This historical depth, complemented by the well-preserved 18th century front elevation, contributes to its overall visual appeal, positioning it as an asset of interest within its contextual surroundings.
- 3.5.141 Its setting is characterized by its location back from the road within a residential area. This placement offers a sense of community, albeit with considerations for potential road-related noise due to its proximity. The property's immediate surroundings consist of neighbouring residential properties, coexisting with agricultural fields, striking a balance between urban and rural elements within its setting. The surrounding did not change much since the first edition OS map of 1881. Overall, the setting of this asset makes great contribution of the asset's value, and it does not extend to the draft Order Limits.
- 3.5.142 Along rectory Road is 'Mott's Cottage' (**1337414**), a Grade II listed building built in the early 16th century. It is located c.350 m north of the draft Order Limits. This asset exhibits a traditional timber-framed and plastered design with a ridged and gabled peg-tiled roof. This former open hall house has been modified to a single storey with attics, featuring a central plastered chimney stack and a modern front porch. The north front includes a row of five modern casements and two gabled dormers. Overall, this setting has **medium value** for its evidential, historical, and aesthetic value.
- 3.5.143 The setting of Mott's Cottage is characterized by its roadside placement within a rural context. The house is situated within a garden, bordering a road, and is separated by hedges. The surrounding area is predominantly rural, with fields to the north and south, and nearby residential properties to the east and west. Despite its proximity to the road, the setting makes great contribution to its value. Despite some tree lines the setting of this asset does extend to the draft Order Limits.
- 3.5.144 The 'Old Timbers' (**1266270**), is an early 16<sup>th</sup> century plastered timber frame house with thatched roof. It is located c. 450 m north-west of the draft Order Limits. It has **medium value** based on its evidential, historical, and aesthetic value.
- 3.5.145 The Old Timber is situated along a quiet rural road, with a farm complex to the north and northwest, providing a picturesque view. The asset overlooks a vineyard to the north and agricultural fields to the west. Wooded areas to the west enhance the scenic surroundings. To the south, more agricultural fields contribute to the quiet and rural character of the location. Overall, the setting makes great contribution to the asset's value and extends to the draft Order Limits as a pipeline branch crosses a field close to this asset belonging to its setting.

#### *Non-Designated Heritage Assets*

- 3.5.146 Church of St Margaret (**4229**) is in Aldham, c. 100 m west of the draft Order Limits. It was demolished in 1885 and rebuilt of old materials (including 13th and 14th century features) on a new site in the village (**4071**). This asset has **low value** based on its evidential value.

- 3.5.147 Gallows Green, Aldham (**4212**) is located 170 m east of the draft Order Limits, west of Eight Ash Green. On the 1777 Chapman & Andre Historic Map the green assumes a roughly triangular shape, covering an area of approximately 1.3 hectares. The map reveals the presence of five clusters of buildings along the green's periphery, including the noteworthy Grade II century Old Hill House (**1110893**), believed to date back to the 15th century. On the County Series at 1:2500 Scale Epoch 1 Historic Map (1874-1887), another listed building emerges on the green's edge: the mid-19th century Grade II listed Green Farmhouse (**1170055**). The current iteration of the green maintains a similar shape and size to the Epoch 1 version, albeit with an increased number of residential dwellings constructed around its periphery. This green is of **medium value** based on its evidential and historical value and being part of a heritage group.
- 3.5.148 The Church of St Margaret and St Catherine (**4070**), located along Rectory Road in Aldham and 95 m north of the draft Order Limits, is a significant sacred site with a rich history. Records indicate that there was a church present at this location as early as 1315. The church comprises a nave and south aisle, but the chancel is of a single level, resulting in a noticeable tilt. There was also a small structure on the west end, housing two bells. In 1885, the original church was demolished, but the materials from the old building, including some features from the 13th and 14th centuries, were reused to construct a new church on a different site within the village. Despite the reconstruction in 1885, the church retains historical value and architectural elements from the medieval period. Furthermore, this asset has historical link with the adjacent Grade II listed building 'Church House Farmhouse' (**1170085**). Overall, this church has a **medium value** based on its evidential, historical, aesthetic, and communal value.
- 3.5.149 Aldham Hall Moat (**4072**), located near Brook Road, is c. 90 m south of the draft Order Limits. It is an incomplete and fragmentary moat. It surrounds the medieval Grade II\* listed building 'Aldham Hall' (**1306270**), built in an attenuated Z plan, featuring 14th century and Elizabethan details. The moat adds to the historical value of the site, hinting at its medieval origins and architectural features. The listed building and the moat are a heritage group. Therefore, the moat is of **medium value** based on its evidential and historical value.
- 3.5.150 The moated site Cobbs Farm (**4075**) located along Fossetts lane is situated c. 250 m north-west of the draft Order Limits. This asset has **low value** based on its evidential value.
- 3.5.151 The site of the mill near Fordham Bridge (**4095**), located along Mill Road and 60 m south-east of the draft Order Limits, holds historical value as a former corn mill. Its existence can be traced back to the Domesday Book, reflecting its long-standing presence in the area. Unfortunately, the mill was demolished in 1903 and is of **low value**. Descriptions of the mill indicate that it was weather boarded, had a tiled roof, and featured a hoist on the east side.
- 3.5.152 Within the draft Order Limits, along Fossetts Lane, cropmarks of a probable medieval moated site have been recorded (**4104**). This has **low value** based on its evidential value.
- 3.5.153 The site of Church House Wood (**4134**), situated south of Rectory Road and 210 m north of the draft Order Limits in Aldham, holds evidential value. Within the wood, there is a scattered presence of 14th century pottery, tiles, and glass fragments. These artefacts provide valuable insights into the historical activities and human occupation of the area during this century. This asset is located within a field with

cropmarks such as linear features, possible pits, and a rectilinear enclosure (**4073**) of unknown date. The asset 4134 is of **low value**.

- 3.5.154 Cropmarks of former field boundaries have been recorded south of Coney Byes Lane (**4053**), 190 m south of the draft Order Limits, north-east of Fordham. This asset dates from medieval to post-medieval period and has **low value** based on its evidential value.
- 3.5.155 In a field, c. 460 m south-west of Aldham and c. 200 m north of the draft Order Limits was found a scatter of 14<sup>th</sup> century pottery, tile and glass (**4240**). This asset has evidential and historical value and is **low value**.

## Marks and Little Tey/ Great Tey

### *Designated Heritage Assets*

- 3.5.156 The 'Medieval Moat at Marks Tey Hall' (**1477794**) is a schedule monument with **high value** based on its evidential, historical, and aesthetic value. It is located c. 1.6 km north of the draft Order Limits. This asset encompasses the surviving northern, eastern, and southern arms of a rectangular moat encircling Marks Tey Hall, stands as a site of exceptional historical and archaeological importance. Its remarkably well-preserved features, including the distinct platform and three water-filled moat arms, underscore its value as a well-preserved relic of the past. This moated site not only offers the potential for revealing valuable archaeological and palaeoenvironmental insights, particularly within its water-filled ditches, but also boasts a rich documented history spanning centuries, tracing the lineage of the Tey family and the evolution of the site.
- 3.5.157 Its setting is informed by its relationship with the Grade II\* listed Marks Tey Hall South Barn (**1224577**), a 15th century building, which is a heritage at risk site and has **high value** due to its evidential, historical, and aesthetic value. It is also informed by its relationship with the post medieval Grade II listed building 'Marks Tey Hall' (**1224576**) and the post medieval Grade II 'Barn To North West Of Marks Tey Hall' (**1266768**). They all are directly surrounding by a peaceful rural environment to their south but by industrial areas and the busy A12 further north. Overall, the direct setting of both medieval assets (**1477794** and **1224577**) makes moderate contribution to their value, but it doesn't extend to the draft Order Limits.
- 3.5.158 'Church of St Barnabas', Grade I listed building (**1238806**) is located in Chappel, at the intersection of Chappel Hill and the Street, c. 2.9 km from the draft Order Limits, is a valuable example of 13<sup>th</sup> century Early English architecture. The unbroken height and ground plan of the nave and chancel showcase the church's historical significance. The Western bell turret and spire, along with the walls made of coursed flint and rubble, contribute to its architectural charm. The 18<sup>th</sup> century-style South porch adds character to the structure. The West end features indurated gravel and Early English lancets, while the East end boasts Norman windows and a Y-tracery window with quatrefoiled head. The South wall exhibits a mix of 14<sup>th</sup>, 15<sup>th</sup>, and 19<sup>th</sup> century windows, and the altered South door now has a square-headed design. The prominent string courses and the Late 14<sup>th</sup> century window in the centre enhance the church's visual appeal. Overall, this asset has evidential, historical, communal and aesthetic value and is of **high value**.
- 3.5.159 Its setting is informed by its position within the settlement, along a quiet street. There is a front green area separating the church from the street. Infront, to the south is a field giving a sense of space. To the north are mature trees. Some residencies are located east and west of the church. Further north is the river Colne. Overall, its

setting makes considerable contribution to its value but, it does not extends to the draft Order Limits.

- 3.5.160 'St James's Church', Grade I listed building (**1224521**) is located north of Little Tey, c. 185 m south of the draft Order Limits. While the information known about it doesn't provide a precise construction date, it indicates that it has Romanesque origins, suggesting that its likely dates to the Romanesque period, which in England corresponds to the 11th and 12th centuries. The Church is a historically, architecturally, and communally significant heritage site. Its Romanesque origins and various architectural features from different periods offer a tangible connection to the past, making it an illustrative example of the region's architectural evolution. This architectural diversity, from Romanesque to Norman and beyond, provides aesthetic value, showcasing the church's visual appeal. Moreover, the church holds communal value as a place of worship and community gatherings, symbolizing the community's identity and fostering social interaction. Overall, the Church of St. James represents a rich tapestry of heritage values and has a **high value** based on its evidential, historical, aesthetic, and communal value.
- 3.5.161 Its setting is informed by its relationship with one non designated asset (**4355**). The **medium value** asset **4355** include a medieval building with walls which are coursed flint rubble with pudding stone and the post medieval restauration of the church. To the south of the church is Little Tey and residential areas but in all other directions it's rural. Overall, its setting makes great contribution to its value but, although the church and its churchyard are surrounded by some mature trees, it is likely that its setting extends to the draft Order Limits.
- 3.5.162 The Grade I 'Church of St Barnabas' (**1223408**) is in the Great Tey conservation area (**CA8**), c.1 km north of the draft Order Limits. It holds **high value** due to its strong evidential, historical, communal, and aesthetic value. The church's construction dates to the 12th century, with various architectural elements added over time. Notably, the early 14th century reconstruction of the chancel and the late 14th century construction of the north and south transepts have contributed to the church's historical value. Moreover, the central tower, known for its remarkable design, adds to the aesthetic appeal. The chancel, which still features its original roof of seven cants, provides valuable evidence of the church's enduring history.
- 3.5.163 Its setting is informed by its location in the settlement and the conservation area. The church is situated within a churchyard on slightly elevated terrain. Roads border it to the north and west, with noticeable traffic noise in the churchyard. While the presence of some mature trees offers partial screening, the church remains visible from the adjacent roads. A low wall delineates the churchyard's boundaries, limiting open views. The surrounding area is predominantly residential, but the churchyard, with its few mature trees, imparts a sense of open space despite the proximity to the roadways. The setting is further informed by its relationship with three post-medieval listed buildings, 'Rectory Cottage' (**1223155**), 'Guildhall Cottages' (**1223389**) And 'The Old Vicarage' (**1223178**). Overall, the setting does enhance its value, however, due to the presence of vegetation, dwellings, and topography, it does not extend to the draft Order Limits.
- 3.5.164 The 'Church of St Andrew' (**1266781**) is a Grade I listed building located along Church Lane, c. 880 m south of the draft Order Limits. It is a Romanesque Parish Church with a timber-topped tower and modern addition. The presence of Roman brick window quoins, a tympanum above the south door, and unique elements contribute significantly to its evidential and historical value. The chancel, featuring a 14th century priests' door and intricate windows, adds to its aesthetic value. Overall,

this church holds a **high value** due to its evidential, historical, aesthetic, and communal value.

- 3.5.165 The Church of St Andrew is positioned away from the main road, accessed through a narrow track with parking on one side. The setting feels enclosed on the northwest/west side, owing to its proximity to the medium value 'Old Rectory' (**1224522**), and established vegetation that shields the landscape beyond to the west. To the east and south, the churchyard is bordered by a low hedge, offering open views towards the A120 and the railway line. The area experiences noticeable traffic and farm-related noise, but overall, it maintains a quiet and less busy ambiance. The Listed Building is shielded from the south and west, although it is likely visible in the churchyard and behind the church. Overall, its setting makes great contribution to its value but does not extend to the draft Order Limits.
- 3.5.166 The **high value** Grade II\* listed 'Badcocks Farmhouse' (**1239073**) is located approximately 1.93 km south-east of the draft Order Limits and is of evidential, aesthetic, and historical value. The two-storey farmhouse dates to the late 15th century with 16th, 17th, 18th and 19th century extensions and alterations. The farmhouse is also located on the island of a former moated manor, the moat of which can still be observed.
- 3.5.167 The setting of the farmhouse is informed by its presence as a medieval to post-medieval moated manorial/ farmstead complex within a rural agricultural landscape. The setting of this asset has predominantly remained within its original rural agricultural landscape setting which makes a considerable contribution to the current value of the asset. The setting of this asset is however confined to its immediate vicinity to the east, south and west by trees and surrounding farm buildings and is partially restricted by trees to the north. The setting of this asset therefore does not extend to the draft Order Limits.
- 3.5.168 The Grade I **high value** 'Church of St. Mary' (**1238968**) is located approximately 2.3 km south-east of the draft Order Limits and is of evidential, aesthetic, communal and historical value. The church dates to the 12th century with 13th, 15th and 20th century alterations and is constructed with mixed rubble and Romano-British period brick.
- 3.5.169 The setting of the church is informed by its presence as a medieval to post-medieval ecclesiastical complex within Easthorpe, and originally designed to be viewable from the surrounding landscape. This asset remains a focal point within the area. The immediate surrounding setting is that of the churchyard surrounded by village buildings and trees. The surrounding buildings appear to be a mix of medieval to post-medieval buildings to the south and west and modern buildings to the north and east which already makes a moderate contribution to the current value of the asset. The setting of this asset is confined to its immediate vicinity and does not therefore extend to within the draft Order Limits.
- 3.5.170 The **high value** Grade II\* listed 'Easthorpe Hall' (**1273949**) is located approximately 2.5 km south-east of the draft Order Limits and is of evidential, aesthetic, and historical value. The two-storey timber framed house dates to the 15th century with 16th and 17th century alterations and extensions.
- 3.5.171 The setting of the hall is informed by its presence as a medieval to post-medieval manorial/ farmstead complex within a rural agricultural landscape within Easthorpe. The setting of this asset has predominantly remained within its original semi-rural agricultural landscape and village setting which makes a considerable contribution to the current value of the asset. The setting of this asset is however confined to its

immediate vicinity by trees and surrounding farm buildings and does not therefore extend to within the draft Order Limits.

- 3.5.172 The **high value** Grade II\* listed 'St. Mary's Grange' (**1239072**) is located approximately 2.5 km south-east of the draft Order Limits within Easthorpe and is of evidential, aesthetic, and historical value. The two-storey timber framed house dates to the early 15th century, later extended in the late 15th century, with further 16th, 18th, and 19th century alterations.
- 3.5.173 The setting of the house is informed by its presence as a medieval to post-medieval house within a rural agricultural landscape on the eastern edge of Easthorpe. The setting of this asset has predominantly remained within its original semi-rural agricultural landscape and village setting which makes a considerable contribution to the current value of the asset. The setting of this asset is however confined to its immediate vicinity by trees and does not therefore extend to within the draft Order Limits.
- 3.5.174 'Gulls Farmhouse' (**1267431**) is a Grade II\* listed building located along Buckleys Lane, c.1 km north of the draft Order Limits. It holds **high value**, attributed to its strong evidential, historical, and aesthetic value. This 15th century two-story timber-framed house, clad in weatherboards, features a peg-tiled, gabled roof with notable red brick chimneys. Formerly an open hall, it provides evidence of its affluent Yeoman status, making it a historically significant structure known in its deeds as Broadgores, Angevins, and Shatbolts.
- 3.5.175 The setting of Gulls Farmhouse is characterized by its road-side location in a rural area surrounded by fields. The presence of a high hedge along the road restricts the view of the house from the roadside. It generally enjoys a peaceful and quiet atmosphere, surrounding by fields, except for any potential traffic along the road. There is an open view to the south. The setting is also informed by the surrounding agricultural landscape with which this asset has a functional and historical relationship and by its relationship with four-post medieval listed buildings belonging to the Bucklers Farmhouse (**1223173**, **1223176**, **1223174**, **1223175**) and located in front of the Gulls Farmhouse. Overall, the setting of the Gulls Farmhouse enhances its value but does not extend to the Order Limit even if considering the open landscape to the south of this property, there's a significant likelihood that the tops of the towers might be visible from the asset.
- 3.5.176 The 'Old Rectory' (**1224522**) is a 19th century Grade II listed building with mid-19th century alterations. It is a former vicarage featuring three bays and two stories, topped with a hipped roof clad in slate. This asset holds a **medium value** based on its evidential, historical, and aesthetic value.
- 3.5.177 Situated along a quiet road, the 'Old Rectory' is positioned with a front garden and gate, near the Grade I St. Andrew's Church (**1266781**). Residences are present to the south and north, with the church located to the north. However, the setting is affected by noise from the A12, impacting the overall ambiance of the building. Also, west, and east are fields. The presence of mature trees to the south and northeast contributes to the overall character of the setting. Overall, the setting makes great contribution to the value of this asset but does not extend to the draft Order Limits.
- 3.5.178 'Teycross Farmhouse' (**1223211**) is a Grade II listed building located at the junction of Lamberts Lane and Earls Colne Road/Tey Road. It is situated c.2 km north of the draft Order Limits. It has **medium value** due to its evidential, historical, and aesthetic value. This is a house from the 15th century, featuring timber framing and plastered walls, with a pegtiled roof that's ridged and gabled.

- 3.5.179 Its setting is informed by its roadside location and by its historical and functional relationship with the post-medieval 'Barn To South Of Teycross Farmhouse' (**1223213**). The setting is further informed by the surrounding agricultural landscape with which this asset has a functional and historical relationship. It is set back from the road, set in farmyards, and protected by private gardens, hedges, or trees. Therefore, despite the proximity to roads, the setting does enhance the value of this asset. Due to topography and mature tree lines in the intervening landscape, however, the setting does not extend to the draft Order Limits.
- 3.5.180 'Abrahams Farmhouse' (**1223258**) is a Grade II listed building located along Flories Road. This asset is situated almost 2 km north of the draft Order Limits. It has **medium value** based on its evidential, historical, and aesthetic value. It is a 15th/16th century house on an H-plan, framed in timber.
- 3.5.181 Its setting is informed by its roadside location and within a farmyard. The setting is further informed by the surrounding agricultural landscape with which this asset has a functional and historical relationship. The house is set back from the road with a front garden with few trees and hedge. Despite the proximity with a road, the setting does enhance the value of this asset. To the south of this asset is an open view, but due to the distance and the vegetation, there is a high probability that the setting does not extend to the draft Order Limits.
- 3.5.182 'Granary north-west of Teybrook Farmhouse' (**1223157**) and 'Barn to east of Teybrook Farmhouse' (**1223158**) are two medieval Grade II listed buildings belonging to the Teybrook farmyard (**4225**). These three assets have **medium value** due to their evidential, historical, and aesthetic value. While the barn is a 15th century structure with later additions, hipped roof, and black weatherboard cladding, the Granary is an early 16th century timber-framed house, with two storeys, tarred weatherboard cladding and peg-tiled roof. The Teybrook Farm (**4225**) consists of sixteen buildings, with over 50% of the original structures still standing. Seven of these buildings are listed, including the Granary (**1223157**) and the 'Barn to east of Teybrook Farmhouse' (**1223158**) but also the post medieval 'Stables To South Of Teybrook Farmhouse' (**1267423**), the post medieval 'Barn To South East Of Teybrook Farmhouse' (**1267424**), the post medieval 'Teybrook Farmhouse' (**1223156**), the post medieval 'Barn To Rear Of Stables At Teybrook Farm' (**1267422**), and the post medieval 'Garden Wall At Teybrook Farm' (**1223159/4193**) which was restored in the 18th century. Most of the demolished buildings disappeared before 1922. Some of the converted buildings now serve as dwellings, while modern structures to the south may have agricultural or storage purposes. The site is situated above the Roman river adding to its historic landscape features. All these assets have a group value. They are located between c. 20 m and c. 400 m north and north-east of an draft Order Limits.
- 3.5.183 The setting of the assets is shared and is informed by the relationship between the designated assets and their relationship with other elements of the legible farming complex. The assets are recorded on the first edition OS map of 1881. The setting is further informed by the surrounding agricultural land with which the assets have a historic and functional relationship. The assets are situated in well-established grounds containing mature trees and defined by mature tree-lined hedgerows, and woodlands which creates a sense of privacy and enclosure. This setting makes a considerable contribution to the value of the assets. The setting does extend to the draft Order Limits.
- 3.5.184 At the end of a private track, west of East Gores Road, is 'Trumpingtons' (**1223335**), a Grade II listed building. This asset is located c.600 m north of the draft Order

Limits. It has **medium value** based on its evidential, historical, and aesthetic value. It is a timber-framed 15th century house with later additions on a moated site, featuring a T-plan layout, peg-tiled roofs, and updated late 19th and 20th-century windows.

- 3.5.185 Its setting is influenced by its location in a farmyard, in a rural environment. It is also informed by the historical and functional relationship with two post-medieval listed buildings belonging to the same farmyard, 'Barn To North West Of Trumpingtons' (**1223256**) and 'Stable Range To North East Of Barn To North West Of Trumpingtons' (**1267359**). They are recorded on the first edition OS map of 1881. The setting is further shaped by the surrounding agricultural land with which the asset has a historic and functional relationship. Overall, its setting makes great contribution to its value. However, the presence of a woodland approximately 200 m south of the property, along with tree lines to the south of the farmyard, restricts the setting from extending to the draft Order Limits.
- 3.5.186 The Grade II listed 15th century 'Mott's Farmhouse' (**1266736**) is in Motts Farm (**4214**), a historic farmstead situated north of the settlement of Marks Tey, c. 80 m northwest of the draft Order Limits. The Farmhouse, with its origins tracing back to the 15th century, possesses evidential, historical, and aesthetic value. Over the centuries, the house has undergone substantial rebuilding, yet retains key elements of its original structure. Within the same site is also the Grade II listed 17th century barn known as 'The Barn' (**1224584**), a historic farmstead situated north of the settlement of Marks Tey. As for the non-designated Motts Farm (**4214**), this farm is depicted on the 1897-1904 Epoch 2 map, originally consisted of five detached buildings. Today, approximately 50% of the original buildings remain, including the farmhouse and the barn. The Barn appears to have been converted into a dwelling and the farmhouse has undergone modern extensions and alterations, suggesting a shift in the site's use to residential purposes. The map also indicates the presence of three farm ponds, of which two have survived, while the third pond was likely removed during the same period as the original outbuildings. Overall, due to their evidential, historical, and aesthetic value, the two listed building (**1266736** and **1224584**) hold a medium value and the Mott Farm has **low value** due to its evidential and historical value.
- 3.5.187 The setting of the farmhouse, the barn and the farm is informed by their relationship with each other. It is also shaped by their secluded location and providing a sense of separation from the nearby busy A12 road, although traffic noise remains audible. The surrounding rural environment, marked by expansive fields to the south, further emphasizes its countryside context, enhancing the overall value of the assets. Despite hedgerows and mature trees, the setting does extend to the draft Order Limits.
- 3.5.188 'Godbolts Farmhouse', a Grade II listed building (**1224528**) belonging to Godbolt's Farm, Marks Tey (**4215**), is located west of Marks Tey and east of Little Tey. It is also situated c. 200 m of the draft Order Limits. The farmhouse, likely dating from the 15th century, possesses **medium value** due to its evidential, historical, and architectural value. Its timber-framed structure, evident from the interior, reflects traditional building methods, enhancing its historical value. The charming combination of timber framing and period-specific features also contributes to its aesthetic value, making it a noteworthy heritage asset in the local context. The Godbolt's Farm, (**4215**) is a historic farmstead with eight buildings, and over 75% of them survive, including three grade II listed structures, the medieval farmhouse (**1224528**), the post medieval 'Barn South Of Road, West Of Godbolts Farmhouse' (**1266766**) and the post medieval 'Barn North Of Road At Godbolts Farm' (**1224574**). The farm has undergone changes, with new buildings constructed and the farm split between agricultural and

residential use. Remnants of a moat can still be seen on the site. Furthermore, 80 m west is a potential DMV (**4058**) . Overall, all these assets have a group value. Therefore, the Godbolt's Farm (**4215**) has **medium value** due to its evidential and historical value and as part of a heritage group.

- 3.5.189 The setting of the farmhouse and the farm is informed by their relationship with each other and by their proximity with a potential DMV (**4058**) . The setting is also informed by their relationship with the surrounding agricultural landscape with which they have historic and functional relationships. The setting is also shaped by the roadside location along Coggeshall Road which is busy and only a wooden fence protects the assets from the road. However, there is a high probability that the road was already there when the farm and its buildings were built. The industrial areas and new dwellings all around the asset, affect its value. Overall, the setting of Godbolts Farmhouse (**1224528**) and the farm (**4215**) make a low contribution to its value.
- 3.5.190 The view to the east is quite open despite some trees, hedges, and road around the asset. However, even if there are possible views of the Project from the farm and the farmhouse, their setting does not extend to the draft Order Limits.
- 3.5.191 Along Great Tey Road is 'The Old Rectory' (**1224447**) a Grade II listed building, located less than 20 m south of the draft Order Limits. It has **medium value** based on its evidential, historical, and aesthetic value. This is a complex house, potentially dating back to the 16th century or earlier, with later additions. It exhibits a T-plan structure with a parallel range forming the front. The original part is timber-framed and plastered, while the front section is made of painted brick. The house features small-paned sash windows, a central Regency-styled door with an Arabesque porch, and a distinctive semi-circular bow window on the south side.
- 3.5.192 Its setting is informed by its roadside location, within a rural environment. Only a low wooden fence and a hedge protect the house from a busy road. The asset is surrounded by fields and is set back from the road within a front garden. Overall, the setting makes great contribution to the asset, which extends to the draft Order Limits.
- 3.5.193 'The Range south of barn to south of Knaves Farmhouse' (**1266775**) is a Grade II listed building with a **medium value** due to its evidential, historical, and aesthetic value. It is a building from around 1400, connected to a barn, characterized by timber framing with tarred weatherboards and a roof with one gabled end and one hipped end, covered in corrugated iron. It has two simple street-facing doors and features a high-quality oak frame with a side-purlin roof inside. The asset is located within Knaves Farm (**4217**), north of Marks Tey, c.117 m south of the draft Order Limits and c.15 m west of an draft Order Limits permanent access. Knaves Farm is 100 m south to the draft Order Limits. The farmstead has a long history, with a depiction of a farm called 'Naves' at this location on Chapman and Andre's 1777 map. On the 1897-1904 Epoch 2 map, it is shown as a large site with nine buildings, and approximately 75% of these structures still exist today. Three of them are grade II listed buildings, including the c.1850 Knaves Farmhouse (**1266773**), the 18th century barn to the south of the farmhouse (**1266822**), and the c.1400 range to the south of the listed barn (**1266775**). The demolished buildings were gone by 1973. The farmhouse has undergone a significant extension on its eastern side. Overall, the farm is part of a heritage group and has **medium level** due to its evidential and historical value.
- 3.5.194 The setting of the farmhouse (**1266775**) and the farm (**4217**) is informed by their roadside location in a farmyard. Their setting is also informed by their relationship with each other and with the other listed buildings of the farm complex, 'Knave's Farmhouse' (**1266773**) and the 'Barn to south of Knaves Farmhouse' (**1266822**). All the assets are recorded on the first edition OS map of 1881. The setting is further

characterized by the surrounding agricultural landscape with which the assets have a historical and functional relationship. Overall, the setting of the Range south of barn to south of Knaves Farmhouse (**1266775**) and the Knaves Farm (**4217**) makes great contribution to their value and it extends to the draft Order Limits.

#### *Non- Designated Heritage Assets*

- 3.5.195 Broad Green (**4207**), situated in Great Tey is a heritage asset with its own unique characteristics. It is depicted on the County Series at 1:2500 Scale Epoch 2 Map from 1897-1904, located to the east of Coggeshall and just west of Little Tey. On this historical map, Broad Green is represented as a narrow, linear shape that extends from east to west along London Road. It covers an area of approximately 1.0 hectare. The green is surrounded by a small number of buildings, many of which still exist today, adding to its historical value. Broad Green serves as a testament to the architectural heritage and development of the area, providing a glimpse into the past. This asset is located 300 m south of the draft Order Limits. It has **medium value** based on its evidential value.
- 3.5.196 The Eastgore Homestead Moat (**4056**) is a **low value** heritage asset with evidential value, located north of Broad Green, 210 m north of the draft Order Limits. This manorial site features a homestead moat that dates back several centuries. While the exact age is uncertain, an OS field report from 1976 suggests that the East Gate, a structure associated with the site, could possibly originate from the 16th century. However, it has been extensively modernized and does not possess remarkable historical features. It is worth noting that the irregular water features found to the north-west of the house, as described in the field report, were likely not part of a moat. Instead, they may have been initially excavated as clay pits or designed as ornamental ponds.
- 3.5.197 Little Tey House (**4057**) is a homestead moat located along Brook/Great Tey Road, the southern part of which is crossed by an draft Order Limits permanent access. It is c. 70 m north of the draft Order Limits. According to an OS report from 1976, the house itself is relatively modern and does not possess significant historical features. The report also mentions three ponds located to the south of the house. While these ponds are not indicative of a complete moated enclosure, it is speculated that if a moat had existed, it might have followed the hedge and parish boundary to the north. It is worth noting that there are no surviving traditions or records indicating that the farm or the house was ever moated in the past. Overall, Little Tey House holds a **low value** based on its evidential value.
- 3.5.198 Church Farm (**4058**), is located c. 236 m south of the draft Order Limits. The farm is situated along Coggeshall Road in Little Tey and is characterized by a collection of smallholdings, and there are indications that it may have been associated with a Deserted Medieval Village (DMV). An OS field report from 1976 mentions the absence of visible signs of medieval desertion, with the site mainly being ploughed land. Additionally, no evidence of the DMV can be observed on RAF Aerial Photographs. However, the isolation of the church within the area suggests the possibility of a DMV. The presence of a solitary church within the vicinity can sometimes indicate a former settlement that has since been abandoned or significantly diminished in size. While there may not be concrete evidence of medieval desertion at the surface level, the presence of Church Farm and its surrounding smallholdings, combined with the isolated church, provides intriguing hints of a historical past. Overall, this asset has **low value** based on its evidential value.

- 3.5.199 Approximately 870 m north of Copford, and 240 m south of the draft Order Limits are found medieval pottery sherds (**4234**). It has evidential and historical value and is of low value.

## Post Medieval

- 3.5.200 The post-medieval period encompasses a diverse array of heritage assets of historical importance. This era saw developments in transportation, communication, and drainage, all of which left their mark on the landscape. Concurrently, the agricultural sector continued to thrive, leading to the ongoing re-organisation and management of the landscape. The established medieval settlements within the broader Section D region experienced growth and expansion during the post-medieval period, driven by population increases resulting from intensified farming practices. Outside the boundaries of these larger settlements, the post-medieval landscape predominantly retained its rural character, characterized by scattered villages, hamlets, and farmsteads surrounded by enclosed agricultural and pastoral field systems and with brickmaking in some areas.

### Great and Little Horkesley/ Horkesley Heath

#### *Designated Heritage Assets*

- 3.5.201 Near Wissington is 'Wiston Mill' (**1033616**) a Grade II\* listed building located 2.5 km north of the draft Order Limits. This asset has a **high value** based on its evidential, historical, and architectural value. This timber-framed and weatherboarded watermill, although no longer in operation and partly adapted into a dwelling, boasts a remarkable external design that reflects the craftsmanship of the era and adds to its historic value. The mill's facade, featuring a well-proportioned 1:2:1 window arrangement with double-hung sashes and glazing bars, is an outstanding representation of period architecture, notable for its meticulous detailing and historical context. Furthermore, the inclusion of a 16th century timber-framed and plastered house within the mill's complex adds historical depth and contributes to its status as a significant example of vernacular architecture.
- 3.5.202 Its setting is informed by its location in a peaceful rural environment, surrounded by arable fields and pasture. To the south, a wooded area enhances the natural charm of the surroundings. Accessible via a private drive, the property maintains its tranquil character. While the setting undeniably enhances the mill's overall value, the presence of woodland, topographical variations, and other forms of vegetation prevents its extension to the draft Order Limits.
- 3.5.203 Positioned at the extreme west of Section D, 'Langham Lodge' (**1223519**), a Grade II listed building, is a heritage asset with evidential, historical, and aesthetic value, dating back to the 16th century. It is located c. 215 m south of the draft Order Limits but c. 60 m west of an draft Order Limits permanent access. Its well-preserved timber-framed structure from this era provides tangible evidence of construction techniques and styles from the period. Additionally, the property contributes to the aesthetic value of the local heritage due to its traditional architecture, seen in features like the gables and red brick chimneys. As such, this heritage asset can be considered of **medium value**, with its historical and aesthetic contributions being notable aspects.
- 3.5.204 The setting of Langham Lodge is primarily informed by its rural context and location on a private road, contributing to a tranquil and serene environment. Although the property is not accessible, being at the end of a private road, it remains visible from points along it, providing opportunities for observation. The presence of mature trees

within the garden further enhances the natural surroundings. Open fields to the south-east add to its rural character. Despite its proximity to the A12, the area maintains a peaceful ambiance. The combination of these elements enhances the value of this asset. The asset being surrounding by high mature trees/ woodland, its setting does not extend to the draft Order Limits.

- 3.5.205 Along Langham Lane is 'Langmoor House' (**1274047**), a Grade II, constructed around 1800 and located c.115 m north of the draft Order Limits. Its architectural characteristics, including the painted brickwork, slated roof, and double-hung sash windows, are typical of the period, contributing to its value. The presence of a well-preserved door with William and Mary styling further enhances its historical value. While it doesn't possess exceptionally distinctive features, it still holds value as a representative example of the architectural style of its time. Thus, the asset can be classified as having a **medium value** based on its evidential, historical, and aesthetic value.
- 3.5.206 The setting of Langmoor House is shaped by its roadside location, which places it alongside a rural road and exposes it to passing traffic. However, it benefits from a buffer zone created by a gravel area, providing a sense of space around the asset. The property overlooks picturesque agricultural fields, contributing to its rural character. Although there are some residential buildings to the south-west along the road, the overall setting remains tranquil and rural and makes a great contribution to its value. The presence of mature trees between the asset and the draft Order Limits partially screens it from immediate surroundings. Nonetheless, the setting extends to the draft Order Limits.
- 3.5.207 Further north, along Langham Lane, is 'Malting Farm Cottage' (**1223471**) a Grade II listed building, located c.120 m north of the draft Order Limits. Constructed during the 17th century, this timber-framed building displays a blend of plaster and black weatherboards, which is characteristic of the architectural style of its time. The thatched roof and red brick chimney at the ridge junction further accentuate its historical value. While Malting Farm Cottage may not exhibit exceptional uniqueness, it serves as a quintessential example of rural architecture from the 17th century. Therefore, the asset holds a **medium value** based on its evidential, historical, and aesthetic value.
- 3.5.208 Malting Farm Cottage is positioned within a garden, set back from the road, and shielded from view by a well-established hedge. The property enjoys a serene and tranquil location along a quiet rural road, encompassed by expansive agricultural fields and abundant vegetation. These features create an isolated ambiance around the asset, contributing to its overall value. Despite a small woodland acting as a buffer between the asset and the draft Order Limits, it is highly probable that the upper portion of any towers would still be visible from Malting Farm Cottage. Consequently, the setting of the asset extends effectively to the draft Order Limits, considering objective criteria.
- 3.5.209 In the vicinity or within Boxted Heath (MCC9149 - **4211**) are several Grade II listed buildings of **medium value** based on their evidential, historical, and aesthetic value:
- 'Wenlocks' (**1238703**) is located c.1 km north of the draft Order Limits. It is a timber-framed dwelling dating back to the 16th century. It is adorned with black weatherboarding and a thatched roof, embodying significant historical value through its architectural features

- ‘Honeysuckle Cottage’ (**1238704**), a 17th century timber-framed structure with a thatched roof, offers historical and aesthetic value. It is located c. 1.2 km north of the draft Order Limits
- ‘Weatherboarded Barn At Oldhouse Farm’ (**1238756**), is c. 400 m north of the draft Order Limits. This farm, dating back to the 17th century, represents an example of traditional agricultural architecture. Its timber-framed structure, weatherboarded exterior, and characteristic midstrey contribute to its historical value. This barn stands as a tangible relic of rural heritage, showcasing the architectural techniques of its time
- ‘Boxted Lodge’ (**1238585**), ‘Red Brick Tower Range South East Of Garden Wall At Rear Of Boxted Lodge’ (**1238586**), ‘Gate Lodge To Boxted Lodge’ (**1238583**) and ‘Wall And Gateway To Gate Lodge To Boxted Lodge’ (**1238584**) are a group of heritage value with historical relationship. They are located c.1.5 km north of the draft Order Limits. They are all from the 19th century and have a historical and aesthetic value
- ‘Noake’s Farm Cottage’ (**1238712**) is located c. 860 m north of the draft Order Limits. This asset was constructed around the 1700s and embodies the architectural style of its era. Its timber-framed and plastered exterior, along with thatched roofing, reflects the traditional rural character of the region. While this cottage may not hold exceptional historical or architectural value, it serves as an illustrative example of vernacular architecture from its period
- ‘Thrift Cottages’ (**1238587**) located c. 680 m north of the draft Order Limits, dates to the 1600s and stands as examples of traditional rural dwellings from their era. These timber-framed and plastered cottages, with thatched roofing, embody the vernacular architectural style of the region
- ‘Barritt’s Farmhouse’ (**1238773**), situated c. 930 m north of the draft Order Limits and c.390 m north to the heath, is from the 16th century. It has historical and aesthetic value
- ‘Rose Cottage’ (**1274029**), is a 18th century building located c. 140 m north of the draft Order Limits. It has historical and aesthetic value
- ‘Terrace Hall’ (**1222839**) and Lodge To Terrace Hall (**1222841**) are 19th century buildings with historical relationship to each other. They have historical and aesthetic value. They are located c. 1.4 km south of the draft Order Limits
- ‘Priory House’ (**1238755**) and ‘Cartlodge With Granary Over East Of Priory House’ (**1274028**) are located c. 250 m north of the draft Order Limits. They are two 18th century buildings

3.5.210 The setting of all these listed buildings is mainly rural and is informed by their relationship with the non-designated Boxted Heath (**4211**). Their setting contributes to their value. However, except for the assets **1274029**, (**1238755**), (**1274028**), **1238756**, the setting of the listed buildings does not extend to the draft Order Limits due to the vegetation of the landscape.

3.5.211 Aldecar (**1267663**) is a Grade II listed building located south of Great Horkesley, approximately 650 meters south-west of the draft Order Limits but c. 350 m south of an draft Order Limits pipeline branch. Built around 1800, it exemplifies the architectural style of its era with its red brick facade and symmetrical placement of 8-pane sash windows. It also contributes to the local architectural heritage, offering

insights into early 19th-century construction methods and design preferences. It is of **medium value** due to its evidential, historical, and architectural value.

- 3.5.212 Its setting is informed by its roadside location which can affect its tranquillity. The busy-ness of the road is a detractor however it would have been placed deliberately by this road which is a Roman road. So, the road does contribute to its understanding. To the east, it overlooks a large pasture field, providing a sense of space. On the west, a well-established hedge and open field act as natural boundaries. Residential housing surrounds it to the north and south, affecting the rural feel. Overall, the setting of this asset makes great contribution to its value but does not extend to the draft Order Limits
- 3.5.213 Within Great Horkesley, mainly along The Causeway, are 13 Grade II post-medieval listed buildings. They all have **medium value** based on their evidential, historical, and aesthetic value.
- 'Wisteria' (**1222665**) is a timber framed and plastered house from the 16th century. It is located c.18 m east of the draft Order Limits
  - 'Barn to North West of Woodlands' (**1267714**), is a 16th century barn with four bays, featuring a timber frame and black weatherboarding. It is located c.70 m north of the draft Order Limits
  - 'Yew Tree Cottage' (**1222982**), is a 16th century house with a timber frame featuring heavy exposed beams and plaster infill. This asset is c.90 m north-west of the draft Order Limits
  - 'Oak Cottage' (**1222861**), is a house constructed around 1840. Its well-maintained plastered elevations, hipped roof with crested bonnets, and symmetrical window arrangements reflect the design principles of the mid-19th century. It is located c.180 m south of the Oder Limits
  - 'Village Hall' (**1267662**), was constructed in 1878 and is characterized by its red brick Flemish-bond exterior, scalloped vergeboards, and small paned sash windows. The building's dated inscription adds to its historical value, marking its purpose as a 'Club Room' during that era. Although modest in scale, the Village Hall represents a period of local community development and social activities. It is c.137 m south of the draft Order Limits
  - 'Danbury Cottage' (**1267675**), dating back to the 16th century, is located c.110 m south of the draft Order Limits. Its exposed timber frame and thatched roof exemplify traditional building techniques of the period. A central red brick chimney stack further underscores its historical authenticity. The cottage's round-headed timber doorway, though altered over time, reflects its original design. While some windows have been modernized, two eyebrow dormers on the first floor maintain its historical character
  - 'Messrs Peatling And Cawdron' (**1222667**) and 'House Adjoining And To The North Of Peatling And Cawdron' (**1222668**), are both from early 19th century and are located c.90 m south to the draft Order Limits. These two-storey structures with weatherboarded upper storeys and painted brick lower storeys, adorned with shopfronts featuring leaded flat hoods and glazing bar windows, exemplify the design aesthetics of their era. Their hipped and slate-clad roofs with eaves contribute to their architectural character
  - 'School House' (**1222923**), a mid-19th-century structure located c.150 m south of the draft Order Limits, represents a significant aspect of architectural heritage

from its era. Constructed with meticulous attention to detail, it features red brickwork in Flemish bond, two storeys, and distinctive crow-stepped gables. The chimney stack with four diagonal shafts atop the main ridge adds to its character. While some of the windows have been replaced with modern equivalents, the original pairs of 4-pane casements showcase the building's historical authenticity

- ‘Church Of England School’ (**1222862**), situated approximately 120 m south of the draft Order Limits, is a notable representation of mid-19th-century architectural style. Crafted from red brickwork in a Flemish bond pattern, this single-story structure features two distinctive crow-stepped gables that lend it a unique visual identity. Its roof, clad in banded peg-tiles, is complemented by stone copings, prominent eaves corbels, angle buttresses, and a cinquefoil stone niche in the front gable, demonstrating meticulous craftsmanship
- ‘Highlands’ (**1222981**) is cottage located approximately 78 m south of the draft Order Limits, is a compelling representation of 16th-century architectural heritage. This timber-framed structure, characterized by its exposed framing on the west wall and road-facing gable encased in painted brick, showcases the craftsmanship of its time. The cottage features a distinctive thatched roof on the northern section, complete with two eyebrow dormers, while the southern bay boasts a roof covered in machined red tiles
- ‘New Barn House’ (**1222863**) and ‘Barn To South Of New Barn House’ (**1222924**), are located c. 50 m east of the draft Order Limits. The 16th century timber-framed house, with a central square plan red brick chimney on the main ridge, reflects the architectural heritage of its era. This two-storey structure boasts heavy wooden casement windows with intricate mullions and transoms, showcasing the craftsmanship of the time. The 16th century barn, although repaired and extended over the years, retains its essential timber-framed and black weatherboarded structure, elevated on high red brick footings. Both buildings contribute significantly to the historical context of their surroundings

3.5.214 The setting of these listed buildings is primarily influenced by their location within the settlement of Great Horkesley, particularly their proximity to the busy A134 road. However, **1222981**, **1222863**, and **1222924** are situated somewhat further from the A134, granting them a heightened sense of tranquillity. The overall setting presents a blend of rural and residential environs. The draft Order Limits surrounds Great Horkesley. In general, it can be observed that the setting makes great contribution to the value of these assets. Despite the presence of hedgerows and tree lines, the setting of these listed buildings extends to the draft Order Limits.

3.5.215 ‘Little Simons’ (**1222858**) is a 17th century cottage located along Old House Road and c.120 m south-east of the draft Order Limits. This timber-framed and plastered cottage, with a distinctive fly-hipped gambrel roof adorned with flat-topped dormers, embodies the architectural character of its era. Modern additions, such as the gabled porch and casement windows, enhance its appeal while staying true to its historical roots. A later 20th-century red brick addition complements the original structure without compromising its overall aesthetic. Overall, this asset has **medium value** based on its evidential, historical, and aesthetic value.

3.5.216 Its setting is informed by its roadside location. The asset is set back from a quiet country road, providing a peaceful ambiance. The property is discreetly shielded from view by a well-established hedge. To the west, the property overlooks fields, while to the north, there is a wooded area. On the eastern side, there is a sizable listed and characterful farm complex, and to the south, the surroundings consist of fields.

Overall, the setting of Little Simons enhances its value. Despite the presence of woodland to the north, the property's setting does extend to the draft Order Limits.

- 3.5.217 South-west of Great Horkesley, along Old House Road, is a group of seven Grade II listed buildings which all have a historical and functional relationship with each other. They are all between c.125 m and c.175 m south-east of the draft Order Limits. They have **medium value** based on their evidential, historical, and aesthetic value.
- 'Old House Farmhouse' (**1222850**) is a 18th and 19th century house with older origins
  - 'Coachhouse to west of Old House Farmhouse' (**1222851**) is an 18th-century structure constructed from red brick in Flemish bond
  - 'Granary at Oldhouse Farm' (**1222857**), dating to the 1700s, was originally designed with one storey and six bays and later expanded, which represents an important piece of the region's building history. Its exterior features black weatherboards, and the thatched roof, including an eyebrow dormer, adds to its historical character
  - 'Cart Lodge With Grain Store Over At Oldhouse Farm' (**1267594**), believed to originate from the 1700s, is clad in black weatherboards and crowned with a ridged and gabled roof covered in corrugated iron, representing a notable example of vernacular architecture in the area
  - The 'Barn at Oldhouse farmyard, aligned north-south' (**1222853**), dating back to the 1700s, exemplifies vernacular timber-framed architecture from that era. Likewise, the 'Barn, aligned east-west at Oldhouse Farm' (**1222854**) shares historical origins and architectural characteristics with neighbouring listed buildings in its cluster. This includes the 'Barn to the north of the barn aligned east-west at Oldhouse Farm' (**1222893**)
- 3.5.218 The setting of this cluster of seven listed buildings is informed by their historical and functional relationships. The setting is further defined by the peaceful rural ambiance. Overall, the setting enhances the value of these structures and extends to the draft Order Limits.
- 3.5.219 Within Horkesley Heath are found two Grade II listed buildings with **medium value** based on their historical and aesthetic value: 'Woodhouse Farmhouse', a farmhouse from the 18th century (**1222684**) located c.560 m south of the draft Order Limits and the 19th century 'Church of St John' (**1267664**) located c.760 m south of the draft Order Limits. The Church of St. John located north of Horkesley Heath is nestled within a tranquil and historically significant setting.
- 3.5.220 Situated in a small churchyard, the church enjoys a peaceful atmosphere that contributes to its historical value. To the west, an expansive field provides an open and pastoral backdrop. Various boundaries, including hedges, walls, and fences, define the churchyard's limits. This semi-rural, semi-residential locale accommodates dwellings to the north and east, potentially influencing the church's setting. As for Woodhouse Farmhouse, due to its remote location and tranquil rural surroundings, the setting of this asset contributes to its heightened value. The setting of both the farmhouse and the church does not extend to the draft Order Limits because of vegetation.
- 3.5.221 North-west of Great Horkesley is 'Cart Lodge With Granary Over To South Of Breewood Hall' (**1222979**), a Grade II listed building located c.160 north of the draft Order Limits. This asset is a well-preserved example of a cart lodge with a granary

over. Its functional design, incorporating a gabled projection for external stairs, showcases practical historical construction. This structure, characterized by a combination of red brick and timber framing, reflects the craftsmanship of its era, contributing to the vernacular architectural heritage of the region. Overall, the hall is of **medium value** based on its evidential, historical, and aesthetic value.

- 3.5.222 Its setting is characterised by its location within parkland, nestled amidst expansive fields. The presence of characterful properties within the farm complex further enhances its context. Notably, its setting is significantly informed by its historical and functional relationship with 'Breewood Hall' (**1222977**), a medieval asset nearby. The quiet environment further contributes to the overall ambiance of this setting and enhances the value of this asset. Despite some mature trees around, the setting of this asset does extend to the draft Order Limits.
- 3.5.223 North-east of Great Horkesley, east of the A134, are several listed buildings sparsely located: 'Brook Farmhouse' (**1274031**), 'Potters Farmhouse' (**1222685**), 'Barn To East Of Potters Farmhouse' (**1267669**), 'Holly Lodge Farmhouse' (**1222721**), 'Barn To North Of Holly Lodge Farmhouse' (**1222763**), 'Ridgnall' (**1222675**), 'Barn To East Of Ridgnall' (**1267667**), 'Barn North Of Barn To East Of Ridgnalls' (**1222678**), 'Ridgnalls Lodge' (**1267640**), 'Coveney's' (**1222698**), 'Stable Range To South East Of Barn East Of Coveney's' (**1222706**), 'Barn To East Of Coveney's' (**1222673**), 'Hospytts' (**1222606**), 'Martins' (**1222829**), 'The Rose And Crown Public House' (**1267620**) and 'Whitepark Farmhouse' (**1222920**). Below is their assessment.
- 3.5.224 'Brook Farmhouse' (**1274031**), is a Grade II listed building located 1.7 km north of the draft Order Limits. Dating back to the 16th century, this house stands as a significant example of vernacular timber-framed architecture within the region. Overall, Brook Farmhouse possesses a **medium value**, primarily derived from its evidential, historical, and architectural value.
- 3.5.225 Nestled within a garden enclave adjacent to a serene and rural road, Brook Farmhouse enjoys an isolated and peaceful setting. It is enveloped by vast agricultural fields and bordered by wooded areas to the south-east, adding to its secluded ambiance. The quietude of this location enhances the value of this asset. However, due to the substantial distance, topographical features, and abundant vegetation, the setting of Brook Farmhouse does not extend to the draft Order Limits.
- 3.5.226 'Potters Farmhouse' (**1222685**) and 'Barn To East Of Potters Farmhouse' (**1267669**) are two Grade II listed building located c1.5 km north of the draft Order Limits. The farmhouse is a notable example of a 17th century timber-framed house. Its historical and architectural value is derived from its well-preserved structure, featuring plastered front and a distinctive black weatherboarded south gable. Similarly, the Barn, also dating from the 17th century, showcases a classic timber frame clad with black weatherboards and a thatched, fly-hipped roof facing north. Both structures hold a **medium value** owing to their evidential, historical, and aesthetic value.
- 3.5.227 The setting of these assets is informed by their historical and functional relationships but also by their location. Indeed, both buildings are situated in a tranquil and rural environment. The farmhouse, positioned alongside the road, enjoys a small green area and is part of a farm complex surrounded by characterful properties, agricultural fields, and wooded areas to the southeast. Similarly, the barn, set back within the farm complex, benefits from a gravelled area that creates a sense of spaciousness. Its surroundings include agricultural fields to the east and characterful properties to the west and south. Overall, the setting enhances their value. Due to the presence of small woodlands between them and the draft Order Limits, their settings do not extend to the draft Order Limits.

- 3.5.228 'Holly Lodge Farmhouse' (**1222721**) and 'Barn To North Of Holly Lodge Farmhouse' (**1222763**) are two Grade II listed building located c.9600 m north of the draft Order Limits. They both hold a **medium value** attributed to their evidential, historical, and aesthetic value. These assessments stem from their well-preserved 17th-century architectural features. The Farmhouse follows a traditional T-plan layout with varied ridge and eaves heights, plastered walls, and peg tiled roofs. It combines original elements like casement windows, a front door in a wide case with a hood, and gabled dormers with modern additions. In contrast, the Barn, also dating to the 17th century, adheres to a typical barn design with a thatched roof and black weatherboarded exterior, featuring a central east-facing midstrey. While both structures have experienced some modifications, they fundamentally retain their historical character, contributing to their medium value.
- 3.5.229 Their setting is informed by their historical and functional relationships. It is also shaped by their location within a garden area, screened from view by a well-established hedge, thus harmonizing with the quiet and rural surroundings. The presence of a farm complex and characterful properties to the north adds to their contextual value. Despite the mature trees near the structures and the presence of small woodlands, their settings do not extend to the draft Order Limits.
- 3.5.230 'Ridgnall' (**1222675**), 'Barn To East Of Ridgnall' (**1267667**), 'Barn North Of Barn To East Of Ridgnalls' (**1222678**) and 'Ridgnalls Lodge' (**1267640**) are four Grade II listed buildings, located c1.4 km north of the draft Order Limits. They are all from the 16th century except the lodge which dates to the 18th century. They all have evidential, historical, and aesthetic value leading to a **medium heritage value**.
- 3.5.231 Their setting is informed by their historical and functional relationships, as they are nestled within a rural area along Boxted Church Road. These listed buildings share a common backdrop of agricultural fields and encompassing gardens. The overall quiet and peaceful environment enhances their intrinsic value. However, the presence of topography and dense vegetation restricts their setting from extending to the draft Order Limits.
- 3.5.232 'Coveney's' (**1222698**), 'Stable Range To South East Of Barn East Of Coveney's' (**1222706**) and 'Barn To East Of Coveney's' (**1222673**) are three Grade II listed building, located c.1 km north of the draft Order Limits. They hold a **medium value** attributed to their evidential, historical, and aesthetic value. The main house, dating back to the 16th century, showcases the historical value of vernacular timber-framed architecture. Its timber framing, plaster cladding, and steeply pitched peg-tiled roofs contribute to its historical value. The two barns, dating from the late 18th to early 19th century, exhibit the characteristic architectural elements of their era, with black weatherboarding and slate-clad roofs. The historical value of these buildings is further emphasized by their well-preserved features.
- 3.5.233 Their setting is informed by their historical and functional relationships within a quiet and rural environment. The house is set back from the road within a spacious garden, flanked by characterful properties and surrounded by agricultural fields and wooded areas. Similarly, the barns are nestled within a grassland area, with characterful properties to the west and north. Overall, their setting enhances their value. However, the setting does not extend to the draft Order Limits due to the presence of vegetation, topography, and nearby industrial activity.
- 3.5.234 'Hospytts' (**1222606**) is a Grade II listed building, located along the A134, c.300 m north of the draft Order Limits. It is a 16th-century timber-framed structure, it embodies the craftsmanship and architectural styles of the era. Its construction techniques and design elements are indicative of the period, making it a valuable

historical relic. Additionally, the aesthetic appeal of Hospytts, with its thatched roof, traditional leaded casement windows, and gabled dormer, further contributes to its overall value. Its enduring evidential, historical, and architectural value make it a **medium value** asset.

- 3.5.235 The setting of 'Hospytts' is secluded and sheltered by a well-established hedge, trees, and a fence, making it not visible from the nearby road. Nestled within a substantial garden, the property is situated towards the northern end of a settlement. Therefore, its setting makes great contribution to the value of the asset. The setting does not extend to the draft Order Limits.
- 3.5.236 'Martins' (**1222829**) is a Grade II listed building along the A134, c.850 m north of the draft Order Limits. Martins House exhibits **medium value** owing to its evidential, historical, and architectural value. Dating back to the early 19th century, it represents a fine example of the architectural styles prevalent during that period. The use of gault brick, Flemish bond brickwork, and the hipped slate roof showcase the architectural sensibilities of the era.
- 3.5.237 The setting of Martins House is influenced by its location and surroundings. Situated behind a well-established hedge and trees, it enjoys a degree of seclusion from the busy road, contributing to its tranquillity. Agricultural fields and nearby residential and commercial properties shape its environment. However, the presence of the road somewhat diminishes the rural atmosphere. Overall, the setting makes great contribution to the value of this asset. Due to vegetation and residential areas south of this asset, its setting does not extend to the draft Order Limits.
- 3.5.238 'The Rose And Crown Public House' (**1267620**), a Grade II, is located along the A134, c.920 m north of the draft Order Limits. The House carries **medium value**, primarily attributed to its evidential, historical, and aesthetic value. Dating back to the early 17th century, this timber-framed structure showcases the craftsmanship of that era. The use of painted brick in Flemish bond, the arrangement of sash windows, and the distinctive chamfered oak frame within contribute to its historical and aesthetic value.
- 3.5.239 The setting of the 'Rose and Crown' Public House, is influenced by its immediate surroundings. Positioned behind a gravelled parking area and with fields opposite, it offers a sense of open space around the asset. The property is encompassed by agricultural fields, and there are nearby residential and commercial properties to the northwest. Consequently, the setting makes great contribution to the value of the asset. Additionally, the presence of vegetation and the nearby residential area limits the extension of the setting to the draft Order Limits.
- 3.5.240 'Whitepark Farmhouse' (**1222920**), a Grade II listed building, is located c.2 km north of the draft Order Limits. This asset possesses **medium value** predominantly due to its evidential, historical, and aesthetic value from the late 17th century. While the exterior has been rendered, the structure still retains its historical charm. Modern additions like the roof tiles and chimney stack do not significantly detract from its historical and aesthetic value.
- 3.5.241 The setting of Whitepark Farmhouse is strongly influenced by its rural environment. It is accessed via a private track within a farmyard, contributing to its secluded and quiet ambiance. The property is surrounded by open fields, further enhancing its rural character and its heritage value. However, its setting does not extend to the draft Order Limits due to the considerable distance, local topography, and the presence of vegetation around.

- 3.5.242 West to the A134, north of Great Horkesley and the draft Order Limits, are sparsely located listed buildings: 'The Chantry' (**1416068**), 'The Grove' (**1222988**), 'Fishponds Cottage' (**1267503**), 'Mount Hall' (**1222985**), 'The Retreat' (**1267502**), 'Bucks' (**1222998**), 'Knowles Cottage' (**1222771**) and 'Barn To North Of Knowles Farmhouse' (**1267632**). Below is their assessment.
- 3.5.243 'The Chantry' (**1416068**), an early 19th-century former rectory in Great Horkesley, Essex, holds Grade II listing status and is located c1.4 km north of the draft Order Limits. Its aesthetic value lies in the confident and dignified Neo-Classical design, featuring well-proportioned exterior elements like a double-height bay and an elegant entrance porch. The Chantry's has a functional and historical relationship to the nearby Grade I listed Church of All Saints enhances its historical and functional group value. While some alterations have occurred, they do not significantly diminish its architectural interest. This building holds **medium value**, attributed to its rich evidential, aesthetic, and historical value.
- 3.5.244 The setting of this asset is characterized by its location within a spacious garden, enclosed by a wooden fence and tall trees that effectively screen it from view. This serene setting is significantly influenced by its proximity to the Grade I listed Church of All Saints, which adds to its historical context. To the south, the environment transitions to modern residential properties, while to the east lies the noisy A134 road. However, despite the nearby presence of the busy A134 road, the setting manages to enhance the overall value of The Chantry. The surrounding area is predominantly rural, featuring open fields. Nevertheless, due to the vegetation and the distance, the setting does not extend to the draft Order Limits.
- 3.5.245 'The Grove' (**1222988**), a Grade II listed building, is located c.400 m north of the draft Order Limits. It is a 16th century house with later features and possible earlier framing, which exhibits a distinctive vernacular character. Some alterations are seen such at the entrance, graced by a flat 19th century porch with square columns. This asset has a **medium value** due to its evidential, historical, and aesthetic value.
- 3.5.246 The setting is informed by the roadside location of the asset. It is set back from a it, bordered by a well-established garden hedge. The busy-ness of the road is a detractor however it would have been placed deliberately by this road, so, the road does contribute to its understanding. This asset occupies the northern end on the western side of a residential neighbourhood. The village exudes a sense of calm, although the nearby main road remains busy. The property is surrounded by agricultural fields and residential properties to the east. Overall, the setting of this asset makes great contribution to its value. The setting does extend to the draft Order Limits.
- 3.5.247 'Fishponds Cottage' (**1267503**) is a Grade II listed building located c.980 m north of the draft Order Limits. This asset believed to be of 17th-century origin with later modifications, stands as a structure with an uneven U-plan. All windows have been modernized. This asset is of **medium value** due to its evidential, historical, and aesthetic value.
- 3.5.248 Fishponds Cottage is thoughtfully situated, set back from the road junction, framed by a garden that benefits from well-established hedges, effectively shielding it from the view of the road. The cottage anchors the northern end of a dispersed and predominantly rural settlement, characterized by several characterful properties. The broader vicinity encompasses a tapestry of agricultural fields and grasslands. This setting notably enhances the value of the asset. Furthermore, despite some intervening tree lines between the asset and the draft Order Limits, the setting effectively extends to the draft Order Limits.

- 3.5.249 'Mount Hall' (**1222985**) is a Grade II structure located c.8600 m north of the draft Order Limits. This house is an exemplary 18th-century structure, showcases facades constructed with red brick in Flemish bond on its south-eastern front. This asset has **medium value** due to its evidential, historical, and aesthetic value.
- 3.5.250 Its setting is informed by its location, nestled within an expansive garden, the property remains hidden from view, creating an enclosed and isolated ambiance that enhances its intrinsic value. The surrounding road, characterized by its tranquillity and rural character, further contributes to the asset's appeal. The setting does not extend to the draft Order Limits.
- 3.5.251 'Knowles Cottage' (**1222771**), 'Knowles Farmhouse' (**1222772**) and 'Barn To North Of Knowles Farmhouse' (**1267632**) are three Grade II listed buildings, located along or near London Road, north-west of Great Horkesley. The cottage is c.200 m north of the draft Order Limits, while the farmhouse and the barn are almost adjacent to it. They collectively hold **medium value** due to their evidential, historical, and aesthetic value. The well-preserved architectural elements of these structures, spanning the 16th to 19th centuries, exemplify the evolution of vernacular architecture. Their diverse designs, from the timber-framed 'Knowles Cottage' to the more Georgian 'Knowles Farmhouse,' provide valuable insights into the region's architectural heritage. Furthermore, their cohesive presence as a heritage group enhances their collective historical value.
- 3.5.252 Their setting is informed by the historical and functional relationships. It is also shaped by their location. 'Knowles Cottage' is set back from the quiet rural road, framed by a garden and a well-established hedge, offering a serene atmosphere. The cottage enjoys a pleasant view over an adjacent agricultural field. Similarly, 'Knowles Farmhouse' and the accompanying barn have private access and sit within gardens, giving a sense of seclusion. To the west, a wooded area further enhances their setting, which is surrounded by agricultural fields, contributing to their quiet and rural ambiance. Overall, their setting enhances their value. The settings of these buildings extend to the draft Order Limits.
- 3.5.253 Within the conservation area of Little Horkesley (**CA10**), are three listed buildings, one Grade II\* 'Little Horkesley Hall' (**1267036**), and two Grade II, 'Gatehouse North Of Little Horkesley Hall' (**1223994**) and 'Church Of St Peter And St Paul' (**1266803**). They are located c.1 km north of the draft Order Limits. The Hall, graded at II\*, displays notable architectural features with gault brick and stone, characterized by a Giant Doric portico and fluted columns. It holds **high value** due to its evidential, historical, and aesthetic value within the heritage group. On the other hand, the Church of St Peter and St Paul, while a commendable structure, bears a **medium value**, primarily due to its mid-20th-century construction on the site of an ancient church destroyed during wartime. It consists of a west tower, nave with a south aisle and north transept. The church's value lies in its evidential, historical, aesthetic, and communal value, including the mid-13th-century effigies of Knights and other notable tombs. Similarly, the Gatehouse north of Little Horkesley Hall, with its square plan lodge and Regency sash, holds **medium value** within the heritage group, based on its evidential, historical, and aesthetic value. Both the church and gatehouse contribute to the historical fabric of the settlement and the conservation area.
- 3.5.254 The settings of these heritage buildings are intricately tied to their location within the settlement and their presence in a conservation area. The church is situated within a serene churchyard, enclosed by hedges and wooden fences, with an alley lined by mature trees. To the south lies a parking area leading to open fields, while southwest, it shares its vicinity with two other listed buildings. Northward, the

surroundings comprise residences, and the overall atmosphere is that of a tranquil rural village, enveloped by expansive fields. The open view extends only to the south, enhancing its sense of peaceful isolation. Little Horkesley Hall and the Gatehouse are enveloped by garden and parkland, located at the southern edge of a small settlement, providing a quiet, rural ambiance. Their settings are further enriched by the presence of agricultural fields and woodland to the west and south. Overall, the setting of these assets enhances their value, but due to vegetation and distance it does not extend to the draft Order Limits.

- 3.5.255 Within or adjacent to Westwood Green are found four listed buildings, south-west of Great Horkesley: 'Westwood Park (Old Peoples Home)' (**1267009**), a **high value** Grade II\* listed red brick mansion from the 17th century; the 'North Lodge To Westwood Park', a 19th century **medium value**, Grade II listed building (**1224023**); 'South Lodge To Westwood Park' (**1267010**), a 20th century Grade II with **medium value**; 'Gates And Quadrant Plan Brick Wall To South-East Of South Lodge To Westwood Park' (**1224022**) also a Grade II with **medium value**. Their value is based on their evidential, historical, and architectural value. The main house is located c.500 m south of the draft Order Limits, while the lodge to the north is c.370 m south, and the other lodge and wall are c.650 m.
- 3.5.256 The main house (**1267009**) was set within parkland, some of which remains as does its formal garden to the rear. The edge of the estate was accessed via two gates and the lodges remain, one south and one north (**1224023** and **1267010**), as well as a portion of wall (**1224022**). Their setting is also shaped by their location in a rural environment. The parkland and the Westwood Green inform on the process of emparkment of common land in the post-medieval period. Indeed, Westwood Green was a piece of medieval common land that was absorbed into the parkland of Westwood House by 1874. Despite the proximity to a busy road, the mainhouse remains secluded and protected, thanks to the presence of a high hedge along the road that discreetly conceals the park and the house. Additionally, two lodges as well as a gate and a wall are situated at different entrances to the park. The two lodges, guarding the southern and northern entrances, are nestled within garden, enclosed by a protective brick wall, gates and fences. Nevertheless, the listed gates and brick wall, while located in a rural area, are somewhat impacted by the nearby busy road, detracting slightly from their setting. Overall, the setting of these assets enhances their value except for **1224022**. Despite mature tree lines and small woodland, there is a high probability that the top of the pylons would be visible from these assets. However, the setting of the assets does not extend to the draft Order Limits.
- 3.5.257 Within the vicinity of the former Westwood green are four farmhouses, south-west of Great Horkesley: 'Spring House' (**1222774**), a 16th century Grade II and its 18th century 'Barn To East Of Spring House' to the east (**1267618**), 'Knights Farmhouse' (**1222770**), 'Rookery Farm (Blackheath Bulb Company)' (**1225137**) and 'Gladwins Farmhouse' (**1224485**). They are all Grade II with a **medium value** based on their evidential, historical, and aesthetic value. While Knights Farmhouse is only c.150 m south of the draft Order Limits, the other four are between 260 m and 8600 m south of the draft Order Limits.
- 3.5.258 The setting of these listed buildings is informed by their proximity and relationship to the non-designated Westwood Green and the listed buildings within it. The setting is also informed by their rural roadside locations. All around these assets is rural enhancing their value. Due to the topography and vegetation, the setting does not extend to the draft Order Limits.

- 3.5.259 At West Bergholt, within or adjacent to Bergholt Heath, are four assets: 'The White Hart Public House' (**1225136**) a 17th century timber framed and plastered house, the '2, Colchester Road' (**1266528**) a 19th century house of two storeys and three bays with red brick in Flemish-bond with obtuse ridge and gable slated roof, 'The Grays' (**1225134**) a 19th century red brick house, and 'Virginia Cottage' (**1266510**) a 17th century T-plan, timber framed and rendered house. They are all Grade II with a **medium value** based on their evidential, historical, and aesthetic value. They are all between 700 m and 8600 m east of the draft Order Limits.
- 3.5.260 Their setting is informed by their location in Bergholt Heath as well as their roadside location. They are also situated in a mix of rural and residential areas. Their setting is further informed by the relationship they have with each other but also the relation they have with the medieval Grade II\* High Trees Farmhouse (**1225133**). Most of them are recorded on the first edition OS map of 1881. Overall, their setting makes great contribution to their value. The Project is unlikely to be visible from these assets, especially given the presence of woodland to the west. Overall, the setting does not extend to the draft Order Limits.
- 3.5.261 South-west of West Bergholt are found two post-medieval listed buildings sharing the same setting: 'Newbridge Mill House' (**1225138**) and 'The Old Rectory' (**1225092**). They are both Grade II, respectively located c. 1.4 km and c.860 m of the draft Order Limits. They have **medium value** due to their evidential, historical, and architectural value.
- 3.5.262 Their setting of both assets is informed by their roadside location. The setting of 'Newbridge Mill House' is characterised by its location in a rural area, surrounded by farm buildings and dwellings. While it benefits from a large garden, the presence of a busy road to the south introduces traffic noise. Conversely, 'The Old Rectory' enjoys a more secluded and tranquil setting within a large garden, shielded by high walls and hedges. Woodlands and fields surround it, contributing to its enhanced value. Overall, the setting of these assets makes great contribution to their value. However, both properties have settings that do not extend to the draft Order Limits due to nearby woodlands.
- 3.5.263 Around West Bergholt are six post-medieval listed buildings sharing a rural setting: 'Scarletts' (**1266511**) located c.1.2 km east of the draft Order Limits; 'Alcrofts' (**1225088**) located c.600 m north-east of the draft Order Limits; 'Little Prior's House' (**1225132**) and 'Garden Wall At Little Priors House' (**1266509**) both located c.600 south-east of the draft Order Limits; 'The Hall' (**1266531**), 'Barn To South Of The Hall' (**1266508**) and 'Coachouse To North East Of Hall' (**1225131**) all located c.40 m south of the draft Order Limits. While 'The Hall' is a Grade II\* with **high value** based on its evidential, historical, and aesthetic value, all the others are Grade II with **medium value** due to their evidential, historical, and aesthetic value.
- 3.5.264 The setting of all these listed buildings is informed by their roadside location in a rural environment. They are all surrounded by fields and have a sense of tranquillity. The setting of **1266531**, **1266508** and **1225131** is also informed by their mutual relationship and the link with a medieval church (**1225120**) and a medieval pond. These three post-medieval listed buildings as well as the medieval church, churchyard, and pond, are all recorded in the first edition OS map of 1881. Overall, the setting of the seven post-medieval listed buildings makes great contribution to their value. Furthermore, their setting does not extend to the draft Order Limits. However, it's worth noting that depending on the season, particularly during defoliation, the Project may become more visible, especially from the location of **1266531**, **1266508** and **1225131**.

- 3.5.265 Further north of West Bergholt are four Grade II listed buildings along Colchester Road: 'Timber Framed Barn At Kinkhams Farm' (**1225089**), 'The Sprawls' (**1266526**), 'Cart Lodge To East Of Pond Farmhouse' (**1225090**), and 'Pond Farmhouse' (**1266527**). They are all located between c.350 and c.450 m east of the draft Order Limits. They all have **medium value** due to their evidential, historical, and aesthetic value.
- 3.5.266 Their setting is primarily shaped by their position along a busy road. Their setting is also informed by their location in a rural environment, surrounded by fields. Furthermore, the setting of the assets **1266527** and **1225090** is informed by their historical and functional relationships. Overall, the setting of these four assets makes a great contribution of their value due to the tranquillity of the rural environment. However, the proximity of a busy road detracts from it. Due to an open view to the west, their setting does extend to the draft Order Limits.
- 3.5.267 'Coney Byes' (**1225071**) is a Grade II listed building located at the end of Coney Byes Lane, c.210 m east of the draft Order Limits. It holds a **medium value** attributed to its evidential, historical, and aesthetic value. This late 17th-century house, featuring a square plan and two parallel ranges with ridged gabled roofs, showcases a blend of timber framing and plastered sections, some of which have been recently bricked.
- 3.5.268 The property is accessible via a private route and is situated in a farm complex to the east, surrounded by agricultural fields to the west, north, and south. Nestled in a serene and rural environment, the setting significantly contributes to its overall value. Furthermore, due to its open westward view, the setting extends all the way to the draft Order Limits.
- 3.5.269 'Highfields Farmhouse' (**1225094**) and 'Fordham Place' (**1222602**) are two Grade II listed buildings located west of Colchester Road and c.200 m of the draft Order Limits. They have **medium value** to their evidential, historical, and aesthetic value. The farmhouse, a 17th century or earlier house, recently restored externally, exhibits a timber-framed and plastered exterior, with a distinctive ridge and gambrel roof covered in peg tiles. 'Fordham Place' boasts an 18th-century facade that conceals an earlier house composed of two parallel timber-framed ranges, each with a ridged and gabled peg-tiled roof. The rear range likely dates to medieval times.
- 3.5.270 These assets share a common thread in their settings. Both properties are nestled in tranquil, rural locations. They enjoy private access and are surrounded by picturesque agricultural fields. These settings enhance the value of both assets, providing a peaceful and spacious atmosphere. While Fordham Place overlooks a flat agricultural field, the Farmhouse is encircled by a farm complex, offering a blend of natural beauty and historical charm. Furthermore, the setting of Fordham Place extends to the draft Order Limits due to an open view to the east. As for the farmhouse, a small woodland blocks the view to the east and therefore, to the draft Order Limits. However, due to the proximity there is a probability that the top of the pylons would be visible from the asset. Overall, the setting does extend to the draft Order Limits.
- 3.5.271 'The Grove' (**1225475**) is a Grade II listed building located at the end of a road named The Grove as well and c.390 m west of the draft Order Limits. The Grove holds a **medium value** attributed to its evidential, historical, and aesthetic value. It integrates a 16th-century section into a structure from the 18th century and subsequent periods, presenting as a two-storey timber-framed and plastered building.

- 3.5.272 Its setting is informed by its location. It enjoys a private access setting, within its own garden. To the east, it opens to picturesque agricultural fields, while to the west, there lies a farm and extensive pasture fields. This carefully arranged setting significantly augments its overall value, and it extends seamlessly to the draft Order Limits.
- 3.5.273 'Spring Cottage' (**1393191**), 'Long Acres' (**1266322**), 'Long's Farmhouse' (**1225474**), Cockerells Farmhouse (**1225467**), are four Grade II buildings located along Main Road and Little Horkesley Road. They are c.9600 m and 1.3 km north-west of the draft Order Limits. They have all **medium value** due to their evidential, historical, and aesthetic value.
- 3.5.274 Their setting is informed by their roadside location as well as their location in a rural environment. They all are set back from the road in a garden, protected either by hedges, gates or wall. Overall, the setting makes great contribution to their value. Due to mature trees and woodland present in the landscape, their setting does not extend to the draft Order Limits.
- 3.5.275 Holts Farmhouse (**1223990**), Range (Cart Lodges) At Holts Farm (**1224016**) and Barn North East Of Holts Farmhouse (**1223991**) are all located along Holt's Road, in a same area, c.700 m of the draft Order Limits. Holts Farmhouse is a Grade II\* and the two others are Grade II. While the Grade II\* is of **high value** based on its evidential, historical, and aesthetic value., the others have **medium value** due to their evidential, historical, and aesthetic value.
- 3.5.276 The setting of the three assets is informed by their historical and functional relationships. They are all recorded on the first edition OS map of 1880. Their setting is also informed by their location in the same rural area. They are in a garden surrounded by mature trees and are set back from the road. Their setting makes a great contribution to their values. Due to the mature trees present in the garden, their setting does not extend to the draft Order Limits. However, beyond the trees in the garden, the view is open, therefore, depending on the season, particularly during defoliation, the Project may become more visible.
- 3.5.277 The Queen's Head Public House (**1266416**) is a 18th-century Grade II listed building located in Wormingford and c.1.9 km north-west of the draft Order Limits. This is a **medium value** structure, originally built for James Robinson in approximately 1775, and constructed of red brick and stands two storeys tall in a U-shaped layout. The front facade is three storeys high with Flemish bond brickwork and horned sash windows in a 3-over-2 arrangement, flanking a central front door. It has evidential, historical, and aesthetic value.
- 3.5.278 The setting of The Queen's Head Public House is characterized by its location within a residential area, featuring private parking and a garden. Positioned along the main road of the village, the property enjoys a relatively peaceful environment. To the south, there is an open field, which contributes positively to its setting. Due to the distance and the presence of woodlands further south-east, the setting does not extend to the draft Order Limits.

#### *Non-Designated Heritage Assets*

- 3.5.279 The heritage asset known as 'East of Great Horkesley' (**4066**) is a Quaker burial ground dating to the post-medieval period. The site is situated approximately 240 m south of the draft Order Limits and has **low value** due to its evidential value.

- 3.5.280 Along Langham Lane, c. 2.6 km south-east of Great Horkesley, c. 240 m south-west of the draft Order Limits is a late 17th or early 18th century timber-framed, although altered externally (**4231**). It has evidential and historical value and is of **low value**.
- 3.5.281 North of School Lane, c. 90 m north of the draft Order Limits, is a timber framed building used as stable/tack room (**4347**) certainly dating back to the 19<sup>th</sup> century. This asset has historical value and is of **low value**.
- 3.5.282 Along London Road, c. 1.2 km south-west of Great Horkesley, and c. 240 m south of the draft Order Limits is found a milestone (**4348**) which is about one foot square and eighteen inches high. It has a shallow pyramidal top and is presumably on the old route from Colchester to Nayland. This asset has historical value and is of **low value**.

## Fordham and Aldham

### *Designated Heritage Assets*

- 3.5.283 Within the vicinity of Wakes Colne is found the Grade II\* 'Watch House' (**1224980**), located c.2.7 km north-west of the draft Order Limits. This house holds historical and aesthetic value. It is a 16th century timber-framed house, with its distinctive H-plan and pebble-dashed exterior. This asset has a **high value** based on its evidential, historical, and aesthetic value.
- 3.5.284 Its setting is informed by its roadside location near the A1124 in a residential area within the settlement. This asset has a garden with mature trees to its west, north and south. Its setting is also informed by its proximity to the railway to its east. Overall, its setting does not make a great contribution to its value. Also, the setting does not extend to the draft Order Limits due to the presence of residential area as well as vegetation.
- 3.5.285 North of Fordham are three Grade II listed buildings along Fordham Road, c.1 km north-west of the draft Order Limits: 'Houds Farmhouse' (**1239827**), 'Barn to south-west of Houds Farmhouse' (**1267748**) and 'Rectory' (**1239828**). They all have **medium value** based on their evidential, historical, and aesthetic value. The Rectory is an 18th-century house with Regency-style features, including a front porch with fluted square columns and hornless sash windows. Nearby, the 17th century barn at Houds Farmhouse and the 17th century timber-framed house offer historical and architectural value to the area.
- 3.5.286 Their setting is informed by their roadside location on the north of the settlement. It is also informed by their relationship to each other. The Rectory is secluded within its garden, surrounded by lush vegetation, offering an isolated ambiance amidst agricultural fields. Houds Farmhouse with protective boundaries of fences and hedges, boasts mature trees in its garden. Meanwhile, the barn is concealed behind the farmhouse, linked to it historically, and complemented by the farm's structures and the surrounding fields. Therefore, their setting makes great contribution to their value, and it does not extend to the draft Order Limits, mainly due to the presence of vegetation.
- 3.5.287 Within Fordham, to the north part of the settlement, there are five Grade II listed buildings: 'Congregational Chapel' (**1239830**), 'Maltings Farmhouse' (**1224758**) and 'Threshers' (**1267751**), 'Thriffs Cottage' (**1239832**) and 'Moat Hall' (**1239833**). They are all located c.8600 m north-west of the draft Order Limits. The assets hold **medium value** for their evidential, historical, and aesthetic value. The Congregational Chapel, built c. 1789, showcases a stuccoed exterior with sash windows and an early 19th-century railing-enclosed burial ground. Maltings Farmhouse, a late 16th-century timber-framed house, blends plastered and

weatherboarded sections with double-hung sash windows and a central chimney stack. Threshers, an early to mid-19th-century painted brick house, boasts a central gabled porch and symmetrically arranged sash windows. Thrifts Cottage, a 17th century timber-framed cottage with thatched roof and dormers, features modern casements and a red brick chimney stack. Finally, Moat Hall, dating back to c. 1749 with older elements from the 16th century, is a timber-framed house with small-pane sashes, a distinctive central front door, and a partly moated site.

- 3.5.288 Their setting is informed by their roadside location within the settlement. It is also shaped by their location in a semi-rural and semi-residential areas. Moreover, the setting of these assets is informed by their relationship, they are recorded on the first edition OS map of 1880. While the assets are situated along a busy road in a linear residential area, there are open fields to the west and east. Overall, the setting makes moderate contribution to their value, and it does not extend to the draft Order Limits.
- 3.5.289 Along Rams Farm Road are two 17th century listed buildings, 'Fletchers Farmhouse' (**1222603**) and 'Barn to west of Fletchers Farmhouse' (**1222605**), which are both Grade II and located c.600 m west of the draft Order Limits. They have both **medium value** due to their evidential, historical, and aesthetic value. The main house features a two-storey design with a white painted brick façade, a hipped and slate-clad roof, and chimney stacks at both ends, while the barn, aligned east-west, is a timber-framed structure spanning five bays with a central south-facing midstre and a hipped roof.
- 3.5.290 Their setting is informed by their historical and functional relationship and by their location in a rural area, east of Fordham settlement. Both the main house and the barn share a common setting within a farmyard located near a busy road in a semi-rural, semi-residential area. The setting is further informed by the surrounding agricultural landscape with which the assets have a historical relationship. The setting makes a great contribution to their value and may extend to the draft Order Limits. Moreover, depending on the season, such as during defoliation, there is a possibility that the top of the pylons could become visible from both assets.
- 3.5.291 Within Fordham, c.400 m of the draft Order Limits, are found three post-medieval listed buildings - '72, Church Road' (**1239819**), 'Oak House' (**1239790**) and 'Barn East of Fordham Hall' (**1239812**), all Grade II. They all have **medium value** based on their evidential, historical, and aesthetic value and as a heritage group.
- 3.5.292 Their setting is informed by their location in the settlement as well as their relationship with each other; with the Grade I 'Church of All Saints' (**1239789**) and with three medieval listed buildings: The 'Three Horseshoes Public House' (**1239808**), 'Fordham Hall' (**1267740**) and the 'Granary South-West of Fordham Hall' (**1273566**). The first edition OS map of 1881 records these assets. During the beginning of the 20th century, according to the OS map edition 1925, these buildings remained the same with no residential development around. Today, there are dwellings north of these buildings, but in other all direction it is still rural. The setting of these assets makes a great contribution to their value. Also, due to woodlands to their east and south, their setting does not extend to the draft Order Limits.
- 3.5.293 'Idols Cottage' (**1267711**) is a Grade II listed building, located west of Fordham, c.200 m east of the draft Order Limits. Idols Cottage holds **medium value** due to its evidential, historical, and aesthetic value, featuring a c. 1600 timber-framed structure with a well-preserved L-plan design.

- 3.5.294 Its setting, marked by seclusion and tranquillity within a garden and rural area, greatly enhances its value. Due to an open view to the south of this asset, its setting extends to the draft Order Limits.
- 3.5.295 Within the vicinity of Hemp's Green are found nine Grade II listed buildings: the 18th century 'Archendines Farmhouse' (**1267737**), the 17th century 'Cattles Barn' (**1239788**), 'Valley Cottage' (**1267736**) built between 1840-1850, the 17th century 'Suttons Farmhouse' (**1267747**), the 17th/18th century 'Moss Farmhouse' (**1273568**), the 16th century 'Bretts Farmhouse' (**1366040**), the 16th century 'Vernon's' (**1238818**), the 16th century 'Oaks Farmhouse' (**1266287**) and the early 19th century 'Stable Block And Cottage To East Of Crepping Hall' (**1224982**). They are location between c. 500 m and c. 1.6 km north or north-west of the draft Order Limits. They all have **medium value** based on their evidential, historical, and aesthetic value.
- 3.5.296 Their setting is informed by their location in a rural environment, surrounded by agricultural fields. Whether in a remote location or along a country road, all assets benefit from a sense of tranquillity and space. Their setting makes great contribution to their overall value. Their setting does not extend to the draft Order Limits.
- 3.5.297 Within the Fordstreet conservation area (**CA9**), there are twelve Grade II listed buildings holding **medium value** as a heritage group and due to their evidential, historical, and aesthetic value. 'Barn To South East Of Friars Farmhouse' (**1239835**), 'Friars Farmhouse' (**1267731**), 'Outbuilding south-west of Shoulder of Mutton Public House' (**1239834**), 'Fordstreet Bridge' (**1273567**), 'Riverdale Cottage' (**1110891**), 'The 'Queen's Head' Public House' (**1110886**), 'Studio to south of the 'Queen's Head' Public House' (**1110887**), 'Aldham Carpentry' (**1110888**), 'The Bunches' (**1110892**), 'Ferndale and Valley House' (**1337410**), 'Rose Cottage' (**1110883**), and 'Fore Acres' (**1110889**). They are located between c. 700 m and 170 m north of the draft Order Limits.
- 3.5.298 Their setting is informed by their location in the settlement and especially by their roadside location. The road is the A1134, a busy road. Their setting is mostly residential but with fields further afield. Their setting is also informed by their relationship with each other and with the conservation area (**CA9**). The assets are mostly visible on the first edition OS map of 1881. Since the first edition, the settlement has grown a little during the 20th century, particularly south-west and north-west, but in general and even today, Fordstreet has retained its rural nature surrounded by fields. Therefore, their setting makes great contribution to their value does not extend to the draft Order Limits.
- 3.5.299 'Cooks Mill House' (**1225093**) is a Grade II listed building, located at the end of Cooks Mill, and c.650 m north-west of the draft Order Limits. This asset holds **medium value**, primarily driven by its evidential, historical, and aesthetic value. This 18th century red brick house with distinctive features, such as its semi-circular fanlight and open pediment, contributes to its value.
- 3.5.300 The setting is informed by its location within a farm complex, encompassed by agricultural fields and woodlands to the south and west. While the setting enhances the property's appeal, the presence of mature trees limits visibility of the Project from the house, although it may become more visible during the autumn and winter season. Therefore, the setting does not extend to the draft Order Limits.
- 3.5.301 'Little Porters' (**1239710**) is a Grade II listed building located along Porters Lane, c.240 m east of the draft Order Limits. This house holds **medium value** due to its evidential, historical, and architectural value. This 17th century timber-framed house,

with its distinct features like the central chimney stack and casement windows, contributes to its value.

- 3.5.302 It's situated in a tranquil rural setting along a dead-end track, surrounded by fields, farm buildings to the north, and Fordham Heath village to the south. The peaceful location enhances the property's value. The pipeline branch is crossing fields close to the asset therefore the setting extends to the draft Order Limits.
- 3.5.303 'Fiddlers Farmhouse' (**1273588**) is a Grade II listed building, located north of Fordham Heath, c.135 m of the draft Order Limits. This asset holds **medium value** due to its evidential, historical, and aesthetic value, notably the timber-framed construction with distinctive design elements like the central chimney stack and leaded casement windows.
- 3.5.304 Situated along a busy roadside, the property's setting is influenced by its location, with a small open front garden and nearby houses to the south and north-west. Woodland lies further to the west, surrounded by a rural landscape with fields all around. The presence of traffic along the busy road can slightly affect the setting's contribution to its value but overall, it makes great contribution to the asset's value. The property benefits from an open view to the north and northeast, allowing its setting to extend to the draft Order Limits.
- 3.5.305 'Timber framed barn at Checkley's Farm' (**1337415**) and 'Cart lodge to south-east of timber framed barn at Checkley's Farm' (**1306191**) are two Grade II listed buildings, located along Tey Road, c.1.7 km north of the draft Order Limits. These assets have **medium value** due to their evidential, historical, and aesthetic value.
- 3.5.306 Their setting is informed by their roadside location as well as their proximity to the railway. Their setting is also shaped by the fields all around these two assets giving a sense of space. These assets represent a heritage group due to their historical and functional relationship. Overall, despite the proximity with the road and the railway the setting of these assets makes a great contribution to their value. Due to topography and vegetation, their setting does not extend to the draft Order Limits.
- 3.5.307 'Hoe Farmhouse' (**1337413**) and 'Barn north of farmyard at Hoe Farm' (**1110895**) are two Grade II listed buildings located along Rectory Road, c.500 m north of the draft Order Limits. They have **medium value** due to their evidential, historical, and aesthetic value. The house is from the 16th century with a 18th century front range, featuring red brick in Flemish bond, stone arches and sills for its windows, Elizabethan panelling with a unique pattern inside, and historical documentation dating back to 1319. As for the barn, it is a 16th century barn with timber framing, black weatherboards, and a corrugated asbestos roof, featuring jowled main posts, arch-braced tiebeams, and a 18th century roof replacement.
- 3.5.308 Their setting is informed by their relationship with each other as well as their relationship with the medieval 'Barn To North-East Of Hoe Farmhouse' (**1170078**). These assets are visible on the first edition OS map of 1881. Their setting is also shaped by their roadside location in a rural and agricultural environment. Indeed, the setting is further informed by the surrounding agricultural landscape with which the assets have a historical and functional relationship. To their west, approximately 450 m, is the railway. Overall, the setting of the house and the barn enhances their value but does not extend to the draft Order Limits.
- 3.5.309 'Old Bouchiers Hall' (**1110894**) is a Grade II listed building located near New Road, c.400 m west of the draft Order Limits. This asset showcases distinct architectural features such as its mixed brickwork and unique roof design. Inside, it boasts noteworthy elements like an intricately detailed wooden fire surround and low

panelling. With a **medium value** attributed to its evidential, aesthetic, and historical value, the property benefits from a serene rural setting, surrounded by fields and mature trees, adding to its appeal. Therefore, its setting makes great contribution to its value. While tree cover may at times limit views, the setting extends to the draft Order Limits.

- 3.5.310 'Green Farmhouse' (**1170055**), a mid-19th-century house of neat architectural design, constructed with gault brick, presents a **medium value** based on its evidential, historical, and aesthetic value. It is a Grade II listed building located south of A1124 and c.100 m south of an draft Order Limits access road.
- 3.5.311 It stands surrounded by well-established woodland that imparts a sense of seclusion. To the east and west, a collection of other dwellings and farm-related structures can be found where draft Order Limits permanent accesses are, while to the south, vast agricultural fields stretch out. Despite the occasionally busy and noisy road to the north, the asset's setting makes a considerable contribution to its value, and this setting extends to the draft Order Limits.
- 3.5.312 'Mantills Farmhouse' (**1239708**) is a Grade II listed building located c.150 m west of an draft Order Limits pipeline branch and c. 650 m east of the draft Order Limits. This asset was constructed in the 17th century, boasts a timber-framed and plastered L-plan structure, with weatherboarding on the southeast gable. The roof is pegtiled and gabled, complemented by a red brick chimneystack on the two-story portion and an 18th-century square red brick chimney on the wing extension. Overall, this asset is of **medium value** based on its evidential, historical, and aesthetic value.
- 3.5.313 Positioned along a road but set back from it, the house is surrounded by a garden with mature trees, enclosed by a wall and hedge, and accessible via a short track. The rural location, with fields around and a peaceful ambiance, makes a considerable contribution to its value, but the setting does not extend to the draft Order Limits.
- 3.5.314 'Malting House' (**1239711**), an 18th-century dwelling, is a Grade II listed building located c.950 m east of an draft Order Limits pipeline branch and c.1.7 km east of the draft Order Limits. This asset presents a long street-facing facade of red brick laid in Flemish bond, adopting an L-plan configuration with a hipped, peg-tiled roof and a central square-plan red brick chimney stack. The frontage features four small-pane sash windows set in exposed boxes, with a front door beneath a pedimented hood and five pairs of 19th-century sash windows on the ground floor. It has **medium value** based on its evidential, historical, and aesthetic value.
- 3.5.315 The house is positioned back from a quiet road, passed by a sizable garden, and surrounded by well-established woodland. The broader vicinity comprises agricultural fields, contributing to its rural character. The setting makes a considerable contribution to the value of the property but does not extend to the draft Order Limits.
- 3.5.316 Peakes (**1110897**) and Barn to west of Peakes (**1306188**) are two Grade II listed buildings located c.350 m from the draft Order Limits, along Tey Road. They have **medium value** based on their evidential, historical, and aesthetic value. The house is a 1600 timber-framed and plastered structure with two storeys, L-shaped in design. It features gabled roofs covered in peg-tiles, two red brick chimney stacks, modern metal casement windows, and exposed floor timbers in the ground floor ceilings. The barn is a c. 1600 timber-framed asset with black weatherboards, a ridged and gabled roof, and a midstrey.
- 3.5.317 Their setting of Peakes and its barn is informed by their roadside location in a rural and quiet area. Their setting is also shared and informed by their relationship with

each other and with the other elements of the former farm complex. The setting is further informed by the surrounding agricultural landscape with which the assets have a functional and historical relationship. The assets are part of a former farming complex that appears almost as they do on the first edition OS map of 1881. Overall, the setting enhances the value of both the house and the barn, and it does not extend to the draft Order Limits.

- 3.5.318 Along Rectory Road are five Grade II listed building with **medium value** based on their evidential, historical, and aesthetic value: 'Church House Farmhouse' (**1170085**), 'Half A Loaf Cottage' (**1110896**), 'Old Rectory' (**1306223**), 'Grapes' (**1306225**), 'Wagon Lodge To North Of Aldham Hall' (**1337391**) and 'Numbers 1, 2 And 3 Brick Cottages' (**1169966**). Except for the Old Rectory, which is located approximately 300 metres north of the draft Order Limits, all the others are located within a 250-metre buffer zone, of which asset (**1169966**) is only c.20 m north of the draft Order Limits.
- 3.5.319 Their setting is informed by their roadside location. The traffic can affect the value of these assets. The setting is also informed by the relationship with each other. It's worth noting that the asset (**1337391**) has also a functional and historical relationship with the medieval Aldham Hall (**1306270**), a Grade II\* listed building. Their setting is further shaped by the agricultural fields all around them with which the assets have a historical relationship. They all have mature trees or high hedges screening them from the road. Therefore, their setting contributes to their value. Despite the vegetation around them, their setting does extend to the draft Order Limits.
- 3.5.320 Within Aldham is 'Bentalls Cottages' (**1337412**), a Grade II listed building located c.100 m of the draft Order Limits, along Green Lane. This is an asset of **medium value** based on its evidential, historical, and aesthetic value. The house was built in 1615 and is a timber-framed structure with hipped and ridged roof clad with machined tiles.
- 3.5.321 Its setting is informed by its location within the settlement and along a road. It is also informed by its relationship with the medieval 'Church of St Margaret and St Catherine' (**1170063**), both apparent on the first edition OS map of 1881 and by its garden area with some trees and a hedge. Despite the presence of a front garden, it's essential to note that the asset has an open view of the road, and this proximity doesn't contribute to enhancing the value of the house. The setting extends to the draft Order Limits, especially due to a long view through Church Grove.
- 3.5.322 South-east of Aldham, two Grade II listed buildings, 'Green Acres' (**1239672**) and 'Chippetts Farmhouse' (**1273626**) are found c.100 m of the draft Order Limits. They both have **medium value** based on their evidential, historical, and aesthetic value. They are 16th century houses and are timber framed structures with hipped peg-tiled roofs.
- 3.5.323 Their setting is informed by their roadside location, but they are set back from the road, set in courtyards, and protected by hedges or trees. Their setting is also informed by the surrounding agricultural landscape with which the assets have a functional and historical relationship. Overall, their setting makes a great contribution to their value, and despite tree lines, the setting does extend to the draft Order Limits.
- 3.5.324 Along Turkey Cock Lane are three Grade II listed buildings with **medium value** based on their evidential, historical, and aesthetic value: 'Coach House' (**1239714**), 'Moat Farmhouse' (**1239712**) and 'Lampitts Farmhouse' (**1273606**). They are located c.750 m south of the draft Order Limits. The Lampitts Farmhouse constructed around 1560 and later in the 17th century, is a timber-framed building featuring six bays, a

chimney-bay, and chimney stack. It has a peg-tiled roof, with the east end being first floored, and a 17th century-added west end with modern fenestration. The Moat Farmhouse, dating back to approximately 1690, perhaps even earlier, is a two-storey, three-bay structure boasting a red brick front with an interesting parapet and peg-tiled roof. The Coach House is a 18th century asset, featuring a red brick facade in Flemish bond, a hip and peg-tiled roof with lead bonnets, and altered doors and small pane sash windows.

3.5.325 Their setting is informed by their relationship with each other and with the other elements of the former farm complexes. The setting is further informed by the surrounding agricultural landscape with which the assets have a functional and historical relationship. They appear, with different appellations, on the first edition OS map of 1881. They are set back from the road, set in farmyards, and protected by private gardens, hedges, or trees. However, a large parking and commercial activity to the south of Lampitts farm as well as the presence of the A12, south of all these assets, disrupts the tranquillity of the area. Therefore, their setting makes a little contribution to their value. Due to small woodlands, other vegetation and topography, their setting does not extend to the draft Order Limits.

3.5.326 Kemp's Farmhouse (**1239713**) is a Grade II listed building located west of Turkey Cock Lane, c.750 m south of the draft Order Limits. This asset has a **medium value** based on its evidential, historical, and aesthetic value. It is a 17th century timber framed house, fronted with red brick in Flemish-bond with a roof ridged and gabled and peg-tiled with large red brick central chimney stack.

Its setting is informed by its proximity to the railway and the A12 to its south. Despite mature trees, the noise from the traffic negatively impacts its value even if the fields around to its north gives a sense of space and tranquillity. The busy-ness of the road can be a detractor however, these assets would have been placed deliberately by this road, which is a Roman road. Therefore, the road does contribute to their understanding. Overall, the setting makes moderate contribution and does not extend to the draft Order Limits.

#### *Non-Designated Heritage Assets*

3.5.327 The asset named Brickmaking around West Bergholt (**4161**) has played a significant role in the history of West Bergholt. It has evidential and historical value. The presence of old field names such as 'Clay Field', 'Kiln Field', 'Tiles Upper and Lower', 'Tiles Hoppet (or Hoppit)', and 'Tiles Field' indicates the existence of brick and tile making activities in the area. The monument types associated with this heritage asset are post-medieval brickworks, with production dating back to 1570. Notably, the Grade II listed building Coney Byes Farm (**1225071**), previously known as 'Brickhouse Farm,' holds historical value in relation to brickmaking. Fields surrounding the farm, including 'Tiles Hoppet' and 'Kiln Field,' have retained their names since the seventeenth century. Evidence suggests that brickmaking in West Bergholt predates 1570, as indicated by wills from 1571 that mention several brickmakers. The **4188** asset is located north-west of West Bergholt, along Coney Byes Lane and overlaps the draft Order Limits. It has a **medium value** because it bears witness to the brick industry in this region and has evidential and historical value.

3.5.328 The post-medieval Church of St Margaret and St Catherine (**1170063**) is a Grade II\* listed church located approximately 100 m west of the draft Order Limits, between New Road and Green Lane, in Aldham. The original medieval church (**4230**) was demolished in 1885 but was subsequently reconstructed using old materials (including 13th and 14th century features) on a new site within the village. Notable

fittings within the church include a plain 17th century chest with iron bound angles. This monument has **high value** based on its evidential, historical, and aesthetic value. The value and setting assessment of the church is detailed in the 'Post Medieval - Aldham and Fordham - Designated Heritage Asset' part.

- 3.5.329 A post medieval Silver Finger-Ring (**4127**) was found in a field around Brook Road, south of Aldham. It is 80 m south of the draft Order Limits and has **low value** based on its evidential value.
- 3.5.330 The 'Toll House Cottage' (**4159**) is a toll house situated on the former turnpiked Colchester to Halstead Road that dates to the post-medieval period, specifically the 19th century. It is located 5 m east of the draft Order Limits. The cottage is a single-storey building made of weatherboard, with a tiled gable roof. Over time, the building has undergone significant alterations, with no windows on the Halstead Road and Green Lane sides, and a large modern extension to the south. While the building is still intact, recent extensive alterations have been carried out without proper building recording, potentially resulting in the loss of historic elements, and hindering the establishment of its value. Therefore, this asset has **low value** based on its evidential value.

## Marks Tey/ Little Tey/ Great Tey

### *Designated Heritage Assets*

- 3.5.331 The 'Circular Brick Kilns at W H Collier Brick and Tile Works' (**1020999**) in Marks Tey is a scheduled monument of **high value** based on its evidential and historical value. It is located c.650 m south-east of the draft Order Limits. This is an industrial site of historic importance, created in 1863. The site consists of two circular kilns, and their associated brick working floor, flues and chimney, with the western kiln being a Grade II Listed Building (**1266780**) with a **medium value** based on its evidential and historical value. These kilns are well-preserved and provide valuable insights into late 19th century brick manufacturing. The western kiln features an impressive cone-shaped superstructure, standing 12 m tall, with a 4 m internal diameter. The eastern kiln, designed for draught, reaches a height of 4.5 m. Both kilns have retained original features such as central vents, fireholes, and firebars. The Local Plan Committee adopted this **medium value** complex (Schedule monument and listed building) onto the local list (**4232**) for its evidential and historical value.
- 3.5.332 The site's historical value is enhanced by the adjacent Brickworks North of Primrose House/Colliers Brick Works (**4197**) which is an active site that has been producing bricks since 1863. It is located along the railway and the Roman river, north of Marks Tey. This non designated Brickworks crosses the draft Order Limits. It consists of a central building complex, smaller structures, clay pits, and a tramway. The site has a rich history of manufacturing various brick products, including red and white bricks, tiles, drainage pipes, and pottery. It has utilised different types of kilns, with the last remaining example of a bottle kiln in Essex. The present brickworks are still in operation, making use of historic structures for brickmaking, drying, firing, and storage. It contributes to the evidence for region's industrial history and has a **medium value** based on its evidential and historical value.
- 3.5.333 Overall, this schedule monument holds a **high value** due to its rarity and comprehensive representation of the brickmaking industry's development. Each component contributes to our understanding of the region's industrial past and the technological advancements in brick production from the early 19th century to the late 19th century. The setting of this schedule monument is primarily informed by its

rural context and location on a private road, contributing to a serene environment. Further south is the A12 and other industrial activities, but the woodland surrounding the schedule monument acts as a buffer and preserves the asset. Therefore, the setting of the 'Circular Brick Kilns at W H Collier Brick and Tile Works' schedule monument makes great contribution to its value and does not extend to the draft Order Limits.

- 3.5.334 Along Brook Road is the Grade II\* 'Barn To South West Of Little Tey House' (**1266779**) and 'Little Tey House' (**1266823**) a Grade II listed building. They are located within a radius of less than 50 m north of the draft Order Limits. While the barn has a **high value** based on its evidential, historical, and aesthetic value, the house has **medium value** due to its evidential, historical, and aesthetic value. The barn is a 16th century timber-framed structure with black weatherboards, single aisle, and corrugated iron roof. It comprises six bays, each with characteristic structural elements. As for the house, it is a 19th century asset with a red brick Flemish bond front, featuring three bays and two storeys. Slated gabled roof, pilastered returns, and small-pane sashes. Modern central door and some extensions to the rear.
- 3.5.335 Their setting results from their roadside location and their presence within a farmyard. Their setting is also informed by the relationship between each other and with a possible moated site (**4057**). The assets are apparent on the first edition OS map of 1881. The setting is further informed by the surrounding agricultural landscape with which the assets have a functional and historical relationship. The setting of the asset makes a considerable contribution to its value. This setting does extend to the draft Order Limits which is close to them.
- 3.5.336 Along Earls Colne Road and Newbarn Road are five Grade II listed buildings: 'Newbarn, Farmyard Buildings Round Open Square' (**1223379**), 'Basketers' (**1223209**), 'Smyther's Farmhouse' (**1267413**), 'Cherry Garden' (**1223210**) and 'Barn To South Of Teycross Farmhouse' (**1223213**). They all have **medium value** based on their evidential, historical, and aesthetic value. They are almost 2 km north of the draft Order Limits.
- 3.5.337 Their setting is informed by their roadside location and by their relationship with each other and with the medieval 'Teycross Farmhouse' (**1223211**). Their setting is further informed by the surrounding agricultural landscape with which these assets have a functional and historical relationship. They all are set back from the road, set in farmyards, and protected by private gardens, hedges, or trees. Therefore, despite the proximity with roads, their setting does enhance their value. Due to topography and mature tree lines in the intervening landscape, however, their setting does not extend to the draft Order Limits.
- 3.5.338 Within the Great Tey conservation area (**CA8**) are three Grade II listed buildings: 'Rectory Cottage' (**1223155**), 'Guildhall Cottages' (**1223389**) and 'The Old Vicarage' (**1223178**). They have all **medium value** based on their evidential, historical, and aesthetic value and are located c.1 km north of the draft Order Limits.
- 3.5.339 Their setting is informed by their location in the **CA8** as well as their roadside position. They all are set back from the road, and protected by private gardens, hedges, or trees. Their setting is also informed by their relationship with each other and with the Grade I Church of St Barnabas (**1223408**). Overall, despite the proximity with roads, their setting does enhance their value. However, due to vegetation and residential areas, the setting does not extend to the draft Order Limits.
- 3.5.340 Along Buckleys Lane and Coggeshall Road are six Grade II listed buildings: 'Walcotts Hall' (**1267433**), 'Braziers' (**1267410**), 'Stable to north-east of Bucklers

Farmhouse' (**1223176**), 'Bucklers Farmhouse' (**1223173**), 'Barn to north of Bucklers Farmhouse' (**1223174**), and 'Range to west of Bucklers Farmhouse' (**1223175**). They have **medium value** based on their evidential, historical, and aesthetic value. They are all located between one and two kilometres north of the draft Order Limits.

- 3.5.341 Their setting is informed by their roadside location in a rural area. They are all set back from the road, in farmyards. Their setting is also informed by their relationship with each other and by the surrounding agricultural landscape with which the assets have a functional and historical relationship. The setting of these assets makes a considerable contribution to their value but does not extend to the draft Order Limits. However, considering the open landscape to the south of this property, it is likely that the tops of the pylons might be visible from the asset.
- 3.5.342 Along Brook Road is the Teybrook farmyard (**4225**) including five Grade II post-medieval listed buildings: 'Teybrook Farmhouse' (**1223156**), 'Garden wall at Teybrook Farm' (**1223159**), 'Stables to south of Teybrook Farmhouse' (**1267423**), 'Barn to rear of Stables at Teybrook Farm' (**1267422**) and 'Barn to south-east of Teybrook Farmhouse' (**1267424**). They all have **medium value** due to their evidential, historical, and aesthetic value. They are located between c.20 m and 100 m of the draft Order Limits, except (**1223158**) which is c.400 east of the draft Order Limits.
- 3.5.343 The setting of the assets is shared and is informed by the relationship between the designated assets and their relationship with other elements of the legible farming complex. The assets are recorded on the first edition OS map of 1881. The setting is further informed by the surrounding agricultural land with which the assets have a historic and functional relationship. The assets are situated in well-established grounds containing mature trees and defined by mature tree-lined hedgerows, and woodlands which creates a sense of privacy and enclosure. This setting makes a considerable contribution to the value of the assets. The setting does extend to the draft Order Limits.
- 3.5.344 The Grade II listed 'Bragg' (**1267411**) is located approximately 10 m west of the draft Order Limits (Bracks Lane), and 170 m north of the A120, and is of **medium value** based on its evidential, aesthetic, and historical value. The two-storey timber framed house dates to the 18th century.
- 3.5.345 The setting of the house is informed by its presence as a post-medieval roadside farmhouse within a rural agricultural landscape. The original setting of this asset is that of a house within the northern fringe of Broad Green surrounded by a rural agricultural landscape which has already been affected by the volume of traffic along the east to west aligned A120 to the south of the asset which makes a moderate contribution to the current value of the asset. The setting of this asset is broadly confined to its immediate vicinity by its surrounding tree boundary. It is likely that the setting of this asset would be negatively affected by development within the draft Order Limits as the assets setting extends to within the draft Order Limits.
- 3.5.346 The **medium value** Grade II listed 'Gull Cottage' (**1267412**) is located approximately 225 m south of the draft Order Limits, and 40 m south of the A120, and is of evidential, aesthetic, and historical value. The two-storey cottage dates from the 16th century, with 18th century alterations.
- 3.5.347 The setting of cottage is informed by its presence as a post-medieval roadside cottage within a rural agricultural landscape. The original setting of this asset is that of a cottage within the southern fringe of Broad Green surrounded by a rural agricultural landscape. This setting has been affected by the volume of traffic along

the east to west aligned A120 immediately to the north of the asset's boundary. The setting makes a moderate contribution to the current value of the asset. The setting of this asset is broadly confined to its immediate vicinity by surrounding deciduous trees and a fence line boundary. It is likely that the setting of this asset would be negatively affected by development within the draft Order Limits as the asset's setting extends to within the draft Order Limits, although this is partially restricted by trees.

- 3.5.348 Along London Road (A12) is the Grade II listed building '172 London Road' (**1224446**). This asset possesses **medium value** primarily due to its evident, historical, and aesthetic value. Dating back to c. 1840, this house, constructed with gault brick, stands as a testament to the architectural styles of its era. The three-bay, two-story structure features pilastered returns, a hipped slated roof, and chimneys on the rear slope. It is located c. 1.35 km south of the draft Order Limits.
- 3.5.349 Its setting is informed by its roadside location along the busy A12, which is a Roman road. The busy-ness of the road is a detractor however, these assets would have been placed deliberately by this road. Therefore, the road does contribute to their understanding. The house is set back from the road within a front garden with an open gate. Some mature trees limit the view to the road. Recent industrial activities and dwellings appeared since the house was build, changing thus its setting. Overall, its setting makes moderate contribution to its value and does not extend to the draft Order Limits.
- 3.5.350 The **medium value** Grade II listed 'Broadgreen Farmhouse' (**1223206**) is located approximately 355 m south of the draft Order Limits, and 50 m south of the A120, and is of evidential, aesthetic, and historical value. The two-storey brick farmhouse dates to c.1700. This listed building is in Broadgreen Farm (**4220**). Originally there were five buildings and only one of these buildings remains, namely the Grade II listed Broadgreen Farmhouse (**1223206**). Several modern structures and extensions have been added over time. The site is characterised by two historic landscape features, with farm ponds located to the north and south that have managed to survive. The farm has evidential and historical value. Overall, because the farm has undergone numerous modifications and destruction, it is of **low value**.
- 3.5.351 The setting of the farmhouse and the farm is informed by their presence as a post-medieval roadside farmhouse within a rural agricultural landscape. These assets are surrounded by a rural agricultural landscape. Their setting has already been affected by the volume of traffic along the east to west aligned A120 immediately to the north of the assets' boundary. The setting makes a moderate contribution to the current value of the assets and is broadly confined to its immediate vicinity by surrounding deciduous trees and a fence line boundary. Therefore, the setting does not extend to the draft Order Limits.
- 3.5.352 The **medium value** Grade II listed 'Numbers 115 and 117 Coggeshall Road' (**1224549**) is located approximately 470 m south-east and 560 m north-east of the draft Order Limits and is of evidential, aesthetic, and historical value. The two-storey T-plan timber framed house dates to the 16th century or earlier.
- 3.5.353 The setting of the house is informed by its presence as a post-medieval roadside dwelling in the settlement of Marks Tey within a wider rural agricultural landscape. The original setting of this asset has already been affected by the volume of traffic along the east to west aligned A120 immediately to the north of the asset boundary. The setting makes a moderate contribution to the current value of the asset. The setting of this asset is restricted in its immediate vicinity to the west by a deciduous

tree-lined boundary and by small single storey building to the north of the A120. Therefore, the setting does not extend to the draft Order Limits.

- 3.5.354 Along Long Green is the Grade II listed building 'The Green' (**1224586**), located c. 1.4 km south of the draft Order Limits but c. 680 m south-east of an draft Order Limits pipeline branch. It is a 17th century two-story timber-framed house with weatherboards on gable ends and a rough-cast front elevation. The roof is ridged, gabled, and peg-tiled, adorned with two red brick chimney stacks in the rear pitch. This house has **medium value** based on its evidential, historical, and aesthetic value.
- 3.5.355 This asset can be seen on the first edition OS map of 1881, but at the time it was surrounded by fields. Today, its setting has changed and is determined by its location in a residential area. Its setting has therefore evolved, affecting the value of the asset. This asset is set back from the road, within an entrance garden, where mature trees limit the view of the road. Overall, the setting makes little contribution to the asset's value and does not extend to the draft Order Limits.
- 3.5.356 At the end of a private track, on the east side of East Gores Road, are 'Barn To North West Of Trumpingtons' (**1223256**) and 'Stable Range To North East Of Barn To North West Of Trumpingtons' (**1267359**), two Grade II listed buildings. They are located c.600 m north of the draft Order Limits. They have **medium value** based on their evidential, historical, and aesthetic value.
- 3.5.357 Their setting is informed by their location in a farmyard, in a rural environment. It is also informed by the historical and functional relationship with one medieval listed building belonging to the same farmyard, 'Trumpingtons' (**1223335**). They are recorded on the first edition OS map of 1881. The setting is further shaped by the surrounding agricultural land with which the assets have a historic and functional relationship. The serene environment augments the value of the barn and the stable. However, the presence of a woodland approximately 200 m south of the properties, along with tree lines to the south of the farmyard, restricts the setting from extending to the draft Order Limits.
- 3.5.358 Along East Gores Road is 'Cuckoo's Farmhouse' (**1223381**) a Grade II listed building located c.600 m north of the draft Order Limits. This asset has **medium value** due to its evidential, historical, and aesthetic value. This is a 18th century barn with a timber frame, black weatherboarding, and a central midstrey. It has lapped collars, side-purlins, and primarily wind-braced walls.
- 3.5.359 Its setting is informed by its location in a farmyard. It is set back from the road. The hedge and trees surrounding this house, create feelings of exclusion and peacefulness, and this setting makes a considerable contribution to the value of the asset. The agricultural land beyond with which it has a functional and historical relationship also enhances its value. The setting of the asset does not extend to the draft Order Limits.
- 3.5.360 In a farmyard, east of Salmon's Lane are two Grade II listed buildings, 'Upp Hall' (**1223380**) and 'Cart Lodge to west of Upp Hall' (**1267339**). They are south of the draft Order Limits, less than 50 m. They have **medium value** based on their evidential, historical, and aesthetic value. The hall is a 1700 U-plan oak timber-framed house with plastered walls, featuring pairs of horned sash windows, a peg-tiled hipped roof, and 18th century rear extensions. The lodge is a 18th century structure with an elm frame, oak posts and sills, bracing, and a roof clad with corrugated iron.

- 3.5.361 Their setting is informed by their location in a farmyard surrounding by mature trees giving a sense a seclusion and tranquillity. The setting is further informed by the surrounding agricultural landscape with which the assets have a functional and historical relationship. Their historical and functional relationship enhance their value as a heritage group. Overall, the setting of the assets makes a considerable contribution to their value although the A120 which is c400 m south of these assets detracts from their setting and this may affect their value. Their setting extends to the draft Order Limits.
- 3.5.362 'Three bay barn at Elm Farm' (**1223257**) is a Grade II listed building south of the A120, c.700 m south of the draft Order Limits. It has a **medium value** based on its evidential, historical, and aesthetic value. It is a 16th century barn with an elm frame, tarred roof, and seed bin to the south of the midstrey attached to Elm Farm. The 1897-1904 Epoch 2 map reveals that this farm was originally a substantial site with eleven buildings. Sadly, over 90% of these structures were demolished, leaving behind only one remaining building, the Grade II barn (**1223257**). The farmhouse and all other buildings were demolished. The site has since been repurposed as a lorry depot, necessitating the construction of numerous modern buildings. Approximately 510 m north-east is a possible medieval deserted settlement (**4058**). Therefore, the farm has a heritage group value with the barn and the medieval assets around and is of **medium value** also based to its evidential and historical value.
- 3.5.363 The setting of the barn is shaped by its roadside location, with proximity to the A120 causing traffic noise. However, it is enclosed by tall bushes and hedges, obstructing visibility from the road. The setting is further informed by the surrounding agricultural landscape with which the asset has a functional and historical relationship. Nevertheless, while historical maps like the first edition OS map of 1881 and the 1925 edition depict Elm Farm in a primarily field-surrounded setting, its present-day context with the presence of nearby industrial and residential areas has an influence on the asset's value. Overall, the barn's setting has limited value contribution because of its closeness to the A120 and the nearby industrial zones. Its setting does not extend to the draft Order Limits.
- 3.5.364 Along Great Tey Road are 'Knave's Farmhouse' (**1266773**) and 'Barn to south of Knaves Farmhouse' (**1266822**) two Grade II listed buildings with a **medium value** due to its evidential, historical, and aesthetic value. They are located c. 200 m south of the draft Order Limits.
- 3.5.365 Their setting is informed by its roadside location in a farmyard. Their setting is also informed by their relationship with each other and with the non-designated Knaves Farm (**4217**) and one medieval building of the farm complex 'The Range south of barn to south of Knaves Farmhouse' (**1266775**). All the three assets are recorded on the first edition OS map of 1881. The setting is further characterized by the surrounding agricultural landscape with which the asset has a historical and functional relationship. However, the asset is directly on the road, impacting the value of the asset according to the traffic. Overall, the setting makes little contribution to the value of the barn, and it extends to the draft Order Limits.
- 3.5.366 Both 'Barn South Of Road, West Of Godbolts Farmhouse' (**1266766**) and 'Barn North Of Road At Godbolts Farm' (**1224574**) belong to Godbolt's Farm, Marks Tey (**4215**), a historic farmstead, located west of Marks Tey and east of Little Tey, in the 250 m buffer of the draft Order Limits. Both farms are Grade II with **Medium value** as a heritage group value, based on their evidential, historical, and aesthetic value. The barn to the south is a 17th century a timber-framed structure, black weatherboarding, a thatched ridge, and gabled roof featuring a fly-hip. The barn to the north is a 18th

century, timber-framed and black weatherboarded structure with a thatched, ridged, and gabled roof covered in peg tiles.

- 3.5.367 Their setting is informed by their relationship with their associated Godbolt's Farm (**4215**) and their proximity with a potential DMV (**4058**) as well as by the agricultural landscape with which they have historic and functional relationships. The setting is also informed by the roadside location along Coggeshall Road. Overall, the setting of these two listed buildings makes a great contribution to its value. The view to the east is quite open despite some trees, hedges, and road around the asset. Therefore, there are possible views of the Project, however, the setting of both Barn (**1266766** and **1224574**) does not extend to the draft Order Limits.
- 3.5.368 The Grade II listed building '184, Coggeshall Road' (**1224523**) is located along Coggeshall Road, c.300 m of the draft Order Limits. It has **medium value** based on its evidential, historical, and aesthetic value. This asset is a restored 16th century cottage with one floor and attics, timber-framed and plastered, featuring a modern tiled roof, flat dormers on the south side, and leaded windows.
- 3.5.369 Its setting is informed by its roadside location along the busy A120. The house is set back from the road in a front garden. To its north is a bigger garden and further fields. The setting is a semi-rural, semi-residential area. Due to the proximity of the A120, the setting makes little contribution to the house. The setting does not extend to the draft Order Limits
- 3.5.370 The **medium value** Grade II listed 17th century 'Godmans Farmhouse' (**1224527**) is the only remains standing of Godmans Farm, situated within the settlement of Marks Tey, along Coggeshall Road approximately 275 m north-west and 310 m south-west of the draft Order Limits, 30 m south of the A120. The farmhouse is of evidential, aesthetic, and historical value. The H-plan two-storey timber framed house dates to the 17th century, with a Victorian porch. The 1897-1904 Epoch 2 map also indicates two significant landscape features that once existed on the site: a farm pond to the west and a small woodland to the east. Unfortunately, both features have been destroyed due to subsequent development activities.
- 3.5.371 The setting of this asset is informed by its location in a residential area, along the busy Coggeshall Road. Despite a woodland further north, its setting does not enhance its value due to the proximity of recent residential and industrial/ commercial area. Although the woodland to the north of this asset would certainly block the view to the Project, any work in one of the draft Order Limits' branches located c.290 m to south-west, would be visible from the asset. However, the setting of the farmhouse is limited to the residential area and does not extend to the draft Order Limits.
- 3.5.372 'The Red Lion Public House' (**1224526**) is a Grade II listed building along the A120, west of Marks Tey and c.300 m of the draft Order Limits. The Red Lion Public Households substantial evidential, historical, and aesthetic value. Dating back to c. 1600, this timber-framed and plastered structure with its peg-tiled, ridged, and gabled roof stands as an architectural testament. The presence of two end chimney stacks and an off-centre third adds to its historical value. The visual appeal and architectural characteristics of this structure enhance its overall **medium value**.
- 3.5.373 The setting of the Red Lion Public House is influenced by its roadside location. It is set back from the road with an open front area for parking. Green spaces extend to the east and west, while the southern side is surrounded by residential areas, and to the north are more residences. The setting has changed according to the first edition OS map of 1881, becoming more residential. The busy-ness of the road is a detractor however it would have been placed deliberately by this road, so, the road

does contribute to its understanding. Overall, the setting makes moderate contribution to the asset's value. To the north, a combination of woodland and dwellings obstructs the view toward the draft Order Limits, thus preventing the setting to extend to the draft Order Limits.

- 3.5.374 South of Marks Tey is found the Grade II listed 'Marks Tey Hall' (**1224576**). It is a timber-framed house with Tudor elements, including an H-plan structure, leaded casements, and a peg-tiled roof. This 16th-century building, with later additions, stands on a former moated site. Within the same site is the 17th century Grade II listed 'Barn to the North-West of Marks Tey Hall' (**1266768**). This structure features red brick with blue-glazed headers, a peg-tiled roof, and distinctive architectural details, including corbelled eaves and diagonal chimney shafts, showcasing original elements and intricate diaper patterns. Both listed buildings are located c. 1.7 km south of the draft Order Limits. Based on their evidential, historical, and aesthetic value, both the hall and the barn have **medium value**.
- 3.5.375 Their setting is linked to their historical agricultural relationship within the landscape, which has been maintained through the presence of the surrounding agricultural fields. However, further north (c. 100 m) are some recent industrial activities and the presence of the A12, c. 300 m to its north. But tree lines serve as buffers. Their setting is further informed by their relationship with each other and with the 'Medieval moat at Marks Tey Hall' (**1477794**) a scheduled monument of high value, and 'Marks Tey Hall South Barn' (**1224577**) a Grade II\* listed building. They all form a heritage group which enhances their value. Therefore, the setting of the Hall and the barn makes a moderate contribution to their value and does not extend to the draft Order Limits
- 3.5.376 Two Grade II listed buildings, 'Barn To North East Of East Gores Farmhouse' (**1223385**) and 'East Gores Farmhouse' (**1223384**) remain the only buildings intact on the site East Gores Farm, Great Tey (**4223**). These two listed buildings are found along East Gores Road, c.250 north-west of the draft Order Limits. They have both **medium value** based on their evidential, historical, and aesthetic value. East Gores Farm (**4223**) consisted of nine buildings arranged in a compact layout, however, most of these original buildings were demolished. Despite this, two listed buildings remain intact on the site (**1223384**, **1223385**). The site boasts two farm ponds and the remnants of a medieval moat (**4056**). Therefore, the farm is part of a heritage group and holds **medium value** with evidential and historical value.
- 3.5.377 The assets are positioned along the roadside but set back from the road, concealed by mature trees and hedges. Their setting is informed by their relationship with each other and by the surrounding agricultural landscape with which the assets have a historical relationship. Overall, the setting makes great contribution to their value. Concealed in mature trees, the setting does not extend to the draft Order Limits.
- 3.5.378 In front of 'East Gores Farmhouse' (**1223384**) is 'Roundhouse (**1223386**), a Grade II listed building with **medium value** due to its evidential, historical, and aesthetic value. The octagonally planned single-story structure, with rendered elevations and a distinctive red machine-tiled roof, showcases original features like pairs of 8-pane hornless sashes. It is located c. 255 m north of the draft Order Limits.
- 3.5.379 Its setting is informed by its roadside location and by the surrounding agricultural landscape with which the assets have a historical relationship. The setting makes a great contribution to the asset's value and extend to the draft Order Limits.

#### *Non-Designated Heritage Assets*

- 3.5.380 A post-medieval brick wall is located 75 m north of the draft Order Limits, at Teybrook Farm, Brook Road, Great Tey (**4193**). It has **low value**.
- 3.5.381 Salmon's Farm, Great Tey (**4222**) is located along Salmons Lane, 80 m south of the draft Order Limits. The earliest record of the farm dates to the 1839 Great Tey tithe map, which depicted several interconnected buildings at the location. Unfortunately, the entire site was demolished and therefore, is of **low value** with evidential and historical value.
- 3.5.382 Approximately 1 km north of Copford and c. 110 m south-east of the draft Order Limits is found a post medieval Silver Finger-Ring with ornamental Bezel (**4233**). It has an historical value and is of **low value**.

## Modern

### *Designated Heritage Assets*

- 3.5.383 There is a schedule monument 'World War II Eastern Command Line at Chappel Viaduct' (**1020687**) located between the settlements of Chappel and Wakes Colne, c. 2.88 km of the draft Order Limits. It holds evidential and historical value and is of **high value**. This asset is a tangible representation of the strategic defensive measures implemented during World War II. Constructed as part of the Stop Line Defence plan, this site showcases the full spectrum of defensive structures, including various pillbox types, anti-tank barriers, and spigot mortar emplacements. Notable is the survival of the last FW3/28 artillery pillbox on the Eastern Command Line. These structures strategically placed around Chappel Viaduct offer a well-preserved testament to the largest engineering task undertaken by the Home Forces.
- 3.5.384 The site's setting includes the Chappel Viaduct, a prominent railway embankment, and the River Colne. The defensive structures strategically positioned around the viaduct take advantage of natural barriers and the man-made protection of the railway embankment. The river represents a natural barrier, emphasizing the strategic importance of the viaduct's fortification. Some parts of this asset are in woodlands and the rest along the railway. Overall, its setting makes a considerable contribution to its value but due to the distance it does not extend to the draft Order Limits.

### *Non-Designated Heritage Assets*

- 3.5.385 Within Section D of the Project, the modern period is defined by prominent World War II remains and notable developments in infrastructure. The era is marked by significant improvements in the road system, including the construction of the motorway network. Additionally, the expansion of the rail network played a crucial role during this period. Despite these advancements, the landscape continued to be shaped by ongoing agricultural practices and effective drainage management.
- 3.5.386 The Boxted WWII Airfield (**4063**) is a heritage asset consisting of various features and structures. There is evidence of it being a military airfield during World War II, with documented records and cropmarks indicating its existence. It was operational from May 1943 until its closure in November 1946, initially housing USAAF B-26 bombers and later accommodating different fighter units. The airfield layout included three runways connected by a perimeter track, along which 45 loop dispersals and six frying pan dispersals. The bomb stores were located on the east side, where some Nissen huts remain, including three used for bomb fusing. Two T-2 hangars were present on opposite sides of the perimeter, but they have since been removed. The main technical site was situated along Lodge Lane, where a few Nissen huts

may still exist, along with a Blister hangar. Although the airfield is now under cultivation and plantations, remnants of the runways and perimeter track can still be observed, albeit at a reduced width. Aerial photographs show cropmarks of field boundaries depicted on early O.S. maps and traces of the former runway. Some buildings on the main site are reported to survive in an unknown condition, while aerial photographs from 2000 indicate the presence of bomb store buildings and several structures at the main technical site. The Boxted WWII Airfield is intersected by the draft Order Limits in a west to east direction. This asset has evidential and historical value and of **medium value**.

- 3.5.387 A pillbox was located c. 170 m east of the draft Order Limits, in the northwest corner of Fiddler's Wood, Fordham Bridge (**4004**) and dated from the WWII era. The evidence for its existence comes from contemporary documentary records. Unfortunately, the pillbox has been destroyed, and there are no remains visible at the site. This asset has therefore **low value**. The ground in the corner of the wood appears to be disturbed. Based on the proximity to an infantry pillbox located just 90 m north-east (**4024**) and Fordham Bridge, it is speculated that this pillbox may have been an artillery pillbox, possibly of Type FW3/28, serving to cover the bridge.
- 3.5.388 Nearby are other **low value** modern military heritage assets and they have group value as part of system of WWII defences of the eastern command line:
- An ammunition shelter (**4011**). According to contemporary records, the shelter was situated on the northern boundary near the bridge over the River Colne, 50 m west of the draft Order Limits. Today, the remains of the shelter can still be seen inside the wood, approximately 37 m from the road. The concrete base with low side walling is intact, and the entrance on the eastern side is clearly visible. The site is scattered with collapsed Anderson shelter sheets, which were originally placed on top of the walling. It is believed that this shelter was primarily constructed to house the bombs for the two spigot mortar positions located on each side of the road (**4037**) and (**4040**)
  - The heritage asset known as the Anti-Tank Rails at Fordham Bridge (**4038**), is partially preserved. Only the cut-off ends of the anti-tank rails are visible, embedded in a 1.5 m high concrete wall. These rails are located along the south bank of the River Colne, east of Fordham Bridge, covering approximately 27 m. The concrete wall runs parallel to the riverbank and forms part of a hard-standing area for vehicles adjacent to the road. The top of the wall, at least 1.5 m wide, contains the cut-off ends of the anti-tank rails, which were likely oriented vertically or angled towards the river, possibly standing three or four feet high. There are a total of 30 rails in a single row, originally fashioned from sections of RSJ (Rolled Steel Joist) or railway line. Remains of anti-tank rails are rare in Essex. Along the Eastern Command Line four sites have been recorded. This asset is adjacent to the draft Order Limits
  - A Road Barrier at Fordham Bridge (**4039**), is recorded as being destroyed along Mill Road, c. 200 m east of the draft Order Limits. Contemporary records simply state its existence, mentioning 'Road Barrier. Fordham Bridge.' During WWII, the River Colne served as part of the Eastern Command Line, and it is likely that every bridge crossing the river was obstructed by a road barrier made of concrete and steel
  - Contemporary records indicate that Great Porters Farm had a total of six pillboxes during World War II, and remarkably, all of them have survived to this

day (**4001**, **4021**, **4023**, **4022**). The pillboxes are all located south of the draft Order Limits, in the 250 m buffer

- Other pillboxes dating from the World War II period are found in this area such as (**4025**, **4026**, **4029**, **4044**, **4043**, **4028**)

- 3.5.389 A road Barrier (**4041**), no longer in existence, was located at Fordstreet Hill, 65 m north to the draft Order Limits. Although the road barrier itself is destroyed, faint marks on a 1946 aerial photograph reveal the presence of a rail and socket anti-tank barrier at the foot of Fordstreet Hill. These marks can be seen where the anti-tank ditch (**4119**), crossed the road. Additionally, anti-tank pimples, either cone-shaped or pyramid-shaped structures measuring two feet in height and three feet wide at the base, can be observed on each side of the road. There were three pimples on the west side and two on the east side. During the site visit, a raised portion covered with earth and containing large fragments of concrete, which were described as 'typically WWII,' was found in the corner of the field on the east side of the road. These remnants possibly represent the remains of the demolished anti-tank pimples. Both assets have **low value** based on their evidential value.
- 3.5.390 The 'Road Barrier / Anti-Tank Pimple, New Road, Fordstreet' (**4042**) holds historical and evidential value as it marks the location of an anti-tank ditch during the mid-20th century. The contemporary records and a 1946 aerial photograph confirm its existence, with surviving evidence in the form of a rare pyramid-shaped anti-tank pimple situated in the roadside hedge. While anti-tank pimples were once commonplace, the unique pyramid design of this example distinguishes it as the first of its kind recorded in Essex. Given its rarity and evidential and historical value in documenting historical defensive measures, the asset is considered of **medium value**.
- 3.5.391 A **low value** spigot Mortar Emplacement (**4009**), which is no longer extant, was in the garden at the rear of the Police Station, in Great Horkesley, 55 m south of the draft Order Limits. Unlike typical octagonal emplacements, this structure appears as a rectangle with two exterior ammunition alcoves integrated into it. It is likely that the emplacement was designed in this manner to cover the northern approach to the village. As of 2005, the police station has been converted into two private houses situated on the east side of The Causeway. No visible traces of the emplacement were apparent in the rear garden of the northernmost house during the site visit. This asset has evidential value.
- 3.5.392 An ammunition shelter (**4010**) which no longer exists, was located 160 m north of the draft Order Limits, at Woodlands Farm in Great Horkesley. It has **low value** due to its evidential value. An aerial photograph taken in June 1960 reveals the presence of a small Nissen-type hut, which is characteristic of ammunition shelters of its kind. The shelter was located on the west side of an orchard, a short distance north of Broad Lane. The current owner of the property confirms that the shelter was demolished approximately thirty years ago. While the orchard has been transformed into a tennis court, scattered fragments of concrete beneath nearby bushes likely represent remnants of the shelter's foundation.
- 3.5.393 South of Lodge Lane, 210 m south-east of the draft Order Limits, is Boxted WWII Airfield – Administrative Site (**4049**). An Air Ministry plan from November 1944 provides further details about the Administrative Site at Boxted Airfield and its Dispersed Sites. It has evidential value. The plan indicates that the Administrative Site, located in Kiln Wood, encompassed eight buildings and various other structures, including the Operations Block. However, as the current survival or existence of these remains is unknown, this asset has **low value**.

- 3.5.394 A Historic signpost (**4230**) from the 1920s/1930s, crafted in cast iron by Maldon Iron Works is found along The Causeway, near Great Horkesley and c.150 m south of the draft Order Limits. The signpost features a circular-section tapered post, although its finial is currently broken. This asset has **low value** and has historical value.
- 3.5.395 Adjacent the A12 and near Lodge Lane, c. 130 m east of the draft Order Limits, is a site of Sick Quarters linked to a World War II airfield (**4345**); However, it is no longer present. This asset has evidential value but is of **negligible value**.
- 3.5.396 Close to **4345**, c. 240 m south of the draft Order Limits is an area of communal facilities connected to a World War II airfield (**4346**). However, it is no longer present. This asset has evidential value but is of **negligible value**.
- 3.5.397 Along Langham Lane, c. 220 m north-east of the draft Order Limits is an underground Cold War Nuclear Monitoring Post (**4349**). This asset has historical value and is of **low value**.

## Undated

- 3.5.398 The earthwork in Brinkley Grove (**1002137**), situated within the woodland of Highwoods, Essex, is a Scheduled Monument of **high value** based on its evidential and historical value. It comprises the south-west corner of what appears to be a rectangular structure, featuring a substantial ditch measuring about 60 feet wide and nine feet deep, flanked by external and internal banks. Additionally, it consists of an earthwork characterised by two banks with ditches arranged at right angles and interpreted as defensive, However, only faint traces of this earthwork remain visible within the woodland.
- 3.5.399 Brinkley Grove, nestled in the northern outskirts of Colchester and forming part of Highwoods Country Park, serves as the backdrop for this enigmatic earthwork. Shrouded in woodland, it takes the form of an L-shaped ditch, spanning approximately 15 meters across, hinting at its potential role as part of a larger enclosure. The 1841 tythe map, however, indicates that the area encompassing the monument originally belonged to High Wood, rather than Brinkley Grove. Recent investigations, including small trenches near the northern edge of the west ditch, have yielded limited evidence regarding the monument's age or purpose. An east-west ditch, likely of post-medieval origin, intersects the area and appears to cut through natural sandy clay rather than fill a former ditch. Although previously interpreted as a defensive feature, possibly built in the Civil War or the Iron Age, it could equally be more modern and the result of clay extraction, which may lower its value somewhat.
- 3.5.400 Its setting is informed by its location between a woodland and residential areas. Views in all directions are short due to the presence of buildings to the south and east and trees to the north and west. The tranquillity of the woodland grove reinforces the value of this asset, although it is likely to be disturbed by the proximity of houses. Overall, its setting makes moderate contribution and due to the location of this asset, its setting does not extend to the draft Order Limits.
- 3.5.401 West of Fordham Bridge (**4090**) is an area where cropmarks have been observed, indicating the presence of linear features and rectangular pits, likely related to agricultural activities. There is also a cropmark of a possible rectilinear enclosure, approximately 40 m in size, potentially with two banks and possibly an entrance. The site is located north of Halstead Road and intersects the draft Order Limits and has **low value** based on its evidential value.

- 3.5.402 North of Langham Road are some **low value** undated cropmarks, near Boxted Heath (**4205**). This asset crosses the draft Order Limits. Other undated cropmarks are near Langham, along the A12 (**4109**). These assets have evidential value.
- 3.5.403 A watermill was located on the River Colne in West Bergholt, 60 m from the draft Order Limits (**4008**). It is now demolished and is of **low value** due to its evidential value.
- 3.5.404 The Old House Field (**4067**) is located within the draft Order Limits and has **low value** due to its evidential value. The Grade II listed building 'New Barn House' (**1222863**) is situated within the south-west of this non designated asset.
- 3.5.405 Several cropmarks, pits, ditches, and trackways have been recorded throughout Section D. Although these features are undated, it is noteworthy to mention that many of them may have prehistoric origins, especially the ring ditches and enclosures:
- Within the draft Order Limits, charcoal-rich pits, south of Redhouse Farm, Boxted (**4185**) have been recorded. They have **low value** based on their evidential value
  - South-west of Fordstreet, along New Road and c. 220 m west of the draft Order Limits, is a shallow depression (**4353**) or spread ditch running in a straight line for about 400 m to the South of Burgis Hall. This asset has **low value** based on its evidential value
  - Along Boxted Road, c. 250 m north of the draft Order Limits, are cropmarks (**4352**) which reveal a small square feature with wide ditches, showing no visible interruptions in the ditch lines. It raises questions about potential trackways and pits in the area. They have **low value** based on their evidential value
  - West of Aldham, adjacent to the draft Order Limits are Cropmarks of former field boundaries (**4354**). They have **low value** based on their evidential value
  - Faint cropmark of a 'quadrant shaped' enclosure (**4014**) has been recorded in the 250 m buffer and in a field adjacent to the Teybrook farmyard. It has **low value** based on their evidential value
  - Cropmarks of trackways (**4018**) are found west of Great Horkesley and are crossing the draft Order Limits. Also, a cropmark complex north-east of Horkesley Heath (**4227**) is found c. 140 m south of the draft Order Limits. They have **low value** based on their evidential value
  - Cropmarks of probable former field boundaries (**4030**) are found along Boxted Road, c.200 m north of the draft Order Limits. They have **low value** based on their evidential value
  - Along Brook Road, c.180 m east of the draft Order Limits, are found cropmarks: a large ring ditch cut by a broad ditch (**4061**). Given its substantial size, it is more indicative of a prehistoric origin and could potentially be identified as a barrow. Hence, owing to its evidential value, this asset holds a **medium value**
  - A small rectangular enclosure, linear features, and possible ring-ditch (this may be a geological feature) (**4065**) are located along Boxted Road, c.230 m north of the draft Order Limits. It is probable that the cropmarks represent an agricultural settlement. This asset is of **low value** due to its evidential value
  - Between Fiddlers Hill/ Mill Road and Porters Farm Road, along the River Colne, are found cropmarks (**4077**) and other cropmarks (ditches and trackway) which stops at the river (**4089**). These assets are crossing the draft Order Limits. On the

other side of Mill Road, facing **4077** and **4089** are linear features, rectangular 'pits' - probably agricultural in origin (**4090**). They have **low value** based on their evidential value

- Along Rectory Road, c. 30 m east of the draft Order Limits are found cropmarks of linear features and trackway (**4083**). They have **low value** based on their evidential value
- Cropmarks of trackway spanning two modern fields (**4084**) along Brook Road, near Aldham and within the draft Order Limits. Further west (c.700 m) are cropmarks of linear features (**4085**) adjacent to the railway (west of Aldham), c.300 m north to the draft Order Limits. Directly south-east of **4085** are cropmarks of a small square enclosure with linear features leading up to a possible entrance in the north-west side (**4092**). The most south-easterly point of this asset touches the draft Order Limits. They have **low value** based on their evidential value
- Cropmarks of field boundaries which appear on the OS 1st edition (**4096**) are located along East Gore Road and c.140 m north of the draft Order Limits. It has **low value** based on their evidential value
- Along Brook Road are cropmarks of linear features, the predominant ones being the former woodland boundaries and field boundaries of Aldham Hall Wood and Aldham Hall (**4099**). It is crossing the draft Order Limits. They have **low value** based on their evidential value
- Cropmarks of the former parish boundary (the boundary is still in administrative use) are found between Fordham and West Bergholt (**4100**) and crosses the draft Order Limits by its most south-easterly point. They have **low value** based on their evidential value
- Along the A12, within the draft Order Limits some linear features and pits (MEX9596 - **4107**) have been recorded. This asset is located c.8600 m south of Langham. Further north-east, c.180 m from this asset are cropmarks comprising 2 small ring ditches and many linear features (MEX9712 - **4109**) which may be geological. Overall, **4107** and **4109** have **low value** due to their evidential value
- In Fordham Heath, c. 40 m west to an draft Order Limits pipeline branch and c. 555 m south to the draft Order Limits can be found cropmarks such as linear features, some of which may represent remnants of recently removed field boundaries (**4118**). They have **low value** based on their evidential value
- Along Park Lane, c. 110 m north of the draft Order Limits is a series of ditches indicative of a multi-period landscape, primarily field systems, although enclosures and pitting may be present (**4243**). This asset has low value based on its evidential value
- North of Marks Tey, c. 190 m east of an draft Order Limits pipeline and c. 330 m south-east of the draft Order Limits are cropmarks of former field boundaries (**4350**). This asset has evidential value and is of **low value**

## 3.6 Section E: Braintree District Council

### Location

- 3.6.1 Section E of the Project is located wholly within the County of Essex and the District of Braintree. Section E begins at the Colchester/Braintree District border c. 2 km

south-west of Marks Tey and heads generally west-south-west bypassing the settlements of Coggeshall, Kelvedon, Silver End, Faulkbourne and Fairstead. Section E terminates at Fuller Street that marks the Braintree/Chelmsford District border. Section E of the Project accounts for approximately 16 km of its overall length.

## Topography

- 3.6.2 From the Colchester/Braintree District border at 44 m aOD the draft Order Limits passes through a very gently undulating at between 44 m and 50 m aOD to a point at 41 m aOD adjacent to Coggeshall Road north of the Blackwater Valley. The draft Order Limits crosses the Blackwater Valley at 27 m aOD before climbing up to the B1024 Kelvedon Road at 44 m aOD. From here, the draft Order Limits passes through a gently undulating landscape between 39 m and 51 m aOD before reaching the railway line between Braintree and Chipping to the north of the Brain Valley. The draft Order Limits crosses the Brain Valley at 27 m aOD and then climbs the valley side to Church Hill at 46 m aOD. From here, the draft Order Limits passes through an undulating landscape between 46 m and 69 m aOD before arriving at Fuller Street at 60 m aOD on the Braintree/Chelmsford District border.

## Geology

- 3.6.3 The solid geology of Section E consists entirely of clay, silt, and sand of the London Clay Formation. The superficial deposits are dominated by diamicton glacial tills of the Lowestoft Formation. Exceptions to this pattern are seen in the Blackwater Valley where bands of clay, silt, sand and gravel head deposits, sand of gravel of the Kesgrave Catchment Subgroup, alluvial clay, silt, sand and gravel, and river terraces of sand and gravel are recorded; in a shallow tributary of the Blackwater Valley north of the Clock House where clay, silt, sand and gravel head deposits are recorded; in a shallow tributary of the Blackwater Valley between Silver End and Rivenhall where a similar sequence of deposits to those in Blackwater Valley are recorded; and in the Brain Valley where bands of sand and gravel of the Lowestoft Formation, glaciofluvial deposits of sand and gravel and alluvial clay, silt, sand and gravel. Towards the south-western limit of Section E, the draft Order Limits crosses two shallow tributaries of the Ter Valley where bands of alluvial clay, silt, sand, and gravel, glaciofluvial deposits of sand and gravel, clay, silt, sand and gravel head deposits and peat are recorded.

## Historic Landscape Characterisation

- 3.6.4 Section E is in the District of Braintree and wholly within National Character Area 86: South Suffolk and North Essex Claylands. National Character Area 86 is characterised by a high, boulder clay (glacial till) central plateau dissected by small-scale undulating river valley topography (Natural England accessed 05/04/2023).
- 3.6.5 The Essex landscape of the South Suffolk and North Essex Claylands (NCA 86) has been further divided, into Historic Environment Character Zones (HECZ) as defined in Section E by the Braintree District Historic Environment Characterisation Project (ECC, 2010).
- 3.6.6 The first zone through which the draft Order Limits pass is HECZ 12.5 Feering and Langley Green which comprises largely open countryside with a very dispersed settlement pattern. The fieldscape is complex, comprising a mix of pre-18th century irregular fields of possible medieval origin although some maybe older, and pre-18th century co-axial fields also of probable medieval origin. There has been moderate

Post 1950s boundary loss. Evidence of prehistoric occupation is indicated by cropmark evidence especially in the south-west of the zone comprising ring ditches suggestive of ploughed Bronze Age barrows. Late Iron Age or Roman occupation is indicated by the Roman roads of Stane Street (the old A120) and the former A12 and cropmark evidence of double ditched rectilinear enclosures typical of Roman farmsteads. Medieval settlement can be seen in the surviving dispersed halls (manors), moats and farms indicative of a rural character based on an agricultural economy. The main London to Colchester railway line constructed in 1843 bisects the zone.

- 3.6.7 Heading to the south-west, the draft Order Limits then crosses HECZ 12.4 Blackwater Valley. Historically the zone had a dispersed and rather sparse settlement pattern comprising Coggeshall Abbey (founded in 1140), Ferringbury and several other farms. The fieldscape is complex, comprising a mix of pre-18th century irregular fields of probable medieval origin, though some may be older, and pre-18th century co-axial fields, also of probable medieval origin. Meadow pasture survives in the base of the Blackwater Valley. The scheduled monument of Coggeshall Abbey, which was founded in 1140, is located on the western side of the Blackwater c. 1.1 km north-west of the draft Order Limits. The river has been exploited at least since the medieval period with at least four mills constructed along its length, and there is extensive cropmark and earthwork evidence for water management. The alluvial deposits in the base of the valley have the potential to contain important palaeoenvironmental deposits. Prehistoric occupation is indicated from cropmark evidence with a range of enclosures and occasional ring ditches (indicative of Bronze Age barrows) being identified across the zone. A scheduled Neolithic long mortuary enclosure and a scheduled Bronze Age barrow lie 630 m south-east of the draft Order Limits. The valley was exploited throughout the Roman period with several sites being recorded on the upper slopes of the valley.
- 3.6.8 Leaving the Blackwater Valley, the draft Order Limits crosses in to HECZ 12.1 HECZ 12.1: Rivenhall. This zone comprises of largely open countryside with a very dispersed settlement pattern of ancient origin. The fieldscape is complex, comprising a mix of pre-18th century irregular fields of probable medieval origin, though some may be older, and pre-18th century co-axial fields also of probable medieval origin. There has been moderate post 1950s boundary loss. Meadow pasture survives in the base of the Cressing Brook, with cropmark evidence showing important meadow pasture features surviving to the north of Rivenhall. Historic settlement comprises isolated manors, manor/church complexes, farms, moated sites, hamlets, and Georgian mansions. Evidence of prehistoric occupation is probably indicated by cropmark evidence of a range of enclosures and occasional ring ditches, suggestive of Bronze Age barrows, being identified across the zone. The zone was exploited throughout the Roman period and includes the scheduled Roman villa complex at Rivenhall (850 m south-east of the draft Order Limits) as well as several other farmsteads. The settlement at Rivenhall shows continuous occupation from the early to middle Iron Age through to the modern period.
- 3.6.9 Continuing to the south-west, the draft Order Limits passes in to HECZ 11.2: Brain Valley. This zone contains multi-period settlement evidence represented by cropmarks, field systems, dispersed historic buildings, the scheduled Cressing Temple and the Registered Park and Garden and associated listed buildings at Faulkbourne Hall. The fieldscape is complex, comprising a mix of large demesne fields associated with the Medieval manor at Cressing Temple, pre-18th century irregular fields of probable Medieval origin, although some may be older, and pre-18th century co-axial fields, also of probable medieval origin. There were extensive

areas of meadow pasture along the valley floor, some of which survives, whilst some have been planted with willow. There has been some field boundary loss in the 20th century. The zone is bisected by the mid-19th century railway line. Extensive evidence of prehistoric occupation has been identified in the zone on the valley slope comprising Bronze Age barrows, settlements and field systems from cropmarks including a Scheduled cropmark of a possible Neolithic henge. Evidence for several Roman farmsteads is known on the upper slopes of the Brain Valley and Roman mausoleum is recorded at Black Notley. Excavation at Cressing Temple has revealed an Iron Age enclosed settlement and structures and buildings relating to the Knights Templars' manor, including the chapel and burial ground. Further below-ground remains, both on this site and in the remainder of the zone can be anticipated to survive and the alluvial deposits in the valley floor have the potential to preserve important palaeoenvironmental remains.

- 3.6.10 The final HECZ through which the draft Order Limits pass in the Braintree District is HECZ 10.2: Fairstead and Ranks Green. The present landscape of the zone largely reflects that of the medieval period with a very dispersed settlement pattern of manors, moats, and farmsteads. Historically, the fieldscape comprised a mix of irregular and rectilinear field patterns with dispersed greens and settlement areas, however, there has been considerable boundary loss from the mid-20th century. Little archaeological work has been undertaken within the zone; however, it is known to contain evidence of Roman occupation on the valley slopes of the Brain river, and it is likely that similar evidence might survive above the tributaries of the Ter river. Belowground remains associated with the dispersed medieval and post medieval settlement pattern can be anticipated, both on currently occupied sites and elsewhere.
- 3.6.11 The landscape of Essex is broken down further into smaller parcels described as Historic Landscape Character Types and defined in The Historic Landscape Characterisation Report for Essex, Volume 2 (Bennet 2011). The HLC Type data has been supplied by the Essex HER and analysis of it has shown that, in Section E, the Construction Zone passes through a landscape largely defined by **low value** areas of common post 1950s boundary loss, which accounts for 21.45% of the Essex landscape (Bennet 2011). Also included within the bounds of the draft Order Limits in Section E are dispersed parcels of **low value** 20th century enclosure, built-up areas - urban development and a water reservoir.
- 3.6.12 Elsewhere within the Construction Zone in Section E there are parcels of:
- Common **low value** Pre-18th Century Irregular Enclosure (HEX8208, HEX8156, HEX8119, HEX6811, HEX2613, HEX6827, HEX2888, HEX2892, HEX22905, HEX2671), which accounts for 17.69% of the Essex landscape (Bennet 2011). These are irregular enclosures vary considerably in size and shape, forming both arable and pasture with sinuous edges and offset corners. They are probably the result of piecemeal enclosure and may originate from the Medieval period or earlier
  - Occasional **low value** Piecemeal Enclosure by Agreement (HEX8127, HEX36641, HEX6754, HEX6748, HEX6833, HEX36684, HEX23097), which accounts for approximately 8.97% of the Essex landscape (Bennet 2011). These fields were created to subdivide a pre-existing earlier field system and are characterised by straighter boundaries. Dating of origin is difficult but they usually predate the introduction of the later formal Parliamentary Enclosure Acts, and thus may relate in certain parishes to the earlier acts of enclosure

- Rare **medium value** Enclosed Meadow (HEX6750, HEX2896, HEX2887, HEX2907), which accounts for 1.69% of the Essex landscape (Bennet 2011). These are sinuous fields that border rivers, often forming part of the flood plain of the river. Many of these areas were established in Medieval times
- Rare **medium value** Ancient Woodland (HEX8559, HEX16712, HEX16683, HEX16680), which accounts for 2.54% of the Essex landscape (Bennet 2011). Ancient Woodland is defined by Natural England (2018) as 'land that has had a continuous woodland cover since at least 1600 AD'. The predominant species are deciduous, broad-leaf trees and shrubs. In the Essex HLC, this category also includes traditional wood-pasture, such as seen at Hatfield Forest, where single or small groups of pollarded trees occur in pasture alongside small coppice-with-standards managed woodlands
- Rare **medium value** Irregular Sinuous Enclosure (HEX8163, HEX8158, HEX8161, HEX8146, HEX8160, HEX8143, HEX2617, HEX23101, HEX2906), which accounts for 2.74% of the Essex landscape (Bennet 2011). These fields have parallel edges which are sinuous, being in a similar orientation, but moving towards and away from each other, with short boundaries cutting across. They appear like co-axial fields, but without the parallel sides. This field type predates the earliest cartographic evidence and probably originate in the Medieval period
- Very rare **high value** Formal style Parliamentary Enclosure (HEX6808), which accounts for 0.98% of the Essex landscape (Bennet 2011). Formal style Parliamentary Enclosure is a rigorous rectilinear field system, often with contemporary roads and trackways, that has overwritten any prior landscape enclosure pattern, usually either prior common arable field, or former heathlands, or wastes, associated with the later Parliamentary Enclosure Acts
- Very rare **high value** Co-axial Enclosure (HEX8120, HEX8560, HEX6744), which accounts for 0.7% of the Essex Landscape (Bennet 2011). These form a distinctive boundary pattern of fields with roughly parallel boundaries, sinuous in form with irregular subdivisions, forming an irregular brick-like sequence, often incorporating ancient lanes and sometimes woodland. It is thought these fields date to the Anglo-Saxon period and were predominantly grazing areas, hence their greater survival than arable fields

## Conservation Areas

- 3.6.13 The **high value** Silver End conservation area (**CA1**) is focused a modern period 'model village' constructed between 1926 and 1932 (**5195**), approximately 770 m north-west of the draft Order Limits, 980 m north-east of the B1018 and 3.1 km south-east of Braintree. The asset is of evidential, aesthetic, communal and historical value. The village was built on 200 acres of land (81ha) to provide accommodation and amenities for the workforce of Crittalls Manufacturing Company Ltd., 90% of whom were disabled ex-servicemen. The houses were influenced by the International Modern Movement and Bauhaus styles of architecture, characterised using flat roofs, rendered painted elevations and linear glazing. The value of the architecture and the extent to which the original industrial village survives mark Silver End as a highly significant location of at least national value (BDC, 2014). The village contains several Grade II listed buildings largely clustered around the intersection of Silver Street and Boars Tye Road, but these are scoped out of this baseline due to their restricted settlement setting.

- 3.6.14 The setting of this conservation area is informed by its creation as a modern period settlement associated with the workforce of Crittalls Manufacturing Company Ltd. within a broadly rural agricultural wider landscape. The setting of this conservation area is broadly confined to Silver End itself and its immediate vicinity but was designed to fit within its surrounding landscape as a 'model village'. The original setting of this asset has already been affected by the volume of traffic within the Conservation Area as well as subsequent modern period development around its peripheries. The setting of the conservation area, therefore, makes a considerable contribution to its value, but the setting does not extend to the draft Order Limits.
- 3.6.15 The White Notley conservation area (**CA2**) is located approximately 295 m south-west of the draft Order Limits and focussed on the medieval core of White Notley. No character appraisal has yet been undertaken for this conservation area. The asset is of **medium value** based on its evidential, historical, and aesthetic values. The small conservation area covers the fossilised medieval throughfare The Street/Church Street and includes the Grade I listed 11th century Church of St. Etheldreda (**1147914**) and the early 16th century White Notley Hall (**1122738**), as well as several post-medieval Grade II listed buildings. The conservation area also includes the large grounds of the hall and a section of the Brain Valley, which is crossed by Station Street in the north-east of the asset.
- 3.6.16 The setting of the conservation area is informed by the relationships between the listed buildings and the non-designated buildings that contribute to the character of the asset. Intervisibility between the listed buildings is limited by the winding nature of the thoroughfare and the mature trees and shrubs of the hall's grounds, however, the cluster of Grade II buildings at the junction of The Street/Church Street and Station Road have open views across the intersection and create the heart of the village. The importance of the Brain river to the settlement is demonstrated by its inclusion in the conservation area in the north-east either side of Station Road. The setting of the asset is further informed by the surrounding agricultural landscape with which it has a historical relationship. The link to the wider landscape has, however, been eroded by 20th century residential development, although the is maintained by the views of the Brain Valley and the landscape beyond. The setting of the conservation area makes a considerable contribution to its value and due to its open views of the river valley to the north-east, the setting extends to the draft Order Limits.
- 3.6.17 Coggeshall conservation area (**CA3**) is located approximately 830 m north-west of the draft Order Limits and encompasses the core settlement of Coggeshall. No character appraisal has yet been undertaken for this conservation area. The asset is of **high value** based on its evidential, historical, and aesthetic values. The northern section of the conservation is focused on the fossilised medieval street plan defined by West Street, East Street, Church Street, Bridge Street and Stoneham Street. Theses thoroughfares are lined with numerous medieval and post-medieval listed building of all grades that greatly contribute to the rich character of the conservation area. To the south, the conservation area extends east and west of Bridge Street to include green fields in the shallow River Blackwater Valley. As the Blackwater meanders to the south the conservation area follows its route and includes the Coggeshall Abbey (**1018865**) scheduled monument and several associated and later listed building.
- 3.6.18 The setting of the conservation area is informed by internal streetscape views that include numerous listed buildings of historical and architectural interest and by the changing vistas as the viewer follows the throughfares. The listed buildings, although moderately varied in style, neither upstage nor are overshadowed by their neighbours creating an attractive, cohesive streetscape that is also complimented by

the non-designated buildings that contribute to the overall character of the conservation area. Turning to the south, Bridge Street descends into the shallow Blackwater Valley revealing pleasing views of riverside properties and valley meadows with scattered trees. In the south-east, the inclusion of the scheduled monument contributes to the conservation area's setting as it ties the settlement to its riverside location and likely suggests the origins of Coggeshall as a settlement on the outskirts of the Abbey's precincts. The setting of the asset, therefore, makes a considerable contribution to its value, but due to its twin, restricted focuses of the medieval street plan and the Blackwater Valley between the settlement and the Abbey complex, the setting does not extend to the draft Order Limits.

- 3.6.19 Terling conservation area (**CA4**) is located approximately 2 km south of the draft Order Limits and encompasses the dispersed, largely linear settlement of Terling and includes the Grade II\* listed 18th century 'Terling Place' (a country house - **1123407**), and a portion of its Grade II listed 'Terling Place' registered park and garden (**1000745**). No character appraisal has yet been undertaken for this conservation area. The conservation area is of **medium value** based on its evidential, historical, and aesthetic values. The settlement of Terling is arranged along likely fossilised medieval thoroughfares of Garnets Mead, Owls Hill, The Street, Church Road, and River Hill to the north-east of the Ter Valley and Norman Hill, Hull Lane, Doms Lane, and Waltham Road to the south-west. The conservation area contains numerous Grade II and II\* listed buildings, but except for the Grade II\* listed 'Parish Church of All Saints' (**1123411**), 'United Reformed Church' (**1123410**), 'Owls Hill House' (**1337824**), and Terling Place (**1123407**) these have been scoped out of this baseline due to their restricted roadside settlement settings.
- 3.6.20 The setting of the conservation area is informed by its sinuous nature and how views of designated assets are revealed as the visitor passes through. Intervisibility between designated assets can be intermittent but the non-designated building stock is generally sympathetic and of the local vernacular thereby limiting fractures in the character of the conservation area. There is a more cohesive group of listed buildings focused on the church along Church Lane and The Street providing a very attractive streetscape and likely indicating the medieval core of the settlement. The portion of the of the Terling Place parkland (**1000745**) included in the conservation area is defined by the gardens associated with Terling Place (**1123407**) with the definition of the former parkland beyond very impacted by modern farming. A large open space in the south-west is defined by Hull Lane, Doms Lane and Waltham Road and it is possible this once served as a village green, although it is now a single agricultural field. The setting of the conservation area is further informed by the surrounding agricultural landscape with which the asset has a historical relationship, and views of this landscape beyond the conservation contribute to its character. The setting of the conservation area, therefore, makes a considerable contribution to its value, but due to overall distance to the Project, the setting does not extend to the draft Order Limits.
- 3.6.21 The **medium value** Kelvedon conservation area (**CA6**) is located approximately 350 m south-east of the draft Order Limits, and it encompasses the historic core of Kelvedon. The character appraisal indicates the area is important principally due to its history as a key centre for seed production in the late 19th century (BDC, 2020). The early medieval focus of the town was centred on the cross-roads at either end of the High Street which follows the line of the Romano-British Colchester road. The presence of early medieval (Anglo-Saxon) manorial and mill sites appears to have resulted in the development of Kelvedon town (ibid.). The historic marketplace was located at the junction of Church Street, Maldon Road, London Road, and the High

Street, with an Anglo-Saxon church and manor site located to the north at Church Street. A second settlement grouping was also located at the crossing-point of the River Blackwater and the road to Coggeshall. Feering Parish was located east of the River and was originally a separate hamlet known as Feering Hill, however 18th and 19th century ribbon development has since connected the two medieval cores and linked Feering to Kelvedon physically. The conservation area contains numerous listed buildings (ibid.). This asset is of evidential, historical, and aesthetic value. There are numerous Grade II and Grade II\* and one Grade I listed buildings within the conservation area, but except for a second Grade I listed asset, the 'Parish Church of St Mary, they have been scoped out of this baseline due to their restricted settlement roadside settings.

- 3.6.22 The setting of the conservation area is informed by its focus on the fossilised medieval street plan and by the relationships between the listed buildings and by their relationships with the non-designated building stock that contributes to the character of the conservation area. The asset is largely enclosed by 20th and 21st century development and some later development within detracts from the character of the conservation area. The setting of the asset, therefore, makes a moderate contribution to its value, but due to its enclosed nature, the setting does not extend to the draft Order Limits.
- 3.6.23 The **medium value** Cressing conservation area (**CA37**) is located approximately 1.7 km north-east of draft Order Limits pipeline mitigation works and encompasses the core of the settlement of Cressing. The conservation area is important due to its retention of the character of many of the listed buildings, original historic street layout and form, and its interaction between its built and natural environments (BDC 2009). Several modern developments within the conservation area have been sensitively designed, however, several alterations have been noted by the appraisal which indicate that the overall quality and condition of the area has been eroded. Cressing village has important historical associations with the Knights Templar who constructed two 12th century medieval timber barns within the south of the conservation area, likely associated with the scheduled Cressing Temple (**1002122**) approximately 1.6 km to the south. Several 'landmark buildings' are also noted by the appraisal which add to the aesthetic appeal of the conservation area including the Grade I listed All Saints Church (**1337619**). This asset is of evidential, historical, and aesthetic value.
- 3.6.24 The setting of the conservation area is informed by its focus on the likely fossilised medieval street plan and by the relationships between the listed buildings and by their relationships with the non-designated building stock that contributes to the character of the conservation area. The setting of this conservation area is broadly confined to Cressing village itself and its immediate surrounding rural agricultural landscape. The setting of Cressing conservation area makes a considerable contribution to its value, but due to overall distance to the Project, the setting does not extend to the draft Order Limits.

## Baseline Introduction

- 3.6.25 The following historic environment baseline for Section E of the Project is presented by chronological archaeological period and from north to south. Section E is further broken down into geographic parcels to allow the reader to orientate and to locate where on the appropriate figure a particular heritage asset is illustrated. These geographic parcels are largely defined by current settlements but also occasionally by landscape features such as high points and valleys and by anthropogenic features

such as roads and railways. Each parcel of Section E is introduced and described only in the first archaeological period where it is appropriate to be used to avoid repetition.

## Prehistoric Period

### General

#### Houchins Farm to B1024

- 3.6.26 This area sub-division follows the draft Order Limits for approximately 3.2 km roughly between Houchins Farm as well as the broadly east to west aligned A120 (between Coggeshall to the west and Broad Green to the east) and the broadly north-west to south-east aligned B1024 (between Coggeshall to the north-west and Kelvedon to the south-east). The northern boundary of this sub-division lies at approximately 45 m to 47 m above Ordnance Datum (aOD). The topography gradually rises to around 50 m aOD around Skye Green to the south-south-west, before descending to approximately 30 m aOD to meet the River Blackwater and where the draft Order Limits turn to the south-west. From the River Blackwater the topography gradually rises to approximately 42 m aOD where the draft Order Limits meet the B1024. The route the draft Order Limits follows is predominantly through a rural-agricultural landscape.
- 3.6.27 The highest concentration of recorded archaeological activity appears to be centred along the broadly north-west to south-east River Blackwater valley which has identified several prehistoric enclosures, various periods of field systems field systems and a Neolithic and later re-utilised early-medieval riverine funerary landscape. Designated heritage assets within this section are broadly connected by the existing road network. Little archaeological activity appears to have been recorded between A120 and the River Blackwater however it must be noted that this does not preclude its potential existence as it is likely that this area has not been previously investigated.

#### *Non-Designated Heritage Assets*

- 3.6.28 Aerial imagery has identified a potential prehistoric period 35 m diameter circular enclosure (**5041**) within a field associated with Frame Farm. The field itself is approximately 145 m south-east of the draft Order Limits, and 320 m north of Feering. This asset is of evidential and historical value and of **medium value**.
- 3.6.29 Cropmarks including a rectangular enclosure and a possible ring ditch which may be prehistoric in date have been identified to the west of Coggeshall Hall (**5089**). The field is situated within the draft Order Limits, immediately east of the B1024 and 1.1 km south of Coggeshall. This asset is of evidential and historical value and of **medium value**.
- 3.6.30 Cropmarks suggestive of a north-west/south-east double ditched trackway, which potentially turns north-north-east/south-south-west, has been observed within a field immediately north-east of Faulkbourne within the draft Order Limits (**5057**). A possible ring ditch and partial ring ditch have also been observed which may date to this period. Nearby archaeological monitoring of groundworks to the rear of School Cottage have also revealed an approximately 4 m wide large oval ring ditch which may have formed part of a settlement or field enclosure of prehistoric or Romano-British date (Ennis 2002). This asset is of evidential and historical value and of **medium value**.

- 3.6.31 Cropmarks of a possible ring-ditch, quarry extraction pits and linear features (**5015**) have been identified via aerial photography approximately 290 m north-west of the draft Order Limits, 60 m north of the River Blackwater and 300 m south of Coggeshall at their closest point. Although these features have not been examined further, they have the potential to date to the prehistoric period. This asset is of evidential and historical value and of **medium value**.

### **B1024 to B1018**

- 3.6.32 This area sub-division follows the draft Order Limits for approximately 2.7 km roughly between the broadly north-west to south-east aligned B1024 (between Coggeshall to the north-west and Kelvedon to the south-east) to the north-east and the broadly north-west to south-east aligned B1018 (between Tye Green to the north-west and Witham to the south-east) to the south-west-west. The eastern boundary of this sub-division lies at approximately 42 m aOD and gently undulates to approximately 41 m aOD where Woodhouse Lane meets Park Gate Road. From here the topography gently undulates but gradually rises to approximately 49 m aOD where the draft Order Limits meet the B1018. The route the draft Order Limits follows is predominantly through a rural-agricultural landscape.
- 3.6.33 Archaeological activity broadly appears to have been noted along the whole section sub-division and has identified several prehistoric enclosures, various periods of field systems field systems and a medieval deer park. Designated heritage assets within this section are broadly connected by the existing road network. Wherever archaeological activity has not been already observed it must be noted that this does not preclude its potential existence as it is likely that this area has not been previously investigated.

### *Non-Designated Heritage Assets*

- 3.6.34 A series of archaeological investigations identified multi-period evidence (**5033**) approximately 95 m south-east of the draft Order Limits, immediately north-east of the B1018 and north-west of New Rickstones Academy. Prehistoric evidence included burnt or fire-cracked flints found during a fieldwalking exercise as well as a pit and tree throw containing pottery during trial trenching. Trial trenching and an excavation also uncovered worked flint dating to this period. The remains suggest a late prehistoric presence perhaps associated with land clearance and early agriculture within this area. This asset is of evidential and historical value and of **low value**.
- 3.6.35 Prehistoric subsoils were identified within postholes at Dovehouse Field, Cressing (**5013**) approximately 225 m north-west of the draft Order Limits, 10 m east of the B1018 and 1.3 km north of Faulkbourne. The postholes were identified during a test pitting exercise which also identified Romano-British period features and deposits. This asset is of evidential and historical value and of **low value**.
- 3.6.36 A multi-period site has been identified through several investigations at Rivenhall Airfield ahead of gravel extraction quarrying approximately 430 m north-west of the draft Order Limits at its closest point, at Woodhouse Lane and 700 m north-east of Silver End. This includes a fieldwalking survey (**5040**) which identified 15 concentrations of finds concentrated on the southern and eastern edges of the survey area, six of which were prehistoric in date (Medlycott, 1992).

## **Palaeolithic**

### **B1018 to Fuller Street**

- 3.6.37 This area sub-division follows the draft Order Limits for approximately 2.1 km roughly between the broadly north-west to south-east aligned B1018 (between Tye Green to the north-west and Witham to the south-east) to the north-east-east and the broadly north-west to south-east aligned Fuller street to the west where this section meets Section F. The eastern boundary of this sub-division lies at approximately 49 m aOD where the draft Order Limits meet the B1018 where it the descends to approximately 30 m aOD where the draft Order Limits cross The River Brain. Heading west from the River Brain along the path of the draft Order Limits the topography gently undulates but generally rises to approximately 64 m aOD where the draft Order Limits are immediately north of Galleycable Wood. From Galleycable wood the topography begins to gently descend to approximately 59 m aOD where Section E terminates near Fuller Street. The route the draft Order Limits follows is predominantly through a rural-agricultural landscape.
- 3.6.38 Various concentrations of archaeological activity can be seen within this subdivision, much of which focusses on the settlement of White Notley within the north-east of this subdivision and the wider surrounding landscape of Fairstead. Archaeological activity broadly appears to suggest number of prehistoric enclosures, and various periods of field systems. Designated heritage assets within this section are broadly connected by the existing road network. Wherever archaeological activity has not been already observed it must be noted that this does not preclude its potential existence as it is likely that this area has not been previously investigated.

#### *Non-Designated Heritage Assets*

- 3.6.39 A findspot of Palaeolithic flints (**5155**) have been identified approximately 515 m north-east of the draft Order Limits and 540 m west of Church Hall (road).
- 3.6.40 Excavations between 1898 to 1899 undertaken by Reverend W. J. Muckley (**5182**) identified 'some apparently Palaeolithic' flints approximately 610 m north-west of the draft Order Limits and immediately north-west of White Notley Church of England Primary School.

### **Mesolithic**

#### **B1024 to B1018**

#### *Non-Designated Heritage Assets*

- 3.6.41 A substantial multi-period site (**5020**) has been identified at Rivenhall, immediately east of the draft Order Limits Northumbrian Water Pipeline, approximately 230 m south of the draft Order Limits, immediately east of Church Road and 1.7 km south-east of Silver End. The asset encompasses the **high value** scheduled monument 'Roman villa, Anglo-Saxon hall, cemetery and church site, around and to the north and east of St Mary and All Saints Church' (**1013831**). Mesolithic period **low value** flint objects (**5060**) of evidential value have been recovered from an in situ buried soil horizon during excavations focused on the monument. This represents the earliest evidence identified at this location.
- 3.6.42 Multi-period activity (**5135**) has been identified approximately 540 m north-west of the draft Order Limits and 400 m south-west of Coggeshall through a large-scale archaeological evaluation). The evaluation identified a small quantity of possibly Mesolithic flint debitage (material off-cuts produced during the process of stone tool and weapon production by knapping stone) within the north-west of the site area.

#### **B1018 to Fuller Street**

## *Non-Designated Heritage Assets*

- 3.6.43 A small bipolar core potentially dating to the Mesolithic period was identified during an archaeological excavation and watching brief (**5196**) undertaken in 2009 associated with an Anglian Water pipeline running from Cressing to Terling which uncovered evidence of multiple periods. The pipeline crosses the draft Order Limits approximately 130 m north-west of Pink Lane within Fields 13 and 14 of the Site. Struck flints collected from either excavated features or from the stripped surface along the route indicated further low intensity Prehistoric period evidence. This asset is of evidential and historical value and of **low value**.

## **Neolithic**

### **Houchins Farm to B1024**

#### *Designated Heritage Assets*

- 3.6.44 The **high value** scheduled monument 'Neolithic Long mortuary enclosure and round barrow' (**1017230**) is of evidential and historical value. The asset is located 160 m south-west of Frame Farm, approximately 90 m south-east of draft Order Limits pipeline mitigation works and 600 m south-east of the draft Order Limits, immediately west of Coggeshall Road. The monument is situated in the floodplain of the River Blackwater to the north of the watercourse. The long mortuary enclosure and round barrow are no longer visible a ground level, but they can be seen as cropmarks on aerial imagery. The long mortuary enclosure comprises of a narrow rectangular ditch with rounded corners approximately 70 m long by 25 m wide with a 4 m wide entrance at its south-western end, facing the River Blackwater. The long mortuary internal ditch bank has been predominantly lost by ploughing. The 25 m diameter round barrow is approximately 10 m south-east of the long mortuary enclosure. Aerial imagery also shows cropmarks which likely mark the position of both 'primary' and 'secondary' burials. Further cropmarks suggestive of pits have also been observed on aerial imagery within the internal area. The potential pits may also relate to the enclosure (**5147**) which is shown by the HER as occupying a wider area than that of the scheduled monument.
- 3.6.45 The setting of the asset is largely informed by its location within the floodplain north of River Blackwater. Given this association, it is possible the river was used as a route of travel through the Neolithic landscape and that the monument was placed to perhaps claim tenure over the land adjacent to the route. Equally, the river may have delineated a tribal boundary, and this possibility is strengthened by the presence the scheduled 'Neolithic long mortuary enclosure at Appleford Farm, Rivenhall End' (**1008980**) c. 4.3 km to the south-west and on the opposite bank of the river (see below). The imposition of the round barrow in the Bronze Age likely represents another claim of tenure over the landscape through the appropriation of the ancestral past represented by the earlier monument, either spurious or not. The secondary burials suggested by the NHL entry could be the result of a later phase of Bronze Age funerary but the reuse of such monument in the Romano-British and ensuing Anglo-Saxon periods is a fact of the archaeological record (Woodward 2000) and cannot be discounted. The Neolithic period saw the gradual clearance of the wildwood to open farmland, and the surrounding landscape likely consisted of surviving forest punctuated by farmstead clearances. With only the river and floodplain surviving to any degree, the setting of the asset makes a minor contribution to the value but due to the proximity of the Project, the setting extends to the draft Order Limits.

### **B1024 to B1018**

### *Designated Heritage Assets*

- 3.6.46 The **high value** scheduled monument 'Late Neolithic Henge Approximately 300 m East North East of Newbarns Farm' (**1008976**) is of evidential and historical value. The asset is located approximately 1.2 km north of the draft Order Limits, and 215 m south-west of the B1018 at its closest point. The 42 m diameter henge monument is located on the River Brain flood plain and 20 m east of the Essex Way. Although the monument is no longer visible as an earthwork at ground level it is defined by a single infilled 4 m wide circular ditch that can be observed as cropmarks on aerial imagery. This henge has only one entrance located towards the north-west and has therefore been classified as a 'Type I'.
- 3.6.47 The setting of the scheduled henge is informed by its shallow, river valley location. The reasons for the siting of such monuments are still much debated and so it is difficult to understand its setting other than, perhaps, the influence of the local physical geography. The floodplain location is in sight of the Brain river and, therefore, it is possible the monument was intended to be seen from watercourse raising the possibility that the river formed a tribal boundary. Or, perhaps, the river was a route used by several communities and the monument was placed to allow those communities to meet and renew bonds of kinship, friendship, and trade etc. The siting of the scheduled mortuary enclosures reported above (**1017230**) can also be interpreted as emphasising the importance of the river networks to Neolithic communities. It is possible that much of the wildwood had been cleared by the Neolithic period to allow for the establishment of field systems and organised farming, but this once open landscape has been eroded by the development of such settlements as Cressing, Silver End and White Notley. The setting of the asset, therefore, makes a minor contribution to its value and due to its focus on the Brain river floodplain, the setting does not extend to the draft Order Limits.

### *Non-Designated Heritage Assets*

- 3.6.48 A Neolithic polished axe (**5169**) was discovered in 1956 approximately 260 m south-east of the draft Order Limits, 550 m north-east of the B1018 and 1.5 km south of Silver End.
- 3.6.49 A multi-period site has been identified through several investigations at Rivenhall Airfield ahead of gravel extraction quarrying approximately 540 m north-west of the draft Order Limits at its closest point, at Woodhouse Lane and 700 m north-east of Silver End. Investigations at Bradwell Quarry Area Site A2 and A5 (**5134**) identified evidence from multiple periods, the earliest of which was a Neolithic pit containing a moderate amount of worked flint, including numerous scrapers. A small group of undated pits and post-holes are located nearby but could also represent a small Neolithic settlement area (ECC 2011).
- 3.6.50 A substantial multi-period site (**5020**) has been identified at Rivenhall, immediately east of the draft Order Limits, immediately east of Church Road and 1.7 km south-east of Silver End. The asset encompasses the **high value** scheduled monument 'Roman villa, Anglo-Saxon hall, cemetery and church site, around and to the north and east of St Mary and All Saints Church' (**1013831**). Neolithic period **low value** flint objects (**5060**) of evidential value have been recovered from an in situ buried soil horizon during excavations focused on the monument (Rodwell and Rodwell 1986).
- 3.6.51 Multi-period activity (**5135**) has been identified during a large-scale archaeological evaluation for the Coggeshall, Feering and Kelvedon Flood Relief Scheme approximately 540 m north-west of the draft Order Limits and 400 m south-west of

Coggeshall. The evaluation identified a Neolithic axe (or adze) within the north-west of the site area.

## **B1018 to Fuller Street**

### *Non-Designated Heritage Assets*

- 3.6.52 Mount Pleasant standing stone (**5008**) is located approximately 150 m north-west of the draft Order Limits and 55 m west of Church Hill and 70 m north-west of Pink Lane. The stone is constructed of Hertfordshire conglomerate and the HER suggests the asset may date to this period, further described by the HER as '*well bedded in the ground*'. This asset is of evidential, aesthetic, and historical value and of **low value**. If proved to be Neolithic in date and associated with similar features within the landscape this asset would be of a higher value.

## **Bronze Age**

### **Houchins Farm to B1024**

#### *Non-Designated Heritage Assets*

- 3.6.53 A probable Bronze Age round barrow forms part of the 'Neolithic Long mortuary enclosure and round barrow' (**1017230**) scheduled monument reported above. The asset is of **high value**, based on its evidential and historic values. Details of it and its setting are reported in the Neolithic section above. The HER entry for this asset covers a wider area and includes a series of undated cropmarks (**5147**) of possible **medium value** based on their evidential and historical values.

### **B1024 to B1018**

#### *Non-Designated Heritage Assets*

- 3.6.54 A series of archaeological investigations identified multi-period evidence (**5033**) approximately 95 m south-east of the draft Order Limits, immediately north-east of the B1018 and 9600 m north of Witham. The earliest confirmed evidence was that of late Bronze Age to early Iron Age pottery found within two features, a pit and fire-pit. This asset is of evidential and historical value and of **low value**.
- 3.6.55 A findspot of a Bronze Age loom weight was found in 1949 (**5164**) approximately 200 m north of the draft Order Limits and 30 m south of the Bridge to Rivenhall Place (**1338253**). This asset is of evidential and historical value and of **low value**.
- 3.6.56 Archaeological investigations at the scheduled monument of Cressing Temple (**1002122**) discussed below have identified multi-period activity including Bronze Age features (**5050**) approximately 30 m north of the draft Order Limits, and immediately east of the B1018. The evidence includes timber beam slots, one of which included a barbed and tanged arrowhead, a brushwood level, and stake-holes in the location of the Chapel and Tudor House. Isolated Bronze Age flakes and flint tools have also been found in contexts dating to almost all periods across the site, some of which may have been imported soil. Investigations within the walled garden have also identified a shallow ditch dating to this period. This asset is of evidential and historical value and of **medium value**.
- 3.6.57 A findspot of a late Bronze Age socketed axe (**5165**) has been identified approximately 400 m south-east of the draft Order Limits, 300 m south of Hollow Road and 1.5 km west of Kelvedon.

- 3.6.58 A findspot of a late Bronze Age socketed axe (**5170**) has been identified approximately 460 m south-east of the draft Order Limits, 185 m south-west of Hollow Road and 1.4 km west of Kelvedon.
- 3.6.59 A multi-period site has been identified through several investigations at Rivenhall Airfield ahead of gravel extraction quarrying at Bradwell Quarry approximately 540 m north-west of the draft Order Limits at its closest point, at Woodhouse Lane and 700 m north-east of Silver End. The eastern-most extent of a trial trench evaluation (**5201**) is located within the draft Order Limits near Monk's Farm Cottages (**1171147**) which identified late Bronze Age to the later medieval/post-medieval period evidence represented by small concentrations of pits, ditches, post-holes, gullies, and quarries. It is unclear at this stage if evidence of this period was located either within or in the vicinity of the draft Order Limits (ASE 2014). This asset is of evidential and historical value and of **low value**.
- 3.6.60 A substantial multi-period site (**5020**) has been identified at Rivenhall, immediately east of the draft Order Limits Northumbrian Water Pipeline, approximately 230 m south of the draft Order Limits, immediately east of Church Road and 1.7 km south-east of Silver End. The asset encompasses the **high value** scheduled monument 'Roman villa, Anglo-Saxon hall, cemetery and church site, around and to the north and east of St Mary and All Saints Church' (**1013831**). Bronze Age period **low value** pottery of evidential value has been recovered from an in situ buried soil horizon during excavations focused on the monument. This asset is of evidential and historical value and of **low value**.
- 3.6.61 Multi-period activity (**5135**) has been identified during a large-scale archaeological evaluation associated with the Feering and Kelvedon Flood Relief Scheme approximately 540 m north-west of the draft Order Limits and 400 m south-west of Coggeshall. The evaluation identified three small clusters of late Bronze Age to early Iron Age ditches and pits. This asset is of evidential and historical value and of **low value**.

## **B1018 to Fuller Street**

### *Non-Designated Heritage Assets*

- 3.6.62 An archaeological excavation and watching brief (**5196**) were undertaken in 2009 associated with an Anglian Water pipeline running from Cressing to Terling which uncovered evidence of multiple periods. The pipeline crosses the draft Order Limits approximately 130 m north-west of Pink Lane within Fields 13 and 14 of the site. This asset is of evidential and historical value and of **low value**. Late Bronze Age activity was identified in three sections of the site as follows:
- A pair of pits in Field 2, one of which contained 205 sherds of late Bronze Age pottery (NAU 2009)
  - A pair of pits were also identified in Field 3 likely to be of similar date to those outlined above (ibid.)
  - Two further late Bronze Age pits were also identified within Field 9 (ibid.)

## **Iron Age**

### **Houchins Farm to B1024**

### *Non-Designated Heritage Assets*

- 3.6.63 Archaeological monitoring of a gas pipeline project has taken place within the draft Order Limits at Langley Green and immediately east of Old Road. The monitoring revealed a shallow curvilinear gully approximately 7.5 m in diameter possibly early Iron Age in date, and a pit with associated pottery fragments and unidentifiable bronze fragments (**5144**). These finds were made in proximity to a crushed Romano-British period cooking pot dating between c.120 to 250AD (**5143**) (McMaster, Fawn and Holbert 1974). This asset is of evidential and historical value and of **low value**.

## **B1024 to B1018**

### *Non-Designated Heritage Assets*

- 3.6.64 A series of archaeological investigations identified multi-period evidence (**5033**) at Cressing Temple approximately 95 m south-east of the draft Order Limits and immediately north-east of the B1018. Late Bronze Age to early Iron Age pottery found within a pit and fire-pit, middle Iron Age features and artefacts, and late Iron Age to Romano-British period pottery. A possible middle Iron Age settlement has been suggested nearby with this area utilised for agricultural activities (Ennis 2007). This asset is of evidential and historical value and of **low value**.
- 3.6.65 Archaeological investigations at the scheduled monument of Cressing Temple (**1002122**) have identified multi-period activity including Iron Age features (predominantly ditches and pits) (**5007**) and pottery (**5186**) approximately 30 m north of the draft Order Limits access, 290 m north-east of the draft Order Limits, and immediately east of the B1018. This asset is of evidential and historical value and of **low value**. The Iron Age evidence comprises:
- A pond or large pit containing middle Iron Age pottery and a substantial late Iron Age east to west aligned enclosure ditch (**5007**) (Ennis 2003) and a late Iron Age to Romano-British field boundary (**5039**)
  - An Iron Age slot containing stake holes and a deep post-hole, a possible early Iron Age corn-drying kiln, further post-holes and timber slots, a substantial Iron Age ditch and possible Iron Age wall have also been identified (**5051**). Residual Iron Age pottery has also been identified throughout later deposits
  - A trial trench exercise in 1947 identified large amounts of pottery predominantly pre-Romano-British native ware (**5186**)
- 3.6.66 Investigations have been undertaken at Great Ash Field approximately 330 m north of the draft Order Limits and 740 m south-west of Silver End Primary School. A findspot of a late Iron Age to Romano-British brooch was discovered by metal detector as well as several Romano-British metal objects including 59 coins (**5152**).
- 3.6.67 A multi-period site has been identified through several investigations at Rivenhall Airfield ahead of gravel extraction quarrying at Bradwell Quarry approximately 430 m north-west of the draft Order Limits, at Woodhouse Lane and 700 m north-east of Silver End at its closest point. This asset is of evidential and historical value and of **low value**. This includes:
- A fieldwalking survey (**5040**) which identified 15 concentrations of finds concentrated on the southern and eastern edges of the survey area (Medlycott, 1992)
  - Middle Iron Age pits and late Iron Age ditches and gullies associated with further settlement activity (**5134**) were also discovered nearby with the investigations suggesting an active settlement during the late Iron Age to Romano-British period, possibly located to the south and west (ECC 2011)

- Within the south-east of the site area, Iron Age to Romano-British period remains correspond with fieldwalking results. Within Area A of the site, Middle Iron Age pits containing little pottery were identified during evaluation trenching as well as late Iron Age and Romano-British parallel ditches. Area B of the site suggested a concentration of late Iron Age to Romano-British period features indicative of a small settlement site (ditches, pits, and a possible oven). Area C of the site also identified ditches of this period (*ibid.*)
- The eastern-most extent of a trial trench evaluation (**5201**) is located within the draft Order Limits near Monk's Farm Cottages (**1171147**) which identified early to middle Iron Age pits, gullies, post-holes, and ditches. It is unclear at this stage if evidence of this period was located either within or in the vicinity of the draft Order Limits (ASE 2014)

3.6.68 A substantial multi-period site (**5020**) has been identified at Rivenhall, immediately east of the draft Order Limits, immediately east of Church Road and 1.7 km south-east of Silver End. The asset encompasses the **high value** scheduled monument 'Roman villa, Anglo-Saxon hall, cemetery and church site, around and to the north and east of St Mary and All Saints Church' (**1013831**). Archaeological excavations focused on the monument have identified **medium value** Iron Age remains of evidential and historical value and comprising:

- A middle Iron Age ditch field system (**5060**) (Rodwell and Rodwell 1986)
- A late Iron Age regular enclosure system (**5060**) situated in a landscape of '*native farmsteads, one of which was rich enough for its occupants to possess decorated bronze mirrors*' (*ibid.*)
- A north/south aligned 190 m by 100 m sub-rectangular enclosure and broad double-ditched trackway can be observed as cropmarks on aerial imagery and may date to the Iron Age to Romano-British periods (**5075**, **5076**)

3.6.69 Multi-period activity (**5135**) has been identified during a large-scale archaeological evaluation associated with Feering and Kelvedon Flood Relief Scheme approximately 540 m north-west of the draft Order Limits and 400 m south-west of Coggeshall. The evaluation identified three small clusters of late Bronze Age to early Iron Age ditches and pits. Late Iron Age to early Romano-British ditches, pits and a trackway have also been identified. This asset is of evidential and historical value and of **low value**.

## B1018 to Fuller Street

### *Non-Designated Heritage Assets*

3.6.70 An archaeological excavation and watching brief (**5196**) were undertaken in 2009 associated with an Anglian Water pipeline running from Cressing to Terling which uncovered evidence of multiple periods. The pipeline crosses the draft Order Limits approximately 130 m north-west of Pink Lane within Fields 13 and 14 of the site. Possible Bronze Age to Iron Age activity was identified in the form of a small flint assemblage. This asset is of evidential and historical value and of **low value**.

## Romano-British Period

### Houchins Farm to B1024

### *Non-Designated Heritage Assets*

- 3.6.71 The Colchester to Coggeshall Roman road (**5151**) crosses the draft Order Limits following the current path of the A120. This asset is of evidential and historical value and of **low value**.
- 3.6.72 Cropmarks of an irregular enclosure 40 m in diameter with an entrance to its south-west and potential internal pits have been identified within a wider complex of cropmarks (**5139**) partially within the draft Order Limits. The area is south-west of the River Blackwater and approximately 130 m north-west of Rye Mill Lane. A possible villa site is noted within the field to the north-west, suggested by a quantity of Romano-British building material, tesserae and half of a pillar drum found over a c.30 m diameter area (**5140**) approximately 150 m north-west of the draft Order Limits. Further undated cropmarks (**5043**) observed within land immediately south of (**5139**) and 310 m south of (**5140**) may also date to this period. The cropmarks comprise of parallel curving ditches approximately 15 m apart seen on aerial imagery, approximately 155 m south-east of the draft Order Limits and north-west of the River Blackwater. These assets are of evidential and historical value and of **low value** but if the villa is proved to be present this asset would be of **medium value**.
- 3.6.73 Archaeological monitoring of a gas pipeline project has taken place within the draft Order Limits at Langley Green and immediately east of Old Road. The monitoring revealed a crushed Romano-British period cooking pot dating between c.120 to 250AD and part of a shallow curvilinear gully approximately 7.5 m in diameter (**5143**) (McMaster, Fawn and Holbert 1974). This asset is of evidential and historical value and of **low value**.
- 3.6.74 A broadly north-west/south-east aligned possibly Romano-British road has been identified on Ordnance Survey (OS) aerial imagery between Coggeshall and Kelvedon (**5148**). This road follows the modern road network and a footpath in part and crosses the draft Order Limits at three points approximately 325 m north-west of the River Blackwater as well as 50 m west and 275 m north-west of Coggeshall Hall Farmhouse (**1306737**). This asset is of evidential and historical value and of **low value**.

## **B1024 to B1018**

### *Designated Heritage Assets*

- 3.6.75 The **high value** scheduled monument 'Roman villa, Anglo-Saxon hall, cemetery and church site, around and to the north and east of St Mary and All Saints Church' (**1013831**) is of evidential and historical value and located c. 2.5 km south-east of Silver End, on the eastern flank of Church Street, 560 m south-east of the draft Order Limits. The monument includes buried foundations, features and deposits associated with a large 2nd century Romano-British villa complex, comprising at least four buildings, and associated ancillary structures and features and footpath. The villa complex included a long trapezoidal precinct, around the edges of which were buildings. The main house was at the western end, a 'lavishly' decorated winged corridor building, elevated on an earth-filled podium. A second smaller house was located on the north side of the precinct linked by a long-tessellated portico to the bath block. Other buildings, including a watermill, are also described as '*known or suspected, but are unexcavated*' (Rodwell and Rodwell 1986). The villa was integrated with the road and field pattern created during the Iron Age, with evidence of geometrical planning of the individual buildings and of the complex (ibid.). A single fine ware fabric pottery sherd (**5019**) has also been recovered which is also suggestive of high-status settlement activity within this area. An extant building platform on which stands the east end of the Grade I listed 'Church of St Mary and All Saints Church' (**1169594**) is the only visible element of the monument at the ground

surface. A substantial volume of building rubble, a metalled road and cropmarks of a wall have also been recovered at the current location of the Church (ibid.), although the church and all related assets are excluded from the scheduling. The site also contains evidence of an earlier Iron Age farmstead, as well as some Mesolithic, Neolithic, and Bronze Age artefactual material. Several extant early medieval (Anglo-Saxon) earthworks (buried in the 1960s) have also been identified on the site as well as a post-built hall to the site east of the main villa building. An Anglo-Saxon cemetery also centres around the villa remains as well as an early medieval timber church built over the southern part of the main villa building, with the villa building itself potentially being re-purposed as an early church or mausoleum. Mesolithic, Neolithic, Bronze Age, and early medieval evidence pertaining to this site is discussed in their respective period sections.

- 3.6.76 The setting of the scheduled monument is informed by its river valley location and by its relationship with a north/south aligned unnamed tributary of the Blackwater river which lies to the south. The setting is further informed by the surrounding agricultural landscape, however, the field systems and trackways which were likely associated with the villa estate have been replaced by post-medieval land division. The setting has been eroded by the imposition of the church, by the residential development of the village of Rivenhall immediately to the south and by the Rivenhall Hall farming complex to the north. The setting of the monument, therefore, makes a moderate contribution to its value, but due to overall distance and its restricted river valley location, the setting does not extend to the draft Order Limits.

#### *Non-Designated Heritage Assets*

- 3.6.77 Within land surrounding Scripps Farm (**1169367**) a possible Romano-British settlement has been suggested due to large volumes of pottery and coins being recovered, as well as a scatter of tile fragments (**5136**). The land lies within the draft Order Limits along its southern edge approximately 340 m north-west of the draft Order Limits, borders Scrips Road to the north-east and is 700 m south of Coggeshall. This asset is of evidential and historical value and of **low value** but if the settlement is proved to be present for certain this asset would be of **medium value**.
- 3.6.78 A series of archaeological investigations identified multi-period evidence (**5033**) approximately 95 m south-east of the draft Order Limits, immediately north-east of the B1018 and 8600 m east of Faulkbourne. Late Iron Age to Romano-British period pottery was recovered. This asset is of evidential and historical value and of **low value**.
- 3.6.79 An unconfirmed location of a Romano-British villa (**5163**) was suggested within transcripts of the Essex Archaeological Society in 1858, situated approximately 300 m south-east of the draft Order Limits and 345 m north-east of the Grade II listed Felix Hall (**1123797**) (Essex Archaeological Society, 1858). No evidence to date has been found during walkover surveys to suggest this is a villa location, although the HER does record that Roman coins and pottery have found from the area including 1st century pottery and coins of Claudius, Marcus Aurelius, and Antoninus Pius. This asset is of evidential and historical value and of **low value** but if the villa is proved to be present this asset would be of **medium value**.
- 3.6.80 Archaeological investigations at the scheduled monument of Cressing Temple (**1002122**) have identified multi-period activity including Romano-British settlement activity in the form of features predominantly comprising of structures, ditches, pits, findspots, a floor and a cropmark of a possible Romano-British structure (**5007**, **5013**, **5016**, **5039**, **5052**, **5065**, **5161**, **5162**) approximately 30 m north of the draft Order Limits, and immediately east of the B1018. Romano-British period evidence

associated with these assets is of evidential and historical value and of **high value**. The Romano-British evidence also includes:

- Several probable early Romano-British period features were identified including a late Iron Age to Romano-British field boundary (**5039**), a likely 1st to 2nd century metal floor/ surface and well, a horse burial, a large pit containing a substantial quantity of Roman tile and painted plaster, and two infant inhumation burials within the south-west corner of the Site (**5007**) (Ennis 2003)
- Five test pits and three trial trenches within Dovehouse Field identified Roman features (**5013**). This included drainage and settlement boundary ditches, postholes, and a cobbled surface
- A coin of Constantine II has also been recovered, possibly from this field '12yds [10.9 m] east of the east arm of the moat' (**5161**), as well as a coin of Gordian III (**5162**)
- Residual remains including a bronze foot, pottery fragments found in later period (medieval) ditches (**5052**) as well as a shallow ditch and sub-rectangular pit found within the gardens
- A large quantity of Romano-British pottery suggestive of settlement activity (**5065**) was found during a trial trenching exercise
- A trial trench exercise in 1947 identified large amounts of predominantly 1st century Romano-British period pottery (**5186**)

3.6.81 Artefacts have been recovered at Great Ash Field approximately 330 m north of the draft Order Limits and 740 m south-west of Silver End Primary School. A findspot of a late Iron Age to Romano-British brooch was discovered by metal detector as well as several Romano-British metal objects including 59 coins and pottery (**5152**).

3.6.82 A multi-period site has been identified through several investigations at Rivenhall Airfield ahead of gravel extraction quarrying at Bradwell Quarry approximately 430 m north-west of the draft Order Limits, at Woodhouse Lane and 700 m north-east of Silver End at its closest point. This asset is of evidential and historical value and of **medium value**. This includes:

- This includes a fieldwalking survey (**5040**) which identified 15 concentrations of finds concentrated on the southern and eastern edges of the survey area, two of which were Romano-British in date (Medlycott, 1992)
- Within the south-east of the site area, Iron Age to Romano-British period remains correspond with fieldwalking results. Within Area A of the site late Iron Age and Romano-British parallel ditches were identified. Area B of the site suggested a concentration of late Iron Age to Romano-British period features indicative of a small settlement site (ditches, pits, and a possible oven). Area C of the site also identified isolated Romano-British period (ECC 2011)
- Late Romano-British ditches, gullies and layers associated with further settlement activity (**5134**) were also discovered nearby with the investigations suggesting an active settlement during the late Iron Age to Romano-British period, possibly located to the south and west (ECC 2011)
- The eastern-most extent of a trial trench evaluation (**5201**) is located within the draft Order Limits near the Grade II listed Monk's Farm Cottages (**1171147**) which identified several Romano-British ditches, gullies, and pits. It is unclear at this

stage if evidence of this period was located either within or in the vicinity of the draft Order Limits (ASE 2014)

- 3.6.83 A substantial multi-period site covering several locations (**5020, 5058, 5066**) including evidence of Romano-British activity (**5059, 5075, 5076, 5187**) within **5020** have been identified at Rivenhall, immediately east of the draft Order Limits, immediately east of Church Road and 1.7 km south-east of Silver End. Asset **5020** also encompasses the **high value** scheduled monument 'Roman villa, Anglo-Saxon hall, cemetery and church site, around and to the north and east of St Mary and All Saints Church' (**1013831**). The Romano-British assets listed above are of evidential and historical value and due to their association with the scheduled monument, of **high value**. The assets comprise:
- A substantial volume of building rubble, a metalled road and cropmarks of a wall have been recovered, likely derived from activity associated with the scheduled monument (**1013831**)
  - A large gravel pit which is currently a pond (**5059**) has been identified north of the current churchyard and is likely to have its origins in this period. This pond may have been one of a series situated along the Cressing Brook's tributary stream as either fishponds and/or mill ponds to drive a later period mill (ibid.)
  - A north to south aligned 190 m by 100 m sub-rectangular enclosure and broad double-ditched trackway can be observed as cropmarks on aerial imagery and may date to the Iron Age to Romano-British periods (**5075, 5076**)
  - A possible Romano-British and possibly earlier barrow cemetery immediately east of (**5020**) is also noted as '*an integral part of the layout*' of the villa (ibid.) (**5058**) approximately 570 m south and 630 m west of the draft Order Limits. Two high-status vessels, a bronze patera and an ewer (**5066**) were also ploughed up in this field, known as 'Barrowfield', in 1839, and have been interpreted as disturbance of a barrow burial (ibid.)
- 3.6.84 Multi-period activity (**5135**) has been identified during a large-scale archaeological evaluation associated with the Feering and Kelvedon Flood Relief Scheme approximately 540 m north-west of the draft Order Limits and 400 m south-west of Coggeshall. The evaluation identified early Romano-British settlement evidence, with a concentration of ditches (some of which are potentially associated with agricultural field systems), pits, postholes, a trackway, and cremation burials. This asset is of evidential and historical value and of **medium value**.

## **B1018 to Fuller Street**

### *Non-Designated Heritage Assets*

- 3.6.85 An archaeological excavation and watching brief (**5196**) were undertaken in 2009 associated with an Anglian Water pipeline running from Cressing to Terling which uncovered evidence of multiple periods. The pipeline crosses the draft Order Limits approximately 130 m north-west of Pink Lane within Fields 13 and 14 of the site. Romano-British activity was identified in several locations during this investigation, the most substantial of which was identified at White Notley which identified building fabric including flue, roof tiles and other occupation debris suggestive of a nearby villa or similarly substantial building. This asset is of evidential and historical value and of **low value**. If it is proved that a villa site is present this would be of **medium value**.

- 3.6.86 Within a field at the terminal end of the draft Order Limits at Faulkbourne, Cropmarks suggestive of a north-west to south-east double ditched trackway, which potentially turns north-north-east to south-south-west, has been observed to the north of the field (**5057**). Nearby archaeological monitoring of groundworks to the rear of School Cottage have revealed an approximately 4 m wide large oval ring ditch which may have formed part of a settlement or field enclosure of Prehistoric or Romano-British date (Ennis 2002). This asset is of evidential and historical value and of **low value**.
- 3.6.87 Cropmarks of a regular double-ditched trackway (**5055**) have been identified as a probable Romano-British road alignment approximately 80 m north-east of the draft Order Limits and 90 m north-east of Forge Cottage (**1338147**). A possible rectilinear corner of an enclosure, open on the west side has also been identified, as a possibly double-ditched square enclosure. This asset is of evidential and historical value and of **low value**.
- 3.6.88 A findspot including pottery and a coin (a sesterce of Antoninus Pius c.138AD) (**5156**) have been recovered approximately 240 m east of the draft Order Limits, immediately west of Fairstead Lodge Road near Fuller Street. This asset is of evidential and historical value and of **low value**.
- 3.6.89 A field walkover survey in 1949 identified weathered tesserae, brick, and pottery. Further excavations in 1954 identified much pottery, roofing tile, flue tile, mortar and a pit containing painted plaster (**5045, 5183, 5184**) approximately 245 m north-west of the draft Order Limits, immediately west of Church Hill and south of White Notley. A robbed-out circular brick-built tomb base was also identified containing a 2nd century coin, part of a toilet seat and fragments of glass vessels. Ditches as well as the artefactual evidence outlined above suggests the presence of a nearby villa complex. This asset is of evidential and historical value and of **low value**. If it is proved that a villa site is present this would be of **medium value**.
- 3.6.90 Several Romano-British building dressings (**5176**) have been identified within the fabric of the Grade I listed 'Parish Church of St Mary the Virgin' (**1337780**) in Fairstead approximately 670 m south of the draft Order Limits. The quoins of the 11th century chancel and nave are comprised of Roman brick as is the southern doorway arch. Romano-British period tile and brick dressings have also been observed within the exterior walls, nave windows and tower arches. Many Roman bricks have also been identified within the fabric of the tower. Romano-British period artefacts have also been recovered within the rectory garden. This asset indicates the re-use of Romano-British period material within a medieval period structure. The artefacts recovered from the garden as well as the re-used building materials may suggest the presence of a nearby Romano-British period building that may have at least been partially extant around the time the church was constructed. The Romano-British material comprising this asset is of evidential, aesthetic, and historical value and of **low value**. If it is proved that a Romano-British building was located at this location this would be of **medium value**.
- 3.6.91 The Grade I listed Church of St. Etheldreda (**1147914**) contains Romano-British period brick (**5185**) within its fabric, and is located approximately 625 m north-west of the draft Order Limits, at White Notley. The bricks can be seen in the chancel south wall entrance, the south wall, with less present on the north and east wall. A silver coin has also been found near the south side of the church as well as an unusual tomb suggesting the site of a nearby villa. Archaeological monitoring of groundworks at the western wall of the south aisle also identified a medieval ditch which also included Romano-British period tile. The artefacts and re-used building materials may suggest the presence of a nearby Romano-British period building that may have at

least been partially extant around the time the church was constructed. The Romano-British material comprising this asset is of evidential, aesthetic, and historical value and of **low value**. If it is proved that a Romano-British building was located at this location this would be of **medium value**.

- 3.6.92 The broadly north-east/south-west aligned Chelmsford-Braintree-Long Melford road (**5149**) dates to the Romano-British period, as is confirmed at several points through archaeological investigations. The road is noted approximately 1.5 km north-west of Great Leighs in Section E over 2 km from the draft Order Limits, but it crosses the draft Order Limits within Section F near Stonage Farmhouse (**1172474**) where it is discussed further.

## Early Medieval

### Houchins Farm to B1024

#### *Designated Heritage Assets*

- 3.6.93 A **high value** scheduled monument of an Anglo-Saxon (5th to 7th century) 'cemetery 150 m east of Easterford Mill' (**1013515**) is of evidential and historical value. The asset is located approximately 1 km south-east of the draft Order Limits and 65 m west of Worlds End Lane. The cemetery itself includes both flat inhumation burials and barrows with the graves themselves surviving well despite the land being ploughed. The scheduling includes part of an Anglo-Saxon cemetery situated on river gravels to the east of the River Blackwater. At least four ring ditches with central graves are noted on this site varying between 5 m and 25 m in diameter, visible as cropmarks on aerial imagery, with the ring ditches associated with barrows that have since lost their earthwork mounds. Further flat burials have also been identified between the ring ditches which also indicated on aerial imagery and are known as 'satellite burials'. Skeletal remains have also been recovered immediately to the south-west of the scheduled area during gravel quarrying.
- 3.6.94 The setting of this asset is informed by its location on slightly higher ground north of the confluence of the River Blackwater and Domsey Brook, perhaps echoing prehistoric funerary practices and potentially concerned with the appropriation of the past and the strengthening of claims of tenure over the land and its resources. The use of monumental barrows mimics past funerary rites and may further emphasise a perceived ancestral validation of such claims. The setting is further informed by the surrounding agricultural landscape with which the asset has a historical relationship. The development of Kelvedon, has however, eroded this link and so the setting of the asset makes a moderate contribution to its value. Due to overall distance and the development of Kelvedon, the setting of the asset does not extend to the draft Order Limits.

### B1024 to B1018

#### *Designated Heritage Assets*

- 3.6.95 The **high value** Grade I listed 'Church of St Mary and All Saints' (**1169594**) is of evidential, historical, and aesthetic value. The church is located within, but excluded from, the scheduled monument 'Romano-British villa, Anglo-Saxon hall, cemetery and church site, around the north and east of the church' (**1013831**) as reported above. The church is located c. 3 km south-east of Silver End, 720 m south-south-east of the draft Order Limits on the eastern flank of Church. A timber framed Anglican parish church of the 10th century was, rebuilt in stone in the late 10th or early 11th century with 14th, 15th, 18th and 19th century extensions and alterations.

Early foundations of the building are evident as above-ground archaeology around the western entrance to the church. A substantial multi-period site (**5020**) including early medieval period activity (**5020, 5061**) has been identified in the fields around the church. This asset is also of evidential and historical value and potentially of **high value** if shown to be related to the listed church or the scheduled villa site. Evidence includes ditches, hearth pits (**5020**) and earthworks which have the potential to date to this period, however these were infilled in the 1960s and now survive as buried features (Rodwell and Rodwell 1986). Investigations surrounding the Romano-British period villa location described above also identified evidence of continued occupation during the early Anglo-Saxon period when a post-built hall was constructed east of the main villa building. An Anglo-Saxon cemetery was also identified centred around the villa remains and, subsequently, the early medieval timber frame church was built before its replacement with the current church. The villa building itself may also have been reused as an early church or mausoleum in this period (ibid.) Other remains include traces of a possible enclosure wall, a T-shaped corn drying oven and what is thought to be the location of a mill to the east (**5020**, ibid.). Further early medieval (Anglo-Saxon) evidence has been identified in the form of a 5th to 6th century hearth, pit and well, found during excavations associated with a new sewer trench in 1971 (**5061**).

- 3.6.96 The setting of the church is informed by its location by its roadside location at the northern limits of the village of Rivenhall. The setting is further informed by its relationship with the surrounding archaeological remains of the scheduled monument that strongly suggest the Roman villa site became the focus of early medieval activity and with the construction of the 10th century timber frame church, became the nucleus of the Anglo-Saxon settlement of Rivenhall recorded in the Domesday Book. The surrounding agricultural landscape with which the asset and the Rivenhall settlement have a historical relationship also contributes positively to the character of the setting. The setting of the church, therefore, makes a considerable contribution to its value, and due to open, commanding views across fields to the north-west, the setting extends to the draft Order Limits.

#### *Non-Designated Heritage Assets*

- 3.6.97 Archaeological investigations at the scheduled monument of Cressing Temple (**1002122**) have identified multi-period activity including early medieval (late Anglo-Saxon to Saxo-Norman) remains during investigations approximately 30 m north of the draft Order Limits access, 290 m north-east of the draft Order Limits pipeline works, 480 m north-west of the draft Order Limits, and immediately east of the B1018 (**5053**). This asset is of evidential and historical value and of **high value**. The evidence also includes:
- The HER notes that bank material associated with the moat of the Anglo-Saxon Manor of Cressing was found to contain shell-tempered potsherds dating between the 9th and 11th centuries, under the ownership of Harold until the Norman conquest in 1066 when it was passed to Count Eustace of Boulogne (**5053**, Cullen unknown). Excavations at the site of the medieval period chapel and later Tudor house have also identified an inhumation cemetery of the same date range predating the medieval chapel (**5208**). Traces of an oven have also been found within the south-west of the site surrounded by circular gravel-packed settings and footings of a buttressed wall. A large volume of shell-tempered pottery and animal bones found around the oven suggest that was associated with a kitchen area dating to the 12th century at the latest (**5208**). No conclusive evidence of Anglo-Saxon period occupation has so far been found at the scheduled monument of Cressing Temple (**1002122**) which may represent a period of no

occupation (Andrews 2020). An 11 m long early Norman timber structure has also been identified at the site that was originally thought to be late Anglo-Saxon date however the artefactual evidence suggests a post-conquest date (ibid.) (**5053**). Drainage trenches were monitored between the medieval period Wheat Barn and Barley Barn which also identified a possible early medieval feature potentially related to the construction of the porch of Barley Barn, however this could not be confirmed (ibid.)

- 3.6.98 Cropmarks have been observed of an early medieval period extractive pit as well as undated field boundary ditches (**5122**) on land east of Parkgate Farm approximately 5 m north of the draft Order Limits and immediately south of Park Gate Road.

## **B1018 to Fuller Street**

### *Non-Designated Heritage Assets*

- 3.6.99 The medieval period Grade I listed Church of St. Etheldreda (**1147914**) contains early medieval material (**5046**) within its fabric implying a nearby early medieval period building within the vicinity of the current church, approximately 625 m north-west of draft Order Limits pipeline mitigation works, 740 m south-east of the draft Order Limits, at White Notley. The church is of evidential, aesthetic, and historical value and of **high value**. A small round-headed window in the vestry is likely to date to this early medieval period and '*It is cut in a single stone believed to be a Saxon gravestone*'. A former arch in the north wall once had a round-headed window set in its blocking of Norman post-conquest or earlier date. The HER indicates the remnants of the early building date from the turn of the 11th century and '*may be associated with a will of 998 [AD]*' (Rodwell and Rodwell, 1977). The wording of the will implies a new foundation of the church and that this was the location of a minster or monastery rather than just a parish church (ibid.). Rodwell and Rodwell suggest the will makes the church one of only a few Anglo-Saxon churches in the country that can be associated with a firm foundation date (ibid.). The dedication of the church to St. Etheldreda also gives a potential early medieval origin to the church as she was likely born near Exning, Suffolk and died in c.680 AD. Etheldreda was the daughter of Anna, king of East Anglia as well as the foundress and first abbess of the Diocese of Ely (Church of England, 2022).

## **Medieval**

### **Houchins Farm to B1024**

#### *Designated Heritage Assets*

- 3.6.100 The **high value** scheduled monument of 'Coggeshall Abbey' (**1018865**) is of evidential, historical, and aesthetic value. The asset is located approximately 1.1 km north-west of the draft Order Limits, west of Feering Road and east of Abbey Lane within Coggeshall conservation area (**CA3**). The abbey was founded in 1140, likely for monks of the order of Savigny by King Stephen and Queen Matilda, later becoming Cistercian in 1147 and was active until the Dissolution. The monument includes both the buried and visible remains of the Savignac, and later Cistercian, monastery of St Mary and St John. The scheduling includes two areas of protection, the site of the church, conventual buildings and features within the abbey precinct to the west of the River Blackwater, and the second, the contemporary fishponds along the river's eastern bank (ibid.). Also included in scheduling are the Grade I listed buildings 'The Abbot's Lodging and Corridor of Coggeshall Abbey' (**1123191**) and the 'Guest House of Coggeshall Abbey' (**1307071**).

- 3.6.101 A further four listed buildings are located within but excluded from the scheduled monument. These comprise the **high value** Grade I listed 'Coggeshall Abbey (Residence)' (**1307099**), and the **medium value** Grade II listed 'Cartlodge/Shelter Shed 60 m south of Coggeshall Abbey' (**1168341**), 'Barn' (**1123192**), and 'Barn 45 m south of Coggeshall Abbey [Residence]' (**1337926**).
- 3.6.102 The 'Coggeshall Abbey residence' (**1307099**) dates to the early to mid-16th century, also altered in the 16th and 17th centuries. The building incorporates part of the 12th century Coggeshall Abbey infirmary. The two-storey Abbot's lodging and corridor (**1123191**) dates to c.1190, with alterations c.1220 and in the late 16th century. The guest house (**1307071**) of the abbey also dates to c.1190, with late 16th century alterations. The timber-framed and weatherboarded cartlodge/ shelter shed (**1168341**) dates to the 16th century or earlier, possibly associated with the post-Dissolution estate, and abuts a similarly timber-framed and weatherboarded 17th century barn (**1337926**). The remaining barn (**1123192**) dates to the 16th century. One further asset is associated with the abbey located within the conservation area but not within the scheduled monument, the **high value** Grade I listed Church of St. Nicholas (**1337925**). The Church of St. Nicholas is the former gatehouse chapel of Coggeshall Abbey and is now a church, originally dating to c.1225 and restored in 1863. Two undated photographs within the church show that the roof was formerly thatched. The Essex HER holds a record for Coggeshall Abbey (**5079**) that extends beyond the bounds of the scheduled monument. Any archaeological remains with the HER record are contemporary with the abbey would be of **high value**. A breakdown of the further identified medieval period evidence within the abbey grounds is as follows:
- Various remains associated with the abbey survive. Buildings such as the abbey, church, infirmary, barns, and undercroft are known to survive as well as several contemporary remains such as a tomb, inhumations, wall, north and south boundaries, and fishponds to the east of the River Blackwater. The buildings survive only as foundations and buried remains, although portions of the eastern arm of the claustral range are still extant within and alongside the Grade I listed 'Abbey Farm' (**1168354**). The minimum extent of the abbey precinct is thought to have been retained as a property boundary after the Dissolution, the position of which was recorded on an estate map of 1639 and appears on aerial imagery. Oliver Cromwell's commissioners inspected the abbey in 1535 and 1536 at which point Abbot William Love was dismissed and replaced by the Abbot of Tower Hill, Henry More. The abbey was then surrendered to the Crown in 1538 and was handed to Sir Thomas Seymour. Seymour exchanged the abbey site for other lands in 1541 and a contemporary survey indicates that the abbey church had already been demolished by this time. The timber framed mansion of Abbey Farm was retained after the Dissolution and at least partially extant in 1639, later replaced with the current late 16th century (c.1581) building range of the Grade I listed 'Coggeshall Abbey House' (**1307099**) (Gardner 1955, Historic England). The house underwent many alterations between the 17th to 19th centuries and still retains its 16th century chimney stacks, oriel windows and west porch
  - Medieval timbers (**5037**) potentially associated with a sluice system were uncovered during restoration works at Abbey Mill fishpond, with a pottery fragment potentially dating the feature to the 14th century
  - The Grade II listed Abbey Mill House (**1123193**) was constructed in the 15th century and later extended in the 18th to 19th centuries. The farmhouse may form part of the original Abbey Mill in the medieval period. The HER indicates that the present main course of the River Blackwater was constructed in the early 13th

century to provide a reliable head of water for the abbey mill. The river is spanned by a bridge, the western half of which is placed on three brick arches that were built at this time. The present Grade I listed Abbey Mill (**1168354**) was built in the 17th century on the site of a likely medieval period flour mill contemporary with the abbey. The asset is located approximately 1 km north-west of the draft Order Limits north of Abbey Lane. The two-storey timber framed house dates to the 15th century and was extended in the 18th to early 19th century. The house is located on the site of a likely medieval period flour mill associated with Coggeshall Abbey and the path of the River Blackwater to the east with the river being re-cut to enable the mill to function

- The HER indicates that Sir John Sharpe held a lease for a '*mansion and lodgings at Coggeshall Abbey* in a will from 1518 (**5080**), passed on to Clement Harleston. The mansion was situated next to the monk's infirmary and the property included '*one little garden next the colliquitory on the west, and the mansion on the east*' and known to still be at least partially extant in 1639, later replaced with the current late 16th century building range of the Grade I listed Coggeshall Abbey House (**1307099**) (Gardner 1955)
- The Grade I listed 'St. Nicholas Chapel' (**1337925**) was constructed in the 13th century approximately 1.3 km north-west of the draft Order Limits associated with Coggeshall Abbey (**1018865**) as the *cappella extra portas* (Chapel outside of the gates) of the Abbey. The chapel was restored between 1860 and 1890 and returned to ecclesiastical use after 300 years of being used as a barn

3.6.103 The setting of the scheduled monument, including the two Grade I listed buildings noted above, is informed by its River Blackwater valley location, which provided water and a power supply for the abbey complex. The setting is further informed by the interrelationship between the extant listed buildings of the abbey complex and by their relationships with the later listed buildings within but excluded from the scheduled monument. The Grade I listed Abbey Mill (**1168354**) and the Church of St Nicholas (**1337925**), and the Grade II listed Abbey Mill House (**1123193**) are located closely outside the limits of the scheduled area, but these too add to the character and historical timeframe of the asset and contribute positively to the cohesion of the heritage complex. The surrounding agricultural landscape within and beyond the river valley was likely part of the abbey's estate and as it is today, concerned with arable production. The setting of the scheduled monument and the associated and adjacent listed buildings, therefore, makes a considerable contribution to their values. Due to their survival as elements of the abbey complex and their strong link to the river valley and the agricultural landscape, the setting of the scheduled monument (**1018865**), its two integral listed buildings (**1123191**, **1307071**), and the Church of St Nicholas (**1337925**) extends to the draft Order Limits. The settings of the remaining Grade I (**1168354**) and Grade II listed buildings (**1123193**, **1307099**, **1168341**, **1123192**, **1337926**) are, however, restricted to their river valley locations within the heritage complex and so do not extend to the draft Order Limits.

3.6.104 The **high value** Grade I listed 'Parish Church of All Saints' (**1123841**) is of historical and aesthetic value. The asset is located approximately 680 m south-east of the draft Order Limits and within Feering conservation area (**CA13**). The church dates between the 13th and 16th centuries and was restored in the 19th century. The chancel-arch may have been reproduced by Sir George Gilbert Scott in 1845 based on the original one dating to c.1200.

3.6.105 The setting of this asset is informed by its purpose as a medieval to post-medieval ecclesiastical building within Feering conservation area (**CA13**). The church is

located within an urban landscape and originally designed to be viewable from the surrounding landscape. The church still retains a functional and historical connection with its surrounding landscape and remains a focal point within Feering. The setting of the asset does not extend to within the draft Order Limits with any potential intervisibility between the asset and draft Order Limits prevented by surrounding buildings and established trees and hedges.

- 3.6.106 The **high value** Grade I listed 'Parish Church of St. Peter Ad Vincula' (**1337953**) is of evidential, historical, and aesthetic value and is also located within Coggeshall conservation area (**CA3**). The asset is located approximately 1.6 km north-west of the draft Order Limits, south of Church Green. The flint rubble parish church dates to the 15th century, restored in the 19th century. The church was severely damaged by enemy action in 1940 and was restored between 1955-1988.
- 3.6.107 The setting of this asset is informed by its presence as a medieval to post-medieval ecclesiastical complex, located within Coggeshall and its associated conservation area (**CA3**), and originally designed to be viewable from the surrounding landscape. This asset remains a focal point within the area. The immediate surrounding setting is that of the churchyard surrounded by village buildings and trees which make a moderate contribution to the current value of the asset with the asset retaining a functional and historical relationship with its original purpose. The setting of this asset is confined to its immediate vicinity and does not therefore extend to within the draft Order Limits.
- 3.6.108 'Feeringbury Manor' (**1306710**) and its associated assets are approximately 110 m north-west of the draft Order Limits, and south-west of Coggeshall Road. The associated assets comprise: the **high value** Grade II\* listed 'Ancillary Building 6 metres South East of Feeringbury Manor' (**1123828**); and the **medium value** Grade II listed 'Waterwheel And Mounting Approximately 23 Metres South West of Feeringbury Manor' (**1337602**) and 'Barn of Feeringbury Farm, 60 Metres South East of Feeringbury Manor' (**1123829**). These buildings are of evidential, historical, and aesthetic value. The two-storey timber framed manor (**1306710**) dates to c.1300 and has later been altered in the 15th, 16th, 18th, 19th, and 20th centuries. The manor was held by the Abbot of Westminster from an unknown date but is recorded by 1343. Henry VIII granted the manor to the Bishopric of Westminster in 1540 during the Dissolution, and later the Bishop of London in 1550 by Edward VI, with a series of post-medieval alterations from the 17th century onwards. The original purpose of the ancillary building (**1123828**) is unknown however the NHL indicates this was likely a chapel. The single-storey building is now combined with a stable block. The timber framed and weatherboarded building dates to the 15th century, later altered and extended in the late 19th and 20th century. The high quality of the building frame and mouldings indicate the original purpose of the building was high status. The waterwheel and water pump mounting (**1337602**) dates to the 19th century. The timber framed and weatherboarded barn (**1123829**) dates to the 16th century, with associated later abutting buildings of no special interest located to the north-west and north-east. The moat predates the existing buildings, with the HER indicating that the manor was in possession of the Abbey of Westminster in 1343, remaining so until the Dissolution. A 15th century outbuilding south-east of the house was originally a chapel; however, this had become a stable by 1892.
- 3.6.109 The setting of these assets is informed by their purpose as a medieval to post medieval manorial/ farmstead complex within a rural agricultural landscape, with the assets broadly remaining within their original setting and the asset retaining a functional and historical relationship with this. The active farmstead complex and surrounding landscape moderately contribute to the value of these assets. There is

likely to be clear intervisibility between these assets and the Project, likely to only be restricted by surrounding established trees and hedges as well as surrounding buildings. The setting of the assets, therefore, extends to the draft Order Limits.

- 3.6.110 The **medium value** Grade II listed 'Poplar Hall Farmhouse' (**1337608**) is of evidential, historical, and aesthetic value. The asset is located approximately 470 m south-east of the draft Order Limits, and north-west of Little Tey Road. The two-storey timber framed house dates to the 15th century, with 17th and 20th century alterations. The house is shown on 1843 tithe map as 'Old House Farm'.
- 3.6.111 The setting of this asset is informed by its purpose as a medieval to post-medieval farmstead within a rural agricultural landscape, with the asset broadly remaining within its original setting and the asset retaining a functional and historical relationship with this. The active farmstead complex and surrounding landscape moderately contribute to the value of the asset. There is likely to be intervisibility between the house and the draft Order Limits although this would be partially restricted by surrounding established trees and hedges to the north. The setting of the asset, therefore, extends to the draft Order Limits.
- 3.6.112 The **medium value** Grade II listed 'Bushmoor Cowes' (**1123830**) is of evidential, historical, and aesthetic value. The cottage is located approximately 500 m south-east of the draft Order Limits, and west of Coggeshall Road. The single storey (with attics), timber framed early 16th century house is now two cottages, later altered in the 17th and late 19th century.
- 3.6.113 The setting of this asset is informed by its purpose as a medieval to post-medieval roadside cottage within a rural agricultural landscape, with the asset broadly remaining within its original setting and the asset retaining a historical relationship with this. The current roadside setting and surrounding landscape moderately contribute to the value of the asset. There is likely to be no intervisibility between the house and the draft Order Limits, restricted by surrounding established trees and hedges, and so the setting of the asset does not extend to the draft Order Limits.
- 3.6.114 Two **medium value** Grade II listed buildings associated with Old Wills Farmhouse are located approximately 545 m south-east of the draft Order Limits, and south of Little Tey Road. The two-storey timber framed 'Old Wills Farmhouse' (**1169439**) dates between the 14th and 15th centuries with 16th and 20th century alterations. The timber framed 'Barn 25 Metres North East Of Old Wills Farmhouse' (**1123838**) dates to the 17th century with the doors replaced in the 20th century. The farmhouse and barn are of historical and aesthetic value.
- 3.6.115 The setting of this asset is informed by its purpose as a medieval to post-medieval farmstead within a rural agricultural landscape, with the asset broadly remaining within its original setting and the asset retaining a functional and historical relationship with this. The active farmstead complex and surrounding landscape moderately contribute to the value of the asset. There is likely to be little intervisibility between the house and the Order Limits, restricted by surrounding established trees and hedges to the north. The setting of this asset does not extend within the draft Order Limits.
- 3.6.116 The **medium value** Grade II listed 'Prested Hall' (**1169450**) is a moated site of evidential, historical, and aesthetic value. The asset is located approximately 1.95 km south of the draft Order Limits and accessed by an unnamed lane leading from the A12 approximately 740 m north-west of the asset. The two-storey timber framed house was constructed between the 14th to 17th centuries with 19th to 20th century alterations on a medieval moated site and is currently a hotel. The house had large

20th century extensions to the north, east and south incorporating the historic structure in a larger building used from 1934 as a nursing home and later as a residential institution.

- 3.6.117 The setting of this asset is informed by its presence as a part of a medieval to post-medieval moated manor and is currently a hotel. The original setting of this asset would have been as a high status defended building surrounded by a moat designed to have intervisibility with its wider surrounding rural agricultural landscape. This asset broadly retains elements of its historic setting with much of the moat and wider rural agricultural landscape remaining which make a moderate contribution to the setting of the asset. There is likely to be no intervisibility between this asset and the Project due to established trees and hedges between the asset and the draft Order Limits to the north. The setting of the asset does not extend to the draft Order Limits.

#### *Non-Designated Heritage Assets*

- 3.6.118 A series of cropmarks (**5014**) have been observed at Kane Farm of which the draft Order Limits travel through. The cropmarks include a sub-rectangular enclosure complex/field boundaries which may date to the medieval or post-medieval periods. This asset is of evidential and historical value and of **low value**.
- 3.6.119 The scheduled monument 'Long mortuary enclosure and round barrow 160 m south-west of Frame Farm' (**1017230**) is situated within a wider cropmark complex (**5147**) that includes the remains a windmill site of potential medieval or later in date. The cropmark asset is located c. 160 m south-west of Frame Farm, approximately 450 m south of the draft Order Limits, and immediately west of Coggeshall Road. The windmill site is of evidential and historical value and of **low value**.

### **B1024 to B1018**

#### *Designated Heritage Assets*

- 3.6.120 The **high value** scheduled monument of 'Cressing Temple' (**1002122**) is of evidential, historical, communal, and aesthetic value. The asset is approximately 30 m north of the draft Order Limits access, 290 m north-east of the draft Order Limits, and immediately east of the B1018 at its closest point. This site is the location of a medieval chapel and moat (a chain of ponds forming a perimeter to the east, south and west) associated with the Knights Templars, and is recorded as the first recorded settlement of the Knights Templar in the UK. The scheduling includes two **high value** Grade I listed medieval barns comprising the timber framed 'The Barley Barn, 40 Metres North West of Cressing Temple Farmhouse' (**1123865**) and 'The Wheat Barn, 35 Metres North East of Cressing Temple Farmhouse' (**1123866**), and three **medium value** Grade II listed buildings comprising the 'Granary/Stables Block 70 Metres South of Cressing Temple Farmhouse' (**1123867**), the 'Waggon Lodge Approximately 40 Metres South of Cressing Temple Farmhouse' (**1169011**) and the 'Wall Enclosing Walled Garden Approx 15 Metres East of Cressing Temple Farmhouse' (**1168978**). These assets are also of evidential, historical, and aesthetic value, and in the case of the barns, communal value. The site of the Templar's church and possible preceptory hall/preceptory as well as ponds and moats which must have once enclosed the whole area are also part of the listing. The scheduling also notes a Romano-British period and earlier settlement underlies part of the area. The timber framed and weatherboarded Barley Barn (**1123865**) dates to the early 13th century with 16th to 17th century alterations. The similarly timber framed and weatherboarded Wheat Barn (**1123866**) dates from the mid-to-late 13th century with 16th and 18th century alterations. The red-brick wall enclosing the walled garden

approximately 15 m east of the farmhouse (**1168978**) dates to the 17th century later altered in the 18th to 19th century. The walled garden is rectangular (25 m by 17 m) and is between two to three metres high. This asset has been included in the listing for its group value. The two-storey timber framed and weatherboarded granary and stables (**1123867**) date to the late 16th century and was also converted to courthouse in 1623 with further alterations in the 19th century. The NHLE notes that this building is the largest granary in Essex which is suggestive of the value of the Cressing Temple estate when it was constructed. The timber framed, thatched and weatherboarded waggon lodge (**1169011**) dates to the 18th century and is also listed for its group value. The two-storey timber framed **medium value** Grade II listed Cressing Temple Farmhouse (**1168891**) is of evidential, historical, and aesthetic value and is not included in the Cressing Temple scheduled monument (**1002122**). The farmhouse dates to the late 16th century with 18th to 19th century alterations. The building may also be a surviving part of a mansion described in 1623 and 1669 as 'the Greate House'.

- 3.6.121 The setting of the scheduled monument, its included listed buildings, and the excluded farmhouse (**1168891**) is shared and informed by their relationships and by the intervisibility. The setting is further informed by surrounding agricultural landscape with which the assets have a historical and former functional relationship. The assets' association with the Knights Templars also contributes positively to the setting and attracts visitors from around the world. The setting of the assets, therefore, makes a considerable contribution to their values, and due to their strong links to the agricultural landscape, the setting extends to the draft Order Limits.
- 3.6.122 The **medium value** Grade II listed 'Ford Farmhouse and Ford Farmhouse Barn' (**1122614**) is of evidential, historical, and aesthetic value. The asset is located approximately 15 m north-west of the draft Order Limits. The two-storey building dates to the 15th century with later 17th century additions and was renovated in the 20th century.
- 3.6.123 The setting of this asset is informed by its purpose as a medieval to post-medieval farmstead complex within a rural agricultural landscape and predominantly flat topography. The asset broadly remains within its original setting and the asset retains a functional and historical relationship with this. The active farmstead complex and surrounding landscape moderately contribute to the value of the asset. There is likely to be intervisibility between the house and the draft Order Limits. The setting of this asset extends to the draft Order Limits.
- 3.6.124 The **medium value** Grade II listed 'Park Farmhouse' (**1123798**), Kelvedon, is of evidential, historical, and aesthetic value. The asset is located approximately 220 m north-west of the draft Order Limits, east of an unnamed lane leading from Hollow Road approximately 185 m to the south. The two-storey timber framed building dates to the early 16th century or earlier, with early 17th, 18th, and 20th century alterations. The name 'Park Farmhouse' may be a reference to/ association with Felix Hall (**1123797**) estate and Felixhall Park (**5133**) approximately 200 m to the north-west.
- 3.6.125 The setting of this asset is informed by its presence as a late medieval to post-medieval farmstead complex within a rural agricultural landscape. The asset broadly remains within its original setting and the asset retains a functional and historical relationship with this. The surrounding landscape moderately contributes to the value of the asset, but it could not be ascertained if this asset lies within an active farmstead complex due to lack of access. There is likely to be intervisibility between the house and the draft Order Limits pipeline works although this may be partially

restricted by surrounding established trees and hedges. The setting of this asset does not extend within the draft Order Limits.

- 3.6.126 The **medium value** Grade II listed 'Lawn's Farm' (**1122744**) is of evidential, historical, and aesthetic value. The asset is located approximately 700 m south-east of the draft Order Limits and 170 m west of Fairstead Road. The two-storey timber framed building dates to the 16th century or earlier, with later additions and alterations.
- 3.6.127 The setting of this asset is informed by its purpose as a medieval to post-medieval period farmstead within a rural agricultural landscape. The asset broadly remains within its original setting and the asset retains a historical relationship with this. The existing farmstead complex and surrounding landscape are still present and moderately contribute to the value of the asset. There is likely to be intervisibility, aided by the surrounding topography, between the house and the Order. Intervisibility would be partially restricted by the surrounding treelines and hedgerows and nearby buildings acting to restrict intervisibility between the asset and the draft Order Limits. The distance between the asset and the Project means the setting of this asset does not extend within the draft Order Limits.
- 3.6.128 The **high value** Grade I listed 'Parish Church of All Saints' (**1337619**) is of evidential, historical, and aesthetic value. The asset is located approximately 1.7 km north-east of draft Order Limits pipeline mitigation works, 2.6 km south-east of the draft Order Limits, east of Church Road and within Cressing conservation area (**CA37**). The flint rubble, red brick and tile parish church dates between the 12th and 15th centuries, later extended and restored in the 19th century. The church is located on a Saxo-Norman foundation.
- 3.6.129 The setting of this asset is informed by its presence as a medieval to post-medieval ecclesiastical complex originally designed to be viewable from the surrounding landscape and associated with Cressing. The church still retains a functional and historical connection with its surrounding landscape. The church remains a focal point within the area and shares its setting with nearby buildings. There is likely to be no intervisibility between this asset and the draft Order Limits due to established trees and hedges, surrounding buildings, and the surrounding topography. The setting of this asset does not extend to the draft Order Limits.

#### *Non-Designated Heritage Assets*

- 3.6.130 The southern corner of the Rivenhall designed landscape (**5036**) lies within the draft Order Limits to the north-west of Park Road. The draft Order Limits continue through two successive medieval deer parks known by the HER as 'Rivenhall I and II' and two post-medieval parks recorded as 'Rivenhall III and IV' (**5094**) for approximately 1.2 km. The Grade II\* listed Rivenhall Place (**1122598**) and Grade II listed Bridge to Rivenhall Place (**1338253**) also lie within the landscape portion (**5036**). The designed landscape (**5036**) marks the location of a medieval period deer park (Rivenhall I) which later doubled in size (Rivenhall II) (**5094**) and was then overlaid by post medieval alterations made by Humphry Repton around the house (**1122598**) approximately 340 m north of the draft Order Limits (**5036**). The location of Rivenhall I is first mentioned in 1295 but is likely to predate this date, possibly around the late 10th century. The park doubled in size to become Rivenhall II in the 12th century and surrounded by a bank. During the 14th and 15th centuries the park then shrank in size. The Grade II listed Ford Farm's (**1122614**) construction in the early 15th century reduced the enclosed area further, to approximately 170ha. These assets are of evidential and historical value and of **low value**.

- 3.6.131 A medieval moated manor is located at Porter's Farm (**5069**) approximately 20 m north of the draft Order Limits, immediately south of Park Gate Road and c. 2.6 km west of Kelvedon. The moat partially survives with the northern and southern arms still extant. The post medieval Grade II listed 'Porters Farmhouse' (**1171011**) is situated within the moated area. The HER indicates that Porter's Farm is likely associated with the family of John Porter in 1391, and Porters is also mentioned in a 1541 rental. An archaeological watching brief in advance of a swimming pool (**5001**) also identified a recently backfilled modern boundary ditch, however no features associated with the moated enclosure were found. This asset is of evidential and historical value and of **medium value**.
- 3.6.132 Investigations have been undertaken at Great Ash Field approximately 30 m north of the draft Order Limits and 740 m south-west of Silver End Primary School. A findspot scatter of medieval pottery was identified on a slight mound of darker soil approximately 30 m by 10 m across (**5180**).
- 3.6.133 A possible windmill mound at Felixhall Park (**5068**) is located approximately 130 m south of the draft Order Limits and may date to the medieval period or later. The HER indicates that although there was a slight mound at this location it may be associated with nearby quarrying spoil which has since been ploughed flat. This asset is of evidential and historical value and of **low value**.
- 3.6.134 A series of archaeological investigations identified multi-period evidence (**5033**) approximately 95 m south-east of the draft Order Limits and immediately north-east of the B1018. Medieval period activity was identified in the form of a hearth, a pit or well, and two postholes bounded by ditches. Pottery dating to the 13th century suggests activity in this period was relatively short-lived in this location (Ennis 2007). This asset is of evidential and historical value and of **low value**.
- 3.6.135 A scatter of medieval and early post-medieval pottery (**5178**) has been identified on a 'slight mound' within the north-east of a land parcel, approximately 185 m south of the draft Order Limits and 550 m north-east of the B1018. This asset is of evidential and historical value and of **low value**.
- 3.6.136 Archaeological investigations at the scheduled monument of Cressing Temple (**1002122**) have identified multi-period activity particularly including medieval period remains during investigations approximately 30 m north of the draft Order Limits, and immediately east of the B1018 (**5021**, **5022**, **5053**). This asset is of evidential and historical value and of **high value**. The medieval period evidence is as follows:
- An 11 m long early Norman timber structure has been identified at the site that was originally thought to be late Anglo-Saxon in date, however the artefactual evidence suggests a post-conquest date (Andrews 2020) (**5053**). A late Anglo-Saxon or Saxo-Norman inhumation cemetery has also been found, predating the medieval chapel outlined below (ibid.). Traces of an oven have also been found within the south-west of the site surrounded by circular gravel-packed settings and footings of a buttressed wall. A large volume of shell-tempered pottery and animal bones found around the oven suggest that was associated with a kitchen area dating to the 12th century at the latest (**5053**, ibid.)
  - The scheduled monument of Cressing Temple (**1002122**) is the site of a chapel and moat (a chain of ponds forming a perimeter to the east, south and west) associated with the Knights Templars and is recorded as the first recorded settlement of the Knights Templar in the UK. The manor was donated around 1135 to 1136 AD by Matilda I, Countess of Boulogne. After the Knights Templars were officially suppressed on 21st March 1312, Cressing Temple was

subsequently given to the Hospitallers that year. The house at Cressing was dissolved before 1381 with the chapel surviving the Dissolution and is recorded as intact in 1626 (Knowles and Hadcock 1971). In 1515 the farm was then leased to a private owner (Pevsner, 1954). Two aisled barns, the Barley Barn dating to c.1190 and the Wheat Barn to c.1250 are known to survive in 1515, as is a contemporary well. Farm buildings located to the south-east of the courthouse are also likely to date to this period

- An archaeological investigation associated with the location of Cressing Temple visitor centre (**5021**) identified the remains of two previously unknown buildings and a brick culvert. Of these, the oldest building was a medieval timber-framed agricultural building tentatively dated to the 13th century, and the latter a post-medieval late 16th to early 17th century building (**5022**). The medieval building (**5021**) comprised of truncated remains of beam slots and post-holes within the north-western of the site, extending beyond both the northern and western excavation limits. Medieval pottery recovered from the building dates to between the 12th to 14th century
- A medieval ditch has also been identified containing residual Roman finds and may be a leat from the main moat. A shallow 12th century fishpond has also been identified at the site. Gravel footings of a small 12th century chapel have also been found east of the cellar of the Tudor house with inhumations found both inside and outside of the building associated with an early medieval to early post-Norman conquest cemetery (**5208**)
- A watching brief in 1989 also identified a medieval footing and a possible medieval pit (**5208**). Further trenching in 1989 and 1994 also revealed further medieval and post-medieval features including large pits containing Hedingham ware and other medieval pottery as well as slag and/or furnace lining
- Three tile kiln locations (**5064**) are located on land approximately 600 m north-east of the draft Order Limits and may be associated with tile production for the adjacent medieval barns at Cressing Temple (**1002122**), however they may also be post-medieval in date

3.6.137 The HER details that six medieval pottery shreds (**5179**) were recovered near the location of a former building marked on a 1716 map of Crickets Farm approximately 230 m south-east of the draft Order Limits and 420 m east of Silver End farm. This asset is of evidential and historical value and of **low value**.

3.6.138 A **medium value** medieval moated manor (**5071**) of evidential and historical value is located by the HER at Marylands (**5071**) approximately 430 m south-east of the draft Order Limits and immediately east of Sniveller's Lane. Although the moat is complete, the record also suggests '*the late medieval timber farmhouse [was] demolished c.10 y[ea]rs ago*' with the location now vacant and overgrown.

3.6.139 A multi-period site has been identified through several investigations at Rivenhall Airfield ahead of gravel extraction at Bradwell Quarry approximately 430 m north-west of the draft Order Limits, at Woodhouse Lane and 700 m north-east of Silver End at its closest point. This asset is of evidential and historical value and of **low value**. This includes:

- A fieldwalking survey (**5040**) which identified 15 concentrations of finds concentrated on the southern and eastern edges of the survey area, one of which was medieval in date (Medlycott, 1992)

- Medieval enclosure ditches dating to the 12th to 13th centuries have been identified (**5134**) within 'Area A' of the investigations, which are possibly associated with Sheepcotes Farm (ECC 2011). A series of large intercutting medieval quarry pits have been tentatively dated to the early to mid-13th century within 'Area B' of the investigations, likely associated with flint nodule extraction for nearby building construction (*ibid.*)
- The eastern-most extent of a trial trench evaluation (**5201**) is located within the draft Order Limits near the Grade II listed Monk's Farm Cottages (**1171147**) which identified evidence suggestive of medieval roadside occupation as well as working areas and quarrying. It is unclear at this stage if evidence of this period was located either within or in the vicinity of the draft Order Limits (ASE 2014)

3.6.140 A substantial multi-period site (**5020**) including medieval period activity (**5076**) has been identified at Rivenhall, immediately east of the draft Order Limits Northumbrian Water Pipeline, approximately 230 m south of the draft Order Limits, immediately east of Church Road and 1.7 km south-east of Silver End. A possible Iron Age to Romano-British north to south aligned 190 m by 100 m sub-rectangular enclosure and broad double-ditched trackway can be observed as cropmarks on aerial imagery (**5075**). A findspot of six medieval grey coarse ware pottery sherds (**5188**) have also been found at this location as well as a tile and brick waster indicating a potential location for a tile kiln associated with Coggeshall Abbey (**5189**). This asset is of evidential and historical value and of **medium value**.

## **B1018 to Fuller Street**

### *Designated Heritage Assets*

3.6.141 The **high value** scheduled monument 'Blunts Hall ringwork' (**1012098**) is of evidential and historical value and is located on the western outskirts of Witham and c. 2.8 km south-south-east of the draft Order Limits. Ringworks are medieval fortifications built and occupied from the late Anglo-Saxon period to the later 12th century. They comprised a small defended area containing buildings which was surrounded or partly surrounded by a substantial ditch and a bank surmounted by a timber palisade or, rarely, a stone wall. The monument at Blunts Hall is situated on gently sloping land, overlooking the river Brain 700 m south-west of the Grade I listed Church of St Nicholas (**1338236**). It includes a sub-rectangular ringwork which measures 84 m north/south by 76 m east/west. The ringwork consists of an enclosure, the interior of which has been raised to about 1.2 m higher than the surrounding ground level. The prominent internal bank survives to a height of 3.5 m above the level of the island and an average width of c. 6 m. This bank is surrounded by a ditch which survives as a waterfilled earthwork to the north and is infilled to the south. To the north and west the ditch varies in width from 10 m to 15 m, with an average depth of c. 1.5 m deep. To the east and south the ditch has become infilled. It is now visible as a shallow depression 0.2 m deep and survives as a buried feature. At the south-east corner of the enclosure is a conical shaped mound 3.5 m in diameter, which forms part of the rampart and is 0.8 m higher than the inner bank. Limited excavation of the centre of the enclosure and through the bank and ditch was undertaken in 1958. This yielded occupation debris including a hearth and a possible pottery kiln. The site has been dated to the 12th century by the unglazed pottery recovered from the excavation along with bone and oyster shells.

3.6.142 The setting of the asset is informed by its relationship with the scoped out Grade II listed 17th century Blunts Hall (**1122634**) c. 50 m to the south-east and by the adjacent agricultural landscape with which the asset has a historical and likely former functional relationship. The setting has, however, been encroached upon by the

westwards expansion of Witham in the latter half of the 20th century and domestic dwelling now lie immediately to the east of the monument. Furthermore, the monument appears to be overgrown with shrubs and trees negating views to and from its interior. The setting of the asset, therefore, makes a minor contribution to its value, and due to it being restricted largely to the boundaries of the monument, the setting does not extend to the draft Order Limits.

- 3.6.143 The **high value** scheduled monument of 'Great Loyes moated site and fishpond' (**1008979**) is of evidential and historical value. The asset is located approximately 1.4 km south of the draft Order Limits and immediately east of Fairstead Road. The moated site at Great Loyes is well preserved and includes an additional internal fishpond, an unusual feature for this type of asset. The 15 m by 13 m internal fishpond is joined to the north-western moat arm by a small 3 m wide channel. The moated site is quadrilateral in shape and is approximately 85 m by 97 m wide. The moat arms are between 8 m and 10 m wide and fed by a spring with the south of the moat later revetted in brick during the Victorian period. A 25 m wide causeway access is located along the south-western moat arm and is likely to be the original entrance. A subsequent later period 6 m wide causeway was then added to the north-east. The island is currently occupied by the **medium value** Grade II listed 'Great Loyes Farmhouse' (**1147418**). Some of the house rafters may be medieval in date and could be part of the original building. The house, outbuildings, garden wall, greenhouse, driveway, and footbridge are all excluded from the scheduling. The two-storey timber framed house dates to the 17th century or earlier, with 18th century alterations. The NHLE indicates that smoke-blackened rafters in a barn 70 m to the south of the house may have originated from a medieval hall house which may have occupied the island prior to the current building. The **medium value** Grade II listed 'Barn 70 Metres South of Great Loyes Farmhouse' (**1337839**) is timber framed and weatherboarded and dates to c.1300, with 17th and 18th century repairs. The barn substantially remains in its original form.
- 3.6.144 The setting of these assets is informed by its prominent focal position as a medieval moated manor. The original setting of these assets would have been as a high status defended building surrounded by a moat, designed to have intervisibility with its wider surrounding rural agricultural landscape. These assets broadly retain elements of their historic setting with much of the moat and wider rural agricultural landscape remaining which make a considerable contribution to the setting of the assets. There is likely to be little intervisibility between this asset and the draft Order Limits due to established trees and hedges and the surrounding topography between the assets and the draft Order Limits. The setting of these assets is broadly confined to their immediate surrounding landscape and therefore the setting of these assets does not extend to the draft Order Limits.
- 3.6.145 The **high value** scheduled monument 'Moated site and two fishponds at Black Notley churchyard, 20 m east of St Peter's and St Paul's Church' (**1013763**) and the high value Grade II\* listed 'Church of St Peter and St Paul' (**1147111**) are of evidential, historical, and aesthetic value and located approximately 2.9 km north of the draft Order Limits, south of Church Road. The medieval moated site is well preserved and is currently situated under pasture which has not been ploughed or excavated. This moated site is unusually small for the area and its proximity to the medieval church and nearby hall are particularly significant. The site was likely part of the adjacent Black Notley Hall estate 100 m to the south-west which retains a likely contemporary 15th century barn. The church (**1147111**) is not included in the scheduling and dates to the 12th century with 14th, 15th, 16th, 19th, and 20th century rebuilds and alterations.

- 3.6.146 The setting of these assets is informed by their purpose as a medieval to post-medieval ecclesiastical and adjacent high-status manorial estate complex associated with Black Notley Hall estate. The original setting of the manor would have been as a high status defended building surrounded by a moat and designed to have intervisibility with its wider surrounding rural agricultural landscape and adjacent church. The manor site is no longer extant within the landscape so has therefore lost much of its above-ground historic setting although much of wider rural agricultural landscape and the church remain which do make a considerable contribution to the setting of the asset. The church was originally designed to be viewable from the surrounding landscape and its setting is inherently related to Black Notley Hall estate with which it still retains a functional and historical connection. The church remains a focal point within the area and shares its setting with nearby contemporary buildings such as the contemporary barn. There is likely to be no intervisibility between this asset and the draft Order Limits due to established trees and hedges, surrounding buildings, and the surrounding topography. The setting of these assets does not extend to within the draft Order Limits.
- 3.6.147 The **high value** Grade II\* listed 'Newneys Farmhouse' (**1123450**) and its associated **medium value** Grade II listed 'Barn Approximately 10 m South-East of Newneys Farmhouse' (**1337819**) are of evidential, historical, and aesthetic value. The assets are located c. 20 m east of the draft Order Limits, and east of Fairstead Lodge Road respectively. The timber framed and weatherboarded house dates to the 15th and 17th centuries, with 20th century alterations, and may have originated as a 15th century hall house. The upper room has been sealed off and disused from an early date soon after the construction of the main house. This room in particular preserves valuable evidence of medieval interior finishes. The timber-framed and weatherboarded barn dates to the late 17th century. The roof of the barn was thatched until c.1962. The barn is listed for its group value.
- 3.6.148 The setting of these assets is informed by its purpose as a medieval to post-medieval roadside farmstead within a rural agricultural landscape. The asset broadly remains within its original setting and the asset retains a historical relationship with this. The existing farmstead building, barn and surrounding landscape are still present and considerably contribute to the value of the asset. There would be intervisibility between the house and barn and the draft Order Limits. The setting of these assets extends to the draft Order Limits.
- 3.6.149 The **medium value** Grade II listed moated manor site of 'Dines Hall' (**1123448**) is of evidential, historical, and aesthetic value. The hall is located approximately 40 m west of the draft Order Limits, and south of Ranks Green Road. The timber framed hall dates to the medieval period or the 16th century, later altered in the 17th, 18th, and 20th centuries. A possible rectilinear enclosure and field boundaries (**5103**) which have the potential to date to the medieval period have been identified within land surrounding Dines Hall which may itself be medieval or early post-medieval (16th century) in date. The land is located south of Ranks Green Road and the southern extents of this land lie within the draft Order Limits. A moat (**5044**) surrounds Dines Hall, with the moat island formerly divided by a cross-arm (RCHME, 1921). These assets are of evidential and historical value and of **medium value**, with the rectilinear enclosure and field boundaries (**5103**) **low value**.
- 3.6.150 The setting of Dines Hall and its moat are informed by its purpose as a medieval to post-medieval moated manor complex. The original setting of this asset would have been as a high status defended building surrounded by a moat, designed to have intervisibility with its wider surrounding rural agricultural landscape. This asset broadly retains elements of its historic setting however the status of the moat and its

condition is currently unknown. The wider rural agricultural landscape remains which make a moderate contribution to the setting of the asset. There is intervisibility between this asset and the draft Order Limits, with the setting of the asset extending to the draft Order Limits.

- 3.6.151 The **medium value** Grade II listed 'Oak Farnhouse [sic]' (**1123422**) is of evidential, historical, and aesthetic value. The asset is located approximately 30 m east of the draft Order Limits, and immediately north of Church Hill (road). The two-storey timber framed building dates to the 16th century.
- 3.6.152 The setting of this asset is informed by its purpose as a post-medieval roadside farmstead within a rural agricultural landscape. The asset broadly remains within its original setting and the asset retains a historical and potentially functional relationship with this. The existing farmstead building, farm buildings to the north and the surrounding landscape moderately contribute to the value of the asset. There would be intervisibility between the house and the draft Order Limits. The setting of the asset extends to the draft Order Limits, however intervisibility would be partially restricted by immediate surrounding buildings and trees.
- 3.6.153 The medium value Grade II listed 'Westocks [sic] Farmhouse' (**1168106**), 'Farm Outbuilding Approximately 10 m East of Westcocks Farmhouse' (**1122745**) and Granary Approximately 20 m South of Westcocks Farmhouse' (**1168121**) are of evidential, historical, and aesthetic value and located c. 220 m north of the draft Order Limits and east of Fairstead Road. The single-storey timber framed farmhouse (**1168106**) dates to the 16th century or earlier, with later additions and alterations. The outbuilding (**1122745**) comprises a timber framed and weatherboarded 16th to 17th century outbuilding and bull pens. The timber framed and weatherboarded granary (**1168121**) dates to the 18th century but has been constructed using much older timbers. These post medieval asset are recorded here due to their association with the late medieval farmhouse.
- 3.6.154 The setting of these assets is informed by their purpose as a late medieval and post-medieval farmstead complex. The setting of this asset is informed by its purpose as a medieval to post-medieval period farmstead within a rural agricultural landscape. The asset broadly remains within its original setting and the asset retains a historical and possibly still functional relationship with this. The existing farmstead complex and surrounding landscape are still present and moderately contribute to the value of the asset. There is likely to be intervisibility between the house and the draft Order Limits although the surrounding treelines and hedgerows and associated buildings act to restrict intervisibility between the asset and the draft Order Limits. The setting of these assets extends to within the draft Order Limits.
- 3.6.155 A small group of three **medium value** Grade II listed buildings comprising Great Warley Hall and two barns are of evidential, historical, and aesthetic value. The assets are located approximately 340 m north of the draft Order Limits and north-west of the junction between Fairstead Road and Ranks Green Road. The timber framed 'Great Warley Hall' (**1123449**) was a pair of Unit System houses, which have since been joined, dating to the 16th century with 20th century alterations. The timber framed and weatherboarded 'Barn Approximately 40 m West-South-West of Great Warley Hall' (**1248834**) dates to the 17th century with early 18th century additions. The timber framed and weatherboarded 'Barn Approximately 40 m South-West of Great Warley Hall' (**1337818**) dates to the 15th century, with 17th and 20th century alterations.
- 3.6.156 The setting of these assets is informed by their purpose as a medieval to post-medieval manorial estate designed to have intervisibility with its wider surrounding

rural agricultural landscape. This asset broadly retains elements of its historic setting with the potential presence of a former moat corner located to the south-east of the asset. The status or existence of the moat and its condition is currently unknown. The wider rural agricultural landscape remains which make a moderate contribution to the setting of the asset. There is intervisibility between this asset and the Project, with the setting of the asset extending to the draft Order Limits. The intervisibility between the asset and draft Order Limits is likely to be partially restricted by established surrounding trees and hedges.

- 3.6.157 The **medium value** Grade II listed 'Beauchamps' (**1123454**) is of historical and aesthetic value. The dwelling is located approximately 320 m south of the draft Order Limits and west of Fairstead Road. The two-storey timber framed dwelling dates to the early 16th century, altered in late 16th century and 20th century. An 'imperfect' moat (**5049**) is also located approximately 290 m south of the draft Order Limits. The land is likely associated with the family of Stephen 'de Beauchamp'.
- 3.6.158 The setting of this asset is informed by its purpose as a medieval to post-medieval defended moated manorial estate within a rural agricultural landscape. This asset was designed to have intervisibility with its wider surrounding rural agricultural landscape. This asset broadly retains elements of its historic setting although it is currently unknown whether the moat is still extant within the landscape or its current condition. The wider rural agricultural landscape remains which make a moderate contribution to the setting of the asset. There is intervisibility between this asset and the Project, with the setting of the asset extending to the draft Order Limits. The intervisibility between the asset and draft Order Limits is likely to be partially restricted by established surrounding trees and hedges and undulating topography.
- 3.6.159 The **high value** Grade II\* listed moated manor site of 'Troys Hall' (**1123457**) is of historical, evidential, and aesthetic value. The building is located approximately 400 m south of the draft Order Limits and north of Troys Close. The two-storey timber framed Troys Hall was constructed c.1400 AD with 16th, 18th, 19th, and 20th century alterations.
- 3.6.160 The setting of this asset is informed by its purpose as a medieval to post-medieval defended moated manorial estate within a rural agricultural landscape. This asset was designed to have intervisibility with its wider surrounding rural agricultural landscape. This asset broadly retains elements of its historic setting although it is currently unknown whether the moat is still extant within the landscape or its current condition. The wider rural agricultural landscape remains which make a moderate contribution to the setting of the asset. There is intervisibility between this asset and the draft Order Limits, and so the setting of the asset extends to the draft Order Limits. The intervisibility between the asset and draft Order Limits is likely to be partially restricted by established surrounding trees and hedges.
- 3.6.161 The **high value** Grade I listed 'Parish Church of St. Mary the Virgin and St. Peter' (**1337780**) is of evidential, historical, and aesthetic value. The church is located approximately 495 m south-west of the Order, and south of Fairstead Hall Road. The flint and pebble rubble parish church dates to the late 11th century with a 13th century extension and was restored in the 19th century. The building also contains Romano-British fabric within its construction (**5176**) as reported above.
- 3.6.162 The setting of this asset is informed by its purpose as a medieval to post-medieval ecclesiastical complex originally designed to be viewable from the surrounding landscape and is associated with the settlement of Fairstead. The church still retains a functional and historical connection with its surrounding landscape. The church remains a focal point within the area and shares its setting with nearby buildings.

There is likely to be clear intervisibility between this asset and the Project. The setting of the asset does not extend into the draft Order Limits.

- 3.6.163 A group of five assets comprising the **high value** Grade II\* listed White Notley Hall and four **medium value** Grade II listed buildings (a stable, cartlodge and two barns) are of evidential, historical, and aesthetic value and are located within White Notley conservation area (**CA2**). Collectively these assets hold group value. The assets are located between 640 and 730 m west of the draft Order Limits, and west of The Street (road). The two-storey timber framed 'White Notley Hall' (**1122738**) dates to c.1530 or earlier, with 16th, 17th and 20th century additions and alterations. The single-story red brick 'Stable Range To Rear (East) of Barns White Notley Hall' (**1122741**) is located approximately 60 m north of the hall and dates to the 19th century. The two-storey timber framed 'Cartlodge Attached to South West Angle of White Notley Hall' (**1122739**) is attached to the south-west angle of the hall and dates to the 16th century with later repairs. The timber framed and weatherboarded 'Barn Approximately 30 Metres West of White Notley Hall' (**1122740**) dates to the 16th century with a later roof and is noted by the NHLE as good of its type. The timber framed and weatherboarded 'Barn Approximately 6 Metres North East of Barn QV White Notley Hall' (**1147910**) approximately 65 m north-west of the hall also dates to the 16th century. The post medieval asset in this complex is reported here due to their association with the medieval White Notley Hall.
- 3.6.164 The setting of these assets is informed by their purpose as a late medieval to post-medieval manorial complex within White Notley conservation area (**CA2**) within a semi-urban and wider semi-rural agricultural landscape. This asset was designed to have intervisibility with its wider surrounding landscape as a high-status dwelling. This asset broadly retains its historic setting within the conservation area which makes a considerable contribution to the setting of the asset. There is likely to be no intervisibility between this asset and the draft Order Limits due to screening by established surrounding trees and hedges, buildings, and topography. The setting of these assets does not, therefore, extend to the draft Order Limits.
- 3.6.165 The **medium value** Grade II listed 'Vicarage, Church Hill' (**1122742**) is of evidential, historical, and aesthetic value. The asset is located approximately 560 m south-east of the draft Order Limits, and within White Notley conservation area (**CA2**) and is associated with the **high value** Grade I listed Church of St. Etheldreda (**1147914**). The two-storey timber framed vicarage dates to the 16th century with 18th and 19th century alterations. The church dates to the 11th century with later 12th to 19th century alterations and restorations.
- 3.6.166 The setting of this asset is informed by its purpose as a medieval to post-medieval ecclesiastical dwelling associated with the Church of St. Etheldreda and located within White Notley conservation area (**CA2**) within a semi-urban and wider semi-rural agricultural landscape. This asset was designed to be an ecclesiastical dwelling associated with the church to the north. The asset broadly retains its historic setting with the church which makes a considerable contribution to the setting of the asset. There is likely to be no intervisibility between the asset and the draft Order Limits due to screening by established surrounding trees, hedges, and buildings. The setting of the asset does not, therefore, extend to the draft Order Limits.
- 3.6.167 The **medium value** Grade II listed 'Tudor Cottage' (**1123459**) is of evidential, historical, and aesthetic value. The cottage is located approximately 650 m north of the draft Order Limits, and north of Ranks Green Road. The single storey timber framed cottage was built between the 14th and 15th centuries, with later 16th, 17th, and 18th century alterations.

- 3.6.168 The setting of this asset is informed by its presence as medieval to post-medieval semi-rural road-side cottage within Ranks Green and is within a semi-urban and semi-rural agricultural landscape. The asset broadly remains within its original setting and the asset retains a historical relationship with this. The existing buildings within Ranks Green as well as the surrounding landscape moderately contribute to the value of the asset but are broadly confined to their immediate vicinity. There would be intervisibility between the asset and the draft Order Limits however this would be restricted by established trees and hedges as well as nearby buildings. The setting of the asset does not extend to the draft Order Limits,
- 3.6.169 The **high value** Grade I listed 'Parish Church of St. Germanus' (**1337803**) is of evidential, historical, and aesthetic value. The asset is located approximately 630 m south-east of the draft Order Limits, and east of Church Hill (road). The parish church dates to the late 12th century with late 13th century alterations and a 19th restoration.
- 3.6.170 The setting of this asset is informed by its purpose as a medieval to post-medieval ecclesiastical complex originally designed to be viewable from the surrounding landscape south of Faulkbourne. The church still retains a functional and historical connection with its surrounding rural agricultural landscape. The church remains a focal point within the area but is broadly confined to its immediate surrounding vicinity. Any intervisibility between the asset and draft Order Limits is likely to be restricted by intervening established treelines and hedgerows to the north. The setting of the asset does not extend to the draft Order Limits.
- 3.6.171 The **high value** Grade I listed 'Faulkbourne Hall' (**1337782**) is of evidential, historical, and aesthetic value. The asset is located approximately 890 m south-east of the draft Order Limits, and 260 m north-east of Church Hill (road). The two-storey red-brick mansion dates to the was built c.1439 for Sir John Montgomery, incorporating part of an earlier timber-framed house, with 17th and 19th century alterations and extensions.
- 3.6.172 The surrounding **medium value** Grade II listed registered park and garden (RPG) of 'Faulkbourne Hall' (**1000341**) is also of evidential, historical, and aesthetic value and located approximately 870 m south of the draft Order Limits, covering approximately 55ha and includes the Grade I listed 'Parish Church of St. Germanus' (**1337803**) within its bounds. The River Brain also travels north-west/ south-east through the core of the parkland. The current gardens date to the late 19th century and overlay an earlier 16th century garden. The 16th century gardens also overlay a deserted medieval village (DMV). The gardens are surrounded by a mid-18th century park, later extended during the late 19th century. Faulkbourne Hall designed landscape (**5017**) is also noted by the HER and occupies the northern half of the Registered Park and Garden dating to the 15th century. The designed landscape (**5017**) lies approximately 370 m south of the draft Order Limits. Approximately 4ha of the late 19th century gardens are located on the site of older gardens which likely date to the medieval period. Faulkbourne DMV (**5018**) is also located within the designed landscape area. The remains of an avenue of trees approaching the Hall (**1337782**) from the north-west passes close to the church (**1337803**) on the west showing a former drive. The village was likely abandoned when two lakes were constructed in the valley to the West of the Hall and south of the church. The only positively identified features associated with the DMV are an area of surface quarrying 50 m south-east of the church and random locations where tree roots have been removed. No house sites or garden plots can be observed; however, some linear features have been observed as cropmarks on aerial imagery (**5018**). The designed landscape and

DMV location are of evidential and historical value and of **medium** and **high value** respectively.

- 3.6.173 The setting of the listed assets is informed by their purpose as a medieval to post-medieval manorial estate within a formal designed landscape and within a wider rural agricultural landscape to the south-east of Faulkbourne itself. Collectively the assets were designed to be collectively connected through the creation of a formally designed landscape as well as maintain its link with a wider surrounding agricultural landscape as a high-status dwelling within the confines of its own boundary. These assets broadly retain this historic setting, and in the case of the church, its functional setting which collectively makes a very considerable contribution to the setting of the assets. There is little to no setting impact concerning the DMV with the only surviving element of its original historic setting being that of the rural agricultural landscape within the wider area with which the DMV would have shared a connection with. There is likely to be little intervisibility between this asset and the draft Order Limits, predominantly prevented by established surrounding trees and hedges and topography. The setting of these assets does not extend to the draft Order Limits.
- 3.6.174 The **high value** Grade II\* listed 'Troys Farm' (**1123462**) is of evidential, historical, and aesthetic value. The two-storey timber framed farm is located approximately 990 m south of the draft Order Limits, south of Troys Lane. The two-storey timber framed building is now a house, but its original purpose is unknown, dating to the late 14th to early 15th century with late 16th and early 19th century alterations. The NHLE indicates that unusual form of the building being *'high but of relatively small span, very strongly constructed and possibly with a cambered first floor'* suggests the building may have originally been a hunt standing or for another purpose.
- 3.6.175 The setting of this asset is informed by its original purpose as a potential medieval hunt standing occupying high ground, and later as a post-medieval rural dwelling within a rural agricultural landscape. This asset was originally designed to have intervisibility with its wider surrounding landscape for the purpose of hunting. This asset broadly retains elements of its historic setting however the surrounding landscape would likely have been that of woodland which only seems to partially survive approximately 120 m north-east of the asset. The current setting of the asset matches that of the rural agricultural landscape within which the building which was likely extant by the time the structure was converted into a dwelling which makes a moderate contribution to the setting of the asset. There is likely to be intervisibility between this asset and the draft Order Limits however this would likely be restricted by established tree lines and hedgerows between the asset and the draft Order Limits to the north and north-east. The setting of the asset does not extend to the draft Order Limits.
- 3.6.176 The **medium value** Grade II listed 'Batemans Farmhouse' (**1147209**) is of evidential, historical, and aesthetic value. The asset is located approximately 1.1 km north of the draft Order Limits, east of Mill Lane. The two-storey timber framed house dates to c.1500 with 20th century alterations.
- 3.6.177 The setting of this asset is informed by its purpose as a medieval to post-medieval farmstead within a rural agricultural landscape. The asset broadly remains within its original setting and the asset retains a historical and possibly still functional relationship with this. The existing farmstead and surrounding landscape are still present and moderately contribute to the value of the asset. There is likely to be no intervisibility between the building and the draft Order Limits due to the topography as well as established treelines and hedgerows and surrounding buildings to the south. The setting of the asset does not extend to the draft Order Limits.

- 3.6.178 The **medium value** Grade II listed building 'Oak Lodge' (**1147277**) is of evidential, historical, and aesthetic value. This asset is located approximately 1.5 km south of the draft Order Limits, east of Braintree Road. The single-storey timber framed building also has attics and dates to the late 16th century, with 17th and 20th century alterations.
- 3.6.179 The setting of this asset is informed by its purpose as post-medieval road-side dwelling within a rural agricultural landscape. The asset broadly remains within its original setting and the asset retains a historical relationship with this. The lodge forms the south-easternmost of a group of three buildings to the north of Braintree Road, with Wasses Farmhouse (**1147288**) to the south-west. The surrounding group of dwellings, Wasses Farmhouse and rural agricultural landscape moderately contribute to the value of the asset; however, the setting of this asset is broadly confined to its immediate surrounding area. There would be intervisibility between the asset and the draft Order Limits, however this would be partially restricted by established trees and hedges, buildings north of the asset and undulating topography. The setting of the asset does not extend to the draft Order Limits.
- 3.6.180 The **medium value** Grade II listed building of 'Three Ashes Farmhouse' (**1123408**) is of evidential, historical, and aesthetic value. The asset is located approximately 1.1 km south of the draft Order Limits and immediately north of the junction between Braintree Road and Fairstead Hall Road. The timber framed single and two storey farmhouse dates to the 17th century, with 20th century alterations and is now divided into two cottages.
- 3.6.181 The setting of this asset is informed by its purpose as a medieval to post-medieval farmstead within a rural agricultural landscape. The asset broadly remains within its original setting and the asset retains a functional and historical relationship with this. The existing farmstead, surrounding farm buildings to the north and north-east of the asset and the surrounding landscape moderately contribute to the value of the asset. There is likely to be no intervisibility between the building and the draft Order Limits due to undulating topography as well as established treelines and hedgerows and the immediate nearby farm buildings. The setting of the asset does not extend to the draft Order Limits.
- 3.6.182 The **medium value** Grade II listed 'Ridley Hall' (**1337837**) is of evidential, historical, and aesthetic value. The asset is located approximately 1.2 km south-east of the Order, and north of the River Ter. The two-storey timber framed house dates to c.1400 with 18th and 20th century alterations. In the 19th century the building became a large tenement and was altered to its present form c.1960.
- 3.6.183 The setting of this asset is informed by its purpose as a medieval to post-medieval manorial estate hall to the north-west of Terling within a rural agricultural and wooded landscape. This asset was designed to have intervisibility with its wider surrounding landscape. This asset broadly retains elements of its historic setting and appears to maintain its relationship with this. The wider rural agricultural and wooded landscape remains which make a moderate contribution to the setting of the asset. There is likely to be no intervisibility between the asset and the development within the draft Order Limits due to the surrounding established trees and hedges as well as undulating topography between the asset and the draft Order Limits. The setting of the asset, therefore, does not extend to the draft Order Limits.
- 3.6.184 Two **medium value** Grade II listed buildings associated with Pennett's Farmhouse are of evidential, historical, and aesthetic value. The assets are located approximately 1.3 km north-east of the draft Order Limits, and immediately east of Witham Road. The two-storey timber-framed 'Pennett's Farmhouse' (**1168226**) dates

to the late 14th to early 16th century origin with 17th century and later additions and alterations. The building was converted into a bake and brewhouse in the 18th to 19th century, with a large red brick bake/brew chimney on the north wall. The associated timber framed and weatherboarded 'Granary Approximately 8 Metres East of Pennet's Farmhouse qv' (**1122752**) dates to the 18th century.

- 3.6.185 The setting of these assets is informed by their purpose as a medieval to post-medieval farmstead, and later bakery and brewery complex within a rural agricultural landscape. The asset broadly remains within its original setting and the asset retains a functional and historical relationship with this as an active farmstead complex. The existing farmstead, surrounding farm buildings to the south-east, south and south-west of the assets and the surrounding landscape moderately contribute to the value of the assets. There is likely to be no intervisibility between the building and the draft Order Limits due to undulating topography, established treelines and hedgerows and the immediate nearby farm buildings. The setting of the assets does not extend to the draft Order Limits.
- 3.6.186 The **high value** Grade I listed 'Church of St. Nicolas' (**1338236**) is of evidential, historical, and aesthetic value. This asset is located approximately 1.5 km south-east of the draft Order Limits, west of Church Street, and is located within Witham Town Centre conservation area (**CA5**). The parish church dates to c.1330, with 14th, 15th and 16th century additions and a restoration in 1849 to 1850. The building fabric retains some Romano-British brick fabric. The irregular plan of the late medieval church suggests it was constructed around a large earlier period core. The rebuilding of the church in the 14th and 15th century reflects the prosperity of the town as a centre of cloth production and as a market town during this period.
- 3.6.187 The setting of this asset is informed by its purpose as a medieval to post-medieval ecclesiastical complex within Witham Town Centre conservation area (**CA5**) within an urban landscape and originally designed to be viewable from the surrounding landscape. The church still retains a functional and historical connection with its surrounding landscape and remains a focal point within the area. The setting of the asset does not extend to within the draft Order Limits with any potential intervisibility between the asset and draft Order Limits prevented by surrounding buildings.
- 3.6.188 Three **medium value** Grade II listed buildings associated with Wasses Farmhouse are of evidential, historical, and aesthetic value and located approximately 1.5 km south of the draft Order Limits, west of Braintree Road. The two-storey timber framed 'Wasses Farmhouse' (**1147288**) dates to the early to mid-16th century, with early 17th and 20th century alterations. The timber framed and weatherboarded 'barn approximately 15 m north-north-east of Wasses Farmhouse' (**1123409**) dates to the late 17th century. The timber framed and weatherboarded 'byre approximately 25 m east of Wasses Farmhouse' (**1147294**) dates between the late 17th century and early 18th century. The NHLE indicates that the byre was listed for its group value.
- 3.6.189 The setting of these assets is informed by their purpose as a medieval to post-medieval farmstead complex within a rural agricultural landscape. The asset broadly remains within its original setting and the asset retains a historical and functional relationship with this. Several road-side dwellings are also located to the north-east of the farmhouse complex. The surrounding landscape and buildings moderately contribute to the value of the asset; however, the setting of these assets is broadly confined to their immediate surrounding area. There would be intervisibility between the asset and the draft Order Limits, partially restricted by established trees and hedges, buildings north of the asset and undulating topography. The setting of the assets does not extend to the draft Order Limits.

- 3.6.190 The **high value** Grade I listed 'Stanton's Farmhouse' (**1122817**) is of evidential, historical, and aesthetic value. The asset is located approximately 2 km north of the draft Order Limits and 120 m west of Witham Road. The timber framed two-storey dates to c.1300 with 15th, 17th, 19th and 20th century alterations and additions and was possibly built for Thomas de Stanton.
- 3.6.191 The setting of this asset is informed by its presence as a medieval to post-medieval farmstead complex within a rural agricultural landscape. The original setting of the asset retains a historical and functional relationship with this. The farmhouse and associated buildings, as well as the surrounding landscape moderately contribute to the value of the asset. There would be no intervisibility between the asset and the draft Order Limits. The setting of the asset does not extend to within the draft Order Limits, restricted by established tree lines and hedgerows, undulating topography, and surrounding associated buildings.
- 3.6.192 The **high value** Grade II\* listed 'Owls Hill House' (**1337824**) is of evidential, historical, and aesthetic value. The asset is located approximately 2.1 km south of the draft Order Limits, south of Garnets Mead (also known as Owls Hill), and within Terling conservation area (**CA4**). The two-storey timber framed house dates to the late 14th century, altered in the late 16th, 19th, and 20th centuries. This house is noted as retaining several early features with the service doorway being of 'unusual interest'.
- 3.6.193 The setting of this asset is informed by its purpose as a medieval to post-medieval roadside dwelling within Terling conservation area (**CA4**). The setting of this asset is informed by its purpose as a medieval to post-medieval road-side dwelling within the semi-urban and semi-rural landscape of the fringes of Terling. The asset broadly remains within its original setting and the asset retains a historical relationship with this. The surrounding landscape moderately contributes to the value of the asset. There would be no intervisibility between the asset and the draft Order Limits. The setting of the asset does not extend to within the draft Order Limits, with intervisibility prevented by surrounding established hedgerows and surrounding road-side dwellings.
- 3.6.194 The **high value** Grade II\* listed 'Parish Church of All Saints' (**1123411**) is of evidential, historical, and aesthetic value and located within Terling conservation area (**CA4**). The church is located approximately 2.6 km south of the draft Order Limits, south of Church Road. The church dates between the 13th to 15th centuries, with an early 18th century tower and restored in the 19th century.
- 3.6.195 The setting of this asset is informed by its presence as medieval to post-medieval ecclesiastical building within a conservation area and an urban landscape. The church was originally designed to be viewable from the surrounding landscape. The church still retains a functional and historical connection with its surrounding landscape and remains a focal point within the area. The setting of the asset does not extend to within the draft Order Limits with any potential intervisibility between the asset and draft Order Limits prevented by surrounding buildings between the asset and draft Order Limits to the north.
- 3.6.196 The **high value** Grade II\* listed two-storey timber framed 'Card's house' (**1122806**) is of evidential, historical, and aesthetic value. The asset is located approximately 2.9 km north of the draft Order Limits and south of Bakers Lane. The building dates between the late 15th and early 16th century, with 20th century alterations.
- 3.6.197 The setting of this asset is informed by its presence as a medieval to post-medieval semi-rural road-side dwelling on the southern fringes of Row Green within a semi-

urban roadside and semi-rural agricultural landscape. The asset broadly remains within its original setting and the asset retains a historical relationship with this. The surrounding rural agricultural landscape and nearby roadside buildings moderately contribute to the value of the asset. There would be no intervisibility between the asset and the draft Order Limits. The setting of the asset does not extend to within the draft Order Limits, prevented by surrounding established tree lines and hedgerows, undulating topography, and surrounding buildings.

#### *Non-Designated Heritage Assets*

- 3.6.198 An archaeological excavation and watching brief (**5196**) were undertaken in 2009 associated with an Anglian Water pipeline running from Cressing to Terling which uncovered evidence of multiple periods. The pipeline crosses the draft Order Limits approximately 130 m north-west of Pink Lane within Fields 13 and 14 of the site. A highly disturbed medieval structure was identified within Field 13 (NAU 2009). This asset is of evidential and historical value and of **low value**.
- 3.6.199 Two areas of dark soil indicating the location of two possible medieval brick kilns with findspots of 14th to 15th century brick fragments and burnt clay (**5131**) are marked by the HER at Great Warren Field, approximately 45 m north-west and 100 m north-east of the draft Order Limits as well as 85 m, south-west of the B1018 and the boundary of Cressing Temple (**1002122**). This asset is of evidential and historical value and of **low value**.
- 3.6.200 The Grade I listed Church of St. Etheldreda (**1147914**) is likely to date to the 11th century with later alterations and contains early medieval material within its fabric (**5046**). It is located approximately 490 m north-west of the draft Order Limits at White Notley. A former arch in the north wall once had a round-headed window set in its blocking of Norman post-conquest or earlier date. The HER indicates the remnants of the early building date from the turn of the 11th century (**5047**) (Rodwell and Rodwell, 1977). Immediately north of this location, archaeological monitoring of footing excavations at the Grade II listed Garden House (**1307192**) identified a substantial north to south aligned medieval ditch (**5232**). The ditch contained both medieval pottery and residual Romano-British period tile, possible a leftover from the construction of the church. Evidence of medieval to post-medieval wall paintings are also recorded within the church itself (*ibid.*). The medieval material within the fabric of the church as well as the nearby ditch is of evidential and historical value and of **high value** due to their association and proximity with the church.
- 3.6.201 Multi-period activity (**5135**) has been identified during a large-scale archaeological evaluation for Feering and Kelvedon Flood Relief Scheme approximately 540 m north-west of the draft Order Limits and 400 m south-west of Coggeshall. The evaluation identified a concentration of medieval pits, ditches, gullies, and structural postholes in which may be associated with a 12th century settlement. The HER notes that a map from 1606 also indicates buildings nearby. Further ditches and pits also have the potential to represent a roadside settlement or croft, alongside Cuthedge Lane. Outlying ditches also suggest a surrounding associated field system.

## Post Medieval

### Houchins Farm to B1024

#### *Designated Heritage Assets*

- 3.6.202 The **medium value** Grade II listed 'Cockerell's Farmhouse and Bakehouse' (**1169484**) is of evidential, historical, and aesthetic value. The asset is located

approximately 35 m north-east of the draft Order Limits, and south of Skye Green (road). The two-storey timber framed and red-brick house dates to c.1700, and the bakehouse c.1800. The single-storey bakehouse is located to the north-west of the house, linked to the house by a wall with an arched gateway.

- 3.6.203 The setting of this asset is informed by its presence as post-medieval farmstead and bakehouse within a rural agricultural landscape. The asset broadly remains within its original setting and the asset retains a historical relationship with this, however the seems to be no remaining functional relationship with the assets use as a bakehouse. The existing farmstead and farm buildings to the east and the surrounding landscape moderately contribute to the value of the assets. There is likely to be intervisibility between the building and the draft Order Limits although this may be partially restricted by established treelines and hedgerows and the immediate nearby farm buildings. The setting of the asset extends within the draft Order Limits .
- 3.6.204 The **medium value** Grade II listed Coggeshall Hall Farmhouse and an associated barn are of evidential, historical, and aesthetic value. The assets are located approximately 20 m east of the draft Order Limits and 240 m east of the B1024. The two-storey mainly timber framed 'Coggeshall Hall Farmhouse' (**1306737**) was built c.1575, with 18th and early 19th century alterations. This building is on the parish boundary between Feering and Kelvedon. The timber framed and weatherboarded 'Barn 20 Metres North West of Coggeshall Hall Farmhouse' (**1123869**) dates to the early 16th century or earlier, with 20th century alterations.
- 3.6.205 The setting of these assets is shared and informed by their purpose as a post-medieval farmstead within a rural agricultural landscape. The asset broadly remains within its original setting and the asset retains a historical and functional relationship with this. The existing farmstead and farm buildings as well as the surrounding landscape moderately contribute to the value of the assets. There is likely to be intervisibility between the assets and the draft Order Limits although this may be partially restricted by established treelines and hedgerows and the immediate nearby farm buildings. The setting of these assets extends within the draft Order Limits.
- 3.6.206 The **high value** early post-medieval period (16th century) Grade II\* listed moated 'Houchin's Farmhouse' (**1123187**) is of evidential, historical, and aesthetic value. The asset is located approximately 100 m north-west the draft Order Limits and immediately east of Houchin's Lane. The current three-storey timber framed building was constructed c.1590 and altered in the 20th century, however the surrounding moat suggests at least a medieval origin for settlement at this location. An archaeological investigation has been undertaken at the farmhouse (**1123187**) that identified medieval period evidence within the moat island in the form of a substantial volume of medieval pottery which suggested human occupation has occurred at this location from at least the 13th century onwards, and possibly earlier (**5078**). The investigation also suggested that the location has three artificially raised areas which, when combined with the waterlogged nature of the location and the ditches and moat, all indicate that this area has always required some form of drainage system to make it habitable. The location of an aisled barn is also noted at the site and the investigation also identified much 19th to 20th century rubbish material. These non-designated assets are of evidential and historical value and of **medium value**.
- 3.6.207 Undated **low value** cropmarks of linear field boundaries (**5129**) of evidential and historical value can also be seen on the OS first edition mapping approximately 50 m north-west of the draft Order Limits and immediately west of Houchins Lane which may also date to the post-medieval period.

- 3.6.208 The setting of this asset is informed by its presence as a medieval to post-medieval defended moated manorial estate within a rural agricultural landscape. This asset was designed to have intervisibility with its wider surrounding rural agricultural landscape. This asset broadly retains elements of its functional and historic setting. The wider rural agricultural landscape remains which make a considerable contribution to the setting of the asset. There is likely to be clear intervisibility between this asset and the Project. The building largely remains within its original context despite its proximity to the A120 approximately 490 m to the south, with the setting of the asset extending to the draft Order Limits.
- 3.6.209 The **medium value** Grade II listed 'The Old Cottage' (**1123839**) is of evidential, historical, and aesthetic value. The asset is located approximately 10 m north-east of the draft Order Limits, and south of Skye Green (road). The timber framed cottage dates to the 17th century with a 20th century extension.
- 3.6.210 The setting of this asset is informed by its presence as a post-medieval rural dwelling within an agricultural landscape. The asset broadly remains within its original setting and the asset retains a historical relationship with this. The surrounding landscape and nearby similar roadside dwellings along Skye Green moderately contribute to the value of the asset. There is likely to be intervisibility between the assets and the draft Order Limits although this may be partially restricted by established trees and hedges surrounding the asset as well as a substantial farm building to the east of the asset. The setting of the asset extends within the draft Order Limits.
- 3.6.211 The **medium value** Grade II listed 'Hornigalls Farmhouse' (**1123837**) is of evidential historical and aesthetic value. The asset is located approximately 160 m south-east of the draft Order Limits and south of Elm Lane. The two-storey timber framed building was constructed in the 16th century, later altered in the 18th and 20th centuries.
- 3.6.212 The setting of this asset is informed by its purpose as a post-medieval farmstead within a rural agricultural landscape. The asset broadly remains within its original setting and the asset retains a historical relationship with this. The asset and former surrounding buildings now appear to be the location of a series of small businesses with the surrounding landscape moderately contributing to the value of the asset. There is likely to be intervisibility between the assets and the draft Order Limits although this may be restricted by established treelines and hedgerows to the north. The setting of the asset does not extend into the draft Order Limits.
- 3.6.213 The **medium value** Grade II listed 'Barn 50 m South West of Frame Farmhouse' (**1337603**) is located approximately 140 m south-east of the draft Order Limits, and west of Coggeshall Road and is of evidential, historical, and aesthetic value. The timber framed and weatherboarded barn dates to the late 16th century.
- 3.6.214 The setting of this asset is informed by its purpose as part of a post-medieval farmstead complex within a rural agricultural landscape. The asset broadly remains within its original setting and the asset retains a historical and functional relationship with this. The asset and former surrounding buildings now appear to be the location of a series of small businesses with the surrounding landscape moderately contributing to the value of the asset. There is likely to be clear intervisibility between the assets and the draft Order Limits although this may be restricted by slightly restricted by nearby surrounding buildings and established treelines and hedgerows. The setting of the asset extends to the draft Order Limits.
- 3.6.215 Three **medium value** Grade II listed buildings associated with Feering Place farmstead complex are of evidential, historical, and aesthetic value. The assets are

located 730 m south-east of the draft Order Limits, and west of Coggeshall Road. The two-storey timber framed 'Feering Place' (**1123831**) dates to the 17th century, later altered in the 19th century. The timber framed and weatherboarded 'Barn 50 Metres North North West of Feering Place' (**1350318**) dates to the mid to late 18th century and shares a group value with both Feering Place and the further 'Barn 60 m North West of Feering Place' (**1350319**). The latter barn is also timber framed and weatherboarded and dates to the late 18th to early 19th century.

- 3.6.216 The setting of these assets is informed by their purpose as a post-medieval road-side farmstead complex within a semi-rural agricultural landscape on the semi-urban fringes of Feering to the south-east. The assets broadly remain within their original setting and the assets retain a historical and functional relationship with this. The assets and surrounding buildings as well as the surrounding landscape moderately contributing to the value of the assets, however the setting of these assets is broadly confined to their immediate area. There is likely to be intervisibility between the assets and the draft Order Limits although this may be restricted by established treelines and hedgerows as well as surrounding buildings. The setting of these assets do not extend into the draft Order Limits.
- 3.6.217 The **medium value** Grade II listed 'Moorings' (**1337634**) is of evidential, historical, and aesthetic value. The asset is located approximately 260 m south-east of the draft Order Limits, and north of the B1024. The two-storey timber framed house dates to c.1700 with 18th century alterations. The house is marked as 'Mill Farm' on the 1875 and 1895 OS maps and may have been associated with buildings to the south-east near the River Blackwater although this is yet to be confirmed.
- 3.6.218 The setting of this asset is informed by its purpose as post-medieval road-side dwelling within a semi-rural agricultural landscape on the semi-urban fringes of Kelvedon to the south-east. The asset broadly remains within its original setting and the assets retain a historical relationship with this however any connection with a mill as suggested on the 1875 and 1895 OS maps has since been predominantly lost although it is still accessible by a roadway connecting it to former trade routes and is within a rural agricultural landscape which may have supplied raw materials. The asset and surrounding buildings as well as the surrounding landscape moderately contributing to the value of the asset, however the setting of this asset is broadly confined to its immediate area. There is likely to be intervisibility between the assets and the draft Order Limits although this may be restricted by established treelines and hedgerows as well as surrounding buildings. The setting of the asset does not extend within the draft Order Limits.
- 3.6.219 The **medium value** Grade II listed 'Rye Mill House' (**1337609**) is of evidential, historical, and aesthetic value. The asset is located approximately 480 m south-east of the draft Order Limits, and west of Rye Mill Lane. The two-storey timber framed house dates to the 17th century with a late 18th century extension.
- 3.6.220 The setting of this asset is informed by its purpose as a post-medieval rural dwelling within a rural agricultural landscape to the north of Feering. The asset broadly remains within its original setting and the assets retain a historical relationship with this however any connection with a mill at this location appears to have since been lost except for its proximity to the River Blackwater which would have likely powered a mill wheel at this location. The house is still accessible by a roadway connecting it to former trade routes and is within a rural agricultural landscape which may have supplied raw materials. The asset and surrounding buildings as well as the surrounding landscape moderately contributing to the value of the asset. There is likely to be no intervisibility between the asset and the draft Order Limits, prevented

by established treelines and hedgerows as well as surrounding buildings. The setting of the asset does not extend within the draft Order Limits.

- 3.6.221 The **medium value** Grade II listed 'Lee's Farmhouse' (**1123138**) is of evidential, historical, and aesthetic value. The asset is located approximately 610 m north-west of the draft Order Limits at the junction of the B1924 and the A120. The two-storey timber framed farmhouse dates to the late 16th century with 17th, 18th, and 20th century alterations.
- 3.6.222 The setting of this asset is informed by its presence as a post-medieval road-side farmstead within a rural agricultural landscape. The asset partially retains some of its original setting and the asset partially retains a historical relationship with this to the south of the asset. The presence of the east to west aligned A120 dual carriageway to the north of the asset has affected the historic relationship with its setting partially due to its high noise and traffic levels. The surrounding landscape moderately contributes to the value of the asset. There is likely to be intervisibility between the assets and the draft Order Limits although this may be restricted by the surrounding topography as well as established treelines and hedgerows. Due to its setting being restricted to its farmyard location and immediate agricultural landscape, it does not extend to the draft Order Limits.
- 3.6.223 The **medium value** Grade II listed 'Pointwell House' (**1337972**) is of evidential, historical, and aesthetic value. The asset is located approximately 690 m north-west of the draft Order Limits, north of Pointwell Lane on the fringe of Coggeshall Hamlet. The two-storey timber framed house dates to c.1700 with 19th and 20th century alterations. The house is also shown on a map of 1732.
- 3.6.224 The setting of this asset is informed by its presence as a post-medieval building, likely associated with a former water mill. The asset is within a semi-rural agricultural landscape within the eastern semi-urban fringes of Coggeshall Hamlet. The asset has lost much of its original setting however the only apparent surviving connection with its historical relationship with a mill at this location appears to be the assets proximity to the River Blackwater which would have likely powered a mill wheel at this location. The asset and surrounding buildings as well as the surrounding landscape moderately contributing to the value of the asset. There is likely to be no intervisibility between the asset and the draft Order Limits, prevented by established treelines and hedgerows. The setting of the asset does not extend to the draft Order Limits.
- 3.6.225 The **medium value** Grade II listed 'Pointwell Mill House' (**1170230**) is of evidential, historical, and aesthetic value. The asset is located approximately 700 m north-west of the draft Order Limits, north of Pointwell Lane on the fringe of Coggeshall Hamlet. The two-storey timber framed and weatherboarded house dates to c.1600, later extended c.1700 and in the 18th to early 19th century. The house is indicated on a map of 1732, adjacent to 'Poyntle Mill'. The building was associated with a non-listed watermill that ceased operations in 1902 and was converted into a dwelling in 1960.
- 3.6.226 The setting of this asset is informed by its presence as a post-medieval building, likely associated with a former water mill, like that of Pointwell House (**1337972**) described above. The asset is within a semi-rural agricultural landscape within the eastern semi-urban fringes of Coggeshall Hamlet. The asset has lost much of its original setting however the only apparent surviving connection with its historical relationship with a mill at this location appears to be the assets proximity to the River Blackwater which would have likely powered a mill wheel at this location. The house is still accessible by a roadway connecting it to former trade routes and is within a rural agricultural landscape which may have supplied raw materials. The asset and

surrounding buildings as well as the surrounding landscape moderately contributing to the value of the asset. There is likely to be no intervisibility between the asset and the draft Order Limits, prevented by established treelines and hedgerows. The setting of the asset does not extend to the draft Order Limits.

- 3.6.227 The **medium value** Grade II listed 'Barn 40 m North of Monks Downs Farmhouse' (**1123102**) is of evidential, historical, and aesthetic value. The asset is located approximately 970 m north-west of the draft Order Limits, south-east of Tey Road. The timber framed and weatherboarded barn dates between the late 18th and early 19th century, with the surrounding far buildings not included as part of the listing.
- 3.6.228 The setting of this asset is informed by its presence as a post-medieval road-side farmstead complex within a rural agricultural landscape. The asset broadly remains within its original setting and the asset retains a historical and functional relationship with this. The asset and surrounding buildings as well as the surrounding landscape moderately contribute to the value of the asset. There is likely to be no intervisibility between the asset and the draft Order Limits, prevented by established treelines and hedgerows, the surrounding topography, and surrounding buildings. The setting of the asset does not extend to the draft Order Limits.
- 3.6.229 The **high value** Grade I listed 'Abbey Mill' (**1168354**) is of historical and aesthetic value and located within Coggeshall conservation area (**CA3**). The asset is located approximately 1.1 km north of the draft Order Limits, and west of Witham Road. The two-storey timber framed watermill dates to the 17th to 18th century, altered in the 19th century. The NHLE indicates there is a history of fulling on this site however it is unknown whether this iteration of the mill was originally built for fulling. In 1820 it was opened as a silk-throwing mill for John Hall, and in 1839 the silk throwing facility was subsequently transferred to the Gravel Factory in West Street, Coggeshall. The mill was then converted for corn grinding and was adapted for steam in 1857. The mill remained in commercial use until 1960.
- 3.6.230 The setting of this asset is informed by its presence as a post-medieval mill located within Coggeshall conservation area (**CA3**) and immediately south-east of the Coggeshall Abbey estate scheduled monument (**1018865**) reported above. The asset predominantly lies within a rural agricultural landscape to the west of the River Blackwater and south-east of Coggeshall Abbey monument. The asset broadly remains within its original setting and the asset retains a historical relationship with this. The building is still accessible by a roadway connecting it to former trade routes and is within a wider rural agricultural landscape which may have supplied raw materials. The setting of the asset makes a considerable contribution to its value; however, the setting of this asset is broadly confined to its immediate area. There is likely to be intervisibility between the asset and the draft Order Limits, partially restricted by established treelines and hedgerows as well as nearby buildings. The setting of the asset does not extend to the draft Order Limits.
- 3.6.231 The **medium value** Grade II listed 'The Lodge' (**1169345**) is of evidential, historical, and aesthetic value. The asset is located approximately 2 km north-west of the draft Order Limits, south-west of the junction between Colne Road and Marks Hall Road. The two-storey timber framed house dates to the 19th century or earlier, with a 20th century extension. This building is a former lodge at the entrance to the former Mark Hall estate with the style of the windows like those of Mark Hall which was demolished c.1948.
- 3.6.232 The setting of this asset is informed by its presence as a part of a post-medieval rural road-side dwelling within a rural agricultural landscape to the north of Coggeshall and associated with former the former Mark Hall manorial estate. The asset broadly

remains within its original setting; however, it has lost its a historical relationship with the estate which has since been demolished. The asset and surrounding buildings as well as the surrounding landscape moderately contributing to the value of the asset. There is likely to be no intervisibility between the asset and the draft Order Limits, prevented by established treelines and hedgerows. The setting of the asset does not extend within the draft Order Limits.

- 3.6.233 The **medium value** Grade II listed 'Palmer's Farmhouse' (**1337924**) is of evidential, historical, and aesthetic value. The asset is located approximately 1.8 km north-west of the draft Order Limits, north of Purley Lane. The two-storey timber framed farmhouse dates to the 16th century, with 17th, 18th, and 20th century alterations. The 1841 tithe award indicates that the farm then comprised of 101 acres.
- 3.6.234 The setting of this asset is informed by its presence as a post-medieval road-side farmstead complex within a rural agricultural landscape. The asset broadly remains within its original setting and the asset retains a historical and functional relationship with this. The asset and surrounding buildings as well as the surrounding landscape moderately contribute to the value of the asset. There is likely to be no intervisibility between the asset and the draft Order Limits, prevented by the gradually rising topography between the asset between the asset and the draft Order Limits to the south, as well as established treelines and hedgerows and surrounding farm buildings. The setting of the asset does not extend within the draft Order Limits.

#### *Non-Designated Heritage Assets*

- 3.6.235 The site of Fulling Mill (**5142**) is located approximately 5 m south and 5 m west of the draft Order Limits, with the River Blackwater running north to south through the land parcel. The mill is noted as a water mill and can be seen on mapping from 1777. This asset is of evidential and historical value and of **low value**.
- 3.6.236 A 19th century milepost (**5002**) constructed by 'Firmin Builder' of Greenstead marks the distances between Colchester (8 miles), Coggeshall (2 miles), and Braintree (8 miles). The milestone is located north of the A120 and approximately 15 m east of the draft Order Limits. This asset is of evidential and historical value and of **low value**.
- 3.6.237 A 19th century boundary post (**5005**) is located approximately 270 m south-east of the draft Order Limits and west of Coggeshall Road near Kane Farm. A series of cropmarks (**5014**) have also been observed within land associated with Kane Farm, approximately 130 m south-west of the draft Order Limits at its closest point. The cropmarks include a sub-rectangular enclosure complex/ field boundaries which may date to the medieval or post-medieval periods. These assets are of evidential and historical value and of **low value**.
- 3.6.238 Undated cropmarks of linear field boundaries (**5128**) can be seen on the OS first edition mapping approximately 200 m west of the draft Order Limits and immediately north of the A120 which may date to this period. This asset is of evidential and historical value and of **low value**.
- 3.6.239 Pointwell Mill (**5141**) is a three-stone water mill approximately 390 m north of the draft Order Limits and 110 m north-east of the B1024. The mill dates to the 18th century, with a Grade II listed mill house (**1170230**) dating to the late 16th to 17th century, and 19th century stable and outbuildings. The mill itself became derelict in 1902 and was converted into a house in 1960.

## B1024 to B1018

### *Designated Heritage Assets*

- 3.6.240 The **medium value** Grade II listed 'Monk's Farm Cottages' (**1171147**) is of evidential, historical, and aesthetic value. The asset is located approximately 10 m north of the draft Order Limits, and at the western terminal end of Pantlings Lane. The house dates to the late 16th century with 17th to 20th century alterations. The two-storey timber framed house is currently split into three cottages.
- 3.6.241 The setting of this asset is informed by its purpose as a post-medieval farmstead complex within a rural agricultural landscape. The asset broadly remains within its original setting and the asset retains a historical and functional relationship with this. The asset and surrounding buildings as well as the surrounding landscape moderately contribute to the value of the asset. There is likely to be clear intervisibility between the asset and the draft Order Limits, likely partially restricted by surrounding established trees and hedges and nearby buildings. The setting of the asset extends within the draft Order Limits.
- 3.6.242 The **medium value** Grade II listed 'Hungry Hall Farmhouse' (**1123868**) is of evidential, historical, and aesthetic value. The asset is located 50 m north of the draft Order Limits, and east of the B1018. The two-storey timber framed farmhouse dates to the late 16th century with 17th, 18th, and 20th century extensions.
- 3.6.243 The setting of this asset is informed by its purpose as a post-medieval road-side farmstead complex within a rural agricultural landscape. The asset broadly remains within its original setting and the asset retains a historical and functional relationship with this. The asset and surrounding buildings as well as the surrounding landscape moderately contribute to the value of the asset. There is likely to be intervisibility between the asset and the draft Order Limits, partially restricted by surrounding established trees and hedges and nearby buildings. The setting of the asset extends within the draft Order Limits.
- 3.6.244 The **medium value** Grade II listed 'Pound Farmhouse' (**1123812**) is of evidential, historical, and aesthetic value. The asset is located approximately 80 m west of the draft Order Limits, and west of the B1024. The two-storey timber framed building dates to c.1590 with 17th, 18th and 20th century extensions and alterations. The building was extensively repaired and renovated between 1982 and 1986.
- 3.6.245 The setting of this asset is informed by its purpose as an early post-medieval farmstead complex within a rural agricultural landscape. The asset broadly remains within its original setting and the asset retains a historical and functional relationship with this. The asset and surrounding buildings as well as the surrounding landscape moderately contribute to the value of the asset. There is likely to be intervisibility between the asset and the draft Order Limits, partially restricted by surrounding established trees and hedges and nearby buildings. The setting of the asset extends within the draft Order Limits.
- 3.6.246 Two **medium value** Grade II listed cottages comprising 'Lingwoods Cottage' (**1123846**) and 'Lingwoods' (**1306290**) are of evidential, historical, and aesthetic value. The cottages are located approximately 85 m south-east of the draft Order Limits, and north of Hollow Road. The single-storey timber framed Lingwoods Cottage (**1123846**) also has attics and dates to the early 17th century with 19th century alterations. The two-storey timber framed Lingwoods (**1306290**) dates to the 16th and 17th century, altered in the 19th and 20th century.

- 3.6.247 The setting of these assets is informed by their presence as post-medieval road-side cottages within a semi-rural agricultural landscape. The assets broadly remain within their original setting and the assets retain a historical relationship with this. The assets and surrounding buildings as well as the surrounding landscape moderately contribute to the value of the asset, however the setting of these assets is broadly confined to their immediate area. There is likely to be intervisibility between the asset and the draft Order Limits, partially restricted by surrounding established trees and hedges and buildings to the north-west of the assets. The setting of these assets does not extend to the draft Order Limits.
- 3.6.248 Three **medium value** Grade II listed assets comprising Felix Hall, the clock house and the orangery are of evidential, historical, and aesthetic value. The assets are located between approximately 90 m south-west of the draft Order Limits, and west of an unnamed lane leading from Hollow Road approximately 845 m to the south-east. The two-storey red-brick 'Felix Hall' (**1123797**) dates to the 18th century and reduced in size in 1939. The building was severely damaged by a fire in 1940. The house was built c.1715 and enlarged c.1750. The wings were demolished in 1939. The red-brick 'The Clock House' (**1305802**) dates to the mid-18th century is the former service and stable range to Felix House and was converted into a house in the 20th century. The red brick 'The Orangery' (**1337627**) dates to c.1750 and was converted in the 20th century from being the service wing of the mansion. An attached wall connects this block with Felix Hall.
- 3.6.249 The setting of these assets is informed by its presence as a post-medieval manorial estate complex within a wider rural agricultural landscape. The original setting of the assets would have been as a high-status estate designed to have intervisibility with its wider surrounding rural agricultural landscape. The assets broadly retain elements of their historic setting which makes a considerable contribution to the setting of the assets; however, the setting of these assets is broadly confined to their boundaries. There is likely to be clear intervisibility between these assets and the draft Order Limits partially restricted by surrounding established trees and hedges and surrounding buildings between the assets and the draft Order Limits. The setting of the assets extends within the draft Order Limits.
- 3.6.250 The **medium value** Grade II listed 'Porter's Farmhouse' (**1171011**) is of evidential, historical, and aesthetic value. The asset is located approximately 10 m south-east of the draft Order Limits and south-west of Park Gate Road. The two-storey timber framed house dates to c.1600 with 18th and 20th century alterations on the location of a medieval moated site and later a farmstead. Sale catalogues of 1784 and 1913 record that the house was associated with a farm of 138 and 152 acres respectively. The farmhouse was part of the Felix Hall (**1123797**) manor estate.
- 3.6.251 The setting of this asset is informed by its purpose as a medieval to post-medieval moated site and later a post-medieval farmstead complex within a rural agricultural and wooded landscape. The asset broadly remains within its historical and functional setting as a farmstead complex and maintains a relationship with this. The asset no longer shares its setting its original moated manor setting. The surrounding landscape moderately contributes to the value of the asset. There is likely to be intervisibility between the asset and the draft Order Limits although this may be partially restricted by surrounding established trees and hedges. The setting of this asset extends within the draft Order Limits.
- 3.6.252 Two **medium value** Grade II listed buildings comprising Clark's Farmhouse and the associated granary are both of evidential, historical, and aesthetic value. The asset is located approximately 120 m south-east of the draft Order Limits, and north of

Cranes Lane. The two-storey timber framed 'Clark's Farmhouse' (**1306239**) dates to the early 17th century, later altered in the 18th to 20th century also includes an 18th century dairy wing. The single storey red brick 'Granary 23 Metres South West of Clark's Farmhouse' (**1123813**) dates between the 18th to early 19th century and is included for its group value.

- 3.6.253 The setting of these assets is informed by their presence as a post-medieval farmstead complex within a rural agricultural landscape. The asset broadly remains within its original setting and the asset retains a historical and functional relationship with this. The asset and surrounding buildings as well as the surrounding landscape moderately contribute to the value of the asset. There is likely to be intervisibility between the asset and the draft Order Limits, partially restricted by surrounding established partially restricted by surrounding established trees and hedges and nearby buildings. The setting of the asset does not extend to the draft Order Limits.
- 3.6.254 The **medium value** Grade II listed 'Rook Hall' (**1170991**) is of evidential, historical, and aesthetic value. The asset is located approximately 310 m south of the draft Order Limits, and 50 m north of Hollow Road. The two-storey timber framed building dates to c.1600 with extensions in the 17th, 18th, and 20th centuries.
- 3.6.255 The setting of this asset is informed by its purpose as an early post-medieval manor within a wider rural agricultural landscape. The original setting of this asset would have been as a high-status estate designed to have intervisibility with its wider surrounding rural agricultural landscape. This asset broadly retains elements of its historic setting which makes a moderate contribution to the setting of the asset. There is likely to be intervisibility between this asset and the draft Order Limits partially restricted by surrounding established trees and hedges between the asset and the draft Order Limits. The setting of the asset extends within the draft Order Limits.
- 3.6.256 The **medium value** Grade II listed 'Cotcroft Cottage' (**1123800**) is of evidential, historical, and aesthetic value. The cottage is located approximately 325 m north-west of draft Order Limits pipeline works, 1.1 km south-east of the draft Order Limits, and south of Hollow Road. The single-storey timber framed house with attics dates to the 17th century or earlier with 19th and 20th century alterations.
- 3.6.257 The setting of this asset is informed by its presence as post-medieval road-side cottage within a semi-urban and semi-agricultural landscape. The asset broadly remains within its original setting and the asset retains a historical relationship with this. The asset and surrounding buildings as well as the surrounding landscape moderately contribute to the value of the asset. There is likely to be intervisibility between the asset and the draft Order Limits, partially restricted by buildings to the south and east of the asset as well as established tree lines and hedgerows. The setting of the asset does not extend within the draft Order Limits.
- 3.6.258 The **high value** Grade II\* listed 'Rivenhall Place' (**1122598**) and the **medium value** Grade II listed 'Bridge to Rivenhall Place' (**1338253**) are of evidential, historical, and aesthetic value. The assets are located approximately 350 m and 230 m north-west of the draft Order Limits respectively. The house is accessed via a tree-lined avenue heading south-west from the junction of Western Road, Park Gate Road, and Park Road. The three-storey house dates between the 16th to 18th centuries and is located within its own grounds, with a stream enlarged into a lake and approached by brick bridge across the lake. The original red-brick eastern section of the house dates to the 16th century with the house considerably altered in the 18th century. The garden has a stone balustrade on the south side, with a flight of steps. The bridge was originally built in 1693 and was rebuilt in 1963.

- 3.6.259 The setting of these asset is informed by their presence as post-medieval manor within a managed landscape and wider rural agricultural landscape. The original setting of these assets would have been as a high-status estate designed to have intervisibility with its wider surrounding rural agricultural landscape. This asset broadly retains its historic setting which makes a considerable contribution to the setting of the assets. There is likely to be intervisibility between these assets and the draft Order Limits partially restricted by surrounding established trees and hedges between the assets and the draft Order Limits. The setting of these assets extends within the draft Order Limits.
- 3.6.260 The **medium value** Grade II listed 'Scrip's Cottage (at Rear of Scrip's House)' (**1169367**) is of evidential, historical, and aesthetic value. The asset is located approximately 440 m north-west of the draft Order Limits, 240 m south of Cuthedge Road. The two-storey timber framed and weatherboarded house dates to the 17th century, with a 20th century extension. A single-storey red-brick lean-to extension linking the 20th century extension with Scrip's House is not included in the listing.
- 3.6.261 The setting of this asset is characterised by its integral role within a post-medieval farmstead complex. It draws further influence from the encompassing agricultural landscape, reflecting a deep historical connection. Notably, the asset is distanced from a main road, enhancing the sense of serenity. Overall, the setting of this asset makes a considerable contribution to its value, but it does not extend to the draft Order Limits.
- 3.6.262 The **medium value** Grade II listed '1 and 2 Rivenhall Farm Cottages' (**1306464**) are of evidential, historical, and aesthetic value. The cottages are located approximately 425 m south of the draft Order Limits, east of Church Road. The single-storey timber framed and weatherboarded cottages also have attics and date between the 17th and 18th centuries.
- 3.6.263 The setting of these buildings is informed by their presence as post-medieval semi-rural road-side cottages. The setting is further informed by the surrounding agricultural landscape with which the assets have a historical relationship. Moreover, their location along the roadside, originally established when they were built, is now subject to potential traffic impacts. Only a low hedge and small front garden act as a buffer between the road and the cottages. Near, the 'Roman villa' SM (**1013831**), the Grade I 'Church of St Mary and All Saints' (**1169594**) and the 'Rivenhall Hall' (**1122613**) add historical and cultural context. Overall, the setting makes considerable contribution to the asset's value and does extend into the draft Order Limits.
- 3.6.264 A small group of four **medium value** Grade II listed buildings associated with Church Hall Farmhouse/ manor complex are of evidential, historical, and aesthetic value. The assets are located between approximately 580 m south-east of the draft Order Limits, and 130 m north-west of London Road. The two-storey timber framed 'Church Hall Farmhouse' (**1171035**) dates to the late 18th century with 19th and 20th century alterations. The timber framed and weatherboarded 'Barn 65 Metres North West of Church Hall Farmhouse' (**1171056**) dates between the 14th and 16th century. The timber framed and weatherboarded 'Ancillary Building 25 Metres West of Church Hall Farmhouse' (**1123801**) dates to the early 16th century. The NHLE indicates that the original purpose of this asset is unknown but was likely a stable due to its size and high build quality. A purpose-built stable was built for the Crown from the late 13th century, with the manor held by the Abbot of Westminster. The timber framed 'Granary/Cottage 40 Metres North of Church Hall Farmhouse' (**1337629**) dates to the early 16th century or earlier, later altered into a cottage in the early 19th century, and

then used as a poultry house and is currently unused. Granaries dating to this period recorded by the NHLE are rare, this being one of only four knowns in Essex.

- 3.6.265 The setting of these assets derives its character from their historical purpose as a medieval to post-medieval farmstead/manor and their interrelated presence. Situated to the south of Kelvedon, they are embedded within a predominantly agricultural landscape, with deep-rooted historical and functional connections. South of the assets, London Road runs, and approximately 200 m to the north lies the railway, both pre-existing features documented in the first edition OS map of 1881. The notable new infrastructure that could potentially affect their setting is the A12, located roughly 650 m to the south of these assets. However, the presence of vegetation and a residential line in the intervening landscape serves as a buffer, mitigating this effect. While Kelvedon has experienced growth since the first edition of the OS map in 1881, this expansion has not directly encroached upon the assets' immediate surroundings. In conclusion, the setting of these assets provides a moderate contribution to their overall value but does not extend to the draft Order Limits.
- 3.6.266 The **medium value** Grade II listed 'Rivenhall Hall' (**1122613**) is of evidential, historical, and aesthetic value. The asset is located approximately 700 m south-east of the draft Order Limits east of Church Road. The two-storey timber-framed building dates to the late 16th century with a later 17th century extension.
- 3.6.267 The setting of this asset is informed by its purpose as a post-medieval farmstead complex. The setting is further informed by the surrounding agricultural landscape with which the asset has a historical and functional relationship. Moreover, its location along the roadside, originally established when the school was built, is now subject to potential traffic impacts. However, the asset is thoughtfully set back from the road in a farmyard. Near, the 'Roman villa' SM (**1013831**), the Grade I 'Church of St. Mary and All Saints' (**1169594**) and the '1 and 2 Rivenhall Farm Cottages' (**1306464**) add historical and cultural context. Overall, the setting makes considerable contribution to the asset's value but does not extend to the draft Order Limits.
- 3.6.268 The **medium value** Grade II listed 'William and Mary Cottages' (**1123864**) are of evidential, historical, and aesthetic value. The assets are located approximately 600 m north-east of the draft Order Limits and east of the B1018. The single-storey timber framed and red-brick cottages were built in the late 18th century and is now one house with attics.
- 3.6.269 The setting assessment for William and Mary Cottages is predominantly influenced by their roadside location, originally established when the buildings were constructed, now potentially susceptible to traffic impacts. These cottages are separated from the road by a small front garden and a low redbrick wall. The surrounding landscape is characterized by agricultural fields, but the vistas in all directions from the assets are somewhat limited by tree lines and small woodlands. To the south, the presence of SM 'Cressing Temple' (**1002122**) with its listed buildings contributes to the historical context. Overall, the setting of these cottages provides a moderate contribution to their value. It does not extend to the draft Order Limits, and the presence of vegetation makes it unlikely that the Project would be visible from the asset.
- 3.6.270 Three **medium value** Grade II listed buildings associated with Leapingwell's Farmhouse farmstead complex are of evidential, historical, and aesthetic value. The assets are located approximately 650 m south-east of the draft Order Limits and are south-west of Hollow Road. The two-storey timber framed 'Leapingwell's Farmhouse' (**1305774**) dates to the 16th century, with 17th and 19th century alterations. The single-storey timber framed 'Cottage 5 m North West of Leapingwell's Farmhouse' (**1337628**) dates to c.1600 and was altered in the 19th century. The cottage was built

as part of a Unit System pair with the main house. The timber framed and weatherboarded 'Barn 15 Metres South West of Leapingwell's Farmhouse' (**1305775**) dates to the early 17th century.

- 3.6.271 The setting of these assets is informed by their purpose within a post medieval farmstead complex and by their historical relationship with each other and other buildings in the complex. It is also informed by the assets' location within a rural agricultural landscape which has historical significance and functional connections to them. These assets are surrounded by a few mature trees which contribute to a sense of isolation. In summary, the setting of these assets makes a considerable contribution to their value, but due to the setting being restricted to their farmyard location and the surrounding agricultural landscape, it does not extend to the draft Order Limits.
- 3.6.272 The **medium value** Grade II listed 'Rivenhall Church of England Primary School School House' (**1122612**) is of evidential, historical, and aesthetic value. The asset is located approximately 860 m south-east of the draft Order Limits, and east of Church Road. The single-storey stone building dates to the mid. 19th century. The School house adjoins the school on the south-east corner at a right angle to it.
- 3.6.273 The setting of the school house' is defined by several key elements. Its location along the roadside, originally established when the school was built, is now subject to potential traffic impacts. However, the asset is set back from the road with a parking area serving as a buffer. To the south, there are neighbouring residences, while the north, west, and east offer a rural expanse, characterised by agricultural fields that provide a sense of space and unobstructed views. In proximity, the 'Roman villa, Anglo-Saxon hall, cemetery and church site, around and to the north and east of St Mary and All Saints Church' scheduled monument (**1013831**) and the Grade I listed 'Church of St Mary and All Saints' (**1169594**) add historical and cultural context. In summary, the setting of the school house makes a moderate contribution to its value, with a blend of urban and rural elements, but it does not extend to the draft Order Limits.
- 3.6.274 Two **medium value** Grade II listed buildings associated with Allshot's Farmhouse, the farmhouse itself and its associated barn, are of evidential, historical, and aesthetic value. The assets are located approximately 910 m north-west of the draft Order Limits, and 330 m north-east of Woodhouse Lane. The timber framed 'Allshot's Farmhouse' (**1337612**) dates to c.1600 with a single-storey 20th century extension. The house can be seen as 'Holdshot's Farm' on the tithe map of 1841. The timber framed and weatherboarded 'barn approximately 45 m north-west of the farmhouse' (**1169906**) dates to c.1700.
- 3.6.275 The setting of these assets is informed by their purpose within a post-medieval farmstead complex and by their historical relationship with each other and other buildings in the complex. It is also informed by the assets' location within a rural agricultural landscape which has historical significance and functional connections to them. These assets are surrounded by trees which contribute to a sense of seclusion. However, the recent introduction of a nearby quarry further north and west has altered the setting significantly, as it was not present on the last edition of the OS map. This change has disrupted the historical relationship between the assets and their surroundings. The Project would not be visible from the assets due to the topography and vegetation in the intervening landscape. In summary, while the setting of these two assets maintains a rural character, it offers a moderate contribution to their value, and their setting does not extend to the draft Order Limits.

- 3.6.276 Two **medium value** Grade II listed assets associated with Woodhouse Farmhouse are of evidential, historical, and aesthetic value. The assets are located approximately 1.2 km north of the draft Order Limits, and 400 m north of Woodhouse Lane. The two-storey timber framed 'Woodhouse Farmhouse' (**1123843**) dates to the early 17th century, with alterations in the 18th and 19th centuries. The single-storey timber framed and weatherboarded 'Ancillary Building 10 Metres North East of Woodhouse Farmhouse' (**1123844**) is noted by the NHLE as being used as bakehouse, brewhouse and stable dating to the 18th century with a 19th century extension. The bread oven is noted as incomplete and the brewing vat is missing. The ancillary building is included for its group value with the farmhouse.
- 3.6.277 The setting of these assets is informed by their presence as a post-medieval farmstead complex and by their historical relationship with each other. The setting is also informed by the assets' location within a rural agricultural landscape which has historical significance and functional connections to them. These assets are surrounded by trees which contribute to a sense of seclusion. However, the recent introduction of a nearby quarry further north and west has altered the setting significantly, as it was not present on the last edition of the OS map. This change has disrupted the historical relationship between the assets and their surroundings. The Project won't be visible from the assets due to the topography and vegetation in the intervening landscape. In summary, while the setting of these two assets maintains a rural character, it offers a moderate contribution to their value, and their setting does not extend to the draft Order Limits.
- 3.6.278 Three **medium value** Grade II listed buildings comprising Cresley's Farmhouse and associated assets are of evidential, historical, and aesthetic value and located approximately 1.1 km north-east of the draft Order Limits, and east of Church Road. The two-storey timber framed 'Cresley's Farmhouse' (**1168706**) dates to the early 17th century, with a 20th century extension. Both the 'Barn 30 Metres North of Cresley's Farmhouse' (**1123859**) and 'Barn 55 Metres North West of Cresley's Farmhouse' (**1278016**) are timber framed, thatched and weatherboarded and both date to the early 17th century, with the latter barn also including a 19th century byre and 19th to 20th century stable range.
- 3.6.279 The setting of these assets is informed by their purpose as a post-medieval farmstead complex. The setting is further informed by their relationship with each other and with the other building in the farmyard. It is also characterised by the surrounding agricultural landscape with which the assets have a historical and functional relationship. Although positioned alongside the road, they are strategically set back and concealed from view by a line of trees. Further east is the settlement of Silver End. There is an open view to the south from the assets but due to the distance and the trees within the farmyard, there is low probability that the Project would be visible from the assets. Overall, the setting of the assets makes a considerable contribution to their value and their setting does not extend to the draft Order Limits.
- 3.6.280 A small group of three **medium value** Grade II listed buildings comprising Brick House and associated stables and barn are of evidential, historical, and aesthetic value. The assets are located approximately 1.4 km south-east of the draft Order Limits, and immediately east of the road junction between Braxted Road and Kelvedon Hall Road. The two-storey 'Brick House and Attached Forecourt Wall' (**1309072**) dates to the 17th century but may pre-date this to the rear, with an 18th century frontage. The front range is constructed in red brick with external chimney stacks to left and right. The composer Dr. Martin Shaw (b.1875 - d. 1958) lived in this building and was known for composing hymns including 'Hills of the North Rejoice'.

The 'Stables Approximately 2 m to the Rear (East) of Brick House' (**1111078**) date to the 18th century and is timber framed and weatherboarded. This asset is part of the original farm complex. The 'Barn Approximately 20 Metres Left (South) of Brick House' (**1166115**) is 16th century in origin and has been subject to later repairs and a two-bay extension. The barn is timber framed and weatherboarded.

- 3.6.281 Collectively, the setting of these assets is informed by their purpose as a post-medieval farmstead within a rural agricultural landscape. The setting is further informed by their relationship with each other and with the other building in the farmyard. It is also characterised by the surrounding agricultural landscape with which the assets have a historical and functional relationship. The A12 is situated approximately 8600 m to the north of the assets, but the vegetation in the intervening landscape acting as a natural barrier, shields the assets from any potential traffic noise. Overall, their setting makes considerable contribution to their value, however their setting does not extend to the draft Order Limits.
- 3.6.282 The **medium value** Grade II listed 'Hoo Hall' (**1169797**) and its associated 'Stable Block to Number 188 (Hoo Hall)' (**1122596**) are of evidential, historical, and aesthetic value. The assets are located approximately 1.3 km south-west of the draft Order Limits. The two-story red-brick timber-framed house was largely rebuilt in the late 18th century but may have 17th century origins. The two-storey timber-framed and weather boarded stable block dates to either the late 18th or early 19th century.
- 3.6.283 Collectively, the setting of these assets is informed by its context within a rural managed landscape associated with the of Hoo Hall complex. These properties are prominently located within a farmyard, reflecting their historical and functional connections with each other and the agricultural landscape that surrounds them. The presence of mature tree lines and small woodlands strategically obscures the assets from the road, enhancing their privacy and visual appeal. Despite some trees, there is an open view to the south of the assets which can directly lead to the railway as well as the A12 which are respectively c.450 m and c.850 m south of them. There is likely to be no intervisibility between these assets and the draft Order Limits. The setting of these assets does not extend within the draft Order Limits.
- 3.6.284 The **medium value** Grade II listed 'Stovern's Hall' (**1122558**) is of evidential, historical, and aesthetic value. The asset is located approximately 1.4 km south of the draft Order Limits, south of Rickstones Road. The two-storey timber-framed building dates to the 17th century with 19th century alterations. The building was renovated in the 20th century.
- 3.6.285 The setting of this asset is influenced by its location within a farmstead complex, encompassed by hedgerows and set against the backdrop of a rural agricultural landscape. The open terrain to the north suggests potential intervisibility with the Project. Additionally, its setting is shaped by its roadside placement and the presence of neighbouring residences along the same road. To the south-west lies Witham, and to the north-east, Rivenhall provides a regional context. However, the existence of a golf course to the south of the asset has altered some aspects of its historical relationship with the surroundings. In summary, the setting of this asset offers a moderate contribution to its overall value. The setting of this asset does not extend to the draft Order Limits.
- 3.6.286 The **medium value** Grade II listed 'Powers Hall' (**1122560**) is of evidential, historical, and aesthetic value. The asset is located approximately 1.9 km south-west of the draft Order Limits, and north of Terling Road. The two-storey timber-framed Powers Hall dates to the late 16th century and was re-fronted in the 18th century.

- 3.6.287 The setting of this asset is informed by its context within a rural agricultural landscape. These property is prominently located within a farmyard, reflecting its historical and functional connections with the agricultural landscape that surrounds it. The presence of mature trees strategically obscures the asset from the road, enhancing their privacy and visual appeal. To the east lies the town of Witham, offering a contrast between the rural setting of the properties and the nearby urban area. The Project would not be visible from the asset due to the topography and vegetation in the intervening landscape. In summary, the setting makes a considerable contribution to its value. The setting of the asset does not extend to the draft Order Limits.
- 3.6.288 The **high value** Grade II\* listed 'Braxted Park House' (**1111110**) is located approximately 2.8 km south-east of the draft Order Limits, and within the grounds of the **high value** red brick walled Grade II\* listed 'Braxted Park' Registered Park and Garden (**1000455**), which is approximately 2 km south of draft Order Limits pipeline works at its closest point. The assets are of evidential, historical, and aesthetic value. Braxted Park was a deer park in 1342 when under the ownership of the Countess of Pembroke. Little further detail is known until c.1650 when the estate was purchased by Thomas Darcy, with a new house built in 1682 and later remodelled under the ownership of Peter Du Cane. The current red brick two-storey house dates to the 17th century with later alterations, reconstructed to designs of Robert Taylor c.1752-1759, enlarged by John Johnson c.1804-1806. There were also various works in the late 18th century by James Brown and Matthew Hall. Building restoration work was also undertaken in 1950. The building also contains a 20th century library. Braxted Park (**1000455**) surrounds the house covering approximately 202ha and including a 6ha lake crossed by a bridge. The park also contains a cave/icehouse and a summerhouse at its western end. Six lodge cottages and various garden features are also located throughout the park. The **medium value** Grade II listed 'Kelvedon Lodge' (**1166087**) is located approximately 1.7 km south of the draft Order Limits pipeline works at the northern-most corner of Braxted Park. The two-storey brick-built lodge was built in the early 19th century within the grounds of the park. The **high value** 12th century Grade II\* listed 'Church of All Saints' (**1165777**) is also located within the park approximately 2.6 km south of the draft Order Limits pipeline works and immediately west of the 6ha lake. The church has undergone later alterations in the 13th, 15th, 18th, and 19th centuries. The building also contains Romano-British brick and quoin within its fabric.
- 3.6.289 Collectively, the setting of these assets is influenced by the existing high status post-medieval manor house and its associated parkland landscape. It is also influenced by the historical relationships that these assets have with each other. The fortified nature of the park and the surrounding wooded landscape reinforce the sense of isolation. The predominantly rural agricultural landscape, with a dense avenue of trees, around the assets is impacted by the presence of the A12 to the north of these assets. The Project would not be visible from the asset due to the topography and vegetation in the intervening landscape. Overall, the setting of these assets makes a considerable contribution to them despite the proximity of the A12. The setting of these assets does not extend to the draft Order Limits.
- 3.6.290 The **medium value** Grade II listed 'Sheepcote Farmhouse' (**1122600**) is of evidential, historical, and aesthetic value. The asset is located approximately 1.9 km north of the draft Order Limits immediately east of Sheepscotes Lane. The L-shaped two-storey building dates between the late 16th to early 17th century. The south-west frontage was re-fronted in red brick in the 18th century. An early 16th century barn is also located to the south-west of the house, which has been re-roofed in corrugated iron.

- 3.6.291 The setting of this asset is informed by its location within a rural agricultural landscape. It is situated along a tranquil countryside road, marked by its peaceful and isolated location. It is thoughtfully set back from the road, featuring a front garden, a protective brick wall, and tall trees, all of which contribute to its sense of seclusion. The landscape around the property is predominantly rural, with open fields adding to its picturesque charm. However, the recent introduction of a nearby quarry further north has altered the setting significantly, as it was not present on the last edition of the OS map. This change has disrupted the historical relationship between the asset and its surroundings. The Project would not be visible from the asset due to the topography and vegetation in the intervening landscape. In summary, while the setting of Sheepcote Farmhouse maintains a rural character, it offers a moderate contribution to its value, and the setting of the asset does not extend to the draft Order Limits.
- 3.6.292 The **medium value** Grade II listed 'Highfields Farmhouse and Attached Cottage to north-east' (**1337626**) is of evidential, historical, and aesthetic value. The asset is located approximately 1.9 km south-east of the draft Order Limits, and north-east of Highfields Lane. The two-storey timber framed house and the attached cottage date to the 18th century, with 19th century extensions and alterations.
- 3.6.293 The setting of this asset is informed by its presence as post-medieval rural road-side dwelling. The property's roadside location is mitigated by its strategic positioning set back from the road within a farmyard, with a substantial front garden providing separation from the road. Additionally, a tree line shields the asset from view, except during the defoliation season, enhancing its privacy and visual appeal. The setting is further enriched by its historical and functional relationship with the surrounding agricultural landscape. However, the presence of the A12 about 500 m to the north of the property could have an effect on the setting, especially as there are open views to the north from the asset. The Project won't be visible from the asset due to the topography and vegetation in the intervening landscape. In summary, the setting of Highfields Farmhouse and attached cottage makes a considerable contribution to their value, despite the proximity to the A12 and its traffic noise. The setting of this asset does not extend to the draft Order Limits.
- 3.6.294 The **medium value** Grade II listed 'Curd Hall' (**1123140**) is of evidential, historical, and aesthetic value. The asset is located approximately 1.9 km north of the draft Order Limits, approximately 470 m north of Cuthedge Lane. The timber framed two-storey building dates to the 17th century, later extended in the 18th century and c.1900. The house is illustrated in an estate map of 1735 as having three gables and two chimneys. The tithe award of 1853 shows the house was associated with a 190-acre farm.
- 3.6.295 The setting of this asset is informed by its presence as a post-medieval farmstead. It is accessed via a private track, creating a sense of seclusion and privacy. The property is situated within a farmyard, emphasizing its rural character and historical agricultural associations. It is enveloped by agricultural fields, fostering a serene and tranquil environment. To the south lies a quarry, providing an interesting contrast to the otherwise calm surroundings. Further north, the presence of Coggeshall conservation area (CA) adds to the historical and cultural context of the area. The Project would not be visible from the asset due to the topography and vegetation in the intervening landscape. In summary, the setting of Curd Hall considerably contributes to its value, with its rural and historically significant surroundings. The setting of this asset does not extend to the draft Order Limits.

- 3.6.296 The **medium value** Grade II listed 'Gatehouse Cottages' (**1338229**) is of evidential, historical, and aesthetic value. The asset is located approximately 1.6 km south-east of the draft Order Limits, west of Oak Road. The single-storey timber framed range of cottages date to the 18th century.
- 3.6.297 The setting of this asset is informed by its purpose as a range of post-medieval roadside dwellings within a rural agricultural landscape. The setting assessment for Gatehouse Cottages is primarily influenced by its roadside location. Situated adjacent to the road, the property is only separated from it by a low wooden fence, leaving it vulnerable to potential impacts from passing traffic. To the east of the asset, there is another residence, but the surrounding landscape is predominantly characterized by agricultural fields and pockets of woodland, creating a distinctly rural ambiance. The Project would not be visible from the asset due to the topography and vegetation in the intervening landscape. In summary the setting of Gatehouse Cottages maintains a rural character and makes a moderate contribution to the asset's overall value. The setting of this asset does not extend to the draft Order Limits.

#### *Non-Designated Heritage Assets*

- 3.6.298 The southern corner of the Rivenhall designed landscape (**5036**) lies within the draft Order Limits to the north-west of Park Road. The draft Order Limits continue through two successive medieval deer parks known by the HER as 'Rivenhall I and II' and two post-medieval parks recorded as 'Rivenhall III and IV' (**5094**, **5095**) for approximately 1.2 km. The Grade II\* listed 16th century (Tudor) Rivenhall Place (**1122598**) also known as 'Wyseman's Hall', and Grade II listed Bridge to Rivenhall Place (**1338253**) also lie within the landscape portion (**5036**). The designed landscape (**5036**) marks the location of post-medieval alterations made by Humphry Repton around the house (**1122598**) recorded as Rivenhall III and IV (**5094**, **5095**) approximately 340 m north of the draft Order Limits (**5036**). The HER suggests that the location of Rivenhall III and IV can be discerned from features on maps from 1668 onwards and from field boundaries, field names, surrounding roadways, and topography. In the 16th century Rivenhall manor was acquired by Sir Ralph Wyseman who extended the Tudor House (Archer's) and who created the formal ornamental garden recorded as Rivenhall III (**5095**), occupying around 117ha. A new boundary enclosed by a pale, rather than by a bank and ditch is likely to have surrounded the park at this time. Rivenhall IV (**5095**) was constructed around 1790 to 1795 by Charles Callis who commissioned Humphrey Repton to create an 'English landscape Park' predominantly comprising of open grassland for sheep and cattle with irregular clumps of trees. By 1839 the park was reduced to less than 100 acres with the park finally ceasing to exist during WWII. This asset is of evidential, aesthetic, and historical value and of **medium value**.
- 3.6.299 The Grade II listed Porters Farm House (**1171011**) dates to the late 16th century and is located on land partially within the draft Order Limits immediately south of Park Gate Road on the site of a medieval moated manor (**5069**) approximately 20 m north of the draft Order Limits. A watching brief ahead of a swimming pool being constructed identified a recently backfilled boundary ditch which may date to the post-medieval period (**5001**). An extant late 17th to early 18th century timber framed barn (**5190**) is also located approximately 40 m south of Porters Farm House and 90 m south-west of the draft Order Limits. The medieval moated manor site is of evidential and historical value and of **medium value**.
- 3.6.300 Cropmark of linear field boundaries, one of which can be seen on the OS first edition (**5113**), can be observed within the draft Order Limits and 480 m east of the B1018

and may date to this period. This asset is of evidential and historical value and of **low value**. Similarly **low value** undated linear field boundary cropmarks potentially dating to the post-medieval period have also been observed.

- Cropmark of linear field boundaries have been identified on a land parcel within the draft Order Limits approximately 285 m east of the B1018 on land to the south and east of Whitehead's Farm (**5115**)
- Cropmark of linear field boundaries have been identified on a land parcel within the draft Order Limits approximately 315 m west of Church Road to the south of Silver Road (**5116**)

- 3.6.301 Cropmarks have been observed of an early medieval period extractive pit and undated field boundary ditches (**5122**), the latter of which may date to this period, on land east of Parkgate Farm approximately 5 m north of the draft Order Limits and immediately south of Park Gate Road.
- 3.6.302 Undated cropmarks of field boundaries and a small rectangular enclosure (**5123**) of possible post medieval date are located on land just clipping the draft Order Limits and immediately south of Hollow Road. The rectangular enclosure is likely to be the location of a house seen on the OS first edition. This asset is of evidential and historical value and of **low value**.
- 3.6.303 Undated field boundaries (**5125**) seen on OS first edition mapping may date to this period and have been observed within the draft Order Limits immediately east of Woodhouse Lane. Similar undated cropmarks of field boundaries including a parish boundary (**5124**) have also been observed approximately 100 m north-west of the draft Order Limits, immediately west of Woodhouse Lane and north of Park Gate Road which may date to this period. This asset is of evidential and historical value and of **low value**.
- 3.6.304 A scatter of medieval and early post-medieval pottery (**5178**) has been identified on a 'slight mound' during field observations within the north-east of this land parcel, approximately 185 m south-east of the draft Order Limits and 550 m north-east of the B1018. Undated field boundary cropmarks (**5120**) have also been identified within the same land parcel on aerial imagery which may also be post-medieval in date.
- 3.6.305 Archaeological investigations at the scheduled monument of Cressing Temple (**1002122**) have identified multi-period activity particularly including post-medieval period remains during investigations approximately 30 m north of the draft Order Limits, and immediately east of the B1018 (**5022**). In 1541 the manor of Cressing, including the former preceptory was granted to a tenant by Henry VIII known as John Smith (**5054**), the family of which remained until 1646. A house was built on this site during this time which was demolished c.1600. The Smith family were also responsible for constructing an enclosed walled garden, stables, and a granary. A series of owners have since occupied the site since 1646. The present two-storey house was built c.1600 on a T-plan with a cross-wing with later alterations. Outbuildings to the east are 17th century in date and the current stables also bear the date 1623 (**5054**). This asset is of evidential, aesthetic, and historical value and of **high value**. Further post-medieval evidence includes:
- An archaeological investigation associated with the location of Cressing Temple visitor centre (Garwood, A. 1997) identified the remains of two previously unknown buildings and a brick culvert. Of these, the oldest building was a medieval timber-framed agricultural building tentatively dated to the 13th century, and the latter a post-medieval late 16th to early 17th century brick built agricultural building (**5022**) which underwent two phases of construction. A brick

culvert was also identified north of the post-medieval building which also underwent two phases of construction. Pottery recovered from below the building and within the culvert suggest it was still in use in the 17th century

- The scheduled monument of Cressing Temple (**1002122**) is the site of a medieval chapel and moat associated with the Knights Templars. The chapel is noted as surviving until at least 1626. Excavations across Cressing Temple have also revealed several post-medieval features and deposits. Excavations since 1990 have identified predominantly post-medieval or modern period features (**5034**)
- Trenching in 1989 and 1994 revealed medieval and post-medieval features including large pits containing Hedingham ware and other medieval pottery as well as slag and/or furnace lining (**5208**)
- Three tile kiln locations (**5064**) are located on land approximately 720 m north-west of the draft Order Limits and may be associated with tile production for the adjacent medieval barns at Cressing Temple (**1002122**), however they may also be post-medieval in date. Undated cropmarks of linear features have also been observed within this field (**5110**) and in the fields immediately to the east (**5111**) and south (**5112**, **5114**) and may date to this period

3.6.306 A surface scatter of medieval to post-medieval brick and tile fragments, clay pipe and 'bellarmine' stoneware and various metal objects including nails (**5177**) have been recovered from a field approximately 450 m south of the draft Order Limits and 770 m south-west of the B1018. An 18th century double ditched tree-lined lane runs from Rickstones road to the south-west side of the field, marked as 'Old House Croft'. Remains of the croft shown on a 1716 map may survive, as well as remains of the 'Old House' referred to in name within the middle of the field (**5177**) The house and croft may in fact also be the same building.

3.6.307 A multi-period site has been identified through several investigations at Rivenhall Airfield ahead of gravel extraction quarrying at Bradwell Quarry, approximately 430 m north-west of the draft Order Limits, at Woodhouse Lane and 700 m north-east of Silver End at its closest point. This asset is of evidential and historical value and of **low value**. This includes.

- This includes a fieldwalking survey (**5040**) which identified 15 concentrations of finds concentrated on the southern and eastern edges of the survey area, six of which was medieval in date (Medlycott, 1992)
- Post-medieval to modern period field boundary ditches seen on the first three OS map editions (**5134**) have been identified during the investigations, with no post-medieval to modern ditches identified within the western-most field (ECC 2011)

## B1018 to Fuller Street

### *Designated Heritage Assets*

3.6.308 The **medium value** Grade II listed 'Homecot' (**1146765**) is of evidential, historical, and aesthetic value. The farmhouse is located approximately 10 m south of the draft Order Limits and south of Fairstead Road. The single storey timber framed cottage with an attic, dates to the 18th century and was later altered in the 20th century.

3.6.309 The setting of this asset is informed by its purpose as a post-medieval rural cottage. It enjoys a rural setting with distinct characteristics. It is situated within a bend in the road, providing an open view to the east, which includes agricultural fields. To the north, the property is surrounded by a wooded area and more fields, adding to the sense of space around it. To the south, it neighbours a characterful property,

contributing to its overall charm. The setting offers a quiet and rural ambiance and benefits from a road that is not heavily trafficked. In essence, the rural location considerably contributes to the value of Homecot. The setting of this assets extends to the draft Order Limits.

- 3.6.310 The **medium value** Grade II listed 'Hill Farmhouse' (**1123461**) is of historical and aesthetic value. The farmhouse is located approximately 15 m south-west of the draft Order Limits and west of Church Hill (road). The two-storey timber framed house dates to the late 16th century, with 19th century alterations.
- 3.6.311 The setting of this asset is informed by its purpose as a post-medieval rural cottage. Hill Farmhouse is situated within a farmyard, creating a setting defined by its proximity to other structures within the yard. This setting is further enriched by its historical relationship with the surrounding agricultural landscape. While it is located along a roadside, it is thoughtfully set back within the farmyard, partially concealed by mature trees and high hedges, making it challenging to spot from the road. This secluded positioning enhances its overall value. In summary, the setting of Hill Farmhouse considerably contributes to its value. The setting of this asset extends to the draft Order Limits.
- 3.6.312 The **medium value** Grade II listed 'Oak Cottages' (**1123421**) are of evidential, historical, and aesthetic value. The asset is located approximately 50 m south-east of the draft Order Limits, and immediately south of Church Hill (road). Now two cottages and formerly more, the single-storey timber framed and weatherboarded Oak Cottages date to the 17th century and were later altered in the 20th century.
- 3.6.313 The setting of this asset is informed by their purpose as a row of post-medieval semi-rural roadside cottages within a rural agricultural landscape. The asset broadly remains within its original setting and the asset retains a historical relationship with this. The nearby farm buildings to the north and the surrounding landscape moderately contribute to the value of the asset. The setting of the asset extends to within the draft Order Limits, however intervisibility would be partially restricted by immediate surrounding buildings, trees, and hedges.
- 3.6.314 The **medium value** Grade II listed 'Forge Cottage' (**1338147**) is of evidential, historical, and aesthetic value. The cottage is located approximately 75 m north-west of the draft Order Limits and north of Church Hill (road). The single-storey timber framed cottage dates between the 17th to 18th centuries with 20th century.
- 3.6.315 The setting of this asset is informed by its purpose as a post-medieval road-side cottage within a rural agricultural landscape. Forge Cottage is positioned a bit away from the bustling road that connects Faulkbourne to White Notleys. It enjoys a degree of seclusion thanks to well-established vegetation that screens it from the road, partially obstructing views in both directions. However, despite its slightly set-back position, the cottage is visible from the front façade. The immediate setting is nestled within the rural agricultural lands, offering a serene atmosphere enriched by the presence of nearby characterful properties. The broader setting maintains this rural, agricultural character. Overall, the setting makes a considerable contribution to the value of Forge Cottage. The setting of this asset extends to the draft Order Limits.
- 3.6.316 The **medium value** Grade II listed 'Walnut Tree Cottage' (**1308803**) is of evidential, historical, and aesthetic value. The dwelling is located approximately 270 m south of the draft Order Limits, and west of Fairstead Road. The timber framed and weatherboarded cottage dates to the 18th century, with 20th century alterations.

- 3.6.317 The setting of this asset is informed by its purpose as a post-medieval rural dwelling on the eastern edge of Fairstead within a rural agricultural landscape. The asset broadly remains within its original setting and the asset retains a historical relationship with this. The existing buildings to the south and south-west as well as the surrounding landscape moderately contribute to the value of the asset. The setting of the asset is restricted to its roadside location and the immediate agricultural landscape and does not, therefore, extend to the draft Order Limits.
- 3.6.318 The **medium value** Grade II listed 'Hole Farmhouse' (**1146854**) is of evidential, historical, and aesthetic value. The cottage is located approximately 50 m north-west of the draft Order Limits, and east of the B1018. The two-storey timber framed and weatherboarded house was built in the 16th century, later altered in the 18th and 19th centuries and is now two cottages.
- 3.6.319 The setting of this asset is informed by its purpose as a post-medieval farmstead within a rural agricultural landscape. The Hole Farmhouse is situated along a single-track lane leading to a small cluster of properties, which includes the listed building itself and another modern structure. To the west, there are agricultural buildings. The immediate setting of the farmhouse is defined by a boundary of fences and hedgerows, with the rear enclosed by tall, well-established trees, creating a sense of seclusion. The wider setting is marked by quiet rural surroundings with an agricultural character, and there is a railway to the east. Moving further outward, the landscape remains agricultural, positioned on the periphery of the Chelmsford and Braintree areas. The site, particularly the west facade, is distinctly visible, and there are likely views from the front as well. Overall, this setting of the asset makes a considerable contribution to the value of the Hole Farmhouse. The setting of this asset extends to within the draft Order Limits.
- 3.6.320 The **medium value** Grade II listed 'Pond Cottage' (**1123455**) is of evidential, historical, and aesthetic value. The cottage is located approximately 75 m south of the draft Order Limits, and west of Fairstead Road. The asset is also approximately 60 m south of the Grade II listed 'Homecot' (**1146765**). The single-storey timber framed and weatherboarded cottage dates to the 18th century, with 20th century alterations.
- 3.6.321 The setting of this asset is informed by its purpose as a post-medieval rural cottage. Pond Cottage is positioned slightly set back from the road, offering a sense of seclusion, and it is further enclosed by tall, well-established vegetation and fencing. The immediate setting of the cottage is characterised by a rural agricultural landscape, and this ambiance extends to the broader surroundings, which also maintain a rural and agricultural character. Overall, the setting, with its feeling of seclusion due to the proximity of the road and the surrounding vegetation, considerably contributes the value of Pond Cottage. Additionally, the Project is likely to be visible from the rear of the property, as well as from the surrounding grounds and upper floors, thanks to the expansive and open landscape. The setting of this asset extends to within the draft Order Limits.
- 3.6.322 The **medium value** Grade II listed 'Post House' (**1123423**) is of evidential, historical, and aesthetic value. The asset is located approximately 100 m north-west of the draft Order Limits, and immediately east of Church Hill (road). The two-storey timber-framed building dates to the 17th century and was later altered in the 19th century.
- 3.6.323 The setting of this asset is informed by its purpose as a post-medieval postal service building, later adapted into a dwelling within a semi-urban and semi-rural agricultural landscape. The asset broadly remains within its original setting and the asset retains a historical relationship with this although the asset has since lost its functional

relationship. The existing buildings to the north, existing trees and hedgerows and the surrounding landscape moderately contribute to the value of the asset. There would be intervisibility between the house and the draft Order Limits, however any intervisibility would be partially restricted by surrounding trees, hedgerows, and buildings. The setting of the asset extends to within the draft Order Limits.

- 3.6.324 Two **medium value** Grade II listed buildings comprising Blixes Farmhouse and associated barn are of evidential, historical, and aesthetic value. The assets are located approximately 200 m west of the draft Order Limits access route, 560 m north-west of the draft Order Limits, and south of Ranks Green Road. The two-storey timber framed 'Blixes Farmhouse' (**1123460**) dates to the 17th century with 20th century alterations, extended to form two houses. The timber framed and weatherboarded 'Barn Approximately 30 m South West of Blixes Farmhouse' (**1146827**) also dates to the late 17th century.
- 3.6.325 The setting of these assets is informed by their purpose as a post-medieval farmstead complex. It is significantly influenced by their location within this complex and their interconnectedness with each other and other structures on the premises. Their placement is also shaped by their historical and functional association with the surrounding agricultural landscape. Situated along a tranquil rural road, the assets are enveloped by a peaceful environment. Consequently, the setting makes considerable contribution to the value of these assets. Furthermore, the setting extends to the draft Order Limits and due to the open landscape to the east of the assets, the Project would likely be visible from the properties.
- 3.6.326 The **medium value** Grade II listed 'The Stores' (**1146812**) is of evidential, historical, and aesthetic value. The building is located approximately 200 m east of the draft Order Limits, and west of Braintree Road. The two-storey timber framed building was constructed c.1590, converted to a shop and house in the 19th century and into a house in the 20th century. The shopfront retains 3D 19th century signage for '*Lifebuoy Soap - Sunlight Soap - No wear no tear no care*' made by Roots and Heinemann of Connersville, Indiana, patented in 1888.
- 3.6.327 The setting of this asset is informed by its purpose as a post-medieval rural road-side cottage and shop within a rural agricultural landscape. The Stores is positioned set back from the road and features a small front yard enclosed by a low wooden fence with an open entrance. It is clearly visible from the road, without any obstructing vegetation. The proximity of nearby residences along the road adds to the setting's character. In the wider context, the surroundings maintain a rural feel with open agricultural fields. The setting of this asset offers a moderate contribution to the asset's overall value. The setting of this asset is broadly confined to its immediate area. The setting of this asset does extend to the draft Order Limits.
- 3.6.328 The **medium value** Grade II listed 'The Heron's' (**1337781**) is of historical and aesthetic value. The asset is located approximately 250 m east of the draft Order Limits, and east of Fairstead Lodge Road. The two-storey timber framed house dates to the 17th century. The front wall was raised approximately 1 m during the early 19th century when the house was converted into two cottages, and then back to one house in the 20th century.
- 3.6.329 The setting of this asset is informed by its presence as a post-medieval semi-rural road-side dwelling. It is positioned within a small yard, set back from the rural road, with only a low hedge and a tall tree to its south. It is clearly visible from the road, as there is no intervening vegetation. Residences are located both to the north and south of the asset, but the broader surroundings maintain a rural character. In summary, the setting provides a moderate contribution to the value of the cottage.

The setting of this asset is broadly confined to its immediate area. The setting of this asset does extend to the draft Order Limits.

- 3.6.330 The **medium value** Grade II listed 'Garden House' (**1307192**) is of historical and aesthetic value and located within White Notley conservation area (**CA2**). The house is located approximately 650 m south-west of the draft Order Limits, east of Church Hill (road). The single-storey timber framed house dates between the 16th to 17th century or earlier, with later alterations.

The setting of this asset is informed by its purpose as a post-medieval road-side cottage within White Notley conservation area (**CA2**). It is intricately woven into its surroundings. It is strongly influenced by its relationship with the conservation area (**CA2**), as well as its connection with both non-designated and designated assets such as the Grade I 'Church of St. Etheldreda' (**1147914**) located to its south. This asset enjoys a slightly elevated position, which sets it apart from the road. A front lawn, accentuated by a stone staircase leading to the entrance, adds to its unique character. The entrance faces the road and there is no dense vegetation to hide it from the road. Part of the settlement, Garden House is encircled by residences, except to its west, where a woodland area and further agricultural fields stretch out. High, mature trees primarily block views to the west, although they may offer a more open perspective during the foliage season. To the east of the asset, there is a generous garden space and additional residences. The house makes its presence known on the first edition OS map of 1881, and over time, more residences have been constructed further south and east impacting its setting. In summary, the setting of 'Garden House' makes a moderate contribution to its value, and its setting does not extend to the draft Order Limits.

- 3.6.331 The **medium value** Grade II listed 'Haven Cottage' (**1168198**) is of evidential, historical, and aesthetic value and is located within White Notley conservation area (**CA2**). The asset is located approximately 350 m south-west of the draft Order Limits, and north of Station Road. The two-storey timber framed cottage dates to the 17th century with 19th century alterations.

- 3.6.332 The setting of this asset is informed by its purpose as a post-medieval road-side cottage within the north-east of White Notley conservation area (**CA2**) with a rural agricultural landscape to the east. The asset broadly remains within its original setting and the asset retains a historical relationship with this. The existing buildings to the south-west as well as the surrounding landscape moderately contribute to the value of the asset. There is likely to be no intervisibility between this asset and the draft Order Limits due to the rising topography to the east as well as the established treelines and hedgerows and surrounding buildings. The setting of the asset does not, therefore, extend to within the draft Order Limits.

- 3.6.333 The **medium value** Grade II listed 'Lindsey Cottage' (**1338144**) is of evidential, historical, and aesthetic value and is located within White Notley conservation area (**CA2**). The asset is located approximately 480 m south-west of the draft Order Limits, and north of Station Road. The single-storey timber framed cottage dates to the 17th century and contains attics.

- 3.6.334 The setting of this asset is informed by its purpose as a post-medieval road-side cottage within White Notley conservation area (**CA2**). Lindsey Cottage is situated at the eastern edge of the settlement, offering a unique setting with woodlands to the east and north. To the south and west, the cottage is neighboured by other residences. This setting combines elements of both a semi-rural and semi-residential environment. To the east, railway lines mark the boundary, while further eastwards, the landscape transitions into expansive agricultural fields. The setting of this asset

provides a moderate contribution to the asset's value; however, its setting is broadly confined to its immediate are. The setting of this asset does not extend to the draft Order Limits.

- 3.6.335 The **medium value** Grade II listed 'Ranks Green Farm' (**1146817**) is of evidential, historical, and aesthetic value. The building is located approximately 500 m west of the draft Order Limits, and south of Ranks Green Road. The two-storey timber framed building was built in the early 18th century with 20th century alterations.
- 3.6.336 The setting of this asset is informed by its purpose as a post-medieval road-side farmstead within a rural agricultural landscape. The farm is discreetly positioned, set back from the rural road, and shielded by tall hedges and trees. It finds its place within a farmyard setting, with neighbouring residences to the west and east, forming a part of the Ranks Green settlement. Beyond this, the landscape opens into expansive agricultural fields. The setting is further enriched by its historical and functional connection to the surrounding agricultural environment. The setting of this asset makes a moderate contribution to its value; however, its setting is broadly confined to its immediate area. The setting of this asset therefore does not extend to within the draft Order Limits.
- 3.6.337 The **medium value** Grade II listed 'Old Rectory' (**1123456**) is of evidential, historical, and aesthetic value. The rectory is located approximately 430 m south of the draft Order Limits, and south of Fairstead Hall Road. The two-storey timber framed building is of 16th century or earlier origin with 18th, early 19th, and 20th century alterations.
- 3.6.338 The setting of this asset is informed by its purpose as a post-medieval cottage. The Old Rectory is enveloped by a characterful red brick wall that is considered part of the listed building's curtilage. Well-established and towering vegetation offers seclusion, although some glimpses are possible through gaps in the greenery. Across the road, there are early to mid-20th-century houses adjacent to the wall. Several other listed buildings are in proximity. The immediate setting feels enclosed, while the wider surroundings are characterised by rural agricultural land. The setting of this asset provides a moderate contribution to the asset's value however the setting of this asset is broadly confined to its immediate area. There is potential intervisibility between the upper floors of the asset, however any intervisibility would be restricted by surrounding trees, hedgerows, and buildings to the north. The setting of this asset does not extend within the draft Order Limits.
- 3.6.339 The **medium value** Grade II listed 'Elmhurst' (**1123451**) is of evidential, historical, and aesthetic value. The dwelling is located approximately 330 m south of the draft Order Limits, and west of the junction between Fairstead Road and Fairstead Hall Road. The two-storey timber framed building dates to the late 16th and 18th centuries and was extended in the 20th century. A photograph taken c.1900 shows this building as part of a range of cottages extending to the east which have since been demolished.
- 3.6.340 The setting of this asset is informed by its purpose as a post-medieval roadside rural dwelling on the eastern edge of Fairstead within a rural agricultural landscape. The asset broadly remains within its original setting and the asset retains a historical relationship with this. The existing buildings to the north and south-west as well as the surrounding landscape moderately contribute to the value of the asset. Due to the asset's setting being restricted roadside location and immediate agricultural landscape, the setting does not extend to the draft Order Limits.

- 3.6.341 Three **medium value** Grade II listed buildings comprising Fairstead Lodge, a waggon lodge and a pump are of evidential, historical, and aesthetic value. The assets are located approximately 140 m east of the draft Order Limits. The two-storey red-brick 'Fairstead Lodge' (**1146798**) and the timber framed and weatherboarded 'Waggon Lodge approximately 90 south-west of Fairstead Lodge' (**1146804**) both date to the early 19th century. The 'pump approximately 1.5 m west of Fairstead Lodge' (**1123458**) also dates to the 19th century and is listed for its group value.
- 3.6.342 The setting of these assets is informed by their purpose as a post-medieval farmstead complex. The setting of the three listed buildings is profoundly influenced by their presence in the farmyard and their interactions with each other as well as with other structures within this context. Their setting is also significantly shaped by their connection to the surrounding agricultural landscape, which holds historical and functional relationship with these assets. The assets are recorded on the first edition OS map of 1881 and the site appears to have remained largely unaltered since. The only notable modification has been the expansion of agricultural operations southward from this farm. The immediate vicinity comprises expansive agricultural fields, and further afield, woodlands. The settlement of Fuller Street is approximately 500 m to the south of these assets. The setting of these assets makes a considerable contribution to their value. The setting of these assets do not extend to the draft Order Limits.
- 3.6.343 Two **medium value** Grade II listed buildings associated with Home Farmhouse including the farmhouse itself and its associated barn are of evidential, historical, and aesthetic value. The assets are located approximately 960 m south-west of the draft Order Limits and 460 m west of Church Hill (road). The two-storey timber framed 'Home Farmhouse' (**1337783**) is now divided into three or four tenements and dates to the 16th century, altered in the 19th century. The timber framed and weatherboarded 'Barn Approximately 20 m to the South West of the Farmhouse' (**1308770**) dates to the 16th century with 17th to 18th century alterations.
- 3.6.344 The setting of these assets is informed by their purpose as a post medieval farmstead complex within a rural agricultural landscape. Their setting is intricately informed by their connection with their associated farmyard and their interaction with other structures in the yard. The setting of the assets is also significantly shaped by their historical and functional ties to the surrounding agricultural landscape. The assets are enveloped by agricultural fields, and to the east, a woodland area further enriches their context. The agricultural fields and adjacent woodland, along with their relationship with the farmyard, considerably contribute to the value of these assets. The setting of these assets makes a considerable contribution to their value; however, their setting is broadly confined to their immediate farmstead complex and rural-agricultural landscape. The setting of these asset does not extend within the draft Order Limits.
- 3.6.345 A group of seven **medium value** Grade II listed buildings associated with Fambridge Hall are of evidential, historical, and aesthetic value. The assets are located approximately 245 m north-west of the draft Order Limits and north-west of Fambridge Chase. The timber framed two-storey 'Fambridge Hall' (**1122746**) dates to the 18th century with rear wings that date to an earlier period, with later alterations in the form of a 19th century brick rear wing and a 20th century pedimented porch with fluted columns. The earliest building within the farm complex is a timber framed and weatherboarded 'Barn Approximately 30 m North East of Fambridge Hall' (**1338142**) which dates to the 14th to 15th centuries. The building is noted as 'good of its type' by the NHLE. This barn suggests that a farmstead has been present since at least

the medieval period and has potentially been continuously occupied since at least this time. The timber framed and weatherboarded 'Barn Approximately 30 m (east) of Barn, Fambridge Hall' (**1239001**) dates to the 16th century. The similarly timber framed and weatherboarded 'Barn Adjacent to North of Barn at Fambridge Hall' (**1307151**) approximately dates to the 18th century. The NHLE also states that this barn holds group value with the two other barns. The timber framed and weatherboarded 'Coach House to North East of Fambridge Hall' (**1122747**) dates to the 18th to 19th century. The NHLE indicates that the coach house is '*part of hall and farm complex and a most unusual example of its type*'. The timber framed and weatherboarded 'Stable Adjacent to Right of Coach House at Fambridge Hall' (**1122748**) also dates to the 18th to 19th centuries. The timber-framed and weatherboarded 'Cartlodge approximately 70 m West of Fambridge Hall' (**1168145**) dates to the 18th century.

- 3.6.346 The setting of these assets is informed by their purpose as a medieval to post-medieval farmstead complex. The seven listed buildings share a distinctive setting that is profoundly shaped by their positioning within a cohesive farm complex. Their collective presence, forming a heritage group, significantly enhances their value. The assets setting is further characterised by their integration with the surrounding agricultural landscape, marked by mature trees and expansive fields, with which they have historical and functional relationship. Additionally, a railway line, situated approximately 80 m to the east, adds to their context. These assets can be observed on the first edition OS map of 1881, and the farm complex itself remains unaltered since that time. The setting of these assets makes a considerable contribution to their value; however, their setting is broadly confined to their farmstead complex and associated immediate rural-agricultural landscape. There is intervisibility between these assets and the draft Order Limits pipeline works, however this is partially restricted by nearby buildings to the south-east. The setting of these assets does not extend into the draft Order Limits.
- 3.6.347 A small group of five **medium value** Grade II listed buildings associated with Stanfield's Farm are of evidential, historical, and aesthetic value. The assets are located approximately 540 m south-east of the draft Order Limits, and east of Vicarage Avenue. The two-storey timber-framed 'Stanfield's Farmhouse' (**1168254**) dates to the 18th century. 'The Wall and Attached Outbuilding to East of Farmyard Complex at Stanfield's Farm' (**1122715**) are located to the west of Stanfield's Farm and also date to the 18th century, as do the attached 'Barn, Pigsties and Cartlodge to the south-east of the barn at Stanfield's Farm' (**1338169**), 'the barn attached to south-west of at Stanfield's Farm' (**1122755**) and the 'Barn and Attached Out Buildings to Left (North West) of Stanfield's Farmhouse' (**1122754**).
- 3.6.348 The setting of these assets is informed by their context as a post-medieval farmstead within a rural agricultural landscape. The five listed buildings are intricately tied to their position within a farm complex, effectively forming a heritage group that substantially bolsters their value. The setting of the assets is further influenced by the juxtaposition of the surrounding residential landscape and the more distant agricultural terrain, with which they have a historical and functional connection with. These assets can be observed on the first edition OS map of 1881, which identifies their historical setting is characterized by open fields. Significant changes have taken place over time, with residential properties now occupying the surrounding area except for the landscape to the west of the assets. This change in landscape use has unmistakably impacted the setting of these assets. Currently the assets are prominently visible from the surrounding roads, with no vegetation concealing their presence. The setting of these assets makes a moderate contribution to their value

however any intervisibility between the assets and draft Order Limits is prevented by surrounding buildings, trees, and hedgerows. The setting of these assets does not extend to within the draft Order Limits.

- 3.6.349 The two **medium value** Grade II listed buildings of 'Fairstead Hall' (**1123452**) and its 'dairy approximately 5 m south-east of Fairstead Hall' (**1123453**) are of evidential, historical, and aesthetic value. The farmstead is located approximately 550 m south-west of the draft Order Limits, south of Fairstead Hall Road. The two-storey Fairstead Hall is timber framed and dates to the late 18th century, with later 20th century alterations. The dairy also dates to the 18th century with 20th century alterations. The NHLE notes that the dairy building is also listed for its group value.

The setting of these assets is informed by their purpose as a post-medieval farmstead complex. Their setting is intricately influenced by their historic relationship with each other, further enhanced by their proximity to the Grade I Church of St Mary and St Peter (**1337780**). The surrounding agricultural landscape also plays a pivotal role, providing a historical and functional connections these assets share with the land. These buildings are set back from the road, and enclosed within their curtilage, bordered by mid-height wooden fencing on the farmyard side. This rural area is dotted with agricultural fields, farmsteads, and associated buildings and yards. The setting of these assets makes a considerable contribution to their value; however, their immediate setting is broadly confined to their immediate vicinity, with intervisibility with the draft Order Limits partially restricted by the surrounding established vegetation and fencing. The setting of these assets does not extend to within the draft Order Limits.

- 3.6.350 Two **medium value** Grade II listed assets associated with Warren Farm Cottage farmstead complex are of historical and aesthetic value. They are located approximately 730 m south-west of the draft Order Limits, and north-east of Faulkbourne Road. These are 'Warren Farm Cottage' (**1337804**) and its associated 'Barn Approximately 10 Metres South East of Warren Farm Cottage' (**1123424**). The timber framed and weatherboarded cottage was constructed c.1600 and altered in the 17th and 20th century. The timber framed and weatherboarded barn dates to the late 17th to early 18th century and has been listed for its group value.

- 3.6.351 The setting of these assets is informed by their purpose as an early post-medieval farmstead complex. Warren Farm Cottage and its associated barn to the south-east are situated in a rural setting. Their location at the end of a private track, in a farmyard, establishes a relationship with other structures in the yard. Their setting is further informed by their relationship with the nearby RPG of 'Faulkbourne Hall' (**1000341**), the former medieval deer park, and the surrounding agricultural fields, with which the assets hold a historical and functional link. To the west of these assets are a limited number of residences and further to the south is Witham. The farm is recorded on the first edition OS map of 1881. The setting makes a considerable contribution to the value of 'Warren Farm Cottage' and its associated barn. There is no intervisibility between the assets and draft Order Limits, and their setting does not extend to the draft Order Limits.

- 3.6.352 A group of four **medium value** Grade II listed buildings comprising Littlebury Farmhouse and associated assets are of evidential, historical, and aesthetic value. The assets are located approximately 860 m south-east of the draft Order Limits, and immediately west of Fairstead Road. The two-storey timber framed 'Littlebury Farmhouse' (**1338170**) dates to the 17th century, with an early 19th extension. The timber framed and weatherboarded 'Granary and Stables Attached Forward Right East of Barn Complex at Littlebury Farm' (**1168097**) are located to the west of the

farmhouse and date to the 18th century. A timber framed and weatherboarded 'Barn with Attached Pig Sties to Left and Byres to Right Approximately 70 metres West of Littlebury Farmhouse' (**1238522**) is located to the west of Littlebury Farmhouse and dates to the 16th century with 18th century alterations. The timber framed 'cartlodge and stable range to left (west) of barn complex at Littlebury Farm' (**1122743**) are also located to the left of Littlebury Farmhouse and the barn and date to the 18th century.

- 3.6.353 The setting of these assets is informed by their purpose as a post-medieval farmstead. The setting of these assets is also informed by their historic relationship with each other and other buildings in the complex. The assets' location within a rural agricultural landscape also has historical and functional connections to them. All the assets are visible on the first edition OS map of 1881, originally labelled as 'Batts Green.' Their rural setting has remained unaltered since that time. The nature of the surrounding landscape and the distance from the draft Order Limits acts to restrict any potential intervisibility between the draft Order Limits and the assets. The setting of these assets makes a considerable contribution to their value; however, the setting of these assets does not extend within the draft Order Limits.
- 3.6.354 A group of five **medium value** Grade II listed buildings associated with the Elms Farmhouse complex are of evidential, historical, and aesthetic value. The assets are located approximately 1.1 km north of the draft Order Limits and north of Green Lane. The timber-framed two-storey 'Elms Farmhouse' (**1307121**) dates to the 16th century or earlier, with later alterations. The timber framed and weatherboarded cartlodge (**1338143**) is located approximately 50 m west of Elms Farmhouse Cartlodge and dates to the 17th to 18th centuries. The NHLE indicates that this building has a picturesque grouping with adjacent granary. The timber framed and weatherboarded granary (**1168179**) dates to the 18th century. The farmstead complex also includes two 16th to 17th century timber-framed and weatherboarded barns (**1307128** and **1122749**) approximately 20 m north-east and 30 m north-west of Elms Farmhouse respectively.
- 3.6.355 The setting of these assets is informed by their purpose as a late medieval to post-medieval farmstead complex. These five listed buildings are situated within a farmyard along a rural road, with their setting intricately shaped by their proximity to one another and their historical connection with the farmyard. The rural character of the surrounding agricultural landscape further enhances their setting, which has remained largely unchanged since their initial recording on the first edition OS map in 1881. The setting of these assets makes a considerable contribution to their value; however, their setting is broadly contained within their immediate vicinity. Any intervisibility between these assets and the draft Order Limits is restricted by surrounding established trees, topography, and distance. The setting of these assets does not extend to within the draft Order Limits.
- 3.6.356 The **medium value** Grade II listed 'Scarletts Farmhouse' (**1147570**) is of evidential, historical, and aesthetic value. The asset is located approximately 1.4 km south of draft Order Limits, and approximately 715 m west of Rolls Farm Lane. The two-storey timber framed farmhouse dates to the 17th century with 19th and 20th century alterations and incorporates a late 14th to early 15th century structure that may be a hunt standing. Scarletts was also described as a mansion holding 128 acres in an abstract of title from 1618. The asset is located within a well surviving moat suggesting a medieval date for the origin of occupation on site.
- 3.6.357 The setting of this asset is informed by its presence as a part of a medieval to post-medieval manorial/ farmstead complex that was moated. The setting of Scarletts Farmhouse is primarily shaped by its isolated position within a rural-agricultural

landscape. This setting is further defined by its historical connection to the surrounding agricultural landscape, while to the east, a woodland area complements the scenery. The presence of mature trees surrounding the property from the north, south, and west restricts some views, while the eastern aspect offers more open vistas. Any intervisibility between the asset and the draft Order Limits is likely to be restricted by surrounding established trees and hedgerows, topography, and distance from the draft Order Limits. The setting of this asset makes a considerable contribution to the value of the asset; however, the setting of this asset is broadly contained to its immediate area. The setting of this asset does not extend to within the draft Order Limits.

- 3.6.358 Two **medium value** Grade II listed buildings comprising Leylands Farmhouse and its associated barn and stable range are of historical and aesthetic value. The farmhouse is located approximately 1.2 km south-east of the draft Order Limits, and 220 m north-east of Terling Hall Road. The two-storey timber framed 'Leylands Farmhouse' (**1337825**) dates between the 17th and 18th centuries. The timber framed, weatherboarded and thatched 'Barn and Stable Range Approximately 15 Metres North of Leylands Farmhouse' (**1308474**). The barn (now a store) dates to the 17th century, with the stable range dating to the 18th century.
- 3.6.359 The setting of these assets is informed by their purpose as a post-medieval farmstead complex within a rural agricultural landscape. The setting of these assets is predominantly defined by their isolated location within a rural farmyard environment. The setting of these assets is further characterized by their historical relationship with the surrounding agricultural landscape. Their proximity to each other within the farmyard also contributes to the setting's definition. Any potential intervisibility between the assets and the draft Order Limits is broadly restricted by established trees and hedgerows as well as their distance from the draft Order Limits. The setting of these assets makes a considerable contribution to the value of these assets; however, their setting is broadly confined to their immediate area. The setting of these assets does not extend to the draft Order Limits.
- 3.6.360 Three **medium value** Grade II listed buildings associated with Sparrows Farmhouse complex are of evidential, historical, and aesthetic value and located approximately 1.6 km south-east of the draft Order Limits. The two-storey timber framed 'Sparrows Farmhouse' (**1123386**) dates to the early 17th century and was altered in the 18th and 20th century. The associated listed buildings comprise a 'Complete Complex of Farm Buildings East of Sparrow's Farmhouse Excluding The Barn, Listed Separately As Item 5/152' (**1123387**) and 'Barn Approximately 30 Metres East of Sparrows Farmhouse' (**1308478**). The timber framed and weatherboarded barn dates to the early 17th century and the associated farm buildings date between the 18th and 19th centuries. Some of these buildings are timber framed and weatherboarded and include a Spine range based on the barn, a cartlodge and a stable, two timber framed shelter sheds. The NHLE notes that the whole farm complex is 'exceptionally complete' and are collectively of group value.
- 3.6.361 The setting of these assets is shared and informed by their purpose as a post-medieval farmstead complex within a rural agricultural landscape. The asset broadly remains within its original setting and the asset retains a historical and functional relationship with this. The farmhouse and associated buildings, as well as the surrounding rural agricultural landscape moderately contribute to the value of the asset, however the setting of these assets is broadly confined to their immediate area. There would be intervisibility between the asset and the draft Order Limits pipeline works, partially restricted by established tree lines and hedgerows as well as

gently undulating topography. The setting of these assets does not extend within the Order.

- 3.6.362 The **medium value** Grade II listed 'Barn 20 m North West of Newbarns Farmhouse' (**1168879**) is of historical and aesthetic value. The farmhouse is located approximately 1.2 km north of the draft Order Limits, west of the B1018. The timber framed and weatherboarded barn dates to the 19th century. The NHLE indicates that the barn is in '*exceptionally unaltered condition*'.
- 3.6.363 The setting of this asset is informed by its purpose as a post-medieval barn within a rural agricultural farmstead complex. It is informed by its roadside location, situated alongside a busy road, and positioned set back from it within a farmyard. This placement establishes a clear relationship with the surrounding agricultural landscape, historically and functionally. Additionally, its historical context is evident, with references dating back to the first edition of the Ordnance Survey map in 1881, highlighting its enduring presence in the area. However, the contemporary effect of heavy traffic on the road, which serves as a primary link between Cressing and Witham, significantly influences the setting of the farmhouse. As a result, the setting of Newbarns Farmhouse makes a minor contribution to its overall value and does not extend to the draft Order Limits.
- 3.6.364 The **medium value** Grade II listed 'Little Russells' (**1337826**) is of historical and aesthetic value. The asset is located approximately 1.6 km south-east of the draft Order Limits, south of Sparrows Farm Road. The single-storey timber framed and thatched house dates to the 18th century, with 20th century alterations.
- 3.6.365 The setting of this asset is informed by its purpose as a post-medieval roadside dwelling within a rural agricultural landscape. It is characterized by several significant factors. It is prominently informed by its roadside location, yet thoughtfully set back from the road within a front garden, framed by a low hedge. This arrangement not only provides a buffer from the road but also enhances the property's visual appeal. 'Little Russells' is also closely linked to the heritage group formed by its proximity to three other listed buildings: Sparrows Farmhouse (**1123386**), Barn Approximately 30 Metres East Of Sparrows Farmhouse (**1308478**), And Complete Complex Of Farm Buildings East Of Sparrow's Farmhouse Excluding The Barn, Listed Separately As Item 5/152 (**1123387**). This association further contributes to its setting by preserving the historical context of the area. Beyond these structures, the asset is surrounded by agricultural fields, underscoring its rural character. In summary, the setting of 'Little Russells' makes a considerable contribution to the property's value, creating a cohesive and historically rich environment, although it does not extend to the draft Order Limits.
- 3.6.366 The **medium value** Grade II listed Westbourne Cottage (**1168239**) is of evidential, historical, and aesthetic value. The asset is located approximately 1.7 km north of the draft Order Limits and west of Witham Road. The single-storey timber framed cottage with attics dates to the 17th to 18th century. This building holds group value with the Grade II listed 'The Plough' (**1338146**), 'Plough Cottage' (**1122753**) and 'Greenacres' (**1168249**).
- 3.6.367 The setting of this asset is informed by its purpose as a post-medieval road-side cottage within a semi-urban roadside and semi-rural agricultural landscape. road-side dwelling within a rural agricultural landscape on the southern fringes of Cressing. The asset broadly remains within its original setting and the asset retains a historical relationship with this. The setting of the asset makes a moderate contribution to its value, but due to it being restricted to its roadside location and the immediate agricultural landscape, the setting does not extend to the draft Order Limits.

- 3.6.368 The Grade II listed 'Plough Cottage' (**1122753**) is located approximately 1.7 km north of the draft Order Limits, south of Witham Road. The two-storey timber-framed cottage dates to the 17th to 18th century. Similarly, the adjacent cottage of 'Greenacres' (**1168249**) to the east of Plough Cottage dates to the same period and shares the same construction method and aesthetics. They hold group value with 'Westbourne Cottage' (**1168239**) and 'The Plough' (**1338146**). These two assets are of historical and aesthetic value and have **medium value**.
- 3.6.369 The setting of these assets is informed by their presence as post-medieval semi-rural road-side cottages. It is characterized by several key elements such as their location along a busy road that connects Black Notley to White Notley. Both cottages are thoughtfully set back from the road and separated by front gardens, which not only create a visual buffer from the road but also contribute to their overall aesthetic appeal. Their setting is further informed by their historical relationship with each other and their proximity to the Plough public house (**1338146**) and Westbourne Cottage (**1168239**), reflecting the historical and social context of the Green settlement. Surrounding the cottages are agricultural fields, emphasizing the rural character of the area. In summary, while the setting of 'Plough Cottage' and 'Greenacres' makes a moderate contribution to the value of these assets by preserving their historical connections and rural ambiance, it does not extend to the draft Order Limits.
- 3.6.370 The **medium value** Grade II listed 'The Plough' (**1338146**) is of historical and aesthetic value. The public house is located approximately 1.8 km north-west of the draft Order Limits, north of Witham Road. The two-storey timber framed public house dates to the 17th century with 20th century additions and alterations. This building holds group value with 'Westbourne Cottage' (**1168239**), 'Plough cottage' (**1122753**) and 'Greenacres' (**1168249**).
- 3.6.371 The setting of this asset is informed by its presence as post-medieval semi-rural public house within a rural agricultural landscape. Its setting is informed by its location along a busy road that connects Black Notley to White Notley. It is set back from the road and separated by a tarmac area and a gravel yard. Its setting is further informed by its historical relationship with Westbourne Cottage' (**1168239**), 'Plough cottage' (**1122753**) and 'Greenacres' (**1168249**), reflecting the historical and social context of the Green settlement. Surrounding the house are agricultural fields, emphasizing the rural character of the area. Overall, the setting of 'The Plough' makes a moderate contribution to its value and does not extend to the draft Order Limits.
- 3.6.372 The **high value** Grade II\* listed 'United Reformed Church' (**1123410**) is of historical and aesthetic value and located within Terling Conservation Area (**CA4**). The church is located approximately 2.6 km south of the draft Order Limits and north of Church Road. The church was constructed between 1752 and 1753 and altered in the 19th century. The building is one storey and formerly had a gallery, externally appearing as a two-storey building. A recessed stone tablet over the door is inscribed '*Bvilded circa 1700, restored 1895*' with the former date being erroneous.
- 3.6.373 The setting of this asset is informed by its presence as post-medieval semi-urban ecclesiastical building within a conservation area. The church is slightly set back from the road, occupying a central location within the village. It is enclosed by other period properties, which creates an intimate and harmonious setting within the residential area. While the immediate setting exudes a residential character, the broader context is rural, encompassing the Terling conservation area (**CA4**) and the Terling Place RPG, both of which share a significant historical relationship with the asset. Near to the church is the Grade II\* All Saints' Church (**1123411**), strengthening its historical

connections within the local community. In summary, the setting of the United Reform Church makes a moderate contribution to its value, maintaining its historical significance and integration within the village, while not extending to the draft Order Limits.

- 3.6.374 The **high value** 'Terling Place' (**1123407**) is of historical, evidential and aesthetic value and is located within its large grounds on the southern edge of Terling and c. 2.6 km south-south-east of the draft Order Limits. The country mansion was built in 1772-73 by John Johnson for John Strutt M. P. and comprises a grey brick in Flemish bond structure with limestone dressings and slated roofs.
- 3.6.375 The setting of the asset is informed by its location with its large formal grounds, by its relationship with the Grade II\* Parish Church of All Saints (**1123411**) c. 180 m to the north and by its view across its formal gardens to the south and the former parklands beyond. The setting is further informed by the surrounding agricultural landscape, with which the asset has a historical relationship, and by the course of the river Ter which passes the asset to the west on an approximate north/south alignment. The former parkland appears to be under the plough or maintained for silage or hay, although the borders, woods, copses and tree belts reflect those recorded on the first edition OS map of 1881. The setting of the asset, therefore, makes a very considerable contribution to its value, but due to it being restricted to its grounds, former parkland and the immediate landscape, the setting does not extend to the draft Order Limits.
- 3.6.376 The **medium value** Grade II listed 'Dagnets Farmhouse' (**1122814**) and its associated barn (**1308637**) as well as the Grade II listed 'Wren Park Farmhouse' (**1122815**) are of historical and aesthetic value. The assets are located approximately 1.5 km north-west of the draft Order Limits along Dagnets Lane. The two-storey timber framed Dagnets house dates to the 17th century, with 18th century and later alterations. The house may also pre-date the 17th century and is recorded by the NHLE as a 'moated site' which suggests a potential medieval origin to settlement at this location. The timber framed and weatherboarded barn dates to the 16th century and was re-roofed in the 19th century. As for the Wren Park Farmhouse, it is a two-storey timber framed building dating between the 15th and 16th century with later alterations and additions and a two-storey 20th century gabled stair turret. The assets hold a heritage group value.
- 3.6.377 Their setting is defined by several significant factors. These properties are prominently located along the roadside within a farmyard. Their setting is informed by their historical and functional relationship with each other. Furthermore, their setting is enriched by the surrounding agricultural landscape, which has historical significance and functional connections to the assets. In summary, the setting of these assets makes a considerable contribution to their overall value, with a strong connection to their historical and agricultural context, even though it does not extend to the draft Order Limits.

#### *Non-Designated Heritage Assets*

- 3.6.378 Cropmark of linear field boundaries (**5104**), some of which can be seen on the OS first edition and could date to this period have been observed. The land parcel contains the draft Order Limits, approximately 225 m east of Fairstead Lodge Road. This asset is of evidential and historical value and of **low value**. Similarly **low value** undated cropmarks that may date to this period comprise:

- Cropmark of linear field boundaries, some of which can be seen on the OS first edition (**5105**) can be observed approximately 130 m south of the draft Order Limits and 220 m east of Fairstead Lodge Road.
- 3.6.379 A findspot of post-medieval pottery and coins (one Scottish King James VI coin and two 'Hans Krauwinkel' tokens) (**5154**) have been identified by metal detector within the draft Order Limits approximately 215 m north-east of the River Brain. This asset is of evidential and historical value and of **low value**.
- 3.6.380 A cropmark indicating the parish boundary between Witham and Faulkbourne (**5118**) may date to this period and is located approximately 80 m west of the draft Order Limits and 120 m west of the B1018. This asset is of evidential and historical value and of **low value**.
- 3.6.381 The Grade I listed Church of St. Etheldreda (**1147914**) is likely to date to the 11th century (**5047**) with later alterations and contains early medieval material within its fabric (**5046**), approximately 490 m north-west of the draft Order Limits at White Notley. Evidence of medieval to post-medieval wall paintings are recorded here (Rodwell and Rodwell, 1977). The church was renovated in the 19th century (**5048**), with a north vestry added in 1845. Further post-medieval evidence includes 17th century shields fixed to wall plates of the chancel roof, 17th century bells, late 16th to early 17th century-stained glass, a Stuart arms on the nave west wall, an 18th century floor slab and plaster on the chancel walls which include graffiti (*ibid.*). The post-medieval features of this church are of evidential, aesthetic, and historical value and of **high value**.
- 3.6.382 Multi-period activity (**5135**) has been identified during a large-scale archaeological evaluation carried out for Feering and Kelvedon Flood Alleviation Scheme approximately 540 m north-west of the draft Order Limits and 400 m south-west of Coggeshall. The evaluation identified post-medieval farmstead remains, in the form of brick foundation, demolition debris, pits, ditches, postholes, and possible yard surfaces. This corresponds to the location of Capon's Farm seen on mapping between 1721 and 1938 and may have its origins in the medieval period. Further post-medieval remains identified field boundary ditches which can also be observed on mapping from the 18th century onwards some of which were only backfilled in the modern period. Large post-medieval quarry pits have also been identified which also appear to have been backfilled in the late 19th to 20th centuries. This asset is of evidential and historical value and of **low value**.

## Modern

### Houchins Farm to B1024

No designated or non-designated heritage assets dating to the modern period are noted within either the draft Order Limits or study area.

### B1024 to B1018

#### *Non-Designated Heritage Assets*

- 3.6.383 An archaeological watching brief (**5001**) was undertaken in advance of a swimming pool at the medieval moated manor of Porter's Farm (**5069**). This site lies approximately 20 m north of the draft Order Limits and is immediately south of Park Gate Road. One recently backfilled modern boundary ditch was identified, however no features associated with the moated enclosure were found. This modern boundary ditch is of evidential and historical value and of **low value**.

- 3.6.384 Cropmark of a linear field boundaries a pond and trackway suggestive of nearby occupation have been identified on a land parcel within the draft Order Limits approximately 860 m west of Church Road (**5117**). This asset is of evidential and historical value and of **low value**.
- 3.6.385 Archaeological investigations at the scheduled monument of Cressing Temple (**1002122**) have identified multi-period activity approximately 30 m north of the draft Order Limits, and immediately east of the B1018. A modern period recreation of a 16th century style garden within the 16th century garden walls of the demolished 'Greate House' (**5035**) has been undertaken. Some features of the garden have been based on information discovered during an archaeological investigation of the garden, with some 19th and 20th century garden elements having also been retained. Small-scale excavations from 1990 onwards have added piecemeal information regarding Cressing Temple, having mainly identified post-medieval or modern period features which have not been outlined by the HER. The garden is of evidential, aesthetic, and historical value but as a modern recreation it is of **low value**.
- 3.6.386 RAF Rivenhall (**5239**) was constructed by the United States Army Air Forces (USAAF) and opened in 1942 during the height of WWII. The base was used by both the RAF and USAAF for various fighter command and bomber command units. The airfield strip itself was approximately 540 m north-west of the draft Order Limits at its closest point, with some land parcels associated with base ancillary buildings located within the draft Order Limits at their closest point. Post-WWII the airfield remained as a reserve base until it was finally closed in June 1956. The Marconi Company subsequently leased part of the airfield and within ten years had taken over most of the surviving buildings. Since then, the northern half of the former airfield has become a quarry (Bradwell Quarry), a majority of which has now been excavated in several field investigations, some of which identified modern period remains (Stait, 2007). The perimeter track of the airfield has been reduced to a single-track agricultural road. Agriculture fields have replaced the grass areas of the former airfield. A T-2 hangar survives to the south-west side of the airfield and there is a possibility that other buildings survive, such as the 12 dispersal buildings that have also been preserved around the hangar. A second T2 hangar also survives and although now surrounded by woodland, was the main technical site area. The type 12779/41, 15371/41 control tower was located on the main site at NGR TL2322063, now marked by wood and scrub land. The Station headquarters (SHQ), operations block (OPS) and four associated Nissen huts at NGR TL8258 2018 are also likely to be complete but are in an unknown condition. The dispersed sites were located to the south-east of the airfield. This asset is of evidential, communal, and historical value and of **medium value**. The following site locations associated with the airfield are noted by the HER within the study area:
- The no longer extant dispersed sleeping site two (**5024**) on the site of the former Cutley's Wood. The south-eastern-most corner of this site is located within the draft Order Limits and borders the draft Order Limits along its southern boundaries
  - The no longer extant dispersed sleeping site six (**5027**). The eastern and southern corners of this site are located within the draft Order Limits
  - The airfield sewage works (**5029**) approximately 15 m north-west of the draft Order Limits. This site is derelict, however the layout of the works can be observed on aerial imagery

- The no longer extant dispersed sleeping site three (**5025**) on the site of the former Upney Wood. This site is approximately 210 m north of the draft Order Limits
- The no longer extant dispersed site mess two (**5028**) approximately 180 m north of the draft Order Limits
- The no longer extant dispersed sleeping site one (**5026**) approximately 470 m north of the draft Order Limits
- The no longer extant dispersed WAAF site on the site of the former Storey's Wood (**5023**), approximately 410 m north-west of the draft Order Limits
- The no longer extant dispersed sleeping site five (**5030**) approximately 625 m north of the draft Order Limits
- The dispersed 'Polish Site' (**5032**) approximately 440 m north-west of the draft Order Limits, comprising of consisting of 10 buildings that remain extant on aerial imagery but are in an unknown condition
- The no longer extant dispersed sleeping site four (**5031**) approximately 750 m north of the draft Order Limits

3.6.387 A multi-period site has been identified through several investigations on the location of Rivenhall Airfield ahead of gravel extraction quarrying at Bradwell Quarry approximately 540 m north-west of the draft Order Limits, at Woodhouse Lane and 700 m north-east of Silver End at its closest point. Further modern period evidence within this land parcel includes post-medieval to modern period field boundary ditches. The ditches can be seen on the first three OS map editions (**5134**) have been identified during the investigations, with no post-medieval to modern ditches identified within the western-most field (ECC 2011).

## **B1018 to Fuller Street**

### *Non-Designated Heritage Assets*

3.6.388 A cast iron signpost dating between the 1920s and 1930s (**5193**) is located approximately 240 m north of the draft Order Limits near the junction of Ranks Green Road and Fairstead Road. The post was built by Maldon Iron Works and indicates the directions of the following settlements: Fairstead/ Terling/ Hatfield Peverel, White Notley/ Black Notley/ Braintree, and Ranks Green / Great Leighs. The post also indicates the location is within the parish of Fairstead. This asset is of evidential and historical value and of **low value**.

3.6.389 A former WWII period ammunition store (**5006**) has been identified at White Notley approximately 500 m north-west of the draft Order Limits and 35 m south-west of the Grade I listed Church of St. Etheldreda (**1147914**). The Nissen hut type ammunition shelter was located within an area of trees, south of the driveway to White Notley Hall and was likely used by the local Home Guard. The shelter was subsequently demolished by the military after the war ended. The ammunition store is of evidential and historical value and of **low value**.

## **Undated**

### **Houchins Farm to B1024**

### *Non-Designated Heritage Assets*

- 3.6.390 Aerial imagery has identified **low value** cropmarks of evidential value in the form of undated linear features and pits (**5091**) approximately immediately west of the draft Order Limits and immediately south-west of Feering Road.
- 3.6.391 Several undated potential linear features, a small rectangular enclosure, a curvilinear trackway, and several large rectangular pits (**5146**) have been identified on aerial imagery within a land parcel containing the draft Order Limits, immediately south and west of the River Blackwater. This asset is of evidential and historical value and of **low value**.
- 3.6.392 Archaeological monitoring of a gas pipeline project has taken place within the draft Order Limits at Langley Green and immediately east of Old Road. The monitoring revealed several parallel undated linear features of non-archaeological origin (**5145**), one of which contained pottery fragments. A Romano-British period crushed pot has also been recovered from the same land plot (**5143**) (McMaster, Fawn and Holbert 1974). This asset is of evidential and historical value and of **low value**.
- 3.6.393 The site of an undated drainage system associated with a water meadow has been suggested (**5130**) approximately 50 m north-west of the draft Order Limits and immediately north of the River Blackwater. This asset is of evidential and historical value and of **low value**.
- 3.6.394 An undated findspot (**5172**) has been identified approximately 300 m north-west of the draft Order Limits and 190 m east of the B1024. The artefact is a half log with two semi-circular depressions found ten feet (3 m) down within the bed of the River Blackwater.

## **B1024 to B1018**

### *Non-Designated Heritage Assets*

- 3.6.395 Undated field boundary cropmarks (**5127**) have been identified which do not appear on OS first edition mapping within the draft Order Limits and approximately 200 m north-west of Pantlings Lane. This asset is of evidential and historical value and of **low value**.
- 3.6.396 Undated cropmarks of possible field boundaries, two small enclosures and associated trackways (**5077**) have been identified within a land parcel containing the draft Order Limits approximately 10 m west of the Grade II listed Rook Hall (**1170991**) and immediately north of Hollow Road. This asset is of evidential and historical value and of **low value**.
- 3.6.397 Undated cropmarks suggestive of a possible trackway, ditches, small rectilinear enclosure, and quarry extraction pits (**5067**) have been identified within a parcel of land that just contains the draft Order Limits on its western-most corner, approximately 150 m west of the Grade II listed Ford Farmhouse (**1122614**). This asset is of evidential and historical value and of **low value**.
- 3.6.398 Archaeological investigations at the scheduled monument of Cressing Temple (**1002122**) have identified multi-period activity approximately 30 m north of the Order, and immediately east of the B1018. Undated cropmarks of a rectangular enclosure and periglacial features (**5074**) are recorded in the field north and east of the scheduled area have been identified, and if the enclosure is related to the scheduled monument, it could be of **high value**.
- 3.6.399 The **negligible value** field name of Old Camp Meadow (**5072**) is of evidential value and located approximately 170 m south of the draft Order Limits and 330 m north of

Rivenhall. The field is recorded on the Tithe Map of Essex 1848 and occupies high ground, however there is no recorded evidence of visible features.

- 3.6.400 Undated **low value** cropmarks of evidential value, comprising linear features, field boundaries, a pond, and a small quarrying area (**5119**) have been suggested approximately 650 m from the draft Order Limits and immediately west of Church Road. Further cropmarks including a north to south aligned linear feature, a former field division, and a possible metalled road have also been identified. There is the potential that these features may be associated with the Romano-British period scheduled villa (**1013831**) observed approximately 100 m to the east of this land parcel.

## **B1018 to Fuller Street**

### *Non-Designated Heritage Assets*

- 3.6.401 Undated field boundary cropmarks (**5101**) have been identified on aerial imagery on a parcel of land containing the draft Order Limits and immediately west of the B1018. An archaeological evaluation was undertaken associated with Cressing Solar Park at this location, however no archaeological features or deposits were identified despite the aerial imagery and a separate geophysical survey of the land parcel. The evaluation instead identified extensive periglacial geological formations. This asset is of evidential and historical value and of **low value**.
- 3.6.402 Undated cropmarks of a potential building, trackway, and linear ditch features (**5056**) have been identified on aerial imagery partially within draft Order Limits along its south-eastern and southern boundary. The land parcel is also immediately south-west of the draft Order Limits on its north-eastern boundary and approximately 280 m west of the B1018. This asset is of evidential and historical value and of **low value**.
- 3.6.403 Undated cropmarks of potential linear features and quarry extraction pits (**5098**) have been identified on aerial imagery within a land parcel containing the draft Order Limits immediately north of Church Hill (road). This asset is of evidential and historical value and of **low value**.
- 3.6.404 Undated cropmarks of potential field boundaries and a parish boundary (**5099**) have been identified on aerial imagery on a land parcel containing the draft Order Limits and immediately south of Pink Lane. This asset is of evidential and historical value and of **low value**.
- 3.6.405 Undated cropmarks indicating possible field boundaries (**5100**) have been identified on aerial imagery within the draft Order Limits immediately north and west of Fairstead Road. Similarly, undated cropmarks indicating possible field boundaries as well as rectilinear and curvilinear enclosures (**5102**) have also been identified on aerial imagery within the draft Order Limits immediately west of Fairstead Road. These assets are of evidential and historical value and of **low value**.
- 3.6.406 Aerial imagery has identified cropmarks within a field approximately 165 m north of the draft Order Limits and immediately north-east of Church Hill (road) in the form of indistinct undated linear features and pits (**5092**). Similar features have been observed between the draft Order Limits and the River Brain (**5093**). These assets are of evidential and historical value and of **low value**.
- 3.6.407 Multi-period activity (**5135**) has been identified during a large-scale archaeological evaluation approximately 540 m north-west of the draft Order Limits and 400 m south-west of Coggeshall. As well as a large amount of datable evidence of multi-

period human activity, the evaluation also identified a significant number of undated archaeological remains.

## 3.7 Section F: Chelmsford City Council

### Location

- 3.7.1 Section F of the Project is located wholly within the County of Essex and the District of Chelmsford. Section F begins at the Braintree/Chelmsford District border c. 2 km south-west of Marks Tey and heads generally south-south-west bypassing the settlements of Chatham Green, Little Waltham, Roxwell, Writtle and Margaretting. Section 6 terminates between Little Hyde Farm and Margaretting Hall Cottages on the Chelmsford/Brentwood District border. Section F of the Project accounts for approximately 20 km of its overall length.

### Topography

- 3.7.2 From the Braintree/Chelmsford District border at 60 m aOD, the draft Order Limits descends into the bottom of the Ter Valley at 43 m aOD. It then climbs back out of the valley to 52 m aOD before heading south-south-west through a gently undulating landscape between 52 m aOD and 61 m aOD to a Main Compound site at Sheepcotes Wood, 190 m east of the A131. The draft Order Limits crosses the A131 at 55 m aOD and then begins its decent into the Chelmer Valley between Great Waltham to the west and little Waltham in the east. The draft Order Limits crosses the river Chelmer at 33 m aOD before climbing the valley side to Ball's Farm off Lark's Lane at 55 m aOD. The draft Order Limits then passes through a gently undulating landscape between 55 m aOD and 63 m aOD before arriving at Bushy Wood at 55 m aOD c. 2.1 km north-east of Chignall St James. From here the topology gradually falls to a tributary of the Can Valley at 41 m aOD before rising again to 50 m aOD south of Chignall St James. The draft Order Limits then crosses the Can Valley at 33 m aOD before the landscape rises slightly to 40 m aOD only to descend into the Roswell Brook Valley at 35 m aOD, itself a tributary of the Can. The draft Order Limits then passes through a gently rising landscape to Lady Grove Woods at 62 m aOD. From here the landscape undulates between 51 m aOD and 68 m aOD as the draft Order Limits reaches Margaretting Road at 55 m aOD. The draft Order Limits then steadily climbs to the high point of Section 6 at 88 m aOD between Baker's Wood to the west and King Wood to the east. From here, the Order Limit descends to the floor of a tributary of the Wid Valley at 46 m aOD before rising again to 65 m aOD at the Chelmsford/Brentwood District border.

### Geology

- 3.7.3 The solid geology of Section F is dominated by clay, silt, and sand of the London clay Formation (BGS accessed 12/04/2023). At the southern limit of the Section deposits of clay, silt and sand of the Claygate Member and sand of the Bagshot Formation are recorded which coincide with the topographically highest portion of Section F near King Wood. As seen in previously in Section E, the superficial deposits are dominated by diamicton glacial tills of the Lowestoft Formation with variations to this deposit model seen in the valleys within Section F. The Ter and Chelmer Valleys contain mixed bands of glaciofluvial deposits of sand and gravel and head deposits of clay, silt, sand and gravel with alluvial clay, silt, sand, and gravel in the valley floors. The Can Valley and the Can tributary valley east of Chignall St James contain

head deposits of clay, silt, sand and gravel with alluvial clay, silt, sand, and gravel in the valley floors. Roxwell Brook Valley contains head deposits of clay, silt, sand and gravel, sand and gravel of the Kesgrave Catchment and alluvial clay, silt, sand, and gravel in the valley floor. From the Roxwell Brook Valley to the southern extent of Section 6, the dominant superficial diamicton glacial tills of the Lowestoft Formation are interrupted by bands of head deposits of clay, silt, sand, and gravel. The only exception to this being deposits of sand and gravel of the Stanmore Gravel Formation, which coincide with the high point of Section 6 at 88 m aOD.

## Historic Landscape Characterisation

- 3.7.4 Section F of the Project is in the District of Chelmsford and largely within National Character Area 86: South Suffolk and North Essex Claylands with the southern 25% of Section F located within National Character Area 111: Northern Thames Basin. National Character Area 86 is characterised by a high, boulder clay central plateau dissected by small-scale undulating river valley topography, whilst National Character Area 111 is characterised by the suburbs of North London, historic towns, and cities and in the Project, by moderately dispersed settlements, arable land, and river valleys (Natural England accessed 12/04/2023).
- 3.7.5 The Essex landscape of the South Suffolk and North Essex Claylands (NCA 86) and Northern Thames Basin (NCA 111) has been further divided, into Historic Environment Character Zones (HECZ) as defined in Section F by the Chelmsford Borough Historic Environment Characterisation Project (CBC and ECC 2010). At the Braintree/Chelmsford District border, the draft Order Limits enter HECZ 14.5: Ter Valley. This zone comprises the valley of the Ter river. Both slopes of the valley are of pre and post 18th century irregular enclosure which has suffered little boundary loss in the 20th century. In the valley base lies meadow pasture along the length of this zone which survives in very good condition. The settlement pattern comprises church/hall complexes and dispersed farmsteads, many of which have their origins in the medieval period. Both the northern and southern slopes of the Ter valley contain multi-period cropmarks and archaeological fieldwork has identified significant evidence of Bronze Age activity. The Roman road from Braintree to Chelmsford crosses the Ter Valley west of the draft Order Limits and, therefore, evidence of Romano-British activity may be expected in this area. The medieval period is represented in the zone by the church/hall complex of Great Leighs, at Lyons Hall south of the Ter, and the scheduled monument of Leez Priory. There is the potential for the preservation of environmental and palaeo-environmental deposits surviving in waterlogged deposits in the valley floor.
- 3.7.6 Heading to the south-west, the draft Order Limits then passes into HECZ 14.4: Land either side of the A131, which is a large zone on the boulder clay plateau. The surviving fieldscape is largely of pre 18th century irregular enclosure, although there has been some boundary loss. The zone is bisected by the Roman road from Chelmsford to Braintree, however, the road seems to have had little effect on the field pattern, suggesting the fieldscape may be of considerable antiquity. Several areas of Ancient Woodland survive which have the potential for surviving woodland earthworks. The historic settlement pattern comprises dispersed farmsteads many with their origins in the medieval period. There are also several medieval moated sites occupying the boulder clay plateau. Little archaeological work has been undertaken in the zone but the potential for surviving deposits is high.
- 3.7.7 Continuing south-west, the draft Order Limits then simultaneously passes in to both HECZ 13.2: Great Waltham and Deer Park to the north and HECZ 13.3: Chelmer

Valley, North of Chelmsford to the south. The Order Limit crosses a short section of HECZ 13.2: Great Waltham and Deer Park but is largely contained within HECZ 13.3. HECZ 13.2: Great Waltham and Deer Park is situated on the western slope of the Chelmer Valley and contains the listed 17th century house of Langleys and its associated parkland as well as the village of Great Waltham. The present estate has medieval origins along with much of the Ancient Woodland in the zone. Neolithic flints have been found in Great Waltham and extensive late Iron Age remains are recorded to the south of the zone with a hoard of gold coins found in Great Waltham. Roman material is known from close to the village and the medieval church contains Roman building material.

- 3.7.8 HECZ 13.3 Chelmer Valley, North of Chelmsford comprises largely of meadow pasture in the valley bottom adjacent to the River Chelmer and rising ground to the east and west. The historic settlement pattern is characterised by dispersed farmsteads either on or set back from the Braintree/Chelmsford Roman road frontage, or on the valley slope above the river Chelmer with a settlement focus on Little Waltham. Cropmarks are evident on the Chelmer Valley floor and on the rising sides, which likely comprise evidence of multi-period activity. Finds of Bronze age pottery suggest prehistoric activity and a major middle Iron Age settlement was excavated ahead of the construction of the Little Waltham bypass. Roman settlement and an associated cemetery close to the Roman road is known south of the village. The river valley has potential for the preservation of environmental and palaeo-environmental deposits surviving in waterlogged deposits.
- 3.7.9 The south-west of the Chelmer Valley the draft Order Limits passes in to HECZ 12.3: Chignall Smealy/Broads Green. This zones historic landscape largely comprises pre-18th century enclosure with some boundary loss after 1950. The historic settlement within the zone comprises the church/hall complex at Chignall Smealy and the Green at Broads Green with the remaining historic settlement pattern comprising dispersed halls, farmsteads, and moats. There is archaeological evidence of Palaeolithic and Mesolithic activity in the zone and the Bronze Age is represented by the excavated remains of a shrine, cremations, and a settlement at Broads Green. Scatters of late Iron Age and Roman pottery and building material has been identified at several sites and a scheduled Roman villa site is located to the west of Bury Farm 1.3 km north-west of the draft Order Limits. There are several medieval moated sites throughout the zone and cropmarks are visible, several of which may relate to activity from as early as the Bronze Age.
- 3.7.10 East of Chignall St James, the draft Order Limits passes simultaneously in to HECZ 12.5: Chignall St James and HECZ 11.1 Writtle. HECZ 12.5 centred on the area around Chignall St James and is bisected by the river Can. The historic fieldscape comprises pre-18th century irregular fields with some surviving boundaries likely of considerable antiquity. Meadow pasture existed on either side of the river Can, much of which survives in the southern part of the zone. The historic settlement pattern comprises the village of Chignall St James, Chignall Hall, dispersed farmsteads and moated sites. Although the zone has been extensively quarried, a significant part of the historic landscape survives, including the afore mentioned field boundaries and meadow pasture. Prehistoric activity is attested to by Mesolithic and Neolithic flintwork, and a scheduled Roman courtyard villa is located at Chignall St. James. Excavations adjacent to the villa have revealed evidence of a middle Iron Age settlement with continuous occupation into the late Roman period. Further finds of Roman material indicate more widespread Roman activity within the zone and there are several undated cropmarks complexes throughout the zone.

- 3.7.11 HECZ 11.1: Writtle lies to the west of Chelmsford and contains the historic village of Writtle. The fieldscape within this zone comprises a large area of pre-18th century irregular and irregular sinuous enclosure of possible Medieval or earlier in origin, with some post 1950's boundary loss. Strips of enclosed meadow pasture survive along each of the waterways throughout this zone. Several archaeological artefacts have been found in the zone ranging in date from the Palaeolithic to the Iron Age, and although there is a paucity of prehistoric settlement evidence, archaeological excavation has suggested a small Iron Age settlement to the north of the village green at Writtle. Romano-British settlement activity has been recorded at Sturgeons Farm north of Writtle and the Domesday Book records that Writtle had become a high-status royal estate by the late Anglo-Saxon period. The medieval period is represented the 13th century All Saints Church at Writtle, and the moated site of King John's Hunting Lodge situated to the north of the main medieval settlement within the grounds of Writtle College.
- 3.7.12 As the draft Order Limits passes through HECZ 11.1: Writtle, its western flank intrudes in to HECZ 12.6: Roxwell. This zone comprises the valleys of the Roxwell and Newland Brooks and contains the settlement of Roxwell. Both brooks retain enclosed meadow pasture along their length, whilst the remaining historic fieldscape comprises pre-18th century irregular enclosure, that despite some post-1950s boundary loss, retain surviving boundaries that may have medieval origins. Small blocks of Ancient Woodland survive, and the historic settlement pattern comprises the village of Roxwell with dispersed moated and un-moated farmsteads and halls. A series of cropmarks located close to the main watercourses include trackways, linear features, pits, and ring ditches. The ring ditches suggest Bronze Age burial barrows and it is probable that other cropmarks are of a similar date.
- 3.7.13 As the draft Order Limits turns to the south-east west of Writtle, it passes in to HECZ 11.3: Zone south of Writtle. The zone forms part of the larger Royal Manor of Writtle. The fieldscape comprises pre-18th century irregular enclosure which has suffered some 1950's boundary loss. The layout of the fields shown on the first edition Ordnance Survey map in the centre of the zone, indicate the potential boundary of an earlier possible park or woodland. The field pattern within this area is distinctly different to the remainder of the irregular enclosure in the zone. The historic settlement pattern comprises dispersed farmsteads, some of which dates back to the medieval period. The zone contains two medieval moated sites and there are undated linear cropmarks.
- 3.7.14 Turning south-south-west, the draft Order Limits passes in to HECZ 11.4: Writtle Forest and Deer Park. This zone forms an element of the greater Medieval Royal Manor of Writtle comprising the Royal Forest and Deer Park, located 300 m west of the draft Order Limits. The forest contains many surviving earthworks both associated with the forest as well as of an earlier date. The woodland landscape of enclosed coppices with areas of common and wood pasture, with scattered hamlets, was likely to have been established by the early 1100s. Writtle Park is shown on the Chapman and Andre map of 1777 and the Park Pale can be traced on the ground for almost its entire length. The historic settlement pattern comprises dispersed farmsteads some with moats. Prehistoric flintwork has been recovered from Writtle Forest and an earthwork enclosure within the forest has been evaluated by excavation and shown to be of late Iron Age/Roman date. The remains of a medieval chapel survive within the forest along with at least four medieval and post-medieval brick and tile kilns. Further recorded sites include a medieval moated site, a section of holloway, post medieval sawpits, and an 18th century dovecote.

- 3.7.15 Continuing to the south-south-west and the Chelmsford/Brentwood District border, the draft Order Limits passes in to HECZ 11.5: Land to the North of Margaretting. The zone lies to the south of Writtle Park and comprises a mixed landscape largely originating as pre-18th century irregular enclosure containing a single medieval green and small areas of Ancient Woodland. There has been field boundary loss throughout the zone since the 1950s. The historic settlement pattern comprises a single Green at Handley Green and dispersed farmsteads some of which dates back to the medieval period. Archaeological remains in the zone are scarce, but a Roman road passes through the extreme east of the zone and a mill mound is noted to the north, which may be medieval in origin. Cropmarks probably relating to post medieval field boundary loss are also visible.
- 3.7.16 As the draft Order Limits reach the Chelmsford/Brentwood District border its eastern flank intrudes in to HECZ 10.1: Wid Valley. The fieldscape comprises largely pre-18th century irregular enclosure with some surviving areas of meadow pasture close to the river and small areas of historic woodland. The settlement of Margaretting is located on its western side, 580 m east of the draft Order Limits, and comprises a polyfocal settlement with a church and manor complex. The remainder of the historic settlement pattern comprises dispersed farmsteads and moated sites. Prehistoric flint artifacts have been reported throughout the Wid Valley and limited fieldwork has identified material of late Iron Age, Roman and Saxon date including a coin hoard from the late 3rd century, suggesting settlement along the valley sides. The bottom of the valley is likely to contain significant environmental deposits.
- 3.7.17 The landscape of Essex is broken down further into smaller parcels described as Historic Landscape Character Types and defined in *The Historic Landscape Characterisation Report for Essex, Volume 2* (Bennet 2011). The HLC Type data has been supplied by the Essex HER and analysis of it has shown that, in Section 6, the Construction Zone passes through a landscape largely defined by **low value** areas of common post 1950s boundary loss, which accounts for 21.45% of the Essex landscape (Bennet 2011). Also included within the bounds of the Construction Zone in Section F are dispersed parcels of **low value** 20th century enclosure, built-up areas - urban development and a water reservoir.
- 3.7.18 Elsewhere within the Construction Zone in Section F there are parcels of:
- Rare **medium value** Enclosed Meadow (HEX3103, HEX3204, HEX20493, HEX20351, HEX11578, HEX12081, HEX20367, HEX11503, HEX11508, HEX11532, HEX11462, HEX21042, HEX21054, HEX20970), which accounts for 1.69% of the Essex landscape (Bennet 2011). These are sinuous fields that border rivers, often forming part of the flood plain of the river. Many of these areas were established in the medieval period
  - Rare **medium value** Ancient Woodland (HEX16923, HEX34229, HEX11446, HEX16909, HEX16910), which accounts for 2.54% of the Essex landscape (Bennet 2011). Ancient Woodland is defined by Natural England (2018) as 'land that has had a continuous woodland cover since at least 1600 AD'. The predominant species are deciduous, broad-leaf trees and shrubs. In the Essex HLC, this category also includes traditional wood-pasture, such as seen at Hatfield Forest, where single or small groups of pollarded trees occur in pasture alongside small coppice-with-standards managed woodlands
  - Rare **medium value** Irregular Sinuous Enclosure (HEX23917, HEX23934, HEX23933, HEX11509, HEX11389), which accounts for 2.74% of the Essex landscape (Bennet 2011). These fields have parallel edges which are sinuous, being in a similar orientation, but moving towards and away from each other, with

short boundaries cutting across. They appear like co-axial fields, but without the parallel sides. This field type predates the earliest cartographic evidence and probably originate in the medieval period

- Rare areas of **medium value** Boundary Loss – with relict elements (HEX34201, HEX34027, HEX34011, HEX29524, HEX29531, HEX33015), which account for 2.07% of the Essex landscape (Bennet 2011). These represent field boundary loss since the 1950s due to mechanisation and changes in agricultural practices. This may range from the loss of a single boundary merging two fields into one, or many field boundaries being removed to form a single field. The resultant field is a hybrid and palimpsest, with edges that may have several periods of origin. The surviving edges of these fields are of historic value
- Occasional **low value** Piecemeal Enclosure by Agreement (HEX34099, HEX3116, HEX3162, HEX23916, HEX23909, HEX23911, HEX20495, HEX20494, HEX20564, HEX20732, HEX21053), which accounts for approximately 8.97% of the Essex landscape (Bennet 2011). These fields were created to subdivide a pre-existing earlier field system and are characterised by straighter boundaries. Dating of origin is difficult but they usually predate the introduction of the later formal Parliamentary Enclosure Acts, and thus may relate in certain parishes to the earlier acts of enclosure
- Common **low value** Pre-18th Century Irregular Enclosure (HEX2658, HEX3073, HEX3106, HEX3107, HEX34202, HEX3114, HEX23927, HEX23941, HEX23932, HEX23935, HEX20492, HEX12096, HEX12095, HEX20471, HEX20469, HEX8694, HEX20366, HEX11402, HEX11387, HEX11390, HEX11465, HEX11466, HEX11470, HEX11338, HEX11425, HEX21033, HEX21035, HEX21037, HEX21040, HEX20962, HEX21023, HEX21104), which accounts for 17.69% of the Essex landscape (Bennet 2011). These are irregular enclosures vary considerably in size and shape, forming both arable and pasture with sinuous edges and offset corners. They are probably the result of piecemeal enclosure and may originate from the medieval period or earlier

## Conservation Areas

- 3.7.19 The Great Waltham conservation area (**CA55**) covers 85.3 ha and is in the civil parish of Little Waltham, within the northern part of the Chelmsford District, and lies on the northern edge of Chelmsford, the center of which is located approximately 5 km to the south. The conservation area is located immediately to the north-west of the draft Order Limits and at its closest point, the Little Waltham conservation area lies 210 m to the south-east. Chelmsford Road, which runs through the middle of the conservation area and joins the B1008 in the south at Little Waltham and Howe Street in the north, is the main access road to the area. The river Chelmer runs along the eastern boundary of the conservation area.
- 3.7.20 The conservation area of Great Waltham is of **medium value** owing to its evidential, historical, and aesthetic value. The conservation area also derives value from its associative historical value with figures that were prominent in English landscape and architectural design in the 18th century.
- 3.7.21 The conservation area contains 31 listed buildings, comprising two Grade I, two Grade II\* and 27 Grade II listed assets. A large part of the conservation area is the Langleys Grade II Registered Park and Garden, and this naturally divides the conservation area into two parts: the Registered Park and Garden in the east, and the historic settlement that flanks Chelmsford Road and Main Street to the west.

- 3.7.22 In the west the main settlement of Great Waltham is situated along Chelmsford Road and centred in the north of the area where Chelmsford Road sharply curves to the west and forms a junction with South Street and Barrack Lane. This part of the settlement around the road is likely to be medieval in origin and forms the historic core of the village and contains 27 of the listed buildings. There is a cluster of three Grade II listed buildings that flank Chelmsford Road in the southern extent of the conservation area. To the east of the conservation area is some 20th century modern development, this type of development also infills a central gap between the eastern and western part of the conservation area. To the north is open farmland with scattered farmsteads. To the south is also open farmland that gives this part of conservation area a more rural feel.
- 3.7.23 In the east, the conservation area comprises entirely of Langley's Registered Park and Garden, which dominates most of the conservation area and takes up approximately 75.9 of the 85.3 designated hectares. This area also includes three Grade II and one Grade I listed buildings, which are all within the Registered Park and Garden. The shared parkland and conservation area boundary stretches north far past the settlement of Great Waltham to the village of Howe Street where it is bounded by Main Road to the west and north and Chatham Hall Lane in the east. This part of the conservation area looks out onto open farmland with some scattered settlement to the east, however it is bordered by the village of Howe Street to the north and the denser settlement of Little Waltham and its conservation area to the south.
- 3.7.24 The setting of the conservation area is informed by the two distinct character areas: the streetscape and the listed country house, gardens, and parklands. The Great Waltham streetscape included in the conservation area comprises Chelmsford Road, South Street, Barrack Lane, and Main Road and these thoroughfares constitute the fossilised medieval street plan focused on Grade I listed 12th century Church of St Mary and St Laurence. The setting of this section of the conservation area is informed by views along these thoroughfares, by the interrelationships between the listed assets and by their relationships with the post medieval and early modern non-designated buildings that positively contribute to the character of the conservation area. Much of this section of the conservation area is enclosed by modern development to the south and west and by Langley's parkland to the north, there are, however, more open views to the north from Main Road and the south-east from Chelmsford Road. At the northern extent of the village on Main Road the view to the north includes a portion of the conservation area parkland to the east, but to the west there are open views of agricultural land, which includes the Walthamby Brook and the Grade II listed Waltham Bury Farmhouse (**1171598**). To the south-east, the conservation area extends along Chelmsford Road to include outlying characterful designated and non-designated buildings beyond the built-up village, and it terminates just within the draft Order Limits. This section of the conservation area includes views of the south-eastern extent of Langley's parkland, views to Little Waltham in the east and views of agricultural land to the south-west and the north-east, the latter of which includes the Chelmer river.
- 3.7.25 The setting of the country house, gardens and parkland section of the conservation area is informed by the intrinsic link between the house, its grounds, and its outbuildings and by the relationship between the country estate and the village of Great Waltham immediately to the south. This section of the conservation area almost entirely matches the extent of the parkland, and so shares its setting with the house being very much the focus of this artificial landscape. The house and gardens are located on raised ground at the heart of the parkland. The parkland and its

prescribed routes would have been designed to reveal attractive vistas of the parkland, the house and both combined as guests of the estate walked, rode, or took carriages along the routes. Unusually for this class of asset, the parkland is defined by low fence lines and hedgerows rather than the often-seen tree belts. This has resulted in open views in and out of the conservation area and parkland emphasising its relationship with the agricultural landscape beyond. This more outward looking aspect of the parkland conservation area is exemplified by the view from the east-north-east facing rear elevation of the house. From here, the planted and lawned garden channel the view out over the Chelmer river, which now defines the border of the parkland, to the Grade II listed Chatham Hall (**1338512**), which stood at the former eastern limit of the parkland recorded on the first edition OS map of 1881.

- 3.7.26 The setting of the Great Waltham conservation area, therefore, makes a considerable contribution to its value and due to its beneficial views over the Chelmer river valley to the south-east, through which the Project passes, the setting extends to the draft Order Limits.
- 3.7.27 The Little Waltham conservation area (**CA56**) covers 26.3 ha and is in the civil parish of Little Waltham, within the northern part of the Chelmsford District, and lies on the northern edge Chelmsford, the center of which is located approximately 5 km to the south. The conservation area is located immediately to the south-east of the draft Order Limits and south-east of the Great Waltham conservation area, which includes a registered park and garden. Approximately 0.35 km to the east is the dualled A131 Essex Regiment Way and immediately to the west is the B1008 which provide access to the conservation area. The river Chelmer runs north-west/south-east through the western part of the conservation area before crossing it and heading to the south-east.
- 3.7.28 The conservation area of Little Waltham is of **medium value** owing to its evidential, historical, and aesthetic value. The village became a significant medieval settlement whose street plan is still evident. The conservation areas value is also greatly contributed to by its aesthetic value derived from the area's great examples of extant vernacular building styles typical to the south-east of England and that have been relatively untouched by modern infill.
- 3.7.29 The conservation area contains 33 Grade II Listed Buildings and can be divided into 2 areas: the north and south.
- 3.7.30 In the north the settlement of Little Waltham is situated along The Street, the main thoroughfare that runs north-north-east/south-south-west through the conservation area. This linear settlement, medieval in origin, forms the historic centre of the village and contains 29 of the Grade II listed buildings. The Street crosses over the river Chelmer via a bridge in the south where a cluster of older listed buildings are situated, notable is a rare Essex example of a Wealden Hall House that has now been divided into three cottages). A second cluster of listed buildings is located on the northern part of The Street close to a large grassy area in the east now used as playing fields. The settlement of The Street backs onto open land/fields to the north-west and south, however in the east the older settlement and playing field sits adjacent to some modern 20th century development that is not included within the conservation area.
- 3.7.31 In the south, the conservation area includes a large area of open land in the Chelmer valley and beyond that to the east is the Grade II listed Church of St Martin and three other Grade II listed assets comprising The Old Rectory, Little Waltham Hall and a timber framed cottage known as Hulmans. These four assets form a listing group as identified by Historic England, and the settlement pattern evidence indicates they

represent one of the scattered medieval farmsteads/ manors that characterise the landscape. This part of the conservation has a more open feel with wider spaced properties giving way to agricultural land.

- 3.7.32 The setting of the Little Waltham conservation area is informed the streetscape of The Street and its designated assets, a section of the Chelmer river and the local environs of the Church of St Martin. To the north, The Street is flanked by non-designated 19th century houses, 20th century bungalows and the Little Witham Sports and Social Club, which, based on cartographic evidence, was once the village's Drill Hall. Moving southwards, the first listed asset encountered is the White Hart Inn and from here the throughfare is lined by attractive designated and non-designated largely post medieval buildings. These buildings and characterful 20th century additions follow the local vernacular, complimenting each other and providing attractive, unspoiled streetscape vistas. The Street follows a bridge over the Chelmer river where rivers of the watercourse to the north-west and south-east emphasises the settlements link to the river and to the flanking agricultural and pastoral landscape. Over the river, the conservation area follows the route of the Street as it turns towards the west and where it is again flanked by attractive designated and non-designated post medieval housing.
- 3.7.33 The central portion of the conservation zone contains a section of the Chelmer river flanked by open ground, which, based on satellite imagery, appears to be exploited for silage and grazing. The setting of the conservation here is informed by its relationship with the village to the west, the probable subsumed hamlet around the church to the east and river itself, which would have been a major influence in the siting of the settlement when it was originally founded.
- 3.7.34 The eastern focus of the conservation area is around the Church of St Martin and the associated characterful designated and non-designated post medieval building to the north and south of Brook Lane that positively contribute to the character of the conservation area. Also included is a fishpond with tree lined banks to the south of Brook Lane and that is recorded on the first edition OS map of 1881. The setting on the conservation here is rather insular in nature due to the large grounds of the church and the mature gardens of the housing around, which are defined by mature tree lined hedgerows and contain scattered mature tree cover.
- 3.7.35 The setting of the Little Waltham conservation area, therefore, makes a considerable contribution to its value and due to its beneficial views over the Chelmer river valley to the within the conservation area and outwards to the north-west and the route of the Project, the setting extends to the draft Order Limits.
- 3.7.36 Broomfield conservation area (**CA60**) is a small asset covering just over 4.5 ha of the settlement focused on the Grade II\* listed late 11th century Church of St Mary the Virgin (**1338425**). The conservation area includes the fossilised medieval street plan defined by the thoroughfares Main Road and Church Grove and the extant Church Green open space. At its closest point, the conservation lies 1.2 km east of the draft Order Limits.
- 3.7.37 As well as the medieval church, the conservation area contains the Grade II listed medieval Broomfield Hall (**1122188**) and a further six post medieval Grade II listed buildings variously located on the western flank of Main Road and north and south of Church Grove. The post medieval assets have, however, been scoped out from inclusion in this report due to their restricted settlement settings. The conservation area is of **medium value** based on its designation and its evidential, historical, and aesthetic value.

- 3.7.38 The setting of the conservation area is informed by the interrelationships between the listed buildings and by their relationships with non-designated post medieval and early modern buildings that make a positive contribution to the character of the conservation area. Key views are those around the Church Green taking in the picturesque open space lined by listed buildings and characterful non-listed assets, but perhaps preeminent is the view from the church to the Church Green to east. The later 20th and 21st century expansion of Broomfield has largely enclosed the conservation area, almost entirely removing the agricultural landscape, with which the core of the settlement had a historic relationship, from its setting. The link to the rural landscape is, however, maintained along the western edge of the conservation area where views out over agricultural land are possible from the church graveyard. The largely insular nature of the conservation area's results in its setting making a considerable contribution to its value, but due to distance and the topology, mature tree lined hedgerows and development of the intervening landscape, the setting does not extend to the draft Order Limits.
- 3.7.39 Roxwell conservation area (**CA59**) is a small asset covering 6.33ha of the settlement focused on the fossilised medieval thoroughfare of The Street and the 14th century Grade II\* listed Church of St Michael and all Angels (**1235784**). The conservation area does, however, include the Grade II listed Dukes House (**1264894**) and its associated complex of outbuildings. The Street runs approximately parallel to Roxwell Brook to the north and is situated on slightly higher ground above the valley bottom. The Dukes House complex also occupies slightly higher ground on the northern flank of the valley. An draft Order Limits pipeline lies 540 m south-east of the eastern extent of the conservation area, whilst the draft Order Limits lies 1.3 km to the east-south-east.
- 3.7.40 As well as the church and Dukes House, the conservation area contains a Grade II listed medieval timber frame building and a further eight post medieval Grade II listed buildings. These assets are variously located on the northern and southern flanks of The Street and to the south of the church, and other than the church, Duke House and three of the post medieval assets, they have been scoped out from inclusion in this report due to their restricted settlement settings. The conservation area is of **medium value** based on its designation and its evidential, historical, and aesthetic value.
- 3.7.41 The setting of the conservation area is informed by the interrelationships between the listed buildings and by their relationships with non-designated post medieval and early modern buildings that make a positive contribution to the character of the conservation area. The setting is also informed by the narrow strip of pastoral land in the bottom of the Roxwell Brook valley. Key views are those along The Street incorporating the church and other characterful buildings and the view across the valley to and from the Dukes House complex. The listed buildings and non-designated dwelling along the norther flank of the street are a single plot deep and so the conservation area retains its link to the surrounding agricultural landscape with assets within have a historical relationship. The setting of the conservation area, therefore, makes a considerable contribution to its value, but due to distance and the topology, mature tree lined hedgerows and development of the intervening landscape, the setting does not extend to the draft Order Limits.
- 3.7.42 Writtle conservation area (**CA58**) covers 14.7 ha and largely encompasses the extent of the settlement recorded on the first edition OS map of 1881. The OS mapping records the fossilised medieval street plan around Writtle Green including The Green, Church Lane, St Johns Green, and St Johns Road. From The Green and the 12th century Grade II\* listed Church of all Saints (**1237229**) the conservation area extends

to the east along the southern flank of Bridge Street to its eastern extent on the banks of the Wid river. At its closest point, the conservation area lies 1.7 km east of the draft Order Limits.

- 3.7.43 As well as the medieval church, the conservation area contains a Grade I listed medieval house, three more Grade II listed medieval buildings, 35 Grade II listed post medieval buildings and a Grade II listed water pump. These assets are variously arranged around Writtle Green, St Johns Green, Bridge Street and the junction of Lodge Road and Romans Place. Except for the church, however, these designated assets have been scoped out from inclusion in this report due to their restricted settlement settings. The conservation area is of **medium value** based on its designation and its evidential, historical, and aesthetic value.
- 3.7.44 The setting of the conservation area is very much insular as, other than at its eastern extent at the Wid river, it is hemmed in by 20th century residential development. The setting of the conservation area is informed by the interrelationships between the listed buildings and by their relationships with non-designated post medieval and early modern buildings that make a positive contribution to the character of the conservation area. The key views are those along the thoroughfares defining Writtle Green, from within the Green to the encircling characterful buildings, around the much smaller St Johns Green, and around the church and Romans Place in the south. The setting of the conservation area, therefore, makes a considerable contribution to its value, but due to its insular nature created by the surrounding later development, the setting does not extend to the draft Order Limits.
- 3.7.45 Margaretting conservation area (**CA57**) covers 36 ha and encompasses: Main Road from Ottley Place in the north-east to The Red Lion in the south-west; the Peacock Estate and Parsonage Farm to the south-east of Main Road; and Peacocks Homestead, a model farm, and Evelands Hall to the north-west of the thoroughfare. At its closet point, the conservation area lies 400 m east-south-east of the draft Order Limits. The as well as the non-designated parkland and model farm noted above, Margaretting conservation area contains seven Grade II listed post medieval buildings and a modern Grade II listed war memorial. The conservation area is of **medium value** based on its designation and its evidential, historical, and aesthetic value.
- 3.7.46 The conservation area is focused on the green space of the Peacock Estate parkland and Parsonage Farm combined, and includes the non-designated Peacocks Homestead model Farm, and Evelands Hall north of Main Road and a portion of the thoroughfare itself. The setting of the parkland is almost entirely insular as views in and out are extremely rare and broken by vegetation if glimpsed at all. Parsonage Farmhouse enjoys one of the very few external views out of the conservation area, but it is interrupted by the railway. The building stock along Main Street is largely in the local vernacular, complimenting the few, scattered listed buildings although there is limited intervisibility as many buildings are set back from the road amid large, mature garden with tree cover. Likewise, views of Peacock Homestead, which in part has been converted into domestic dwellings, are partially screened from the road, whilst Eveland Hall and associated buildings cannot be seen at all from Main Road due to extensive tree cover within its grounds. The setting of the conservation area, therefore, is somewhat disjointed and so makes a moderate contribution to its value, but due to its largely insular nature, and the intervening A12 dual carriageway, located between the conservation area and the draft Order Limits, the setting does not extend to the draft Order Limits.

## Baseline Introduction

- 3.7.47 The following historic environment baseline for Section F of the Project is presented by chronological archaeological period and from north to south. Section F is further broken down into geographic parcels to allow the reader to orientate and to locate where on the appropriate figure a particular heritage asset is illustrated. These geographic parcels are largely defined by current settlements but also occasionally by landscape features such as high points and valleys and by anthropogenic features such as roads and railways. Each parcel of Section F is introduced and described only in the first archaeological period where it is appropriate to be used to avoid repetition.

## Prehistoric Period

### General

#### Fuller Street to Little Waltham

- 3.7.48 Fuller Street is a small village located on the northern boundary of Section F. The settlement is located at the head of a shallow tributary valley of the Ter river at c. 44 m aOD with the river c. 500 m to the south at c. 38 m aOD. Little Waltham lies c. 4.7 km to the south-east in the Chelmer Valley at c. 36 m aOD. The intervening landscape includes a higher ridge of land up to c. 68 m aOD aligned approximately north/south. The landscape is largely agricultural in nature with scattered churches, hamlets, farmsteads, cropmark complexes and findspots.

#### *Non-Designated Heritage Assets*

- 3.7.49 Cropmarks of a ring ditch, pit and ditch which may be prehistoric in date have been identified at Lyons Hall (**6022**). The field is situated approximately 360 m south-east of the draft Order Limits, immediately north of Goodmans Lane and west of St Mary's Church and Cole Hill. The site is of evidential value and has **low value**.

#### Little Waltham to Chignall St James

- 3.7.50 Little Waltham is a small town situated in the Chelmer Valley at c. 36 m aOD. The larger settlement of Great Waltham is located on higher ground at c. 48 m aOD 8600 m to the north-west. The village of Chignall St James lies c. 4.6 km to the south-west on ground at c. 51 m aOD with the Can river valley at c. 37 m aOD 380 m to the west. The intervening landscape includes a higher ridge of land up to c. 66 m aOD aligned approximately north/south. The landscape is largely agricultural in nature with scattered churches, villages, hamlets, farmsteads, cropmark complexes and findspots.

#### *Non-Designated Heritage Assets*

- 3.7.51 A **low value** cropmark complex (**6030**) of historical and evidential value is located on the northern outskirts of Little Waltham c. 45 m south-east of the Order Limit. The cropmarks likely represent three ring or penannular ditches partly masked by geological and periglacial features. Although undated, their morphology suggests the remains are prehistoric.
- 3.7.52 Cropmarks including an enclosure, rectilinear enclosure, curvilinear enclosure, linear feature, and possible annexe enclosure identified as prehistoric have been observed to the north of Stacey's Farm (**6039**). The site comprises two fields approximately 30 m east of the draft Order Limits and 500 m to the west of the town of Broomfield. A

prehistoric worked flint (**6121**) has been recovered from the northern field. The site itself contains a south-west to north-east aligned draft Order Limits access road at its northern corner. This site also contains multi period field boundaries most probably relating to the post medieval period. The assets are of evidential value and have **low value**.

- 3.7.53 Two findspots (**6119** and **6120**) to the south of Dragonsfoot field that is partly located within the draft Order Limits, approximately 250 m west of the settlement of Broomfield, have identified some prehistoric worked flint. These findspots are located immediately to the north of a west/east aligned access road within the draft Order Limits. The assets are of evidential value and have **low value**.
- 3.7.54 A findspot at Montpelier Farm (**6123**) comprises some possible prehistoric worked flint. The site is located approximately 8600 m south-east of the draft Order Limits with Blasford Hill to the east and Broomfield to the south. The asset is of evidential value and has **low value**.
- 3.7.55 Fieldwalking at Broomfield Hospital (**6141**) recovered prehistoric burnt flint. The findspot is located c 180 m east of the draft Order Limits at Blasford Hill, to the north-west of the settlement of Broomfield. The fieldwork was carried out prior to expansion of the hospital site and the development of the Broomfield Mental Health Unit. The site has now been built upon and is covered by mixed development. The site is of evidential value and has **low value**.

## Chignall St James to Writtle

- 3.7.56 The small village of Chignall St James is situated on land at c. 51 m aOD with the Can river valley at c. 37 m aOD 380 m to the west. The small town of Writtle lies c. 3.4 km to the south-south-east on the western flank of the Wid river valley at c.52 m aOD with the river on the eastern edge of the settlement at c. 28 m aOD. The intervening landscape includes a north/south aligned ridge of higher land up to c. 45 m aOD with the Can river valley at c. 32 m aOD to the west and an un-named valley to the east at c.33 m aOD. The landscape is largely agricultural in nature with scattered churches, villages, hamlets, farmsteads, cropmark complexes and findspots.

### *Non-Designated Heritage Assets*

- 3.7.57 The cropmarks of two ring ditches with internal features and linear ditches (**6007**) are recorded on land partially within the draft Order Limits and c. 1.2 km north-west of Writtle. The assets have not been excavated and so remain undated, but the Selected Heritage Inventory for Natural England (SHINE) suggests the ring ditches are of prehistoric date, whilst some of the linear features are likely post medieval field boundaries. The cropmarks have evidential value and are of **medium value** if related to settlement or funerary activity.
- 3.7.58 The cropmark of a large 45 m diameter circular enclosure (**6046**) is located on land to the west of Brickbarns Farm on the north-western outskirts of Chelmsford and on the southern flank of an draft Order Limits access road. The asset has not been excavated and so remains undated, but the SHINE suggests the feature is of prehistoric date. The site has evidential value and is of **medium value** if related to settlement or funerary activity.

## Palaeolithic

### Little Waltham to Chignall St James

#### *Non-Designated Heritage Assets*

- 3.7.59 A findspot at Dragonsfoot Field (**6118**) identified a heavily painted, Achueulian cordate hand axe of the Palaeolithic period. This findspot is most probably linked to an east/west scatter of Palaeolithic artefacts in the south of the same field, including another late/middle Acheulean ovate hand-axe (**6129**) and a flint scrapper (**6130**). The HER records two further prehistoric worked flint findspot (**6119** and **6120**) in this area. Although the findspots themselves are just outside the draft Order Limits to the east, the westerly section of the field in which they are located is partly within the draft Order Limits. The field is approximately 250 m west of the settlement of Broomfield, just south of Partridge Green, and the findspots are located immediately to the north of an east/west aligned draft Order Limits access road. The site is of evidential value and has **low value**.

## Mesolithic

### Little Waltham to Chignall St James

#### *Non-Designated Heritage Assets*

- 3.7.60 A findspot at Ash Tree Corner (**6138**) constitutes a scatter of Mesolithic and other flints over an area of roughly 4,500 sqm. These were identified through excavations carried out between 1970-71 in advance of the B1008 Little Waltham by-pass. The area in which these finds were situated is located between the south-easterly boarder of the draft Order Limits and western side of the settlement of Little Waltham. A large part of the area is made up of agricultural land, however, the south-east section has been developed with the expansion of the settlement of Little Waltham and the creation of the B1008 by-pass. The asset is of evidential value and has **low value**.
- 3.7.61 An unspecified Mesolithic find (**6112**), likely a diagnostic flint, was found on land at Ash Tree Corner, Little Waltham. The findspot is located c. 80 m south-west of the B1008 Little Waltham by-pass excavations noted above. The asset has evidential value and is of **low value**.

## Neolithic

### Little Waltham to Chignall St James

#### *Non-Designated Heritage Assets*

- 3.7.62 The excavations at Ash Tree Corner, carried out between 1970-71 in advance of the B1008 Little Waltham by-pass, identified multi-period archaeological remains including an early Neolithic pit, hearth and postholes which contained worked flints including a diagnostic leaf-shaped arrowhead, laurel leaf and scraper (**6033**). The area in which this record is situated is located between the south-easterly boarder of the draft Order Limits and western side of the settlement of Little Waltham. A large part of the area is made up of agricultural land, however the south-east section has been developed with the expansion of the settlement of Little Waltham and the creation of the B1008 by-pass. The Neolithic remains are of evidential value and are of **low value**.
- 3.7.63 Neolithic pottery (**6144**) has been found at Border Wood, approximately 150 m south-west of the draft Order Limits and 350 m south-east of Margaret Woods Road. The asset is of evidential value and is of **low value**.

## Chignall St James to Writtle

### *Non-designated Heritage Assets*

- 3.7.64 A findspot at Reeds Farm (**6128**) comprises a small Neolithic flint pick. The findspot is located immediately to the south of the A1060, approximately 410 m to the east of the draft Order Limits and about 1.5 km to the north of Writtle. The asset has evidential value and is of **low value**.

## Bronze Age

### Little Waltham to Chignall St James

#### *Non-designated Heritage Assets*

- 3.7.65 An archaeological evaluation was carried out on land c. 1.1 km north-north-east of Little Waltham and c. 245 m south-east of the draft Order Limits. Archaeological remains (**6180**) were recorded in seven of the evaluation trenches, comprising an isolated, un-urned cremation of a young adult or adult individual was undated but is assumed to have been of later Bronze Age or Iron Age date; and two large pits, two smaller pits/hearths and an area of buried soil have been dated by pottery to the late Iron Age/early Roman period.
- 3.7.66 The excavations at Ash Tree Corner, carried out between 1970-71 in advance of the B1008 Little Waltham by-pass, identified archaeological evidence of multi-period activity including several Bronze Age artefacts, comprising a scraper, a barbed and tanged arrowhead and pottery (**6139**). The area in which this asset is situated is located between the south-easterly boarder of the draft Order Limits and western side of the settlement of Little Waltham. A large part of the area is made up of agricultural land, however the south-east section has been developed with the expansion of the settlement of Little Waltham and the creation of the B1008 by-pass. The Bronze Age asset is of evidential value and has **low value**.
- 3.7.67 An archaeological evaluation of land at the junction of Woodhouse Lane and Court Road, on the site of Broomfield Hospital identified unstratified late Bronze Age worked flint and pottery sherds from a single vessel (**6136**). The scatter of possible prehistoric burnt flint noted above (**6141**) may be related. The site is located approximately 1 km to the east of the draft Order Limits at Blasford Hill to the north-west of the settlement of Broomfield. The Bronze Age finds are of evidential value and of **low value**.

## Chignall St James to Writtle

### *Non-designated Heritage Assets*

- 3.7.68 Cropmarks of a possible ploughed out Bronze Age barrow and some linear features have been identified within a field south of Mashbury Road (**6010**). The field is located approximately 200 m to the west of the westerly outskirts Chelmsford. The field is adjacent to the draft Order Limits. The site is of evidential value, and if shown to be related to funerary practice, potentially of **medium value**.

## Writtle to Margaretting

- 3.7.69 The small town of Writtle is situated on the western flank of the Wid river valley at c.52 m aOD with the river on the eastern edge of the settlement at c. 28 m aOD. The small, linear settlement of Margaretting lies c. 42 km to the south on land at c. 56 m aOD. The intervening landscape gently undulates between 40 m and 70 m aOD but generally climbs from north to south. A plateau of higher ground lies to the west of

the draft Order Limits mid-section. The landscape is largely agricultural in nature with scattered churches, villages, hamlets, farmsteads, cropmark complexes and findspots.

## Iron Age

### Little Waltham to Chignall St James

#### *Designated Heritage Assets*

- 3.7.70 The **high value** scheduled monument 'Settlement Site at Ash Tree Corner' (**1002140**) is of evidential and historical value. The asset is located approximately 97 m south-east of the draft Order Limits, immediately to the west of the B1008 and the Little Waltham Conservation Area. The monument is part of an extensive pre-Belgic, Belgic and Romano-British settlement on the slopes of the Chelmer Valley, discovered by aerial photograph. It is now a rough field of pasture adjacent to the B1008 Little Waltham by-pass. A portion of the monument was excavated in advance of the construction of the by-pass (see **6020** below).
- 3.7.71 The setting of the asset is informed by location in open agricultural land in the Chelmer Valley between the settlements of Little Waltham to the east and Great Waltham to the west. However, the site is situated next to a very busy main road (the B1008) which produces a lot of traffic noise that detracts from the asset's rural nature. The placing of the road has also severed the visual and physical link the settlement has with Chelmer to the east. The setting of the asset, therefore, makes a minor contribution to its value but due to the proximity of the Project, the setting extends to the draft Order Limits.

#### *Non-designated Heritage Assets*

- 3.7.72 The excavations at Ash Tree Corner, carried out between 1970-71 in advance of the B1008 Little Waltham by-pass, identified archaeological evidence of multi-period activity including an Iron Age settlement (**6020**) with some time depth demonstrated by an unenclosed settlement succeeded by an enclosed one. The excavated remains comprise houses with polygonal wall trenches, four post structures interpreted as granaries, two post structures interpreted as drying racks, drainage ditches, horseshoe ditches, hearths, the enclosure ditch and associated palisade, stock enclosures, roundhouses, and evidence of an iron working site. A complex palimpsest of archaeological remains related to those above was identified within the relatively narrow (c. 30 m to 45 m) strip for the B1008 and the evidence suggests the settlement extends to the east and to the west towards the draft Order Limits. The area to the west is the scheduled monument (**1002140**) reported above. The area in which this asset is situated is located between the south easterly boarder of the draft Order Limits and western side of the settlement of Little Waltham. A large part of the area is made up of agricultural land, however the south-east section has been developed with the expansion of the settlement of Little Waltham and the creation of the B1008 by-pass. The site is of evidential and historical value and has **high value** due to it being directly related to the scheduled monument.
- 3.7.73 Some pits potentially dating to the Iron Age were identified at Broomwood Quarry at Broad's Green (**6036**). The three features were observed in the quarry face, however there is a possibility that they could also date to the Roman period (**6091**). The site is located immediately to the east of some woodland, which borders the settlement of Broad's Green to the south. Margaret Woods Road borders the site to the north, which is located just 40 m north-west of the draft Order Limits. The site is of evidential value and is of **low value**.

- 3.7.74 An Iron Age findspot had been identified in Dragonsfoot Field, to the east of Woodhall Farm (**6131**). A small quantity of Belgic pottery, including a base sherd with an illegible potter's stamp was found. Although the findspots themselves are just outside the draft Order Limits to the east, the westerly section of the field in which they are located is partly within the draft Order Limits. The field is approximately 250 m west of the settlement of Broomfield, just south of Patridge Green, and the findspots are located immediately to the north of a west/east aligned draft Order Limits access road. The site is of evidential value and has **low value**.
- 3.7.75 Iron Age to Romano-British archaeological features (**6101**) were identified in 1976 in the face of quarry located c. 370 m south of Margaret Woods Road, 1.6 km south-west of Great Waltham and 160 m west of the draft Order Limits. The features, probable pits, and ditches produced an abundant assemblage of Iron Age and Romano-British finds suggesting considerable settlement activity. Iron Age and Romano-British features and finds (**6102**) were again encountered in 1978 when landscaping was undertaken around the former quarry edge. The identified features comprised pits, ditches, a possible well and part of a possible double ditched enclosure. The large finds assemblage again suggested the proximity of settlement activity, and it is possible it was lost to the quarry. The site has evidential and historical value and is of **medium value** if not lost.

## Chignall St James to Writtle

### *Non-Designated Heritage Assets*

- 3.7.76 A late Iron Age ditch (**6095**) was identified on land to the North of Thatcher's Farm, approximately 860 m to the south-east of the village of Boyton Cross and 470 m to the west of the draft Order Limits. Belgic pottery sherds and fired clay were recovered from ditch. The asset is of evidential value and has **low value**.

## Roman Period

### Fuller Street to Little Waltham

#### *Non-Designated Heritage Assets*

- 3.7.77 A broadly north-east/south-west aligned Romano-British road has been identified between Little Leighs and Little Waltham (**6104**). This Chelmsford-Braintree-Long Melford Roman road follows part of the modern course of the A131 Chelmsford-Braintree-Long Melford road. The asset crosses the draft Order Limits at two points; approximately 240 m south of its junction with Scurvy Hill Lane and 460 m north-east of the roundabout junction with the A130. The site is of evidential and historical value and has **medium value**.

### Little Waltham to Chignall St James

#### *Designated Heritage Assets*

- 3.7.78 The **high value** scheduled monument 'Roman Villa 200 m east of Howletts' (**1011809**), is of evidential and historical value. The asset is located c. 640 m north-west of the draft Order Limits, immediately to the west of Mashbury Road, 230 m north of the river Can and 8600 m to the north-west of the small settlement of Chignall St James. The villa is visible as a cropmark and the layout of the building

has been plotted from aerial photographs. Concentrations of Roman material in the ploughsoil are also visible at ground level. These indicate the locations of buried archaeological deposits although there are no visible upstanding features. The buried features include the foundations of buildings, pits, and ditches. The main villa building surrounds a rectangular internal courtyard approximately 33 m north/south by 28 m east/west. Around this is a corridor with rooms laid out on three sides, to the north, east and west. The total area of the known building foundations measures around 47 m by 57 m. This building is situated within a large ditched polygonal enclosure which is believed to have covered an area of about 4.2ha. To the east of the villa building the boundary comprises six separate parallel ditches covering a width of 30 m. From 1977 to 1984 excavations were undertaken in advance of mineral extraction to the south and south-west of the main building within the southern part of the enclosure and to the south of it. These have revealed material and features from the Mesolithic through to the medieval period. The earliest features inside the enclosure are of the 1st century with evidence of the occupation until the 4th century. Timber-posted granaries and other associated agricultural buildings have been identified in the southern part of the enclosure and further similar buildings are believed to survive in the area around the main building.

- 3.7.79 The setting of the asset is informed by its situated on a south-west facing, gentle slope overlooking the river Can within a rural landscape. The asset is surrounded by open farmland with some dispersed settlement immediately to the east flanking Mashbury Road. The south-facing aspect of the asset, the river a little to the south and the agricultural land around are key surviving elements of its setting and so the asset's setting, however, the surrounding fieldscape is largely post medieval in date. The setting of the asset, therefore, makes a moderate contribution to its value, but due to overall distance and development in the intervening landscape, the setting does not extend to the draft Order Limits.

#### *Non-Designated Heritage Assets*

- 3.7.80 Three Roman asset have been identified at Ash Tree Corner at Little Waltham. The assets comprise archaeological remains identified during the excavations at Ash Tree Corner, carried out between 1970-71 in advance of the B1008 Little Waltham by-pass including: field boundaries, fencing, pits, ditches, a palisaded enclosure, postholes, stock enclosures, a well, posthole alignments, a floor, cobbled surfaces, building remnants, an iron working site and a road that evidences Roman settlement activity of various phases (**6021**). Adjoining this site is a findspot scatter of various Roman artefacts (**6137**) found on examination of the roadworks of the neighbouring site, as well as some pottery dating from the 2nd to 4th centuries (**6115**). The assets border the draft Order Limits on their south-eastern boundary at Larks Lane immediately east of Little Waltham. Most of the assets' location is agricultural land, however a small portion of the southern part of the site has been developed due to the expansion of the settlement if Little Waltham. The assets are of evidential and historical value and have **low value**.
- 3.7.81 A Roman bridge has been identified at Little Waltham (**6079**) adjacent to the three Roman assets listed above (**6021**, **6137** and **6115**). Oak bridge piles dated by dendrochronology to 165 AD were identified in the centre of the settlement of Little Waltham on the western side of The Street, approximately 300 m south-east of the draft Order Limits. The asset is of evidential and historical value and is of **medium value**.

In the field immediately to the north the Roman bridge (**6079**) a possible Roman vessel was found that further evidences Roman activity in the area (**6107**). The

findspot of an abraded, sandy oxidised ware sherd is located approximately 210 m to the south-east of the draft Order Limits in the centre of the settlement of Little Waltham on the western site of the Street. The asset is of evidential and historical value and is of **negligible value**.

- 3.7.82 Immediately south of a large area of Roman settlement (**6021**, **6137**) two Roman assets have been recorded at Little Waltham Lodge that further evidence Roman settlement in the area. These assets include a Roman cemetery, evidenced by cremation urns containing human remains noted in 1864 (**6080**), and part of a Roman road, found in trench dug in 1959 (**6081**). The two assets are located approximately 350 m south-east of the draft Order Limits, in an arable field immediately to the east of the southern part of the settlement of Little Waltham. The assets are of evidential and historical value and are of **medium value**.
- 3.7.83 Two findspots in the fields adjacent to the west and south of the sites (**6021**, **6137**, **6080** and **6081**), further evidence Roman settlement in the area. The findspot of a Roman gold Ptolemy coin (**6108**) is located approximately 250 m south-east of the draft Order Limits, and the findspot of a Roman tessera and several sherds of red ware (**6111**) is located 240 m south-east of the draft Order Limits. these findspots are situated in some agricultural land immediately to the east of the southern part of the settlement of Little Waltham, approximately 150 m south-east of Larks Lane. The site is of evidential and historical value and is of **low value**.
- 3.7.84 Cropmarks indicating a possible Roman Temple have been identified in a large field at Stacey's Farm (**6062**), as well as a concentration of Roman tile (**6109**). The asset is located to the south of Partridge Green, approximately 530 m to the east of the large settlement of Broomfield. Although the draft Order Limits run through the field the asset is situated in, the area defined by the HER sits 20 m outside the eastern boundary of the draft Order Limits. The site is of evidential and historical value and is of **medium value**.
- 3.7.85 Some pits potentially dating to the Roman period have been identified at Broomwood Quarry at Broad's Green (**6091**). The three features were observed in the quarry face, however there is a possibility that they could also date to the Iron Age (**6036**). The site is located immediately to the east of some woodland, which borders the settlement of Broad's Green to the south. Margaret Woods Road borders the site to the north, which is located 230 m north-west of the draft Order Limits. The asset is of evidential and historical value and has **negligible value**.
- 3.7.86 The site of a Roman villa with hypocaust has been identified in a field to the east of Woodhall Farm (**6099**). The site of the building is indicated by a finds scatter recovered during fieldwalking comprising brick, flue tile, tile, plaster, a Colchester type brooch, 11 coins, bracelet fragments and pottery sherds including samian, and Castor and Oxford wares. This site is located at Dragonsfoot Field 40 m north of an draft Order Limits access road and approximately 250 m west of the settlement of Broomfield, just south of Patridge Green. The site is of evidential and historical value and is of **medium value**.
- 3.7.87 Roman pottery sherds (**6135**) were recovered in 1950 from a field 630 m south-west of villa site (**6099**) to the east of Woodhall Farm and 140 m from the draft Order Limits. The site lies 550 m east of Woodhill Hill road and roughly 1 km west of the large settlement of Broomfield. The site is of evidential and historical value and is of **low value**.
- 3.7.88 Iron Age to Romano-British archaeological features (**6101**) were identified in 1976 in the face of quarry located c. 370 m south of Margaret Woods Road, 1.6 km south-

west of Great Waltham and 160 m west of the draft Order Limits. The features, probable pits, and ditches produced an abundant assemblage of Iron Age and Romano-British finds suggesting considerable settlement activity. Iron Age and Roman features and finds (**6102**) were again encountered in 1978 when landscaping was undertaken around the former quarry edge. The identified features comprised pits, ditches, a possible well and part of a possible double ditched enclosure. The large finds assemblage again suggested the proximity of settlement activity, and it is possible it was lost to the quarry. The site is of evidential and historical value and is of **medium value**.

- 3.7.89 Roofing tile fragments suggesting the location of a possible Roman building have been found at Beaumont Oates (**6133**), 45 m north-east of the draft Order Limits. The site is situated immediately to the east of Woodhill Hill approximately 1 km to the north of the settlement of Chelmsford. The site is of evidential value and has **low value**.

### Chignall St James to Writtle

#### *Non-Designated Heritage Assets*

- 3.7.90 The site of a possible Roman villa has been identified at Sturgeon's Farm (**6092** and **6122**), where artefacts including Roman vessels and oyster shells have been found. The site is located approximately 230 m east of the draft Order Limits on the site of Writtle College's Cow Watering Lane Campus. This site lies to the north-west of the eastern settlement of Writtle approximately 180 m to the west of Cow Watering Lane. The site is of historical and evidential value and has **medium value**.
- 3.7.91 Two findspots at the Church of St James evidence Roman activity in the area (**6125** and **6140**). Fragments of Roman brick have been found in the walls of the church, and a scatter of Roman sherds, tile and bronze slag have also been found in the field immediately to south-east of the church. These sites are located within the south-east of the settlement of Chignall St James, 200 m north-west of the draft Order Limits and 75 m west of a north/south aligned access road within the draft Order Limits. The site is of evidential, historical, architectural, and communal value and is of **low value**.

### Writtle to Margaretting

#### *Non-Designated Heritage Assets*

- 3.7.92 The Grade II\* listed Church of St Margaret (**1338504**) includes Roman bricks and tiles in the lower parts of the nave walls and with some Roman bricks in the south wall of the south aisle (**6124**). The church is located approximately 70 m east of the draft Order Limits at the end of Church Lane, accessed via the B1002 which runs south from the settlement of Margaretting, approximately 1.4 km to the north-east. The reused Roman material has evidential, historical, and aesthetic value and is of **low value**.

## Early Medieval

- 3.7.93 No early medieval records have been recorded within the draft Order Limits or study area for Section F of the Project. There are, however, numerous settlements recorded in the Domesday Book within Section F indicating a strong Anglo-Saxon presence in the area prior to the Norman Conquest.

## Medieval

### Fuller Street to Little Waltham

#### *Designated Heritage Assets*

- 3.7.94 The **high value** scheduled monument 'Gubbion's Hall moated site' (**1016802**) is of evidential and historical value. The asset is located approximately 1.2 km north-west of the draft Order Limits, immediately to the west of Banters and Mill Lane, 200 m to the west of the small settlement of Gubbion's Green and 310 m to the west of the larger settlement of Great Leighs. The moated site includes a rectangular island measuring a maximum of 32 m north-south and 45 m east-west. This is contained by a water-filled moat or ditch fed by an underground spring. The moat measures up to 18 m wide and at least 2 m deep and is riveted on both the inner and outer faces with faced stone. Modern footbridges across the east and west arms of the moat provide access to the island.
- 3.7.95 The post-medieval Gubbion Hall is Grade II listed (**1122127**) and it and all related post-medieval and later development within the moat are excluded from the scheduling, although the ground beneath these features is included. This asset is reported in the post-medieval section below.
- 3.7.96 The setting of the asset is informed by its presence as a medieval moated site within a largely rural landscape with scattered farmsteads. The site is set back from a tree lined country road within its own yard and forms part of the dispersed rural settlement of Gubbion's Green. Open farmland surrounds the asset to the north, west and south to which there are views out over the flat landscape. The rural nature of the setting is likely a key element, and so the setting of the asset makes a considerable contribution to its value. Due to distance and the topography, mature tree lined hedgerows, copses, infrastructure and development of the intervening landscape, the setting does not extend to the draft Order Limits.
- 3.7.97 The **medium value** Grade II listed building 'Lyons Hall' (**1122128**) is of evidential, historical, and aesthetic value. The asset is located approximately 620 m south-east of the draft Order Limits as part of some dispersed settlement that lines Boreham Road. Lyons Hall is a 15th century plastered timber frame house with central hall and cross wings that was altered in the 17th and 19th centuries when it was refaced in grey brick. The centre part has a wood fascia and brick dentil course. The building is of two storeys and has a three-window range of double hung sashes with glazing bars in plan reveals.
- 3.7.98 The setting of the asset is informed by its location within its own grounds that include formal gardens, lawns and matures trees, which interrupt outward views particularly to the north and east to the Grade I listed Church of St Mary the Virgin (**1171104**). The setting is further informed by complexes of the hall's non-designated outbuildings to the north and south, many of which are recorded on the first edition OS map of 1881. The wider setting of the asset is very rural and open farmland surrounds the asset in all directions. The setting of the asset, therefore, make a considerable contribution to the asset's value. There are open views to the west and south-west from the asset, which are likely to include the Project, and so the setting extends to the draft Order Limits.
- 3.7.99 The **high value** Grade I listed Church of St Mary the Virgin (**1171104**) is of evidential, historical, and aesthetic value. The asset is located approximately 620 m south-east of the draft Order Limits as part of some dispersed settlement that lines Boreham Road. The church has a late 12th century nave and circular west tower and chancel

that was rebuilt in 1330, however there has been some 19th century restoration work with the addition of a 19th century vestry and south porch. The church is particularly distinguished for its flint and rubble circular west tower with a 12th century doorway with chevron mouldings, small windows and five flat pilaster buttresses to the lower part. The spire with gablets was added in 1882. The nave has two 12th century round headed windows in the north wall and one in the south wall, as well as a 12th century south doorway and two 14th century windows with square heads.

- 3.7.100 The setting of the asset is immediately informed by its position in the shallow Ter Valley and within its own enclosed church yard that is surrounded by dense mature trees to the south and north. The churchyard fronts on to Boreham Road and there are interrupted views to Lyons Hall and its outbuildings to the east. The wider setting of the asset is very rural and open farmland surrounds the asset in all directions. The setting of the asset, therefore, makes a considerable contribution to its value, but due screening by Lyons Hall, and its outbuildings and mature grounds to the west and the topology and mature vegetation of the landscape to the north, the setting does not extend to the draft Order Limits.
- 3.7.101 The **high value** Grade II\* listed 'Church of St John the Evangelist' (**1122132**) is of evidential, historical, and aesthetic value. The asset is located approximately 1.4 km north-west of the draft Order Limits within the village of Little Leighs, immediately to the south of Church Lane, and approximately 550 m to the west of the A131. The church is of 12th century origin with a 13th century chancel and was restored in 1895 by A. Y. Nutt who rebuilt the east wall, south porch, and vestry. The building is of flint rubble which is coursed in the 12th century work and uncoursed in the 13th century additions. It has limestone and clunch dressings, a tiled roof and shingled spirelet, and a weatherboarded west belfry. The church is a parish church with good medieval fabric, particularly the original medieval roofs. It also has an outstanding early 14th century tomb of a priest with an elaborate niche and wooden effigy, as well as some medieval fittings that are in excellent condition: such as, the 13th century door, font, and nave benches.
- 3.7.102 The setting of the asset is immediately informed by its position within its own enclosed church yard that is surrounded by dense mature trees to the south, east and west. The churchyard is fronted to Church Lane and there are views to the north, east and south of some residential dwellings in the area. The A131 runs close by and can be seen and heard to the east and south. The wider setting of the asset is more rural and open farmland, interspersed with mixed settlement, surrounds the asset in all directions. Therefore, the setting of the asset makes a considerable contribution to the value of the asset, but due to overall distance and development, infrastructure and mature copses and tree lined hedgerows, the setting does not extend to the draft Order Limits.
- 3.7.103 The **medium value** 'Leighs Hall' (**1305669**) is a Grade II listed building of historical and aesthetic value. The asset is located approximately 1.7 km to the north-west of the draft Order Limits, immediately to the north of Church Lane, on the western outskirts of the village of Little Leighs. Leighs Hall is a medieval plastered timber frame house with early 16th century work, but probably of earlier origin. It has been much altered and added to and renovated in the 20th century. The main block is of two storeys with a jettied upper storey, and a wing extends to the west at the north end. The windows are 20th century casements, and some have leaded lights.
- 3.7.104 The setting of the asset is immediately informed by its location within its own courtyard with associated outbuildings. The property is set back from church lane by a gravel courtyard and is immediately ringed by mature trees to the north, east and

south. There are views to other residential developments in Little Leighs to the east and the A131 cuts through the landscape north to south approximately 700 m to the west of the asset. The asset's rural village location, surrounded by agricultural land and dense mature vegetation setting make a considerable contribution to the value of the asset, however the busy industrial style courtyard along the asset's northern border does take away slightly from the rural setting of the asset, despite this the setting's contribution of the rural landscape is still considerable. The screening by mature vegetation and south-westerly facing aspect of the asset focus the views from the asset away from the draft Order Limits and across rural land to the west, as such the setting of the asset does not extend to the draft Order Limits.

- 3.7.105 The Grade II listed 'Liberty Hall' (**1172559**) is located on the southern flank of Whitbreads Farm Lane, with the farming complex just to the east, Great Leighs 1.6 km to the north-north-east and the draft Order Limits 990 m to the north-east. The hall is of **medium value** based on its designation and its evidential and historical value. The 15th century comprises a plastered timber frame structure with a tiled roof, although the asset has been very much altered since its construction.
- 3.7.106 The setting of the asset is informed by its roadside location and by its relationship with its black weatherboarded outbuildings, some of which are recorded on the first edition OS map of 1881. The setting is further informed by its relationship with Whitbreads Farm, which also appears on the 1881 OS map, and by the surrounding agricultural landscape with which the asset has a historical relationship. There has been some small-scale residential development to the north of Whitbreads Farm Lane but it sympathetic and in local vernacular, and so the setting of the asset makes a considerable contribution to its value. The views east and south-east towards the Project are interrupted by the farm, its numerous outbuildings and by associated mature hedgerows and trees, and so the setting of the asset does not extend to the draft Order Limits.
- 3.7.107 The **medium value** 'Goodmans Farmhouse' (**1122135**) and 'Barn to the East of Goodmans Farmhouse' (**1171336**) are two Grade II listed buildings of evidential and historical value. The assets are located 60 m and 90 m south-east of the draft Order Limits, immediately to the south of the junction of Goodmans Lane with Paulk Hall Lane. The farmhouse is a late 15th century two storey plastered timber frame house, altered in the 17th century, with central hall and cross-wings at the east and west ends. The cross wings are jettied on the upper storey and the building has a four-window range of 18th century double hung sashes with glazing bars. The barn to the east of the farmhouse is a five-bay plastered timber frame structure with gabled central entrance bay and thatched roof. The barn is not dated on the National Heritage List and so included here due to its association with the dated asset.
- 3.7.108 The setting of the assets is shared and informed by their location within a former farming complex with associated outbuildings on the southern flank of the Ter river. The setting is further informed by the interrelationship between the assets and by their relationships with the surviving non-designated outbuildings of the much larger farming complex recorded on the first edition OS map of 1881. The assets and outbuildings are surrounded by mature trees in all directions, however, there are views to another listed farmhouse and farmyard, Hole Farm, that is located immediately to the north-east of the asset which contributes to the setting. The wider setting of the assets is rural and open farmland, with which the assets and outbuildings have a historical and functional relationship, surrounds the assets in all directions. The setting of the asset, therefore, makes a considerable contribution to their values and due to the proximity of the Project, the setting extends to the draft Order Limits.

### *Non-Designated Heritage Assets*

- 3.7.109 A medieval findspot (**6117**) has been identified to the north of Lyons Hall, approximately 600 m to the west of the settlement of Fuller Street. The asset found was a medieval oxidised ware sherd with traces of dark brown-black glazed on the internal surface. The site is located approximately 150 m south of the draft Order Limits, immediately to the east of Cole Hill Road. The asset is of evidential and historical value and is of **negligible value**.

### **Little Waltham to Chignall St James**

#### *Designated Heritage Assets*

- 3.7.110 The **medium value** Grade II listed building of 'Broomfield Hall' (**1122188**) is of evidential, historical, and aesthetic value. The asset is located c. 760 m south-east of draft Order Limits on the western edge of the settlement of Broomfield and within the Broomfield conservation area. Broomfield Hall is a two-storey plastered timber frame house of 15th century origin built on a half H shaped plan, with 16th and 17th century alterations. The building has a four-window range of double hung sashes with glazing bars, a Tuscan style porch, and a tiles roof with 16th century chimney stacks.
- 3.7.111 The setting of the asset is informed by its presence as a rural medieval building set within its own yard within the Broomfield conservation area. The Conservation Area is defined by its central location in Broomfield which is characterised by many triangular greens that run either side of the central busy main road with characterful properties, which are flanked by large open green fields on the east and west. The asset has a closed setting within the conservation area due to it being set back from the road, however the Grade I listed church of St Mary the Virgin is visible to the west. Despite being in the centre of Broomfield, the setting of the asset still feels very rural with lots of green fields, trees, and grass verges visible in the surrounding area, there are views of open fields to the west of the asset. The densely vegetated land containing the asset and the open fields to the west contribute considerably to the value of the asset, maintaining a rural atmosphere to the asset and shielding it from much of the modern development within Broomfield. Due to overall distance, mature vegetation in the asset's grounds and mature tree lined hedgerows of the intervening landscape, the setting does not extend to the draft Order Limits.
- 3.7.112 The **high value** Grade II\* listed 'Church of St Mary the Virgin' (**1338425**) is of evidential, historical, and aesthetic value. The asset is located approximately 1.15 km east of the draft Order Limits, on the western edge of the settlement of Broomfield and within the Broomfield conservation area. The parish church is of late 11th century origin with the nave and west part of the chancel dating to this time. The church has an early circular 12th century tower, which had an octagonal spire added in the 13th century. The north aisle, chancel chapel, vestry and south porch were restored in 1870 by Frederick Chancellor. The exterior is of coursed flint and ferruginous conglomerate with Roman bricks as quoins and a plain-tiled roof.
- 3.7.113 The setting of the asset is informed by its presence as a rural medieval parish church set within its own churchyard within the Broomfield conservation area. The conservation area is defined by its central location in Broomfield which is characterised by many triangular greens that run either side of the central busy main road with characterful properties, which are flanked by large open green fields on the east and west.
- 3.7.114 The asset has quite an open setting within the conservation area due to it being set back from the road by wide grassy verges. Despite the churchyard being surrounded by many mature trees there are views out to the characterful properties in the

conservation area as well as out to the open farmland and fields in the west. Therefore, the asset's setting contributes considerably to its value. It is possible that there would be visibility between the asset and the draft Order Limits to the west beyond, despite the intervening countryside and vegetation due to the height of both the church spire and the towers. The setting of the asset, therefore, extends to the draft Order Limits.

- 3.7.115 The **high value** 'Church of St Mary and Lawrence' (**1122058**) is a Grade I listed church of evidential, historical, and aesthetic value. The church is located approximately 830 m north-west of the draft Order Limits, immediately to the north of Chelmsford Road, at the north of the village of Great Waltham. The church is of Norman origin and is principally built of flint and stone and stone dressings with some Roman tiles incorporated. The west tower has a castellated parapet with gargoyles, three south-facing segmental arch windows with tracery and diagonal buttresses. There is a corner staircase turret and 12th century single splayed windows in the lower north and south walls. There is some Roman brick in the Norman quoins of the nave and chancel and there are traces of round headed 11th to 12th century windows in the east wall of the chancel and early 12th century windows in the north and south walls of the tower. 16th century clerestory windows with drip mouldings have been inserted on the north and south walls of the chancel. The aisles have castellated parapets, and the north aisle has pointed arch windows. The south porch has a pointed arched entrance with a figure of Christ in a recessed niche above. Two other carved figures of saints are displayed on the corner buttress.
- 3.7.116 The setting of the asset is immediately informed by its positions within its own large churchyard, that is set back from the road and ringed by a line of mature trees. The church has a busy central village location within Great Waltham and is within the conservation area (**CA55**) boundary and has views out towards many characterful buildings close by. The village has a rural setting, to the east the village borders the Registered Park and Garden of Langley's and more modern housing estates have been added to the north-east and south-west periphery. The village and conservation area are surrounded by rural fields on all sides. The setting of the asset makes a considerable contribution to its value, however due to limited intervisibility and the intervening village streetscape, the setting of the asset does not extend to the draft Order Limits.
- 3.7.117 The **medium value** 'Garnetts Farmhouse' (**1171885**) is a Grade II listed building of historical and aesthetic value. The asset is located 1.6 km north-west of the draft Order Limits, immediately to the north of Fox Road, 1 km north of Fanner's Green. Garnetts Farmhouse is an 15th century timber framed medieval hall house with exposed timber framing and plaster infill, with a cross wing with jettied upper storey at the east end. The building has casement windows with leaded lights, a tiled roof with one gabled dormer, and an original chimney stack with three circular shafts with spiral ornamentation.
- 3.7.118 The setting of the asset is immediately informed by its rural position within its own enclosed farmyard with associated outbuildings immediately to the north of Fox Road. The asset is surrounded by fields and farmland in all directions and the wider setting is just as rural and made up of open farmland interspersed with a few farmsteads to the south. As such, the maintained historic rural setting of the asset contributes considerably to its value. It is unlikely due to the distance, mature vegetation, and dispersed settlement to the south-east and east that there would be intervisibility between the asset and the draft Order Limits. The assets setting is informed by its immediate grounds and rural landscape and as such does not extend to the draft Order Limits.

- 3.7.119 The **medium value** 'Ball's Farmhouse' (**1305428**) is a Grade II listed building of historical and aesthetic value. The asset is located 50 m south and 35 m east of the draft Order Limits, immediately to the north of Larks Lane, just to the west of Little Waltham Leighs. Ball's Farmhouse is a 15th century medieval hall house faced in red brick, with a cross wing at the east and west ends. The building has a four-window range of double hung sashed with glazing bars, a six-panel door with an open pediment on console brackets, and a tiled roof.
- 3.7.120 The setting of the asset is immediately informed by its open and rural position within its own enclosed farmyard with associated outbuildings to the north of Larks Lane. The property is set back from the road by a gravel driveway and garden and is surrounded by rural fields with views of farmland in all directions. The maintained historical rural farm setting of the asset contributes considerably to its value and extends to the draft Order Limits.
- 3.7.121 The **medium value** 'Church of St Martin' (**1122044**) is a Grade II listed building of evidential, historical, and aesthetic value. The asset is located approximately 780 m south-west of the draft Order Limits, within the eastern part of the village and conservation area of Little Waltham, immediately to the north of Wheeler's Hill and immediately to the east of Brook Hill. The church is of 12th century origin and of stone and flint rubble. The nave/south door is of the 12th century and there is a Norman round headed window in the south-west of the nave. The chancel was rebuilt in the 14th and 15th century and the battlemented west tower is early 15th century but was repaired in the 16th and 17th century when it was partly rebuilt in brick. The church was restored in 1883 when the south porch was rebuilt, and the organ chamber added.
- 3.7.122 The setting of the asset is immediately informed by its position within its own large, enclosed and tree lined churchyard on the eastern periphery of the village and conservation area of Little Waltham. The church and yard are situated on higher ground, on a corner plot and set back from the road. There are views out the south and north of characterful buildings also located within the conservation area. Despite being on the edge of settlement, the wider setting is more rural and the church backs onto open farmland in the east and north-east. The setting of the asset contributes considerably to its value, but due to its restricted village nature, the mature tree lined grounds of the asset and the development, infrastructure and mature vegetation of the intervening landscape, the setting does not extend to the draft Order Limits.
- 3.7.123 The Grade II listed 'Chatham Hall' (**1338512**) is located 70 m west of Chatham Hall Lane, c. 700 m north-north-west of Little Waltham and 170 m north-west of the draft Order Limits. The asset is of **medium value** based on its designation and its evidential and historical value. The original 15th century plastered timber frame house is now to the rear (north) of a large 19th century addition. The original house has a two storey crosswing on the south and part of a one storey and attics hall block remaining. The two-storey 19th century addition has two south facing gables and the whole structure has a tiled roof.
- 3.7.124 The setting of the asset is informed by a largely isolated location and its relationship with its non-designated outbuildings, which are recorded on the first edition OS map of 1881. The building complex is, however, much reduced from that historically mapped with several assets demolished in the latter half of the 20th century. The setting is further informed by the view to the west across Langleys registered park and garden (**1000241**), although there is likely to be no view of the Grade I Langleys country house (**1305533**) and its Grade II outbuildings at the heart of the parkland due to tree cover. The agricultural land to the north and east and pastoral land of the

Chelmer Valley to the south also contribute to the setting providing peaceful rural vistas. The setting of the asset makes a considerable contribution to its value, and due to the proximity of the Project, the setting extends to the draft Order Limits.

- 3.7.125 The Grade II listed 'Walden Cottage' (**1151967**) is located on the western flank of The Street in Little Waltham, and 250 m east of the draft Order Limits. The asset is of **medium value** based on its designation and its evidential and historical value. The cottage, formally Knight's Farmhouse, dates to the 15th century and comprises a plastered timber frame house. An attic storey was added probably in the 17th century and there is a two storey crosswing to the south with an original king post truss. The roof is tiled.
- 3.7.126 The setting of the asset is informed by its roadside location within the settlement and within the Little Waltham conservation area (**CA56**). Its relationships with the post medieval Grade II listed 66 to 70 The Street to the north and with the close by non-designated properties of post medieval and early modern date which positively contribute to the character of the conservation area also contribute to its setting. The setting is further informed by its historical and former functional relationship with the Chelmer Valley and is pastoral land immediately to the west. The setting of the asset, therefore, makes a considerable contribution to its value, and due to the proximity of the Project, the setting extends to the draft Order Limits.
- 3.7.127 'Millstone Cottage' (**1151939**) is located on the northern flank of The Street in Little Waltham, south of the River Chelmer, and 260 m south-east of the draft Order Limits. The asset is of **medium value** based on its evidential and historical value. The cottage, now four dwellings, is a medieval plastered timber frame 'Wealdon' house of probable 15th century date. Wings project at the east and west and the southern and western elevations have 20th century pargetting. There is an early 19th century two story block to the rear creating a double pitched roof which is tiled.
- 3.7.128 Historic England identify Millstone Cottage (**1151939**) as part of a group along with the post medieval assets: 42 The Street (**1152026**), 36 - 40 The Street (**1122025**); The Bell Public House (**1122024**); 30 The Street (**1122023**); The Limes (**1122022**); Oxford House (**1122055**); 37 The Street' (**1122054**); and Two Gates (**1151949**) with the last of these assets included for group value.
- 3.7.129 The setting of Millstone Cottage (**1151939**) is informed by its roadside location within the settlement and within the Little Waltham conservation area (**CA56**). Its relationships with the post medieval Grade II listed buildings within the identified group above and with the close by non-designated properties of post medieval and early modern date which positively contribute to the character of the conservation area also contribute to its setting. The setting is further informed by its historical relationship with the Chelmer Valley and its pastoral land immediately to the north. The setting of the asset, therefore, makes a considerable contribution to its value, and due to the proximity of the Project, the setting extends to the draft Order Limits.
- 3.7.130 The Grade II listed assets Shuttleworth (**1122029**) and Hobbits (**1172594**) of medieval date, and the post medieval Shoulderstick Haul (**1122049**) and Powers Farmhouse (**1305050**) (reported below) are located loosely clustered around the junction of Wheeler's Hill and Cranham Road, 980 m east of Little Waltham and 1.2 km south-east of the draft Order Limits at its closest. The assets are of **medium value** based on their designation and their evidential and historical value. Shuttleworth is an early 16th century plastered timber frame, two storey house with a wing to the south and a tiled roof. The asset has been very much restored. Hobbits was originally a timber frame hall house, of 15th century date, with north-east and south-west cross wings, the latter of which is now destroyed. The asset has a tiled

roof and was restored in the 20th century when the timber framing was exposed on the front elevation.

- 3.7.131 The setting of the assets is shared and informed by their roadside location, the interrelationships between the designated assets, and their relationships with their non-designated outbuildings, some of which are recorded on the first edition OS map of 1881. The surviving outbuildings appear to have been developed as residential properties but retain their outward appearance. The setting is further informed by the surrounding agricultural landscape with which the assets have a historical relationship, and in the case of the farm and its outbuildings, a functional relationship also. The setting of the assets, therefore, make a considerable contribution to their values. The setting of the assets is restricted to their roadside location within the small hamlet and to the immediate agricultural landscape, and it does not, therefore, extend to the draft Order Limits.
- 3.7.132 The Grade II listed Pratt's Farmhouse (**1172663**) and Pratt's Farm Cottages (**1237309**) are located on the western flank of Pratt's Farm Lane, 650 m south-east of Little Waltham and 1.2 km south-east of the draft Order Limits. The assets are of **medium value** based on their designation and their evidential and historical value. Pratt's Farm Cottages (**1237309**) is post medieval in date and reported below in the appropriate section. The Farmhouse is an early 16th century plastered timber frame house that has been very much altered in the 18th and 19th centuries, which included being refronted. The asset is plastered and the west facing front elevation has a parapet. The north and south wings to the rear were replaced in 2021.
- 3.7.133 The setting of the assets is shared and informed by their interrelationship and their relationships with surviving outbuildings of the former farming complex, most of which are recorded on the first edition OS map of 1881. The farm buildings, however, have had a change of function and most are related to the running of the Little Channels Golf Centre. Also, the construction of the golf course around the assets, the laying of the A131 immediately to the east, and the establishment of the Chelmer Valley Park and Ride on the eastern flank of the A131 have eroded the agricultural land stock and severed its links with the asset. There has also been unsympathetic residential and commercial development within the complex in the latter half of the 20th century and on into the 21st. The setting of the asset, therefore, makes no contribution to its value and does not extend to the draft Order Limits.
- 3.7.134 The **medium value** 'Marshalls' (**1305281**) has evidential and historical value and is located approximately 750 m north of the draft Order Limits on the east side of Main Road, at the north of the village of Great Waltham and in the Great Waltham conservation area. The asset is associated with the post medieval assets 'Crowbrush Cottages' (**1122061**), 'Bridge House' (**1172076**), 'Firtree Cottage' (**1122060**), 'The Coach House' (**1338481**), 'Burtons' (**1338480**), and 'Franklyns' (**122059**), which are reported in the appropriate section below. Marshalls is a plastered timber frame house of late 15th century origin with cross-wings at the north and south ends, a tiled roof and casement windows with leaded lights.
- 3.7.135 The setting of Marshalls is shared with the post medieval assets and is immediately informed by their positions fronting onto Main Road at the northern end of the village and conservation area of Great Waltham. The setting is further informed by their interrelationships, by their relationships with the Grade I listed medieval Church of St Mary and St Laurence to the south, and by their relationships with the non-designated post medieval and early modern building on the thoroughfare, which contribute to the character of the conservation area. The village has a rural setting and to the east the village borders the Registered Park and Garden of Langley's.

there are more modern housing estates on the north-east and south-west peripheries of the village. The village and conservation area are surrounded by rural fields on all sides. The setting of Marshalls, therefore, makes a considerable contribution to its value, but due to the insular nature of its village setting, the local topography and screening by other village elements and Langley's parkland, the setting does not extend to the draft Order Limits.

- 3.7.136 The **medium value** 'The Woodman' (**1338493**) is a Grade II listed building of evidential and historical value. The asset is located approximately 1.4 km north-west of the draft Order Limits, to the south of Main Road and immediately north of the boarder of Langley's Park and Garden, at the southern end of the village of Howe Street, to the north of Great Waltham. The Woodman was originally a late 15th century plastered timber frame house with cross wings to the east and west, however, it has been re-fronted in brick in the 19th century and is now painted. The wings have two storeys, and the central block is one storey with attics, the windows are mullioned and transomed casements, and the roof is tiles with a gabled dormer in the centre block.
- 3.7.137 The setting of the asset is immediately informed by its position within its own courtyard, with lawns to the east, west and south and associated outbuildings to the west, which are recorded on the first edition OS map of 1881. It is set back a little from Main Road and the property boundary is lined with mature trees and planting to the south, east and west. There are partial views to the settlement of Howe Street to the north and an open view of agricultural land to the north. The garden boundary of the property backs onto the northern border of Langley's Park and Garden. The wider setting is semi-rural. The setting of the asset, therefore, makes a considerable contribution to its value, but due to distance and screening by its own grounds and by the mature tree cover of Langley's parkland, the setting does not extend to the draft Order Limits.
- 3.7.138 The **medium value** 'Fitzandrews Farmhouse' (**122088**) is a Grade II listed building of evidential and historical value. The asset is located approximately 1.85 km north-west of the draft Order Limits, to the east of Main Road to the north of the village of Howe Street. The farmhouse is a plastered timber frame house of 15th to 16th century origin but was very much altered when it was renovated in the 20th century. The building is of two storeys and a four-window range of 20th century one light casements with horizontal glazing bars. The roof is tiled, hipped, and with a shafted central chimney stack rebuilt at the top and an original 17th century chimney stack with two diagonally set shafts at the east end.
- 3.7.139 The setting of the asset is informed by its location on the north-eastern flank of Main Road within its large garden and by the Fitzandrews working farm complex located immediately opposite on the south-western flank of the thoroughfare. Mature trees and planting line the farmhouse's garden and there is further mature tree cover on the banks of the Chelmer river 100 m to the east. The wider setting is rural, and farmland surrounds the asset to the north, east and west with dispersed settlement. The setting of the asset, therefore, makes a considerable contribution to its value, but due to overall distance, and screening by the asset's grounds and the tree cover and development of the intervening landscape, the setting does not extend to the draft Order Limits.
- 3.7.140 The **medium value** Grade II listed 'Barley Hill' (**1122080**) and 'Well House' (**1338491**) and the **high value** Grade II\* listed 'Hill House' (**1338490**) are a group of listed buildings with evidential and historical value. The assets are located together either side of Little Green Road, 750 m north-north-east of the village of Howe

Street, approximately 1.65 km north-west of the draft Order Limits. Well House and Hill House are of post medieval date and so reported in the relevant section below. The Grade II listed Barley Hill is located 45 m north of Hill House and comprises a late 15th century, two storey timber frame house with a northern wing with a jettied upper storey on the front and a later gabled wing on the south end. The timber framing is exposed with plaster infill. The building has casement windows with lattice leaded lights, and a modern gabled porch (in period style) projects on the front. The roof is tiled with an external chimney stack on the north wing with two diagonally set shafts.

- 3.7.141 The setting of the asset is informed by its rural roadside locations flanking Littlely Green Road. Barley Hill is set back from the road and has lawned gardens to the east and west defined by fences, hedgerows, and scattered trees. The setting is further informed by the asset's interrelationship with the other designated assets and by its relationship with the non-designated Hill House Cottage immediately to the south. The wider agricultural landscape, with which the asset has a historical relationship, also contribute positively to the setting. The setting of the asset, therefore, makes a considerable contribution to its value, but due to overall distance, screening by its mature grounds, and by mature tree lined hedgerows and copses in the intervening landscape, the setting does not extend to the draft Order Limits.
- 3.7.142 The **medium value** 'Fanners Farmhouse' (**1171731**) and 'Cottage approximately 80 yards east of Fanners Farmhouse' (**1122120**) are Grade II listed buildings with evidential and historical value. The assets are located 1.1 km and 1 km west of the draft Order Limits respectively, either side of Fanner's Farm Road within the small, rural village of Fanner's Green. The cottage dates to the 18th century and so is reported in the post medieval section below. Fanners Farmhouse is a plastered timber frame house of late 15th century origin with a cross wing at the south-eastern end. The cross wing is jettied on the first storey and the main block is of one storey with attics. The windows are casements with glazing bars and the roof is tiled with three modern dormer windows to the main block.
- 3.7.143 The setting of Fanners Farmhouse is informed by its location within a former working farm complex, by its relationship with its associated outbuildings recorded on 19th and 20th century OS mapping and by its interrelationship with the designated cottage. The setting is further informed by the surrounding agricultural landscape, with which the assets have a historical and functional relationship. The grounds of the farmhouse contain the outbuildings, lawns and planting and are defined by moderately high evergreen hedgerows instilling a sense of seclusion and privacy. The setting of the asset, therefore, makes a considerable contribution to its value, but due to the property's boundaries and the mature tree lined hedgerows, copses and development of the intervening landscape, the setting does not extend to the draft Order Limits.
- 3.7.144 The Grade II listed assets 'Tudor Cottage' (**1172619**), 'Thorley's Farmhouse' (**1122051**), 'The Maltings At Thorley's Farm, to East of Thorley's Farmhouse' (**1237418**), 'Foxes Maltings' (**1122053**), 'Runnymede' (**1338475**), 'Runnymede Cottage' (**1172657**), 'Glenmore Thorley's Cottage' (**1172635**), and 'Laburnum Cottage Off Licence Store' (**1122052**) are located on the east and west flanks of the B1008 Blasford Hill at the northern limit of Broomfield approximately 650 m south of the outskirts of Little Waltham, 770 m north-west of the draft Order Limits and its closest point. The assets are of **medium value** based on their designation and their evidential and historical value and Historic England identify these assets as a group. Thorley's Maltings (**1237418**), Foxes Maltings (**1122053**), Runnymede (**1338475**), Runnymede Cottage (**1172657**), Glenmore Cottage (**1172635**), and Laburnum

Cottage (**1122052**) are post medieval in origin and reported in the appropriate section below.

- 3.7.145 Tudor Cottage is a 15th century plastered timber frame hall house with a floor inserted into the hall in the 17th century. Originally with cross wings to the north and south, only the jettied, two storey north cross wing survives. The roof is thatched. Thorley's Farmhouse is a 15th century plastered timber frame, two storey hall house. Originally with cross wing to the north and south, only the south cross wing survives. There are 16th century alterations and extensions to the south cross wing and 17th century alterations to the main block. The roof is tiled.
- 3.7.146 The setting of these grouped assets is largely shared and informed by the interrelationships between the designated assets and their relationships with their outbuildings and the post medieval and modern buildings that contribute to the character of the local streetscape. The settlement pattern along the thoroughfare is generally one plot deep allowing for views from the rear of assets of the agricultural land beyond with which they have a historical relationship. These views are, however, occasionally interrupted by outbuildings, garden planting and mature hedgerows. There is also 21st century residential development north and south of Woodhouse Lane in the south and 20th to 21st century residential and commercial development to the north around Rolphsbarn Farm, which has eroded the link between the thoroughfare and the rural landscape. The focus of the setting is, however, the streetscape and so it makes a considerable contribution to the value of the assets but does not extend to the draft Order Limits.

#### *Non-Designated Heritage Assets*

- 3.7.147 Border Wood, a small, ancient, semi-natural linear woodland (**6017**) is located 10 m west of the draft Order Limits at its closest point and 650 m north-west of Partridge Green. The woodland contains several woodbanks including a very considerable large ditch and bank at the north-east end which coincides with the parish boundary. The HER suggests a medieval date for these features. The site has evidential and historical value is of **low value**.
- 3.7.148 A scatter of medieval pottery and tile (**6113**) was recovered during observations of road works around the junction at Ash Tree Corner and along the excavation for the by-pass. Archaeological excavations at Ash Tree Corner, Little Waltham in advance of the by-pass identified multi-period remains that included a medieval building, an associated palisade enclosure and field boundaries of 12th century date and elements of a later 14th century field system (**6034**). Recovered dating evidence comprises pottery, tiles, nails, bricks, and buckles. The investigation areas are situated between the south easterly boarder of the draft Order Limits and western side of the settlement of Little Waltham. A large part of the area is made up of agricultural land, however the south-east section has been developed with the expansion of the settlement of Little Waltham and the creation of the B1008 by-pass. The medieval assets are of evidential and historical value and of **low value**.
- 3.7.149 The site of a medieval moat and former building has been identified at Hedgehall (**6049**). The site also contains finds of pottery, tiles, and animal and mollusca remains. The site is located approximately 85 m north-west of the draft Order Limits, 100 m to the south Broads Green and Margaret Woods Road. The asset is of evidential and historical value and is of **low value**.
- 3.7.150 Approximately 250 m to the south of (**6049**) is another medieval moated site at Partridge Green (**6050**). The eastern end of the site lies partly within the draft Order Limits and the site also contains an draft Order Limits access road. The site is

located approximately 200 m to the north-west of the settlement of Patridge Green, that lies adjacent to the outskirts of Broomfield. The asset is of evidential and historical value and is of **low value**.

- 3.7.151 A medieval to post medieval site comprising a moat, field boundary, linear features and enclosure has been identified at Beaumont Otes (**6052**). This site is shown as a moated site on a map of 1599 and labelled 'Beaumont Moates'. The site is located approximately 80 m north of the draft Order Limits, immediately east of Woodhall Hill Road, and approximately 8600 m to the north of the outskirts of Chelmsford. The eastern part of the site also contains a broadly north/south aligned access road that is contained within the draft Order Limits. The asset is of evidential and historical value and is of **low value**.
- 3.7.152 A medieval find spot of a corroded horseshoe fragment has been found on a multi-period site East of Woodhall farm (**6132**). The findspot lies 100 m east of the draft Order Limits, 30 m north of an draft Order Limits access road and approximately 250 m west of Broomfield. The asset is of evidential and historical value and is of **negligible value**.
- 3.7.153 Fieldwalking at Broomfield Hospital (**6142**) found medieval pottery. The findspot is located c. 180 m east of the draft Order Limits access, to the north-west of the settlement of Broomfield. The Project was carried out prior to expansion of the hospital site and the development of the Broomfield Mental Health Unit. The asset is of evidential and historical value and is of **low value**.

## **Chignall St James to Writtle**

### *Designated Heritage Assets*

- 3.7.154 The **high value** 'Former Church of St James' (**1122199**) is a Grade II\* listed building of evidential, historical, and aesthetic value. The asset is located between two draft Order Limits access roads, c. 100 m west of the draft Order Limits on the southern edge of the village of Chignall St James. The nave and chancel of the medieval parish church are of uncertain date, but earliest features are of late 13th and early 14th century origin. The church was restored in 1865 and porches were also added in the 19th century. The church was made redundant in 1981 and was sympathetically converted to a house by Patrick Lorimer in 1989, when an upper floor was inserted. The church is of flint rubble with some stone and Roman brick, with dressings also of stone and Roman Brick. The church retains its original 15th century windows and roof.
- 3.7.155 The immediate setting of the asset is informed by its position within its own churchyard, that is set back from the road alongside a terrace of Grade II Listed Buildings within the village of Chignall St James. Due to the nature of the village settlement and the surrounding open agricultural landscape the church has a quaint and rural location. There are views out across the open rural landscape to the south of the asset towards the Project. The setting of the asset makes a considerable contribution to the value of the asset and due to the proximity of the Project, the setting extends to the draft Order Limits.
- 3.7.156 The **high value** 'Church of St Michael and All Angels' (**1235784**) is a Grade II\* listed building of historical and aesthetic value. The asset is located c. 650 m north-west of the draft Order Limits, immediately to the south of The Street within the centre of the village of Roxwell. The church is constructed of flint rubble with stone dressings, tiled roofs, timber porch and bell turret, and a shingled spire. The church is probably of 14th century origin; however, the bell turret was added in the 15th to 16th centuries and the church was heavily restored in the 19th century. The north aisle, porch and

vestry were added in 1854 by C. R. Ainslie, the chancel was restored by F. Chancellor in 1872, and the spire was rebuilt in 1891.

- 3.7.157 The setting of the asset is immediately informed by its position within a rural village, set back from the road and situated within its own large churchyard that is ringed by mature trees. There are views in all directions to other characterful properties within the area interspersed with mature trees. The wider setting is rural, and the village is surrounded by open farmland in all directions. The setting of the asset and its historical streetscape makes a considerable contribution to the assets value but due to the 20th century development of Roxwell largely screening the asset, the setting does not extend to the draft Order Limits.
- 3.7.158 The **high value** 'Moor Hall' (**1237175**) is a Grade II\* listed building of evidential, historical, and aesthetic value. The asset is located 760 m west of the draft Order Limits, within a very rural location approximately 460 m to the south of the small village of Newney Green. Moor Hall is a plastered timber frame house of 15th century origin that has been altered in the 16th century and restored after a fire in 1959. The building is of two storeys and attics with casements windows with leaded lights. The north front has two 16th century gabled bays rising to the full height of the house, with carved barge boards to the gables, pendants and carved bressummers to the bay windows. There is a two-storey porch with the upper storey jettied and a similar gable to the bays. The roof is tiled, with a good 15th to 16th century central chimney stack with grouped diagonal shafts. The interior has original features and there are the remains of a moat.
- 3.7.159 The setting of the asset is extremely rural, and it not located near any other settlement. The asset is situated within its own yard with associated outbuildings and open rural farmland surrounds the asset in all directions. There are clear views of open farmland in nearly all direction with some mature tree screening to the east. The setting of the asset, maintained in its historical rural, agricultural landscape, contributes considerably to the value of the asset. Due to the proximity of the draft Order Limits and the elevated terrain on which the asset sits, there is likely to be intervisibility between the two, and as such the setting of the asset does extend to the draft Order Limits.
- 3.7.160 The **high value** Grade II\* listed 'Chobbing's Farmhouse' (**1306286**) and the **medium value** Grade II listed 'Barn at Chobbings Farm' (**1237444**) and 'Granary at Chobbings Farm' (**1237445**) are assets of evidential and historical value. The assets are located together approximately 380 m to the south-east of the draft Order Limits, immediately to the west of Woodhall Hill Road, on the outskirts of Chelmsford. The granary dates to the 17th century and so is reported in the post medieval section below. The farmhouse date to the late 14th century and comprises a former open hall or kitchen block to larger dwelling now demolished. The one storey building with attics is timber framed with a plastered exterior with a weatherboarded dado and a tiled roof. The barn is a late 14th century house that was converted to a barn in the late 16th or early 17th centuries. The barn is a weatherboarded timber frame structure and has five bays. The barn has now been converted as a separate dwelling to the farmhouse.
- 3.7.161 The setting of the assets is shared and informed by their location within a former farming complex, although this space has been divided in two providing garden space for two residential dwellings. The setting is further informed by the interrelationships between the designated assets and by their relationships with the surviving non-designated farm outbuildings, which are recorded on 19th and 20th century OS mapping. The adjacent agricultural landscape, with which the assets and

outbuildings have a historical and former functional relationship, also makes a positive contribution to the setting, but the 20th century and on ongoing expansion of Chelmsford has entirely removed this link to the south. The loss of function for the barn and the granary, the division of the former farmyard, the encroachment of modern housing from the south and the resulting erosion of agricultural land means the setting of the assets makes a minor contribution to their values. Due to distance and partial screening by development and mature tree lined hedgerows in the intervening landscape, the setting does not extend to the draft Order Limits.

- 3.7.162 The Grade II listed assets Kings Court Farmhouse (**1264971**) is located loosely clustered with the post medieval Grade II listed assets 'Armswick Farmhouse' (**1264954**), 'Former Barn to Armswick Farm' (**1235716**), 'Armswick Cottage' (**1264955**), 'Chase Cottage and 1, Wellington Cottages' (**1264970**), and 'The Old Cottage' (**1235666**) in the small settlement of Cooksmill Green, 2.6 km west of Writtle and c. 1.8 km west of the draft Order Limits. The post medieval assets are reported in the appropriate section below. These assets are of **medium value** based on their designation and their evidential and historical value. Kings Court Farmhouse (**1264971**) comprises a 15th or early 16th century plastered timber frame two story house with three gable each to the east and west elevation with a double pitched tiled roof.
- 3.7.163 The setting of the farmhouse is informed by its location within the settlement, by the large working farm complex to the rear (west) and by the large lawned garden to the front (east), which is defined by a high (c. 2.5 m to 3 m) red brick wall. Almost all the former outbuildings recorded on 19th and 20th century OS mapping have been replaced by the modern buildings of the working farm, however, a small east/west aligned range appears to survive just to the north of the asset. The setting is further informed by a view, occasionally broken by mature trees, to the Grade II listed, post medieval Chase Cottage and 1, Wellington Cottages (**1264970**) 100 m to the east. The surrounding agricultural landscape with which the asset has a historical and functional relationship also makes a positive contribution to the setting of the asset. The setting of the asset, therefore, makes a considerable contribution to the asset's value, but due to its settlement location screening views to the east and the Project, the setting does not extend to the draft Order Limits.

#### *Non-Designated Heritage Assets*

- 3.7.164 Cropmarks of medieval to post medieval field boundaries have been identified at Hoestreet Cottages (**6024**). The asset is located approximately 70 m to the west of the draft Order Limits and immediately to the east of Hoe Street, approximately 670 m to the north of Newney Green. The site is crossed by two draft Order Limits pipelines north/south and by a permanent access road east/west. The site is of evidential and historical value and is of **low value**.
- 3.7.165 The site of a medieval moat has been identified at Hoestreet Farm (**6044**) south-west of the cropmarks at Hoestreet Cottages (**6024**). The moat site contains the early 17th century Grade II listed Hoestreet Farmhouse (**1235763**) and its Grade II listed granary (**1247675**). The site is located approximately 70 m south-west of an draft Order Limits access road, immediately to the west of Hoe Street and approximately 630 m to the north-east of the Newney Green. The site is of evidential and historical value and is of **medium value**.

#### **Writtle to Margaretting**

##### *Designated Heritage Assets*

- 3.7.166 The **high value** scheduled monument 'Barn near King John's Place' (**1002166**) south-west of Lordship Farm, Writtle, is of evidential, historical, and aesthetic value. The asset is also Grade II\* listed (**1264255**) and located approximately 1.7 km east of the draft Order Limits, immediately to the west of Lordship Road and 50 m to the north of the outskirts of Writtle. The building is a late 15th to early 16th century (c. 1490-1500) aisled barn of six bays. The building is timber framed and weatherboarded with a tiled roof and two gabled entrances on the north and south sides. The braced tie beams carry crown posts with two-way braces and collar purlin. The structure is supported laterally by arched shore timbers and aisles.
- 3.7.167 The barn is located within the southern limit of the Writtle College Lordship Farm Campus, just to the north of Writtle. The barn is next to, but set back from, the busy Lordship Road. Its former setting as part of the Lordship Farm complex recorded on 19th and 20th century OS mapping has been entirely removed by the development of the campus. Also, the once surrounding agricultural landscape has been severely eroded by the northward's expansion of Writtle. The current setting of the asset, therefore, does not contribute to its value and so the setting does not extend to the draft Order Limits.
- 3.7.168 The Grade II listed 'Bulimers Farmhouse' (**1237353**) is located on the western edge of Writtle 50 m north of Ongar Road, 220 m east-northeast of the draft Order Limits. The farmhouse is of **medium value** based on its designation and its evidential and historical value. The asset is of 16th century or earlier date and comprises a partly weatherboarded plastered timber frame, two storey house on a stone rubble plinth. The roof is tiled and the south-west facing elevation has been refaced in brick. There is a 19th century gault brick parallel range adjoined to the south-east with a Welsh slate roof.
- 3.7.169 The setting of the asset is informed by its relationship with its former outbuildings, now domestic dwelling, most of which are recorded on 19th and 20th century OS mapping. The former setting of the assets was one of dispersed farmsteads linked by winding roads in an agricultural landscape. This was, however, beginning to be eroded by the westward infill expansion of Writtle along Ongar Road as far back as the later 19th century when the first edition OS map was published. This expansion continued gradually in the 20th century and is recorded on OS mapping until 1946. Thereafter, the expansion of Writtle accelerated and farmland to the north and south of Ongar Road was lost to modern planned housing estates. The housing estates now lie adjacent to the asset to the north-east through to the south-east and there has been some small-scale infill development to the west along Ongar Road. The setting of the asset has, therefore, been largely eroded and so it makes a minor contribution to the value of the asset. Due to the now much restricted setting of the asset, it does not extend to the draft Order Limits.
- 3.7.170 The **high value** scheduled monument 'Moated site known as Franklin's Island' (**1017002**) is of evidential and historical value. The asset is located approximately 1.2 km west of the draft Order Limits, and 120 m to the west of a country track that leads to the village of Edney Common 240 m to the north-east. The moated site includes a rectangular island measuring approximately 26 m north-west/south-east by a maximum of 18 m north-east/south-west. The island is contained by a dry moat or ditch which measures approximately 8 m wide and between 1.5 m and 2 m deep. The moated site, which is marked as Franklin's Island on the 1874 1st edition 25-inch Ordnance Survey map, is situated on the extreme northern boundary of Writtle Park, a medieval deer park and the manorial settlement, which lies 220 m to the south-east, and is believed to be a park keepers lodge that belonged to the estate.

- 3.7.171 The setting of the asset is informed by its presence as a medieval moated site situated within parkland. The site is set back from a private hedge lined country track in an area of woodland. Open farmland surrounds the asset to the north, west, east, and south, with some dispersed settlement visible to the north and east. The historic rural setting of the asset has been maintained and thus contributes considerably to the value of the asset, but due to overall distance and mature copses and tree lined hedgerows in the intervening landscape, the setting does not extend to the draft Order Limits.
- 3.7.172 The Grade II listed 'Bearman's Farmhouse' (**1237406**) is in a farming complex on the eastern flank of Writtle Road, 680 m north of Margaretting, c. 70 m south-south-east of the draft Order Limits. Also included in the farming complex are the post medieval Grade II listed 'Barn to South East of Bearmans Farmhouse' (**1237407**), 'Outbuildings at Bearmans Farmhouse' (**1237409**) and 'Barn to East Of Bearmans Farmhouse' (**1264135**), which are reported in the appropriate section below. The farmhouse (**1237406**) is of **medium value** based on its designation and its evidential and historical value. The farmhouse dates to the early 15th century and comprises a plastered timber frame hall house with cross wings. The tiled roof was raised when a floor was inserted in the hall in the early 17th century. The farming complex appears to have been broken in to two separate properties now with the farmhouse (**1237406**), out buildings (**1237409**) and barn to east (**1264135**) forming one to the north and the barn to the south (**1237407**) and non-designated outbuildings forming the other to the south.
- 3.7.173 The setting of the asset is informed by its location within a former working farm complex and by its interrelationships with the Grade II listed outbuildings and barns. The setting is further informed by non-designated farm buildings and the surrounding agricultural landscape with which the asset has a historical and functional relationship. The asset has lawns to the west, east and south, which are defined by thick, high (up to 5 m) evergreen hedges obscuring views in and out of the farm. There is less dense tree cover to the north and glimpses of the asset can be gained looking southwards along Writtle Road. The private road to Coptfold Hall Farm is located 70 m north of the asset, and the route is to be an access road for the Project. The setting of the asset makes a considerable contribution to its value, but whilst the asset is screened from the draft Order Limits to the west by the mature garden boundary, its setting does extend to the draft Order Limits access road to the north.
- 3.7.174 The Grade II\* listed 'Church of St Margaret' (**1338504**) is located on the southern flank of Church Lane, immediately south-east of the Great Eastern Railway, 1.2 km north-east of Ingatestone and 70 m north-east of the draft Order Limits. The asset is of **high value** based on its designation and its evidential, historical, aesthetic, and communal value. The core of the flint and stone rubble church is Norman in origin, but it was almost completely rebuilt in the early-mid 15th century. The west tower and the porch date to the 15th century and the king post roof of the nave is of similar date. The chancel was much altered in the 16th century when it was also re-roofed. The church was much altered in 1877 when it was restored.
- 3.7.175 The setting of the church is informed by its location within its associated graveyard and by its relationship which the vicarage immediately to the north and which is recorded on the first edition OS map of 1881. The setting is further informed by the long-established railway and by the surrounding agricultural land with which the church has a historic relationship. The Grade II listed post medieval Margaretting Hall (**1152104**) lies 240 m to the north-west but due to mature tree growth in the graveyard, flanking the railway and along Church Lane, there is no intervisibility between the assets. The setting of the asset makes a considerable contribution to its

value, and due to the proximity of the Project, the setting extends to the draft Order Limits.

- 3.7.176 The Grade II\* listed 'Church of All Saints' (**1237229**) is located south of Church Lane within the historic core of Writtle and c. 1.4 km west of the draft Order Limits. The asset is of **high value** based on its designation and its evidential, historical, aesthetic, and communal value. The church is mainly constructed of ragstone rubble with some flint and ironstone. There is some Roman brick in the chancel, and the dressings are of clunch, limestone, Barnack stone and some brick. The south nave chapel is 16th century brick, and the roofs are leaded except for the chancel, which is tiled. The church has 12th to 13th century origins and the north and south nave aisles are likely 13th century. The chancel had reached its present extent by the early 13th century and the tower was added likely in the 13th or 14th centuries. The aisles were remodelled and given new windows in the 14th century, when the chancel chapels were added, and the north vestry built. The church was maintained and added to the 15th and 16th centuries, and the west tower was rebuilt in 1802 after the medieval tower collapsed in 1800.
- 3.7.177 The setting of the asset is informed by its associated tree lined graveyard and by its location 100 m south of the three-sided, likely medieval Writtle Green. The setting is further informed by the asset's interrelationship with the numerous post medieval, Grade II listed buildings arranged around Writtle Green and along Romans Place to the east. There has been some 20th century infill residential development around the green and the streets around the church, but this is largely sympathetic and in the local vernacular. The setting of the church makes a considerable contribution to its value, and due to topography, development and mature tree line hedgerows of the intervening landscape, the setting does not extend to the draft Order Limits.
- 3.7.178 The Grade II\* listed 'Church of St Mary' (**1264434**) is located on the western flank of Ingatestone Road c. 2.4 km west of Stock, 80 m south of the draft Order Limits. The asset is of **high value** based on its evidential and historical value. The church's core dates to the 14th to 15th centuries, but there later 18th century alterations and the asset was restored in 1876. Further restoration works took place in 1923, 1949 following WWII damage, and 1977. The nave and aisles are largely medieval and constructed of flint rubble with stone dressing. The chancel is rendered but likely of similar age and construction but has a later red brick plinth. The red brick tower and south porch were built in the late 18th or early 19th centuries, and both are partially weatherboarded. The church may have served the village of Buttsbury, which is recorded in the Domesday Book but now lost.
- 3.7.179 The setting of the asset is informed by its isolated roadside location within its small churchyard and by its all-round views of the agricultural landscape with which it has a historical relationship. The loss of the settlement it once served detracts from the setting, but it still makes a moderate contribution to its value. Due to the proximity of the Project, the setting extends to the draft Order Limits.

#### *Non-Designated Heritage Assets*

- 3.7.180 The fragmentary remains of a medieval moat (**6041**) are located at Montpeliers Farm 120 m west of Margaretting Road. The site is crossed east/west by the draft Order Limits and Writtle approximately 920 m to the north. The site is of evidential and historical value and of **low value**.
- 3.7.181 The site of a poorly surviving medieval moat is located at Lee Farm (**6045**), accessed off a private road 200 m south-east of The Causeway and 1.1 km south-west of

Writtle. It is located c. 80 m east to the draft Order Limits. The site is of evidential and historical value and of **low value**.

- 3.7.182 The possible site of the 12th century Coptfold Chapel (**6048**) is located within the grounds of Coptfold Hall, 250 m west of the draft Order Limits and 970 m to the north of the Handley Green. According to an Ordnance Survey record of 1976, no trace of the medieval chapel was found during field investigation. It is possible that the 19th century chapel (**6096**) associated with the hall stand on the site of its medieval predecessor. The site asset is of evidential and historical value and is of **low value**.

## Post Medieval

### *Designated Heritage Assets*

#### **Fuller Street to Little Waltham**

- 3.7.183 The **medium value** Grade II Registered Park and Garden of 'Langleys' (**1000241**) that also contains the **high value** Grade I listed building 'Langley's' (**1305533**), and Grade II listed **medium value** 'Garden Block to the South of Langleys' (**1122115**), 'Stables to the North-East of Langleys' (**1171617**), and 'South Lodge to Langleys Park' (**1338466**), are of evidential, historical, and aesthetic value. The parkland is located immediately to the north-west of the draft Order Limits, which borders the park's south-eastern boundary. The assets are situated on the eastern edge of the village of Great Waltham and are included within the Great Waltham Conservation Area.
- 3.7.184 The Grade II listed Langleys parkland (**1000241**) is a late 19th century formal garden with 20th century additions, set in an early 18th century park and woodland for which Charles Bridgeman produced designs, with early 19th century alterations by Humphry Repton. The Grade I listed house of Langleys (**1305533**) is a red-brick country mansion, built to an H-plan in three storeys. The entrance front on the west has wings projecting at the north and south ends and a central doorway and window-piece with Ionic pilasters and garland ornamentation. The garden front to the east is like the west front but with only slightly projecting side wings. Langleys was rebuilt on the site of an earlier house between 1710 and 1719 to designs by William Tufnell for Samuel Tufnell but has considerable 19th century alterations. On the south side of the house stands the Grade II listed garden block (**1122115**), a rectangular red brick building with rusticated brick quoins, built by Samuel Tufnell in the late 18th century. On the north-east side of Langleys is the Grade II listed stables (**1171617**), a 17th century red brick and tile building with considerable 19th century alterations. The Grade II listed South Lodge (**1338466**) lies 300 m to the south of the house, on the northern flank of the A130 to B1008 link road. This red-brick and stucco two-storey building is contemporary with the house, having been built by Samuel Tufnell in the late 18th century.
- 3.7.185 The setting of these assets is informed by their interrelationships as elements of a high-status country estate. The setting is further informed by their relationships with the non-designated buildings of the estate that contribute positively to its character. Beyond the park's limits to the south and west, the listed buildings of Great Waltham also contribute to the setting and in particular the Grade I listed Church of St Mary and Laurence (**1122058**), which is visible from the house and from various locations within the parkland.
- 3.7.186 The setting of Langley's house (**1305533**) and Langleys parkland (**1000241**) is also informed by their relationships with the Chelmer Valley to the north and east and the designed view from the house to the east-north-east takes in a picturesque portion of

the river and the eastern flank of the valley beyond the limits of the parkland. The setting of the house and parkland, therefore, makes a considerable contribution to their values and, due to the wider reach of the setting, it extends to the draft Order Limits.

- 3.7.187 The setting of the garden block (**1122115**) and stables (**1171617**) is more insular and restricted to their location within the grounds of the house and the parkland beyond. The setting of these assets, therefore, makes a considerable contribution to their values, but due to its more insular nature, the setting does not extend to the draft Order Limits.
- 3.7.188 Key to the setting of the lodge (**1338466**) is its location at the entrance to the estate on the northern flank of Chelmsford Road with Great Waltham to the south and west. The setting of the asset has been encroached upon by the modern development of Great Waltham to the south. This residential development is almost brutalist in nature and unsympathetic with the general grain of the post medieval elements of the Great Waltham settlement. The setting of the lodge, therefore, makes a moderate contribution to its value, but due to its focus on the estate and its restricted roadside nature, the setting does not extend to the draft Order Limits.
- 3.7.189 The Grade II listed ‘Gubbion Hall’ (**1122127**) is located approximately 1.2 km north-west of the draft Order Limits, immediately to the west of Banters and Mill Lane, 200 m to the west of the small settlement of Gubbion’s Green and 310 m to the west of the larger settlement of Great Leighs. The hall is situated within the scheduled monument ‘Gubbion’s Hall moated site’ (**1016802**) but it and all related post-medieval development within the moat are excluded from the scheduling. The scheduled moat is medieval in date and reported in the appropriate section above. Gubbion Hall is of **medium value** based on its designation and its evidential and historical value. The hall dates to the 17th century and comprises a plastered timber frame, two storey house with a tiled roof.
- 3.7.190 The setting of the asset is informed by its location with the scheduled medieval moated site within a largely rural landscape with scattered farmsteads. The site is set back from a tree lined country road within its own yard and forms part of the dispersed rural settlement of Gubbion’s Green. Open farmland surrounds the asset to the north, west and south to which there are views out over the flat landscape. The rural nature of the setting is a key element, and so the setting of the asset makes a considerable contribution to its value. Due to distance and the topography, mature tree lined hedgerows, copses, infrastructure and development of the intervening landscape, the setting does not extend to the draft Order Limits.
- 3.7.191 The **medium value** ‘Chatley’ (**1122100**), ‘Vixen Tor’ (**1338460**), and ‘Bellrope Cottage Cadmus Cottage’ (**1338461**) are three Grade II listed buildings of evidential, historical, and aesthetic value. All three buildings lay either side of Main Road on the outskirts of Great Leighs, approximately 100 m east of the A131 and 740 m north-west of the draft Order Limits. Chatley, formerly the post office, is a one storey 17th century plastered timber frame cottage with a 17th century addition at the east end and a thatched roof. Vixen Tor lies adjacent to the south of Chatley and is a small 18th century plastered timber frame one storey cottage. The cottage was renovated in the 20th century when a cross wing was built at the south end. Bellrope and Cadmus Cottage lie opposite Chatley and Vixen Tor and are a range of 16th to 17th century one storey cottages. The plastered timber frame cottages were originally of five tenements, but now of two, and were said to be alms-houses.
- 3.7.192 The setting of all the assets is immediately informed by their position along Main Road as part of some dispersed settlement on the edge of Great Leighs. All three are

road fronted and slightly set back by shallow driveways and have views to other residential dwellings in the area. To the west the A131 is extremely close by, however views are screened by an area of mature trees and planting. The wider setting is more rural and open farmland surrounds the assets to the east, west and south. The setting of the assets contributes moderately to their value, with the addition of the major thoroughfare of the A131 to the west impacting their historical rural landscape setting. Even though there is the potential for some intervisibility between the assets and the draft Order Limits to the east, the assets setting is largely centred around their rural settlement and their position on the periphery of Great Leighs. Furthermore, of this the rural landscape in which there are located is dividing in parcels by field boundaries and tree line, offering some screening, to the east in the direction of the draft Order Limits. As such the setting of the assets does not extend to the draft Order Limits.

- 3.7.193 The **medium value** Grade II listed building 'Rochesters' Farmhouse' (**1122102**) is of historical and aesthetic value. The asset is located approximately 850 m north-west of the draft Order Limits, 160 m east of the A131, and immediately to the west of Main Road on the southern outskirts of Great Leighs. Rochesters' Farmhouse is a 17th century plastered timber frame house of two storeys, with a cross wing at the north end. It has a four-window range with double hung sashes with single vertical glazing bars. The roof is tiled, and half hipped at the southern end.
- 3.7.194 The setting of the assets is immediately informed by its position in its own farmyard located along Main Road as part of some dispersed settlement on the edge of Great Leighs. The building is road fronted and slightly set back by a shallow drive and has views to other residential dwellings in the area. To the west the A131 is extremely close by, however views are screened by the outbuildings within the farmyard as well as some trees and vegetation. The wider setting is more rural and open farmland surrounds the assets to the east, west and south. The setting of the asset contributes moderately to its value. Whilst the asset is still located within a farmyard context, the construction of the busy thoroughfare of the A131 to the west and the development of the town of Great Leighs to the north and somewhat to the north-east have altered the setting of the asset. There is still however a substantial amount of agricultural land surrounding the asset. There is likely to be intervisibility between the asset and the draft Order Limits. However, the development along Main Road, the development of the A131 and settlement of Great Leighs as well as the intervening Paulk Hall Lane between the asset and the draft Order Limits all contribute to a fragmentation of the surrounding rural landscape. As such the setting of the asset does not extend to the draft Order Limits.
- 3.7.195 The **medium value** Grade II listed building 'Kitscroft' (**1122103**) is of evidential and historical value. The asset is located approximately 860 m north-west of the draft Order Limits, 70 m to the west of the A131 and 130 m to the north of the A131 roundabout. The building is part of some dispersed settlement roughly 560 m south of the village of Great Leighs, in Little Leighs and is situated on a corner plot where Main Road and Church Lane form a junction. Kitscroft is an 18th century plastered timber frame cottage of one storey and attics. It has casement windows with leaded lights and boarded shutters, as well as a gabled porch that projects onto the front. The roof is tiled with two gabled dormers.
- 3.7.196 The setting of this asset is immediately informed by its position on a corner plot where Main Road meets Church Lane at the centre of the small settlement of Little Leighs. The property is road fronted on three sides, but slightly set back by a gravel drive and it has clear views to other residential dwellings in the area. To the east the A131 and roundabout is extremely close by, however views are partially screened by

an area of mature trees and planting. The wider setting is semi-rural with an open field to the south. The setting of the asset contributes moderately to the value of the asset. This is because of the change in setting of the asset since the time of its construction. Whilst the asset is located still within largely a village landscape, there has been sufficient modern development in growth of the settlement of Little Leighs to the west of the asset and the addition of the main thoroughfare of the A131 to the east of the asset, cutting through the rural fields once to the east, to alter the setting of the asset. The construction of the A131 has reduced the assets setting, dividing the landscape, as such the setting of the asset does not extend to the draft Order Limits.

- 3.7.197 The **medium value** ‘Hillside View’ (**1122105**), ‘Thatch End’ (**1122106**), and ‘Keepers Cottage Rose Cottage’ (**1305570**) are a group of three Grade II listed buildings of historical and aesthetic value. The assets are located approximately 1.4 km north-west of the draft Order Limits, as part of the settlement in the north of the small village of Little Leighs. All three assets form a corner of settlement along the southern edge of the junction of Whites Lane and Rectory Lane. Hillside is a 17th century plastered timber frame cottage of one storey with attic. It has casement windows and a thatched roof with one dormer window. Adjacent to the north of Hillside are Keepers Cottage and Rose Cottage, an 18th century plastered timber frame cottage row of one storey with attics. It has a three-window range and a tiled roof with five dormers. Adjacent to the north of Rose and Keepers cottage is Thatch End, a 17th century plastered timber frame cottage of one storey with attics. The building has casement windows and a thatched roof with three dormer windows.
- 3.7.198 The setting of all the assets is immediately informed by their semi-rural position within the village of Little Leighs, all three are road fronted and slightly set back by shallow driveways and have views to other residential dwellings in the south and east. To the east the A131 is close by, however views are screened by a large area of mature trees and planting to the north, east and south. The wider setting is more rural, and farmland surrounds the assets in all directions, however views are screened by the area of woodland. The setting of the assets contributes considerably to the value of the assets as the historical rural settlement setting of the asset has been maintained. The dense vegetation contributes to a closed setting around the assets, with their setting being confined to the rural street and small residential grouping that they create. As such, between the assets and the draft Order Limits are enough lines of division in the landscape such as treelines, smaller roads as well as the main thoroughfare of the A131, meaning the assets setting does not extend to the draft Order Limits.
- 3.7.199 The **medium value** ‘Little Leighs Rectory’ (**1171513**) and ‘Tithe Barn to the North of Little Leighs Rectory’ (**1122107**) are Grade II listed buildings of historical and aesthetic value. The assets are located approximately 1.6 km north-west of the draft Order Limits, 460 m east of the A131, and immediately to the west of Rectory Lane on the northern outskirts of the small village of Little Leighs. Little Leighs Rectory is a mid to late 19th century two storey red brick house with yellow brick quoins and window dressings. At the east and west ends are two stopped gables with a small gable between them. The east front has three window range, and the south front has five window range, double-hung sashes with single vertical glazing bars. The windows on the ground storey of the south front have glazing bars and extend to the floor level. The ground storey windows have square label moulds and ornamented stops. A moulded stone string course runs between the storeys. The east front is stuccoed on the ground storey and has a ‘Gothic’ pointed arched doorway. The Tithe Barn to the north of the Rectory is a 16th to 17th century plastered timber frame, part

weatherboarded three bay tithe barn with thatched roof. It is now used as a church hall.

- 3.7.200 The setting of all the assets is immediately informed by their semi-rural position on the outskirts of the villages of Little and Great Leighs fronting onto Rectory Lane. Both assets are set within their own yard that is set back from the road slightly by a shallow driveway. There are views to other residential dwellings in the south and east. To the east the A131 is extremely close by, however views are screened by a large area of mature trees and planting to the east and south. The wider setting is more rural, and farmland surrounds the assets in all directions, however views are screened by the area of woodland. The setting of the assets contributes considerably to their value. The visual screening provided by the dense vegetation close to and away from the assets as well as the immediate agricultural land informs much of their setting. Furthermore, further to the east of the assets the landscape is divided by features such as the A131, the settlement of Great Leighs and other smaller roads. As such the setting of the assets does not extend to the draft Order Limits.
- 3.7.201 The **medium value** assets of 'Poplars Cottage' (**1171549**), 'Wakerings Farmhouse' (**1122110**), and 'Peachey's Cottage' (**1122111**) are a group of three Grade II listed buildings of historical and aesthetic value. The assets are located approximately 1 km south-east of the draft Order Limits, as part of some dispersed settlement along Leighs Road, to the south of Fuller Street. Poplars Cottage is an 18th to 19th century plastered timber frame house of two storeys with attics. It has a two-window range with casements, a boarded door and thatched roof. Opposite Poplars Cottage is Wakerings Farmhouse, a 15th, 16th, and 17th century plastered timber frame house built on an L-shaped plan with wings extending to the north-east and south-east. The building is of two storeys and has a three-window range of double hung sashes with glazing bars in plain reveals, with stuccoed lintels and square hood moulds and ornamental label stops. Immediately to the north of Wakerings Farmhouse is Peachey's Cottage, an early 19th century plastered timber frame house of two storeys. It has a two-window range with iron casements with gothic arched upper panes.
- 3.7.202 The setting of these assets is immediately informed by their position along Leighs Road as part of some dispersed rural settlement. All three are road fronted and slightly set back by shallow driveways and Wakerings farmhouse is also set within its own farmyard with associated outbuildings. To the west is a large area of dense woodland and the wider setting is very rural with open farmland surrounding the assets in all directions. The setting of the assets contributes considerably to their values. The large area of trees to the west of the assets provides screening but also a break in the landscape between the assets and the draft Order Limits. As such, whilst there is potential for visibility between the assets and the draft Order Limits, the setting of the assets extends largely to the east rather than the west and does not extend to the draft Order Limits.
- 3.7.203 The **medium value** 'Bishops Hall' (**1171200**), 'Bishops Hall Cottages' (**1122129**), 'Greystones' (**1122130**) and 'Fulbourne Cottages' (**1171225**) are four Grade II listed buildings of historical and aesthetic value. The Bishop Hall Cottages is located 150 m to the north of the draft Order Limits. Bishops Hall is located to the north of the cottages 290 m north of the draft Order Limits. Greystones is located to the north of Bishops Hall 400 m north of the draft Order Limits. Fulbourne Cottages is located to the north-west of Greystones approximately 540 m north of the draft Order Limits. All four buildings are part of some dispersed settlement that lines Boreham Road on the outskirts of Great Leighs. Bishops Hall is a 17th century two storey plastered timber frame house that has been renovated in the 20th century with modern panel

pargetting in old patterns. Bishops Hall Cottages are 17th to 18th century plastered timber frame cottages of one storey with attics. The building has casement windows with leaded lights, boarded doors, and a thatched roof. Greystones was formerly the Old Church of England School that was built in 1813 and now converted into a private dwelling. It is built of flint and stone pebbles with white brick dressings and has windows that are generally mullioned and transomed casements with lattice leaded lights and Tudor style square hood moulds. Fulbourne Cottages is a late 17th or early 18th century plastered timber frame house that has been renovated in the 20th century. The building has casement windows, a tiled roof, and central chimney stack with grouped diagonal shafts.

- 3.7.204 The setting of Bishops Hall Cottages (**1122129**) is informed by its roadside location, by its garden area to the south and east and by its relationships later residential buildings to the north and on the opposite flank of Boreham road. Beyond the property boundaries to the south and west is a parcel of heavily wooded land that encloses the asset and prevents outward views. The setting of the asset makes a moderate contribution to its value, and due to its restricted nature, the setting does not extend to the draft Order Limits.
- 3.7.205 The setting of Bishops Hall (**1171200**) is informed by its roadside location and by its relationship with its surviving non-designated outbuildings, which are recorded on the first edition OS map of 1881. The setting is further informed by the surrounding agricultural landscape with which the asset and associated outbuildings have a historical and former functional relationship. Formally a working farm, the complex has now been broken up into two residential properties and further buildings, possibly residential, have been added to the immediate north of the hall. The setting of the asset, therefore, makes a minor contribution to its value, and due to the erosion of the hall's links to its former outbuildings and the agricultural landscape, the setting does not extend to the draft Order Limits.
- 3.7.206 The setting of Greystones (**1122130**) is informed by its roadside location and, as a former school, by its former playgrounds now converted into gardens. The rural location of the asset also contributes to its setting, but this has been eroded by development immediately to the north-west at to the south associated with Bishops Hall Cottages. The setting of the asset, therefore, makes a moderate contribution to its value, but due to its restricted nature, the setting does not extend to the draft Order Limits.
- 3.7.207 The setting of Fulbourne Cottages' (**1171225**) is informed by its roadside location within the small hamlet focussed on the intersection of Boreham Road, Paulk Hall Lane and Mill Lane. The setting is further informed by the asset's relationships with the other buildings within the hamlet, some of which are recorded on the first edition OS map of 1881. The setting is further informed by the surrounding agricultural landscape with which the asset has a historical relationship. The grounds of the asset are defined by high fences and evergreen hedges largely negating view to and from the asset. the setting of the asset, therefore, makes a moderate contribution to its value, but due to the ground's boundaries and development within the intervening landscape, the setting does not extend to the draft Order Limits.
- 3.7.208 The **medium value** 'Fulbournes Farmhouse' (**1122131**) is a Grade II listed building of historical and aesthetic value. The farmhouse is located approximately 670 m north of the draft Order Limits, immediately to the south of Boreham Road, and on the edge of the southern residential area of Great Leighs. Fulbournes Farmhouse is a two-storey 18th century plastered timber frame house built on an L-shaped plan, probably with an earlier core. The north-west fronts each have a three-window range

of double hung sashes with glazing bars. The west front has a gabled wing at the north end and the roof is tied and half hipped at the south end.

- 3.7.209 The setting of the asset is immediately informed by its position within its own enclosed farmyard with associated farm buildings, fronted onto Boreham road but set back by a shallow drive. The southern outskirts of Great Leighs are close by and can be seen from the asset to the east and a group of other listed buildings can be seen to the west. The wider setting is more rural and open farmland surrounds the asset to the west, south and north. There are views out over the open agricultural landscape to the south. The setting of the asset contributes considerably to the value of the asset, with the farmyard setting being maintained and a large proportion of the area around the asset being agricultural land. The development to the west of Great Leighs has altered the landscape to some extent, however the asset is on the periphery of this settlement. The setting of the asset is restricted to its working farmyard location and the immediate agricultural landscape, and so because of this and development and mature tree cover in the intervening landscape, the setting does not extend to the draft Order Limits.
- 3.7.210 The **medium value** 'Thatched Cottage and Number 2 Adjoining' (**1122133**) and 'Church View St Johns Cottage' (**1171283**) are two Grade II listed buildings of historical and aesthetic value. The buildings are located close together, approximately 1.4 km north-west of the draft Order Limits within the village of Little Leighs, immediately to the north of Church Lane, and approximately 550 m to the west of the A131. Thatched Cottage and Number 2 Adjoining is a 18th to 19th century plastered timber frame house of two storeys, with casement windows, boarded doors, and a thatched roof. Church View St Johns Cottage is a plastered timber frame house of 16th century origins, but it has been much altered and partially rebuilt. At the end there is a gabled crosswing jettied on the first storey, the cottage has casement windows and a riled roof with one gabled dormer to the main block.
- 3.7.211 The setting of the assets is immediately informed by their position fronted onto the north of Church Lane within the village of Little Leighs. The properties are surrounded by mature trees to the north and east and there is a larger wooded area to the south. There are views to the east and south of some residential dwellings in the area, including the Grade II\* listed church opposite. The A131 runs close by and can be seen and heard to the east and south. The wider setting of the assets is more rural and open farmland, interspersed with mixed settlement, surrounds the assets in all directions. The setting of the assets contributes considerably to their value, with their setting of a small linear rural settlement enclosed by much vegetation. The primary views from the assets are to the south-west looking over the Church of St John the Evangelist (1122132). Because of this as well as the pockets of dense woodland to the south, and the intervening development of the A131, the setting of the assets does not extend to the draft Order Limits.
- 3.7.212 The **medium value** 'Hole Farmhouse' (**1338437**) and 'Barn to the South of Hole Farmhouse' (**1171364**) are two Grade II listed buildings of historical and aesthetic value. The assets are located approximately 175 m east of the draft Order Limits, as part of some dispersed settlement immediately to the north of Goodmans Lane. Hole Farmhouse comprises a front block of 18th to 19th century origin and a rear block of 16th century origin that are both plastered timber frame structures. The house was renovated in the 20th century and is of two storeys with a three-window range of double hung sashes with glazing bars in flush cased frames. The barn to the south is of 17th century origin and is timber framed and weatherboarded with a thatched roof.

- 3.7.213 The setting of the assets is immediately informed by their placement within their own rural farmyard with associated outbuildings, that has been set back from the road by a gravel yard and drive. The yard is surrounded by mature trees in all directions, however there are views to another listed farmhouse and farmyard, Goodmans Farm, that is located immediately to the south-west of the asset. The wider setting of the assets is very rural and open farmland surrounds the assets in all directions. The setting of the assets contributes considerably to their value. The dense woodland and agricultural landscape contribute to this setting significantly and despite the visual screening that may be afforded to some extent by the woodland and other vegetation there is still likely to be visibility between the assets and the draft Order Limits as they pass close by through the rural landscape. As a result, the setting of the assets does extend to the draft Order Limits.
- 3.7.214 The **medium value** 'Millars Cottage' (**1122136**), 'Rose Cottage' (**1338438**), 'Jasmine Cottage' (**1171375**), and 'The Cottage' (**1171378**) are four Grade II listed buildings of historical and aesthetic value. The assets are all located approximately 960 to 990 m north of the draft Order Limits within the village of Gubbion's Green, and line Mill Lane in proximity to one another. Millars Cottage is an 18th to 19th century plastered timber frame cottage of one storey with a thatched roof. Jasmine Cottage is opposite Miller Cottage to the east and is a 16th to 17th century plastered timber frame cottage with a thatched roof. Rose Cottage lies immediately to the east of Jasmine Cottage and is a 16th to 17th century plastered timber frame cottage with a thatched roof and boarded door. The Cottage lies immediately opposite Rose and Jasmine Cottages and is a 16th to 17th century plastered timber frame cottage with a tiled roof and gabled dormer.
- 3.7.215 The setting of all the assets is immediately informed by their position along Mill Lane within the small rural village of Gubbion's Green. All assets are road fronted but set back by shallow gravel drives and all have views to each other as well as other residential dwellings in the south and north. The wider setting is semi-rural and open farmland interspersed with settlement surrounds the assets in most directions, however there is a large area of dense woodland to the east and south-east. The small rural settlement of Gubbion's Green is the primary setting of the assets which contributes considerably to their value. It is likely that there would be some visibility between the assets and the draft Order Limits to the distance in the south, however some shielding would be afforded by the woodland to the east and the settlement along Boreham road to the south. The linear settlement along Boreham Road also serves as a dividing feature in the landscape between the asset's settlement and the draft Order Limits. As such, the setting of the assets does not extend to the draft Order Limits with their setting being the rural village location of Gubbion's Green and the immediate surrounding rural area.
- 3.7.216 The **medium value** 'Blue Barns Farmhouse' (**1338439**) is a Grade II listed building of historical and aesthetic value. The asset is located 1.14 km north of the draft Order Limits, immediately to the east of Mill Lane, and on the northern edge of the village of Gubbion's Green. Blue Barns Farmhouse is a 16th century two storey plastered timber framed and plastered house that was altered in the 19th century. The building has a three-window range and a tiled roof with a small gable at the south end.
- 3.7.217 The setting of all the asset is immediately informed by its position within its own enclosed farmyard to the east of Mill Lane. The farmyard is set back from the road by a long drive and there are views to the south-west of the residential dwellings of Gubbion's Green. The wider setting is semi-rural and open farmland interspersed with settlement surrounds the asset in most directions, however there is a large area of dense woodland to the east and south. The farmyard setting of the asset within an

agricultural landscape contributes considerably to the value of the asset. It is possible there may be some visibility between the asset and the draft Order Limits to the south and east, however there would be some screening provided largely by the dense woodland to the southeast, Manns Wood. The land between the asset and the draft Order Limits is also divided by other landscape features such as Boreham Road and Fairstead Lodge Road, creating breaks in the landscape between the agricultural land. Because of this and Manns Wood, the setting of the asset does not extend to the draft Order Limits.

- 3.7.218 The **medium value** 'North Whitehouse Farmhouse' (**1122137**) is a Grade II listed building of historical and aesthetic value. The asset is located 1.5 km north of the draft Order Limits, immediately to the west of Mill Lane, on the outskirts of Gubbion's Green and Ranks Green. The farmhouse is a 17th century plastered timber frame two storey house with its framing exposed. It has a two-window range and a tile roof with original central chimney stack.
- 3.7.219 The setting of all the asset is immediately informed by its position within its own enclosed farmyard with associated outbuildings to the west of Mill Lane. The farmyard is set back from the road by a shallow drive and there are views to the south and north of the residential dwellings of Gubbion's Green and other farms in the area. The wider setting is semi-rural and open farmland interspersed with settlement surrounds the asset in most directions, however there is a large area of dense woodland to the south. The agricultural setting of the asset contributes considerably to its value. There is the potential for some intervisibility between the asset and the draft Order Limits in the distance to the south-east of the asset. However, there would be much screening and division of the landscape created by features such as Manns Wood, Ranks Green Road and Fairstead Lodge Road, means the setting of the asset does not extend to the draft Order Limits.
- 3.7.220 The **medium value** 'Longs Farmhouse' (**1171557**) is a Grade II listed building of evidential, historical, and aesthetic value. The asset is located approximately 400 m south-east of the draft Order Limits at the end of Longs Lane, which adjoins Leighs Road in the east. The farmhouse is of 16th to 17th century origin; however, a house may have stood on the site in the 12th century. The two-storey house is fronted in red brick, has a tiled roof, and has double hung sash windows with vertical glazing bars and segmental heads.
- 3.7.221 The setting of the asset is immediately informed by its location within its own enclosed farmyard, with associated outbuildings, at the end of a country track. The wider setting is extremely rural and there is no other settlement in the area. There are clear open views in all directions of the farmland that surrounds the property. The agricultural setting of the asset contributes considerably to its value. The proximity of the draft Order Limits to the asset means there would not only be visibility between the two but that the setting of the asset does extend to the draft Order Limits as it passes through the neighbouring fields close to the farm.
- 3.7.222 The **medium value** 'Lowleys Farmhouse' (**1305642**) is a Grade II listed building of historical and aesthetic value. The asset is located approximately 320 m west of the draft Order Limits, immediately east of an access road contained within the draft Order Limits, to the south of Goodmans Lane, and approximately 340 m east of the A131. The farmhouse is a 17th century plastered timber frame house that has had later modern additions to the rear. The roof is tiled, there are 20th century windows in casements and a gabled wing on the east side with jettied upper storey.
- 3.7.223 The setting of the asset is immediately informed by its location within its own enclosed farmyard, with associated outbuildings, at the end of a long country track,

south of Goodmans Lane. The wider setting is rural, and the asset is surrounded by open farmland with views out over this landscape, however there is an area of woodland close to the south. The setting of the asset contributes considerably to its value, set within an agricultural landscape and part of a working farmyard, continuing its historical relation to the agricultural landscape. There have been some changes to the landscape such as the addition of the A131 to the west, however the landscape is still largely agricultural. The setting of the asset does extend to the draft Order Limits as the draft Order Limits pass directly through the farmyard associated with the asset.

- 3.7.224 The **medium value** 'Lawns Farmhouse' (**1305707**) is a Grade II listed building of historical and aesthetic value. The asset is located approximately 2 km south-east of the draft Order Limits, immediately to the east of Boreham Road, on the outskirts of the small village of Russel Green. Lawns Farmhouse is a two-storey plastered timber frame house comprising two blocks at right angles to each other and of 16th and 17th century origin. The upper storey of the west block is jettied on the south front and the windows are casements. The windows to the south block are 18th century double-hung sashes with glazing bars. There is a gabled porch with an original window above it. The roof is tiled with an original diagonally shafted central chimney stack on the south block.
- 3.7.225 The setting of the asset is immediately informed by its location within its own enclosed farmyard, with associated outbuildings that is fronted onto the east of Boreham Road. The wider setting is rural, and the asset is surrounded by open farmland with views out over this landscape, however there is an area of woodland close to the west and a little further away in the north-west. The assets agricultural setting contributes considerably to the value of the asset. the setting of the asset is centred largely within the hardstanding centre to the property and the surrounding agricultural fields. The setting of the asset does not extend to the draft Order Limits, with landscape features such as Boreham Road and Lyonshall Wood to the west and north-west and the River Ter to the North dividing the landscape creating breakings across the landscape and limiting visibility between the asset and the draft Order Limits.
- 3.7.226 The Grade II listed 'Stonage Farmhouse' (**1172474**) and 'Barn to the North-West of Stonage Farmhouse' (**1122042**) are located on the eastern flank of the A131, c. 1.7 km north-north-east of Little Waltham and, immediately north of the draft Order Limits. The assets are of **medium value** based on their designation and their evidential and historical value. The farmhouse is a plastered timber frame house of probable 15th century date, which originally had cross wings to the north-east and south-west ends, but only the former survives. The roof is tiled and there is a 17th century chimney stack. The barn is likely of late medieval date being built in the 16th century and comprises weatherboarded timber frame three bay barn with a corrugated iron roof.
- 3.7.227 The setting of the assets is shared and informed by their farmyard location, by their interrelationship and by their relationships with the non-designated elements of the farming complex which are recorded on the first edition OS map of 1881. The setting is further informed by the surrounding agricultural landscape with which the assets have a historical and functional relationship. The setting of the asset, therefore, makes a considerable contribution to its value. The farmyard is partially defined by high, mature hedges and the assets are well screened from the A131 to the west. The boundary is more intermittent, however, to the south and east and the Project pylons would be clearly visible in places. The setting of the assets, therefore, extends to the draft Order Limits.

- 3.7.228 The Grade II listed 'Bakery Cottage' (**1122047**), '9 - 12 Chatham Green' (**1122048**), '4 - 7 Chatham Green' (**1172578**) and 'Bailey's Farmhouse' (**1172583**) are located within the small linear settlement of Chatham Green c. 380 m west of the A131, c. 360 m south-west to the draft Order Limits and equidistant from Great Leighs in the north and Little Waltham in the south. The assets are of **medium value** based on the designation and their evidential and historical value. The Bakery Cottage date to the 16th to 17th centuries and comprises a plastered timber frame house and a tiled roof. Asset 9 - 12 Chatham Green comprises a terrace of four early 18th century plastered timber frame, single storey cottages with tiled roofs. Asset 4 - 7 Chatham Green is of similar date and construction, however, the middle two cottages appear to have been merged into a single dwelling. Bailey's Farmhouse is a late 16th century two storey timber frame house, which was faced with red brick with blue brick vertical bands in the 18th century.
- 3.7.229 The setting of the assets is shared and informed by their location within the settlement and their relationships with each other and the non-designated elements of the settlement several of which are recorded on the first edition OS map of 1881. The setting is further informed by the surrounding agricultural landscape with which the assets have a historical relationship, and in the case of the farmhouse, a functional relationship also. The setting of the assets makes a considerable contribution to their values. Views to the draft Order Limits in the south-east are interrupted by mature hedgerows, the hedge and tree lined route of the A131 and intervening development. The setting, therefore, does not extend to the draft Order Limits.
- 3.7.230 The Grade II listed 'Evergreens and Kozi Cot' (**1172487**) is located on an unnamed road immediately east of the A131, 2 km north-north-east of Little Witham, 230 m west of the draft Order Limits. The asset is of **medium value** based on its designation and its evidential and historical value. The asset comprises an 18th century range of timber frame weatherboarded one storey cottages with tiled roofs.
- 3.7.231 The setting of the asset is informed by its isolated location on a short section of the former route between Little Waltham and Great Leighs, which was replaced by the A131 in the latter half of the 20th century. The setting is further informed by surrounding agricultural landscape with which the asset has a historical relationship, although the route of the A131 20 m to the west has partially eroded this relationship. The setting of the asset, therefore, makes a moderate contribution to its value. The view to the Project in the south-east is partially interrupted by mature hedgerows but pylons would be clearly visible from the asset and so the setting extends to the draft Order Limits.

#### *Non-Designated Heritage Assets*

- 3.7.232 A **low value** cropmark complex (**6054**) of historical and evidential value is located on the northern bank of the river Ter, c. 530 m south-west of Fuller Street and c. 40 m south-west of the draft Order Limits. The cropmarks are of likely extraction pits, or small scale quarrying, and linear features which possibly represent post medieval field boundaries.
- 3.7.233 A post medieval milestone is located 80 m north of the junction of the A121 with Whitbreads Farm Lane, approximately 150 m from a north-west/south-east aligned access road that is contained within the draft Order Limits (**6063**). It is thought that the milestone is dated to the 18th to 19th centuries. The asset is of evidential and historical value and is of **low value**.

- 3.7.234 The former 'Almshouses at Great and Little Leighs' (**6175**) are located on the eastern flank of Cole Hill, 700 m west of Fuller Street, 160 m south-east of the draft Order Limits. The asset is now two private residences. The one-story houses were brick built in the 19th century and have slate roofs. The asset is of **low value** based on its evidential and historical value.
- 3.7.235 The **low value** roundhouse of a post mill (**6147**) of historical and evidential value is located at the southern limits of Chatham Green, adjacent to the Windmill Inn and c. 240 m west of the draft Order Limits. The Chatham Green mill dated from 1829, when it entered the land tax records, and more particularly from 1833, when on June 21st the proprietor, Thomas Child, inserted an auction notice in the Chelmsford Chronicle referring to 'a capital new erected Post Windmill situate at Chatham Green...drawing 10 yards of cloth, the going gears of the best description, containing a wallower nut, spur wheel, and stone nuts, with two pairs of French stones, on centre irons, cast iron stone boxes and bridging ditto, sack tackle, flour mill and jumper. Also a dwelling house. The detached buildings comprise a bake office with new erected 5-bushel oven and patent irons complete.'

### Little Waltham to Chignall St James

#### *Designated Heritage Assets*

- 3.7.236 The **medium value** Grade II listed 'Barn at Scravels House' (**1122189**) is of evidential and historical value. The asset is located approximately 440 m south-east of the draft Order Limits and immediately to the east of a north-west to south-east aligned access road contained within the draft Order Limits. The barn is situated within some dispersed settlement to the north of Hollow Lane, on the northern edge of the settlement of Chelmsford which is situated roughly 550 m to the south. The timber framed barn is of 17th century origin and is weatherboarded with a thatched roof.
- 3.7.237 The barn is set within a closed yard, surrounded by a small metal fence, that has multiple buildings which are all set back from the road. The barn is not visible from the public road due to the mature vegetation and trees that line the road. The wider setting of the asset is more rural with open fields surrounding the property in all directions with a few dispersed buildings that lead to the outskirts of the settlement of Chelmsford in the south. The rural settlement and agricultural setting of the asset contributes considerably to its asset. Due to the proximity of the draft Order Limits passing directly in front of the property containing the asset, and despite the vegetation lining the property, the setting of the asset does extend to the draft Order Limits.
- 3.7.238 The **medium value** 'Parsonage Farmhouse' (**1122193**), 'Barn at Parsonage Farm' (**1169937**) and 'Outbuildings at Parsonage Farm' (**1122194**) are a group of Grade II listed buildings of historical and aesthetic value. The assets are located approximately c. 735 m east and 1.2 km south of the draft Order Limits on the western edge of the settlement of Broomfield, immediately to the south of School Lane. Parsonage Farmhouse is an early 19th century stuccoed brick house with hipped roof of two storeys, with a 1:3:1 window range of double hung sashes with glazing bars in plain reveals. The barn lies to the west of Parsonage Farmhouse and is a 17th century timber framed and weatherboarded building of seven bays, with two projected gabled entrance bays to the front. The outbuildings lie between the barn and the farmhouse and comprise two ranges of 18th century red brick buildings with tiled roofs and gabled loft entrances.

- 3.7.239 The immediate setting of the assets is informed by their presence as a group of buildings that form a closed courtyard, on the edge of the settlement of Broomfield, set back from a lane by wide grassy verges. The wider setting of the buildings is very rural and characterised by open agricultural farmland that immediately surrounds the yard to the east, north and south. The setting of the assets contributes moderately to the setting of the asset. This is largely because of the levels of change to the surrounding landscape that have occurred around the asset. The development of the settle of Broomfield now bordering the asset and its location in Parsons Green has altered to the north-east. Moreover, the sprawling settlement of Chelmsford to the south has now covered much of the surrounding rural land to the south. Whilst there is some rural land surrounding the asset still immediately to the west and north-west, with a small are immediately adjoining the asset to the south between Broomfield and Chelmsford, the landscape dynamics of the area have changed, so that the asset now occupies a peripheral urban and rural setting. The mature vegetation located within Parsons Green may provide some visual screening towards the draft Order Limits, however there may still be some visibility. The setting of the asset does not extend to the draft Order Limits.
- 3.7.240 The **medium value** 'Staceys Farmhouse' (**1169962**) and 'Barn at Staceys Farmhouse' (**1122196**) are two Grade II listed buildings of historical, and aesthetic value. The assets are located approximately 475 m south-east of the draft Order Limits and approximately 470 m west of the eastern edge of the settlement of Broomfield. Staceys Farmhouse is a two-storey 18th century red brick house with a parapet and raised brick band. It has a three-window range with double hung sashes with glazing bars, in plain reveals with gauged brick flat arches. The centre window has a semi-circular head, and the central doorway has a semi-circular fanlight with fan glazing. The slate roof is double pitched with two flat headed dormers on the east and west fronts. The barn lies to the south-west of the farmhouse and is of 17th century origin. The five bay barn is timber framed and weatherboarded with a pantile roof.
- 3.7.241 The immediate setting of the assets is informed by their grouping in a rural farmyard with farmhouse and various outbuildings. The farmyard is self-contained, surrounded by open farmland, and can only accessed via a country track to the north of School Lane, that leads east to the settlement of Broomfield. The setting of the assets contributes considerably to the value of the asset. Whilst the asset is close to the edge of the settlements of Broomfield and Chelmsford, the settlements are screened slightly by mature vegetation limiting to the view from the assets. The draft Order Limits pass closely to the asset, through the agricultural fields to the north and west, leading also to Hollow Lane to the south-west. As such, the draft Order Limits pass through and close to the agricultural land historically and functionally associated with the farm and as such the setting of the assets does extend to the draft Order Limits.
- 3.7.242 The **medium value** 'Vault to the West of Partridge Green Farm' (**1306289**) is a Grade II listed building of evidential, historical, and aesthetic value. The asset is located within the draft Order Limits, roughly 520 m west of the north-eastern edge of the settlement of Broomfield. The asset is a 18th century stick brick vault with stone dressings and a pitched top, with an inscribed slab on the south side of the pitched top that dates the vault to 1772 and identifies the owner as having lived at Partridge Green Farm.
- 3.7.243 The asset is set on the edge of a field on the western edge of a self-contained rural farmyard. The asset is surrounded by open farmland in all directions. There would be intervisibility between the asset and the Project, or the asset may even be removed given the location of the substation within this part of the draft Order Limits. The

setting of the asset contributes considerably to the value of the asset. The asset is linked heavily to its setting within Partridge Farm, associated with the previous owner of the farm, as such the farmyard and agricultural setting of the asset are key. The setting of the asset, therefore, extends to the draft Order Limits.

- 3.7.244 The **medium value** 'Priors' (**1338427**) is a Grade II listed building of historical and aesthetic value. The asset is located approximately 300 m south of the draft Order Limits, immediately to the north of Hollow Lane, and approximately 525 m to the west of the north-western edge of Chelmsford. The asset is originally a mid-16th century red brick moated house; however, it has been much altered in the 17th and 18th centuries, and the south-east cross wing was rebuilt in the 20th century. The building is of two storeys, with casement windows with leaded lights. The south-west side was probably the original front, perhaps with a two storeyed porch, but it was much altered in the 18th century. The north-east side, now the front, has two small gabled wings projecting on the front of the main block, with exposed timber-framing. The north-west wing has several original brick mullioned windows, a bay window, and the remains of original moulded string course. Roof tiled, with two segmental headed dormers in the south-west side and an original central chimney stack with four octagonal shafts, partly restored, on a square base.
- 3.7.245 The immediate setting of the asset is informed by its presence within its own enclosed grounds alongside multiple out buildings. The property boundary is surrounded by a black metal fence and mature vegetation that limits visibility from the roadside. Mature trees line the public roads to the south and north of the asset, which is set on the edge of some dispersed settlement not far from the outskirts of Chelmsford. The wider setting of the asset is more rural with open farmland and fields surrounding the property in all directions. The setting of the asset contributes considerably to its value. Despite the proximity of the sprawling settlement of Chelmsford to the south, the continued use of the agricultural landscape to the north, east and west as well as the shielding provided by vegetation along the southern border of the property maintains largely the rural agricultural setting of the asset. There is the potential for visibility between the draft Order Limits as it joins Hollow Lane but also across the landscape to the north-west as it crosses the agricultural landscape. As the draft Order Limits extend to Hollow Lane which borders the fields to the north of the asset, the setting of the asset does extend to the draft Order Limits.
- 3.7.246 The **high value** 'Church of St Nicholas' (**1170018**) is a Grade II\* listed building of evidential, historical, and aesthetic value. The asset is located approximately 2.05 km to the north-west of the draft Order Limits, at the centre of the small village of Chignall Smealy. The small red brick church with blue brick diapering and tiled roof was built in the early 16th century, however the north aisled was added in 1847. The west tower has an embattled parapet, diagonal buttresses, and original brick windows. There are also original brick windows on the south side of the nave and chancel.
- 3.7.247 The immediate setting of the asset is informed by its position within its own church yard that is set back from the road and surrounded by mature trees. The church is situated within the centre of the village of Chignall Smealy and is surrounded by a small amount of residential development. The wider setting of the church is more rural and there is open farmland surrounding the village in all directions. The rural settlement setting of the asset contributes considerably to the value of the asset. It likely that there would be very limited visibility between the asset and the draft Order Limits due to the immediate vegetation surrounding the asset, the settlement of Chignall Smealy as well as positioned within the landscape between the asset and

the draft Order Limits. The setting of the asset is informed by its relation to the small rural settlement of Chignall Smealy and the agricultural land surrounding the settlement. The intervening vegetation as well as the distance between the asset and the draft Order Limits it is unlikely there would be much intervisibility between the asset and the draft Order Limits. As such the setting of the asset does not extend to the draft Order Limits.

- 3.7.248 The **medium value** assets 'Church End' (**1170065**) and 'Church House' (**1338430**) are Grade II listed buildings both located in the small village of Chignell Smealy, either side of the Grade II\* listed Church of St Nicholas. The assets are of evidential, and historical value. The assets are located approximately 1.2 km to the north of the draft Order Limits, at the centre of the small village, facing onto the road. Church End is a two-storey timber framed house of late 16th century origin but has been much altered and partly brick faced. The south has a three-window range with 20th century casements. At the rear of the property is a short-gabled wing and large brick external chimney stack with three octagonal shafts with star caps. Church House is a timbered frame and plastered house of late 15th to early 16th century origin. There is a cross-wing at the west end of the building which is jettied on the upper storey. The house has been restored and extensively altered, and there are now two cross wings jettied on the upper storey with exposed timber framing. The roof is tiled with two 20th century gabled dormers to the centre block.
- 3.7.249 The setting of both assets is informed by their position within the centre of a small rural village, near the village church. Both properties are road fronted and surrounded by other residential developments. The wider setting of the assets is more rural and there is open farmland surrounding the village in all directions. The rural settlement setting of the assets contributes considerably to their value. It is likely that there would be limited visibility between the assets and the draft Order Limits due to the mature vegetation located around the settlement. The assets settings are informed by their location within the rural settlement of Chignall Smealy as well as the agricultural landscape that surrounds the village. The intervening vegetation as well as the distance between the assets and the draft Order Limits, it is unlikely there would be much intervisibility between the assets and the draft Order Limits. Because of this the setting of the assets does not extend to the draft Order Limits.
- 3.7.250 The **medium value** 'Stevens Farmhouse' (**1263975**) and 'Range of Farm Buildings to the North of Stevens Farmhouse' (**1247730**) are two Grade II listed buildings with evidential, historical, and aesthetic value. The assets are located approximately c. 220 m north and 210 m west of the draft Order Limits, immediately to the west of Mashbury Road, roughly 180 m north of the small village of Chignall St James. Stevens Farmhouse is an early 19th century two storey farmhouse of colour washed brick, hipped slate roof and brick ridge stacks. The east elevation has a symmetrical window range of a six panelled door set in moulded wood architrave with Tuscan columns to Classical porch, and cambered brick arches over 16 pane sashes. The north and south elevations both has symmetrical window ranges of a similar layout. The range of buildings to the north of the farmhouse are an 1852 model farm by Beadle, Son, and Chancellor for James Crush. They are of Flemish bond brown brick with red brick dressings and hipped slate roofs. This asset has been included as a very early example of an advanced mid-19th century farm complex using covered yards, increasingly advocated in the later 1850's as a more efficient method of conserving farmyard manure than open yards and was endorsed by scientists.
- 3.7.251 The setting of the assets is immediately informed by their presence within their own enclosed large farmyard with associated outbuildings. The yard is fronted to Mashbury Road and slightly set back by a small gravel drive. The wider setting of the

farmyard is very rural due to the surrounding open farmland presenting an agricultural landscape in the area. The agricultural and farmyard setting of the assets contributes considerably to the value of the assets. The draft Order Limits extends into the agricultural fields located opposite the assets, on the opposite side of Mashbury Road, as well as at the bend of Mashbury road to the south of the assets. The draft Order Limits also pass through fields to the south-west of the assets. Because of the proximity of the draft Order Limits to the assets and its location passing through agricultural fields close to the farmyard, the setting of the assets does extend to the draft Order Limits.

- 3.7.252 The **medium value** Grade II listed Building of 'Grays Farmhouse' (**1306273**) is of evidential, historical, and aesthetic value. The asset is located approximately 100 m north the draft Order Limits and 1.2 km north-east of the village of Chignall St James. The farmhouse was originally a 15th to 16th century moated hall house with cross wings on the east and west ends, however it was altered considerably in the 17th and 18th centuries when the centre block was raised and divided into two storeys. The building is timber framed and plastered, with jettied cross wings on the upper story and a four-window range. The yard also contains fragmentary remains of the moat.
- 3.7.253 The asset is immediately set within its own farmyard with associated farm buildings at the end of a country track. The wider setting is extremely rural as there is no other settlement in sight, and the farm is surrounded by open flat farmland. The setting of the asset contributes considerably to its value. The draft Order Limits extends into the fields directly the asset to the south and as such the setting of the asset does extend to the draft Order Limits.
- 3.7.254 The **medium value** 'Marshalls' (**1305281**), 'Crowbrush Cottages' (**1122061**), 'Bridge House' (**1172076**), 'Firtree Cottage' (**1122060**), 'The Coach House' (**1338481**), 'Burtons' (**1338480**), and 'Franklyns' (**122059**) are a row of seven Grade II listed buildings of evidential and historical value. Marshalls (**1305281**) dates to the medieval period and so reported in the appropriate section above. The assets are located approximately 960 m north of the draft Order Limits and all line the east flank of Main Road at the north of the village of Great Waltham and the Great Waltham conservation area. Immediately to the south of Marshalls are Crowbrush Cottages, a range of 18th to early 19th century plastered timber frame cottages, with the ground storey faced in brick, a tiled roof and casement windows with leaded lights. Immediately to the south of Crowbrush Cottages is Bridge House, a 17th century plastered timber frame house altered in the 18th century, with casement windows and a tiled roof. Immediately to the south of Bridge House is Firtree Cottage, an early 19th century plastered timber frame house with double hung sash windows, a central hood and lattice porch, and a slate roof. Immediately to the south of Firtree Cottage is the Coach House, an early 19th century plastered timber frame house with double hung sash windows, a central doorway with flat hood, and a hipped slate roof. Immediately to the south of the Coach House is Burtons, an early 19th century plastered timber frame house with double hung sash windows, a brick porch, and a hipped slate roof. Immediately to the south of Burtons is Franklyns, a late 18th to early 19th timber framed and plastered building built on a square plan, with double hung sash windows, a central doorway with a bracketed hood, and a hipped tiled roof.
- 3.7.255 The setting of the assets is shared and is immediately informed by their positions fronting onto Main Road at the northern end of the village and conservation area of Great Waltham. The setting is further informed by their interrelationships, by their relationships with the Grade I listed medieval Church of St Mary and St Laurence to

the south, and by their relationships with the non-designated post medieval and early modern building on the thoroughfare, which contribute to the character of the conservation area. The village has a rural setting and to the east the village borders the Registered Park and Garden of Langley's. There are more modern housing estates on the north-east and south-west peripheries of the village. The village and conservation area are surrounded by rural fields on all sides. The setting of the assets, therefore, makes a considerable contribution to their values, but due to the insular nature of their village setting, the local topography, and screening by other village elements and Langley's parkland, the setting does not extend to the draft Order Limits.

- 3.7.256 The **medium value** 'Wallops' (**1338465**) is a Grade II listed building of historical and aesthetic value. The asset is located approximately 700 m north of the draft Order Limits immediately to the north of Chelmsford Road at the northern end of the village of Great Waltham and the Great Waltham Conservation Area. Wallops is a 16th century timber framed house that was re-fronted in the 19th century. The building is of two storeys with a 1:3:1 window range of double hung sashes with glazing bars, a central five panel door and slate roof.
- 3.7.257 The setting of the asset is immediately informed by its position fronted onto the north of Chelmsford amongst residential dwelling at northern end of the village and conservation area of Great Waltham. The properties have views out towards the many characterful buildings of the Conservation Area, including the Grade I listed church to the west. The village has a rural setting, to the east the village borders the Registered Park and Garden of Langley's and more modern housing estates have been added to the south-east and south-west periphery. The village and Conservation Area are surrounded by rural fields on all sides. The village setting of the asset contributes considerably to its value. the assets peripheral village location has been maintained as well as its position along the border of the Langelys Grade II registered park and garden and within the conservation area. The setting of the asset has been confined to its position along the road by the mature vegetation which limits views to and from the asset to the south, shielding the asset also from modern developments on the south-eastern side of the village. Because of the assets position within the village and the shielding afforded by the mature vegetation and new housing estate to the south of the asset, it is likely that there would be limited visibility between the asset and the draft Order Limits. Because of this, the setting of the asset does not extend to the draft Order Limits.
- 3.7.258 The **medium value** 'Chalk Farmhouse' (**1122079**) is a Grade II listed building of historical and aesthetic value. The asset is located approximately 1.1 km north-west of the draft Order Limits, immediately to the north of the B1008 and south of Old Shaws Lane, as part of some dispersed settlement to the east of Howe Street, and to north of Great Waltham. The farmhouse is a late 16th century timber framed and plastered house of two storeys. There are cross wings at the north-east and south-west ends, and the north-east wing has exposed timber-framing and is jettied on the upper storey. It has a three-window range of casements with leaded lights and a tiles roof with an original central chimney stack with diagonal shaft.
- 3.7.259 The setting of the asset is immediately informed by its position within its own farmyard with associated out buildings, on a corner plot that fronts onto the B1008 and Old Shaws Lane. The house sits on a higher level than the lane and has views out to the north and south of open farmland. The wider setting is rural, and the asset is surrounded by farmland that is interspersed with settlement to the west and south. The setting of the asset contributes considerably to the value of the asset, but due to overall distance and development, infrastructure and matures copses and tree lined

hedgerows in the intervening landscape, the setting does not extend to the draft Order Limits.

- 3.7.260 The **medium value** 'The Hyde' (**1171782**) and 'Cottage 15 Meters East of the Gables' (**1245222**) are two Grade II listed buildings of historical and aesthetic value. The buildings are part of some dispersed settlement on Hyde Hall Lane, to the east of Howe Street, to the north of Great Waltham, and approximately 720 m north-north-west of the draft Order Limits. The Hyde is originally a range of three 16th century timber framed and weatherboarded cottages, that now makes up one tenement. It was renovated in the 20th century and the ground storey is plastered on the front. The building has 20th century casement windows, and a tiled roof with four gabled dormers on the front. 130 m to the south of Hyde Hall, on the opposite side of the road is the Cottage east of the Gables, an early 19th century house that is now in use as a garden shed. The building is a plastered timber frame structure with a clay and flint east outshut, and a roof of corrugated clay tiles.
- 3.7.261 The setting of the assets is immediately informed by their rural position fronted either side of Hyde Hall Lane – The Hyde to the north and the cottage to the south. Both properties face the road and are only very slightly set back by shallow gravel drives. The wider setting is extremely rural and made up of open farmland interspersed with some settlement and there are open views in all directions. However, the B1008 cuts through the landscape to the south-west and the village of How Street is located just beyond this. The rural and agricultural setting of the asset contributes considerably to their value but due to overall distance and development, infrastructure and mature copses and tree lined hedgerows in the intervening landscape, the setting does not extend to the draft Order Limits.
- 3.7.262 The **medium value** 'Hyde Hall' (**1338492**) and 'Hyde Hall Cottage' (**1237480**) are Grade II listed buildings with evidential, historical, and aesthetic value. The buildings are located to the east of Hyde Hall Lane, 230 m west of the A131, and approximately 1.13 km north-west of the draft Order Limits. Hyde Hall is a two-storey moated timber framed manor house built c. 1600 and part of the moat remains on the south-west side of the garden. The house has been considerably restored and all the timber framing is exposed on the front. The upper storey is jettied on the whole front and there are four jettied gables. Some of the bressummers are carved and moulded. The roof is tiled with red brick chimney stacks with flat pilasters. Immediately to the north-east of Hyde Hall is Hyde Hall Cottage, a two storey mid-16th century timber framed building with exposed framing and 20th century brick nogging in ground floor walls. The first floor is rendered between studs and the east wall has black weatherboarding.
- 3.7.263 The setting of the assets is immediately informed by their rural position within their own courtyard, set back to the east of Hyde Hall Lane. Mature trees ring the property boundary in all directions, which blocks the assets from the view of the road. The wider setting is rural and made up of open farmland interspersed with some settlement. However, the B1008 cuts through the landscape to the south-west and the A131 to the east. The rural setting of the assets contributes considerably to their value. The assets historical setting has been maintained within the agricultural and rural landscape, and within the grounds of the property with mature trees lining the property as well as to the rear of the garden (east of the assets), as indicated on OS mapping from the OS Six-inch England and Wales, 1842-1952. The setting of the asset is largely comprised on its location within the grounds of the property. Because of this, as well as the vegetation screening close to the asset and the intercepting settlement along Chatham Green to the east and Scurvy Hall Lane to the south, the setting of the asset does not extend to the draft Order Limits.

- 3.7.264 The **medium value** 'Cobbs' (**1122081**) is a Grade II listed building of historical and aesthetic value. The asset is located approximately 1.31 km north-west of the draft Order Limits, to the south of the B1008 and the north of Parsonage lane, as part of some dispersed settlement on the eastern outskirts of Howe Street to the north of Great Waltham. Cobbs is a 17th century timber framed and plastered cottage of 1 storey with attics. It has a three-window range of casements with leaded lights, and a hipped thatched roof with two dormer windows.
- 3.7.265 The setting of the asset is immediately informed by its position within its own farmyard with associated out buildings, at the end of a country lane that joins to Parsonage Lane in the south. The farmyard has mature trees to the south and east and there are views to some dispersed settlement in the south and north. The wider setting is semi- rural, and the asset is surrounded by farmland that is interspersed with settlement to the north, east and south, however the outskirts of great Waltham can be seen to the west. The setting of the asset contributes considerably to their its value. Despite the addition of the B1008 close to the asset to the west, the rural setting and peripheral village setting of the asset has been maintained. The mature vegetation lining the property and the track leading from Parsonage Lane to the asset provide visual shielding from the main thoroughfare and to the south and east. The visual screening of the asset is also in part due to its location on the edge of the Chelmer River valley, where the land elevation begins to decline compared to the land to the south-east. The views from the asset extend further into the north, with less vegetation around the northern border of the property. As such the setting of the asset is centred largely on its position with the agricultural landscape close to the settlement of Howe Street, with extending views to the north over the river Chelmer valley. As such the setting of the asset does not extend to the draft Order Limits.
- 3.7.266 The **medium value** 'Waltham House' (**1338489**) is a Grade II listed building of historical and aesthetic value. The asset is located approximately 1.24 km north-west of the draft Order Limits, to the south of Parsonage Lane, on the eastern outskirts of the village of Howe Street, to the north of Great Waltham. Waltham House is an 18th century red brick building comprising of a main block with a parapet. On the north-west front two side wings of two storeys project to the north-west. The building has a five-window range on both fronts and a two-window range on the wings of double-hung sashes with glazing bars in plain reveals. Raised brick bands run between the storeys and at parapet level on the north-west front and it has a tiled double pitched and hipped roof.
- 3.7.267 The setting of the asset is immediately informed by its position within its own yard and garden with associated out buildings to the east. It is set back to the south of Parsonage Lane by a driveway and the property boundary is lined with mature trees to the south, east and north. There are views to some dispersed settlement in the south and north. The wider setting is semi- rural, and the asset is surrounded by farmland that is interspersed with settlement to the north, east and south, however the outskirts of Howe Street can be seen to the west. The setting of the asset contributes considerably to the assets value. The assets setting is largely centred around its position on the edge of the settlement of Howe Street and nestled in the low elevated land of the river Chelmer valley and set within large grounds which are still present. Some mature vegetation to the south of the asset would provide some visual screening between the asset and the draft Order Limits, however there is likely to still be some intervisibility. Because of the low-level elevation of the asset and its key setting being its location close to Howe Street, next to the river Chelmer and within a large garden associated with the hall, the setting of the asset does not extend to the draft Order Limits to the south.

- 3.7.268 The **medium value** the 'Green Man Public House' (**1171843**) is a Grade II listed building of historical and aesthetic value. The asset is located approximately 1.65 km north-west of the draft Order Limits, immediately to the east of Main Road as part of some dispersed settlement to the north of the village of Howe Street, situated to the north-east of Great Waltham. The Green Man Public House is an early 19th century red brick house of two storeys, and a three-window range of double-hung sashes with glazing bars in painted reveals. A 20th century central gabled porch projects on the front and there are 20th century additions on the east and west ends. The roof is tiled, hipped, and has a brick dentil eaves course.
- 3.7.269 The setting of the asset is immediately informed by its fronting onto Main Street, to the north of the village of Howe Street. There is a car park immediately to the north and the settlement of How Street can be seen to the south. The wider setting is more rural, and farmland surrounds the asset to the north, east and west with some dispersed settlement. To the south is the wooded parkland of Langley's Park and Garden. The setting of the asset contributes considerably to the setting of the asset. The front of the asset looks over a large grass field which slopes uphill, limiting views to the west of the asset. To the south, the views are also limited by the settlement of Howe Street as well as by mature trees located around the landscape. The asset is also located on low terrain within the valley of the river Chelmer. Because of these factors to the setting of the asset does not extend to the draft Order Limits.
- 3.7.270 The **medium value** 'Mill House' (**1171834**) is a Grade II listed building of historical and aesthetic value. The asset is located approximately 1.9 km north-west of the draft Order Limits, to the east of Main Road as part of some dispersed settlement to the north of the village of Howe Street, situated to the north-east of Great Waltham. Mill House is a 18th century plastered mill house in a picturesque setting. The building is of two storeys and attics, and a two-window range of double-hung sashes with glazing bars in flush cased frames. Its central six panel door has narrowed reeded pilasters and a flat hood on shaped brackets. The roof is tiled, with two gabled dormers and end chimney stacks.
- 3.7.271 The setting of the asset is immediately informed by its secluded position set back 210 m to the east of Main Street by a long drive, to the north of the village of Howe Street. Mature trees and planting ring the property boundary and the settlement of How Street can just be seen to the south. To the west and north are views out over open farmland. The wider setting is more rural, and farmland surrounds the asset to the north, east and west with some dispersed settlement. To the south is the wooded parkland of Langley's Park and Garden. The assets setting contributes considerably to the value of the asset. The key historical setting of the asset in its mill location next to the river Chelmer has been maintained. The low-level terrain that the asset is location on limits the views from the asset, as well as the mature vegetation to the south and east, and the settlement of Howe Street beyond that to the south. Due to these factors, the setting of the asset does not extend to the draft Order Limits.
- 3.7.272 The **medium value** Grade II listed 'Warners Farmhouse' (**1122091**) has evidential and historical value and is located on the western flank of Main Street, c. 2 km north of Great Waltham and c. 1.95 km north-west of the draft Order Limits. The former farmhouse is of probable 16th to 17th century origin but was greatly altered in the 18th and 19th centuries before being renovated in the 20th century. it comprises a plastered timber frame house with a tiled roof.
- 3.7.273 The setting of the asset is informed by its roadside location within its large garden and by its relationship with its non-designated outbuildings to the north, some of which are recorded on the first edition OS map of 1881. The setting is further

informed by the surrounding agricultural landscape, with which the asset and its outbuilding have historical and former functional relationships. The complex of outbuildings has, however, been greatly developed and now functions as a business park detached from the farmhouse. The setting of the asset, therefore, makes a moderated contribution to its value, but due to it being focussed on its roadside location and the immediate landscape, the setting of the asset does not extend to the draft Order Limits.

- 3.7.274 The **high value** Grade II\* listed 'Hill House' (**1338490**), and the **medium value** Grade II listed 'Barley Hill, (**122080**) and 'Well House' (**1338491**) are a group of listed buildings with evidential and historical value. The assets are located together either side of Littlely Green Road, 750 m north-north-east of the village of Howe Street, approximately 1.65 km north-west of the draft Order Limits. Barley Hill dates to the 15th century and so is reported in the medieval section above. The Grade II\* listed Hill House is a two-storey 16th century timber framed house with exposed timber framing and plaster infill. There are cross wings to the east and west ends which are jettied on the upper storey. The building has casement windows with leaded lights, a tiled roof with a central original chimney stack with two diagonally set shafts, and external chimney stacks on the cross wings with two octagonal shafts. Well House lies 180 m to the north and comprises a 17th to 18th century timber framed and plastered two storey house. The building has a two-window range with casement windows, a front projecting modern porch, and a tiled half hipped roof.
- 3.7.275 The setting of Hill House is informed by its rural roadside locations flanking Littlely Green Road. The asset is set back from the road and has lawned gardens to the south and west defined by fences, hedgerows, and scattered trees. The setting is further informed by the asset's interrelationship with the other designated assets and by its relationship with the non-designated Hill House Cottage immediately to the north. Cartographic sources record Hillhouse Farm immediately to the south of the asset, but this large complex of buildings was demolished in the mid-to-late 20th century, detracting from its former setting. The wider agricultural landscape, with which the asset has a historical and functional relationship, however, contribute positively to the setting. The setting of the asset, therefore, makes a considerable contribution to its value, but due to overall distance, screening by its mature grounds, and by mature tree lined hedgerows and copses in the intervening landscape, the setting does not extend to the draft Order Limits.
- 3.7.276 The **medium value** 'Humphreys Farmhouse' (**1122082**) is a Grade II listed building with evidential and historical value. The asset is located 1.2 km north-west of the draft Order Limits, to the east of Humphreys Farm Lane and to the north of Breeds Road, just to the south-west of Great Waltham. Humphreys Farmhouse is a late 16th century two storey timber framed house, built on an L-shaped plan with a wing extending to the south at the west end. The timber framing is exposed with plaster infill, the upper storey is jettied on the whole north front, and in the 17th century brick an outbuilding was added. The building has a four-window range of casements with glazing bars, and a tiled hipped roof with small gables.
- 3.7.277 The setting of the asset is informed by its location within a working farming and industrial complex, by its relationship with its outbuilding, which appears to be the only surviving element of a larger complex of buildings recorded on the first edition OS map of 1881. The setting is further informed by the surviving section of a moat immediately to the south and east of the asset, which tells of a deeper history of the site. The surrounding agricultural landscape, with which the asset and its post medieval and modern outbuildings have historical and functional relationships, also positively contributes to the asset's value. The asset has lawned grounds defined by

mature tree lined hedgerows and there is thick, mature tree growth on the banks of the moat. The setting of the asset, therefore, makes a moderate contribution to its value, but due to distance, its mature grounds and the development and mature tree lined hedgerows of the intervening landscape, the setting does not extend to the draft Order Limits.

- 3.7.278 The **medium value** assets 'Breeds Farmhouse' (**1122114**) and 'Clarkes Tye and Lower Breeds' (**1171586**) are Grade II listed building with evidential and historical value. The assets are located approximately 910 m north-west of the draft Order Limits, north and south of Breeds Road, beyond the south-east outskirts of Great Waltham. Breeds Farmhouse is a 17th to 18th century plastered timber frame house to the rear and fronted in red brick with black brick headers. The building is of two storeys with a two-window range of casements with glazing bars and has a tied hipped roof. Clarkes Tye and Lower Breeds is a 17th century timber framed and plastered house, now two dwellings, with a possible 15th century cross with at the east end, and a further modern wing at the west end. It is of two storeys with 20th century casement windows and a tiled roof.
- 3.7.279 The setting of the farmhouse is informed by its location within a former working farm complex, by its relationship with the listed asset to the south-west and with the surviving non-designated form outbuildings recorded on the first edition OS map of 1881. The setting is further informed by the surrounding agricultural landscape, with which the asset has a historical and former working relationship. The surviving outbuildings of the farm complex have been converted into residential properties and plot boundaries have divided up the former farmyard. The grounds of the farmhouse are defined by high hedges and contain scattered trees. The setting of the asset, therefore, makes a moderate contribution to its value, but due to distance, its mature grounds and the development and mature tree lined hedgerows of the intervening landscape, the setting does not extend to the draft Order Limits.
- 3.7.280 The setting of Clarkes Tye and Lower Breeds it informed by its roadside location on the edge of the settlement, by its relationship with the listed farmhouse and its non-designated outbuildings and by its relationship with the terrace of houses immediately to the west, which are record on the first edition map of 1881. The setting is further informed by views of the agricultural landscape with which the asset has a historical relationship. The two dwellings have large gardens to the rear (south) defined by mature tree lined hedgerows and containing outbuildings and scattered trees. The setting of the asset, therefore, makes a considerable contribution to its value, but due to the asset's mature boundaries and the development and mature tree lined hedgerows of the intervening landscape, the setting does not extend to the draft Order Limits.
- 3.7.281 The **medium value** 'South House' (**1338477**) and 'Barn 15 Meters to the West of South House Manor' (**1171586**) are a group of a Grade II listed buildings with historical and aesthetic value. The assets are located approximately 540 m north-west of the draft Order Limits within the residential development on the south-eastern outskirts of the village of Great Waltham. South House is an 18th to early 19th century red brick house of two storeys and cellars. There is a three-window range on the east front and two window range on the north and south sides of double hung sashes with glazing bars in painted reveals. The building has a central doorway with 20th century ornamental porch and a tiled hipped roof. The Barn immediately to the south-west of the house was formerly a house, then stables and now a store of 17th to 18th century origin. The building is timber framed with an English bond brick plinth and clad with weather boarding. It has a brick extension to the north, and a corrugated tiled roof.

- 3.7.282 The setting of the assets is shared and informed by their location within a former farming complex, by their interrelationship and their relationships with the surviving elements of the farming complex recorded in the first edition OS map of 1881. The setting is further informed by the adjacent agricultural landscape, with which the asset has a historical and former functional relationship. This aspect of the setting has, however, been partially eroded by 20th century residential development to the west, north and east of the asset and the surviving outbuildings have been converted into residential properties. To the rear (south) of the assets is a large garden defined by a mature tree line hedgerow. The setting of the asset, therefore, makes a moderate contribution to its value, but due to the asset's mature boundaries and development in the intervening landscape, the setting does not extend to the draft Order Limits.
- 3.7.283 The **medium value** White Cottage and Cottage Adjoining House (**1122098**) is a Grade II listed building with evidential and historical value. The asset is located on the southern flank of South Street on the southern edge of Great Waltham and its conservation area. The draft Order Limits lie approximately 540 m to the south-east. The asset is a range of 18th century roughly plastered, partly weatherboarded timber frame cottages of one storey with attics. The buildings have casement windows, boarded doors, and a tiled roof with three gabled dormers.
- 3.7.284 The setting of the asset is informed by its roadside location at the southern limit of the settlement. Once moderately isolated, the asset has been encroached upon by the 20th century residential development of Great Waltham to the west, north and east. There is a garden to the rear (south) and a view to the north across a modern village green with residential dwellings beyond. There are views over the open farmland south with which the asset has a historical relationship. The setting of the asset, therefore, makes a moderate contribution to its value, and although there may be long range views of the draft Order Limits to the south, the restricted roadside nature of the setting ensures it does not extend to the draft Order Limits.
- 3.7.285 The **medium value** 'High House and Little Fellows' (**1122092**) is a Grade II listed building with evidential and historical value. The asset is located approximately 1.3 km north-west of the draft Order Limits, immediately to the north of Mashbury Road on the north-eastern outskirts of the village of Great Waltham. The timber frame building is a range of two tenements built in the 16th century and restored in the 20th century. The two-storey building is weatherboarded on the ground floor with pargetting above and has a four-window range of casements with leaded lights, and a tiled roof.
- 3.7.286 The setting of the asset is informed by its roadside semi-rural position, amongst some dispersed 20th century residential development on the north-eastern outskirts of Great Waltham. The setting is further informed by the surrounding agricultural landscape, with which the asset has a historical relationship. There is a garden to the rear (north) and views of the 20th century residential dwellings to the east, however there are open views over the fields and farmland to the south. The wider setting is rural with scattered settlement including Broads Green to the south. The setting of the asset, therefore, makes a moderate contribution to its value, but due to distance and the development and mature tree lined hedgerows in the intervening landscape, the setting does not extend to the draft Order Limits.
- 3.7.287 The **medium value** Waltham 'Bury Farmhouse' (**1171598**) is a Grade II listed building of evidential and historical value. The asset is located approximately 1.8 km north-west of the draft Order Limits, immediately to the west of Bury Lane and north of Waltham Brook, to the north-west of Great Waltham. The plastered timber frame farmhouse is of 16th century origin but has been greatly altered in the 18th century.

The building is of two storeys with a four-window range of double hung sashes with glazing bars, a six-panel door with rectangular fanlight, and a hipped tiled roof.

- 3.7.288 The setting of the asset is informed by its location within a former farming complex and by its relationship with a non-designated outbuilding immediately to the south-east, which is the last surviving element on a large farming complex recorded on 19th and 20th century mapping. These farm buildings were immediately to the north of the asset have now been replaced by large industrial units of mixed use. The setting is further informed by the surrounding agricultural landscape with which the asset and its outbuilding have a historical relationship. The asset has a generous garden defined by mature hedgerows and trees and a large fishing pond to the south. The setting of the asset, therefore, makes a moderate contribution to its value, but due to the asset's mature grounds and the mature tree lined hedgerows and development of the intervening landscape, the setting does not extend to the draft Order Limits.
- 3.7.289 The **medium value** '1 and 2 Larks Lane' (**122083**) is a Grade II listed building with evidential and historical value. The asset is located approximately 180 m north-west of the draft Order Limits, immediately to the south of Larks Lane, within the eastern part of the village of Broads Green. The asset is a pair of 18th to 19th century timber framed and weatherboarded cottages of one storey and attics. They have casement windows and a thatched roof with two dormer windows.
- 3.7.290 The setting of the asset is informed by its village roadside location and by its relationships with the neighbouring non-designated 19th and 20th century characterful residences that also front on to the thoroughfare. The setting is also informed by agricultural land to the north and south, with which the asset has a historical relationship. The setting of the asset, therefore, makes a considerable contribution to its value, but due to its restricted village location, its setting does not extend to the draft Order Limits.
- 3.7.291 The **medium value** 'Brook House' (**1171652**), 'Rose and Crown Inn' (**1122116**), and 'Lace Cottages' (**1122117**) are three Grade II listed buildings of historical and aesthetic value located in the southern extent of the village and conservation area of Great Waltham. The assets are located along Chelmsford Road, 170 m, 140 m, and 80 m north of the draft Order Limits respectively. Brook House is an early 19th century plastered timber frame house with a gabled wing at the north end. The main block is of one storey with casements windows that have Gothic arched heads, and the wing is of two storeys with casement windows. The roof is tiled with two gabled dormers to the main block. South-south-east of Brook House, on the opposite side of the road, is the Rose and Crown Inn, a 18th to 19th century plastered timber frame house of two storeys. The building has a three-window range of double hung sashes with glazing bars, a central six panel door, and a tiled roof with end external chimney stacks. South-south-east of the Rose and Crown Inn is Lace Cottages, an 18th to 19th century plastered timber frame range of cottages that are now two tenements of one storey with attics. The building has a four-window range of casements, the two doorways have Gothic arched heads, the roof is tiled, and half hipped at the north and south ends with five gabled dormers.
- 3.7.292 The setting of the assets is shared and informed by their roadside village location, by their interrelationships and by their relationships with the neighbouring non-designated 19th and 20th century residences that make a positive contribution to the character of the conservation area. The setting is also informed by the agricultural landscape to the east and west, with which the assets have a historical relationship. The setting of the assets, therefore, makes a considerable contribution to their value, and due to the proximity of the Project, the setting extends to the draft Order Limits.

- 3.7.293 The **medium value** 'Fanners Farmhouse' (**1171731**) and 'Cottage 80 Yards East of Fanners Farmhouse' (**1122120**) are Grade II listed buildings with evidential and historical value. The assets are located 1.1 km and 1 km west of the draft Order Limits respectively, either side of Fanner's Farm Road within the small, rural village of Fanner's Green. The farmhouse dates to the 15th century and so is reported in the medieval section above. The cottage to the east is a 18th to 19th century plastered timber framed structure of one storey with attics. the building has casement windows and open porch with tiled lean-to roof, and a tiled mansard roof with two sloping dormers.
- 3.7.294 The setting of the cottage is informed by its roadside location in the small rural settlement and by its interrelationship with the designated farmhouse and its outbuilding to the west. The setting is further informed by the surrounding agricultural landscape, with which the asset has a historical relationship. The grounds of the farmhouse contain a weatherboarded garage or large shed and are defined by fences and mature tree lined hedgerows. The setting of the asset, therefore, makes a considerable contribution to its value, but due to the property's boundaries and the mature tree lined hedgerows, copses and development of the intervening landscape, the setting does not extend to the draft Order Limits.
- 3.7.295 From north to south, the following Grade II listed buildings are located on the opposing flanks of The Street, Little Waltham, and all of them are located within the Little Waltham conservation area (**CA56**). These assets are of **medium value** based on their designation and evidential and historical value:
- The 'White Hart Inn' (**1122020**) is an 18th century, two storey brick building built on a T-shaped plan. The asset was refronted in the early 19th century when a parapet was also added. The roof is tiled
  - The 'Knights' (**1122019**) is an 18th century red brick house with later alterations and additions. The asset has two storeys and a tiled roof
  - The 'Ivy Terrace' (**1304923**) is a range of four early 19th century plastered timber frame two storey houses. The asset has a double pitched roof with the front towards The Street tiled and the rear slated
  - The 'K6 Telephone Kiosk (Opposite Number 108, Canonbury House)' (**1247678**) was designed in 1935 by Sir Giles Gilbert Scott, and made by various contractors. The square Kiosk is constructed of cast iron with a domed roof
  - '108 The Street' (**1122028**) is an 18th century plastered timber frame house with 20th century pargetting in traditional patterns. The asset has two storeys and a tiled roof
  - 'Westeria' (**1152069**) is an early 19th century (1811 date stone) brick house with a gault brick front and parapet. The asset has two storeys and a slate roof
  - '104 The Street' (**1338503**) was originally a pair of plastered timber frame 18th century cottages, but it is now a single dwelling. The asset has two storeys and a tiled roof
  - 'Numbers 100 and 102 The Street Including 'The Alcove', Brook Hill' (**1304952**) is an 18th century and later plastered timber frame two storey house with a defunct 20th century corner shot front, a wing to the rear and a tiled roof
  - 'Campen's Cottage' (**1122043**) is an 18th century range of plastered timber frame two storey cottages, which is now a single dwelling. The north-west and north-east facing elevations are fronted with painted ashlar whilst the roof is thatched

- Historic England identify Ivy Terrace (**1304923**), 108 The Street (**1122028**) Westeria (**1152069**) 104 The Street' (**1338503**), Numbers 100 and 102 The Street, (**1304952**) and Campen's Cottage (**1122043**) as a group
- 'Hillcrest' (**1122018**) is a small, 18th century weatherboarded, timber frame, two storey cottage with a tiled roof
- 'Post Office [and] Shop' (**1122017**) is a two storey, plastered timber frame house with weatherboarding on the ground storey facing south. The asset is now two dwellings with a tile roof
- 'Yew Trees' (**1338501**) is a 17th century plastered timber frame house that was refronted in the 18th century. The two-storey asset has a defunct 19th century shop front with a concave roofed canopy to the north, and a rear painted brick wing to the south. the asset has a tiled roof
- '88 - 94 The Street' (**1122027**) is now a single dwelling comprising a late 18th or early 19th century plastered timber frame house. The two-storey asset is now cement rendered and the roof is thatched
- The 'Little Waltham United Reformed Church' (**1152043**) was built around 1803 and comprises a stuccoed brick two storey building with corner pilasters and a slate roof
- '84 and 86 The Street' (**1338502**) are a pair of 19th century timber frame houses, now pebble dashed, with a weatherboarded base. The roof is tiled
- Historic England identify Hillcrest (**1122018**), Post Office [and] Shop (**1122017**), Yew Trees (**1338501**), 88 - 94 The Street (**1122027**), The Little Waltham United Reformed Church (**1152043**) and 84 and 86 The Street (**1338502**) as a group with the first and last of these assets included for group Value
- 'Numbers 66, 68 (Romary's) and 70 (Lindens)' (**1122026**) is a 17th century plastered timber frame house with 18th century and later alterations. The two-storey asset has a crosswing to the south and a tiled roof
- '42 The Street' (**1152026**) is an 18th century plastered timber frame house now with 20th century scratch pargetting to the north-west and north-east facing elevations. The ground floor of the two-storey asset has a 19th shop window, and the roof is tiled
- '36 - 40 The Street' (**1122025**) is a terrace of late 19th century two storey brick houses. The assets are now painted, and a panel indicates the terrace was built in 1880. The roof is slated
- 'The Bell Public House' (**1122024**) has now reverted to its original function as two (nos 32 and 34 The Street) residential dwellings. Number 32 to the south-west is a late 18th or early 20th century painted two storey house with a parapet. It has a projecting later 19th century brick porch central to the front elevation and double pitched slate roof. Number 34 to the north-east is an early 19th century plastered timber frame house. It has asset has two storeys and a slate roof
- '30 The Street' (**1122023**) is of late 18th or early 19th century date and comprises a two-storey gault brick house with a parapet. The ground storey has a small defunct 20th century shop front and a 19th century bay window from when the asset served as a bakery. The village baker Tom Amos lived at the property between 1936 and 2003, and from when the bakery closed in 1980 Tom used his

capital obtained from stock market ventures to fund local projects and charities. He set up the Tom Amos Charity in 1999, and upon his death in 2003 he left the bulk of his £1,400,000 estate to the charity

- 'The Limes' (**1122022**) is a 17th to 18th century plastered timber frame house which was refronted in the early 19th century. The front elevation of the asset now has 20th panel pargetting in 17th century style. The two-storey asset has a northern wing to the rear, and it has a slate roof
- 'Oxford House' (**1122055**) is an 18th to early 19th century plastered timber frame two storey house. A single storey stable wing extends to the south-west and the roof is tiled
- 'Two Gates' (**1151949**) is a small 18th to early 19th century timber-framed and partly plastered partly weatherboarded cottage. The asset is of one storey with attics and has a tiled roof
- '37 The Street' (**1122054**) is an 18th century, or possibly earlier, plastered timber frame house that was refronted in the early 19th century. The two-story asset has a small, plastered parapet and a tiled roof. the ground storey has a small defunct 19th century shop front and the current name of the dwelling, 'The Old Saddlery' suggests its former function
  - Historic England identify 42 The Street (**1152026**), 36 - 40 The Street (**1122025**), The Bell Public House (**1122024**), 30 The Street (**1122023**), The Limes (**1122022**), Oxford House (**1122055**), 37 The Street' (**1122054**), Millstone Cottage (**1151939**) reported in the medieval section above, and Two Gates (**1151949**) as a group with the last of these included for group value
- 'Ash Tree Cottage' (**1122021**) is a two-storey plastered timer frame house. The asset was renovated in the 20th century and extension was added to the eastern end. The north, east and west elevations were pargetted in the 20th century in 17th century style and the roof is tiled
- 'Foxtons' (**1338476**) is an 18th and 19th century plastered timber frame house with a gabled crosswing at the west end. The house has two storeys and attics and has a double pitched tiled roof

3.7.296 The setting of the listed buildings within the Little Waltham conservation area is informed by their interrelationships with the assets identified by Historic England as being part of their asset group. The setting is further informed by views along the linear streetscape of The Street thoroughfare and occasional longer-range views to other asset groups identified above. The non-designated post medieval and modern residences along The Street also enhance the setting of the designated assets as they are almost entirely sympathetic having been built in the local vernacular. The setting of the assets, particularly of those on the western and northern flanks of The Street, is further informed by the Chelmer river valley and its flanking pastoral land with which the settlement is intrinsically linked. The setting of the assets, therefore, makes a considerable contribution the value of the assets. The afore mentioned assets to the west and north of The Street have the potential for views of the Project, perhaps broken by mature vegetation, from their rear aspects, whilst those to the east and south of the throughfare, may potentially view pylons between gaps in the properties opposite and perhaps breaking above the roof tops. The setting of the assets flanking The Street, therefore, extends to the draft Order Limits.

3.7.297 'Little Waltham Lodge' (**1338514**) is located at the south-western edge of Little Waltham, west of the B1008 and beyond the southern limit of the Little Waltham

conservation area. At its closest, the draft Order Limits lie 360 m to the north-west of the asset. The asset is of **medium value** based on its designation and its evidential and historical value. the lodge is an early to mid-19th century gault brick house with stucco rusticated quoins and a parapet with a bracketed stucco cornice. The asset has two storeys, and the south-east front has a large central canted bay with an entrance portico.

- 3.7.298 The setting of the asset is informed by its location within its own formal garden and by its relationship with its outbuilding some of which are recorded on the first edition OS map of 1881. These outbuilding now appear to dwellings or perhaps business premises. The asset has always experienced a degree of detachment from the settlement, but the modernisation of the B1008 and its junction with Chelmsford Road to the north has increased its detachment and introduced increased traffic noise, pollution, and light into its setting. The setting of the asset, therefore, makes a moderated contribution to its value and due to the proximity of the Project, the setting extends to the draft Order Limits.
- 3.7.299 The Grade II listed assets ‘Spartigans Hall’ (**1263954**), ‘Alsteads Farmhouse’ (**1172595**) and ‘Wilderness’ (**1122050**) are located east and west of Leighs Road, 1.4 km east-northeast of Little Waltham and 1.1 km south-east of the draft Order Limits at its closest. The assets are of **medium value** based on their designation and their evidential and historical value. Spartigans Hall is an early 17th century rendered timber frame two bay end chimneystack house, extended by one bay in the 18th century, with a steeply pitched tiled roof. Alsteads Farmhouse is a 16th to 17th century plastered timber frame house with gabled wings to the north and south and a tiled roof. Wilderness is an early 19th century plastered timber frame two storey house with a tiled roof.
- 3.7.300 The setting of the assets is shared and informed by their roadside location, the interrelationships between the designated assets, and their relationships with their non-designated outbuildings, some of which are recorded on the first edition OS map of 1881. The surviving outbuildings appear to have been developed as residential properties but retain their outward appearance. The setting is further informed by the surrounding agricultural landscape with which the assets have a historical relationship, and in the case of the farm and its outbuildings, a functional relationship also. The setting of the assets, therefore, make a considerable contribution to their values, but due to overall distance, mature vegetation in the asset’s grounds and mature copses and tree lined hedgerows in the intervening landscape, the setting does not extend to the draft Order Limits.
- 3.7.301 The Grade II listed assets Shuttleworth (**1122029**) and Hobbits (**1172594**) are of medieval date (reported above) and the post medieval Shoulderstick Haul (**1122049**) and Powers Farmhouse (**1305050**) are located loosely clustered around the junction of Wheeler’s Hill and Cranham Road, 980 m east of Little Waltham and 1.2 km south-east of the draft Order Limits at its closest. The assets are of **medium value** based on their designation and their evidential and historical value. Shoulderstick Haul is a 18th or early 19th century plastered timber frame cottage that was later faced with yellow brick. The one storey building with attics has a tiled roof and was renovated in the 20th century when a range was added to the rear. Powers Farmhouse is a 17th century two story, plastered and weatherboarded timber frame house with later alteration and a tiled roof.
- 3.7.302 The setting of the assets is shared and informed by their roadside locations and the interrelationships between the designated assets, although intervisibility is limited by mature tree lined hedgerows defining the property boundaries. The setting of the

assets is further informed by their relationships with their outbuildings, some of which are recorded on the first edition OS map of 1881. The surrounding agricultural landscape with which the assets have historical and functional relationships also informs the setting. The setting of the assets, therefore, makes a considerable contribution to their values. The setting of the assets is restricted to their roadside location within the small hamlet and to the immediate agricultural landscape, and it does not, therefore, extend to the draft Order Limits.

- 3.7.303 The Grade II listed Peverel's Farmhouse (**1338513**) is located on the eastern flank of Domsay Lane, 1.9 km east-south-east of Little Waltham and 2 km east-south-east of the draft Order Limits. The asset is of **medium value** based on its designation and its evidential and historical value. The farmhouse is a 17th century timber frame structure that was refronted in brick in the 19th century. the roof is tiled and a range to the rear was added in 2021.
- 3.7.304 The setting of the asset is informed by its farmyard setting and by its relationship with its outbuildings, several of which are recorded on the first edition OS map of 1881. The setting is further informed by the surrounding agricultural landscape with which the asset has a historical and functional relationship. There is, however, an extensive area of mineral extraction 260 m to the east of the asset and although this is largely screen from view by mature tree lined hedgerows, the quarrying likely introduces noise and dust into the assets setting. The setting of the asset, therefore, makes a moderate contribution to its value, but due the distance to the Project and screening by mature tree lined hedgerows and development in the intervening landscape, the setting does not extend to the draft Order Limits.
- 3.7.305 The Grade II listed 'Pratt's Farmhouse' (**1172663**) and 'Pratt's Farm Cottages' (**1237309**) are located on the western flank of Pratt's Farm Lane, 9600 m south-east of Little Waltham and 1.5 km south-east of the draft Order Limits. The assets are of **medium value** based on their designation and their evidential and historical value. Pratt's Farmhouse (**1172663**) is medieval in date and reported in the appropriate section above. The cottages are a 17th century two bay, two storey plastered timber frame cottage with an additional mid to late 19th century bay to the east. The roof is tiled.
- 3.7.306 The setting of the assets is shared and informed by their interrelationship and their relationships with surviving outbuildings of the former farming complex, most of which are recorded on the first edition OS map of 1881. The farm buildings, however, have had a change of function and most are related to the running of the Little Channels Golf Centre. Also, the construction of the golf course around the assets, the laying of the A131 immediately to the east, and the establishment of the Chelmer Valley Park and Ride on the eastern flank of the A131 have eroded the agricultural land stock and severed its links with the asset. There has also been unsympathetic residential and commercial development within the complex in the latter half of the 20th century and on into the 21st. The setting of the asset, therefore, makes no contribution to its value and does not extend to the draft Order Limits.
- 3.7.307 The Grade II listed assets 'Tudor Cottage' (**1172619**), 'Thorley's Farmhouse' (**1122051**), 'The Maltings At Thorley's Farm, to East of Thorley's Farmhouse' (**1237418**), 'Foxes Maltings' (**1122053**), 'Runnymede' (**1338475**), 'Runnymede Cottage' (**1172657**), 'Glenmore Thorley's Cottage' (**1172635**), and 'Laburnum Cottage Off Licence Store' (**1122052**) are located on the east and west flanks of the B1008 Blasford Hill approximately 650 m south of the outskirts of Little Waltham, 770 m north-west of the draft Order Limits. The assets are of **medium value** based on their designation and their evidential and historical value and Historic England

identify these listed buildings as a group. Tudor Cottage (**1172619**) and Thorley's Farmhouse (**1122051**) are medieval in origin and reported in the appropriate section above.

- 3.7.308 The Thorley Maltings (**1237418**) is an early 17th century long maltings range. The structure is timber framed and weatherboarded with a tiled roof. The asset retains its outward appearance but was developed as residential properties in the early 21st century. Foxes Maltings (**1122053**) is a 17th to 18th century plastered timber frame, two storey house with two gables to the east facing front elevation and a tiled roof. The asset was renovated in the 20th century. Runnymede (**1338475**) is an 18th century brick two storey house with a parapet on the east facing front elevation and a tiled roof. Runnymede Cottage (**1172657**) is a 17th century plastered timber frame of one storey with attics and a two-story gabled wing to the south. The asset was renovated in the 20th century, and it has a tiled roof. Glenmore Thorley's Cottage (**1172635**) is a terrace of 18th century plastered timber frame two storey structure with a tiled roof. Laburnum Cottage Off Licence Store (**1122052**) is an 18th century and later plastered timber frame two story with attics house. There is a two-storey gabled wing to the south and a single storey extension to the north.
- 3.7.309 The setting of these grouped assets is largely shared and informed by the interrelationships between the designated assets and their relationships with their outbuildings and the post medieval and modern buildings that contribute to the character of the local streetscape. The settlement pattern along the thoroughfare is generally one plot deep allowing for views from the rear of assets of the agricultural land beyond with which they have a historical relationship. These views are, however, occasionally interrupted by outbuildings, garden planting and mature hedgerows. There is also 21st century residential development north and south of Woodhouse Lane in the south and 20th to 21st century residential and commercial development to the north around Rolphsbarn Farm, which has eroded the link between the thoroughfare and the rural landscape. The focus of the setting is, however, the streetscape and so it makes a considerable contribution to the value of the assets but does not extend to the draft Order Limits.
- 3.7.310 The Grade II listed 'Croxtons Mill' (**1172469**) and 'Croxtons Mill Cottage' (**1122041**) are located on the eastern bank of the Chelmer river at the end of an unnamed road 360 m east of Blasford Hill, c. 1.1 km south-south-east of the outskirts of Little Waltham and 1.4 km south-east of the draft Order Limits at their closest point. The assets are of **medium value** based on their designation and their evidential and historical value. The mill (**1172469**) is an 18th century weatherboarded timber frame, three storey water mill with a hoist loft on the north side. The asset was renovated in the 20th century and has a tile roof. The cottage (**1122041**) is an early 17th century plastered timber frame, two storey house. The asset was renovated in the 20th century and has a tiled roof.
- 3.7.311 The setting of the assets is shared and informed by their location adjacent to the river, which provided power for the mill, and by their interrelationship, although intervisibility is limited due to mature vegetation. The setting is further informed by their secluded location in the bottom of the shallow valley and by the mature trees and hedges of their grounds and by the mature trees lining the banks of the river. The setting provides privacy and peacefulness and makes a considerable contribution to the value of the assets and due to the topography of the valley and the mature trees and hedgerows, the setting does not extend to the draft Order Limits.
- 3.7.312 The Grade II listed '141-145, Patching Hall Lane' (**1186851**) is located on the western flank of Patching Hall Lane on the northern outskirts of Chelmsford, 770 m south-east

of the draft Order Limits. The asset is of **medium value** based on its designation and its evidential and historical value. A date stone dates the asset to 1825 and it comprises a red brick built, two storey with attics block of three dwellings. The asset has a tiled Mansard roof.

- 3.7.313 When built, the asset was rather isolated with just two properties at Scots Green 280 m to the north and Priors (**1338427**) 600 m to the north-west in the local vicinity. Prior to 1881, the non-designated 147 Patching Hall Lane was built to the immediate north of the asset, and both are recorded on the first edition OS map of that year. Unlabelled on this map, they are named 'Claypit Cottages' on the 1924 edition, and several close by pits are recorded on the OS mapping from the first edition onwards. The asset and number 147 remained in relative isolation until the rapid expansion of Chelmsford in the latter half of the 20th century and now they are situated on the south-western edge of a large housing estate. The setting of the asset, has therefore, been largely eroded, but there is a view to the north-west across arable land to Priors, maintaining a remnant of its former setting. The setting of the asset, therefore, makes a minor contribution to its value but due to distance and development and mature vegetation in the intervening landscape, the setting does not extend to the draft Order Limits.

#### *Non-Designated Heritage Assets*

- 3.7.314 A **low value** cropmark complex (**6181**) of evidential and historical value of former field boundaries which are marked on the first edition OS map and a former extraction pit is located c. 1.4 km north-east of Great Waltham and c. 200 m north-west of the draft Order Limits.
- 3.7.315 A post medieval secondary semi natural woodland is located close to the settlement of Patridge Green (**6019**) on the outskirts of Broomfield. The asset is located approximately 55 m to the south-west of the crossroad that intersects the village, immediately south of the draft Order Limits. The north side of the wood is bordered by an east/west aligned access road that is contained within the draft Order Limits. The site is of evidential and historical value and is of **low value**.
- 3.7.316 Archaeological excavations in 1970-71 at Ash Tree Corner, Little Waltham in advance of the B1008 Little Waltham by-pass, identified post medieval pit features largely comprising drainage and field boundary ditches (**6035**), and a post medieval finds assemblage (**6114**). The excavation area was located between the south easterly boarder of the draft Order Limits and western side of Little Waltham. A large part of the area is made up of agricultural land, however the south-east section has been developed with the expansion of the settlement of Little Waltham and the creation of the B1008 by-pass. The post medieval assets are of evidential and historical value and of **low value**.
- 3.7.317 The published *An Inventory of the Historical Monuments in Essex - Volume 2* (1921), records the presence of a post medieval house (**6098**), of probable 16th century date, within the medieval moat (**6050**) at Partridge Green Farm. The moat and house were located approximately 200 m to the north-west of Patridge Green, on the outskirts of Broomfield, 20 m north of an draft Order Limits access road, but cartographic evidence indicates both were lost in the latter half of the 20th century. The site of the house is now occupied by modern hanger style barns and so the asset is of **negligible value** based on its historical value.
- 3.7.318 The published *An Inventory of the Historical Monuments in Essex - Volume 2* (1921), records the presence of a post medieval house (**6097**) within the medieval moated site at Hedgehall (**6049**). Hedgehall is located approximately 85 m north-west of the

draft Order Limits, 100 m to the south of the small settlement of Broads Green, which flanks Margaret Woods Road. Cartographic sources indicate the asset was lost by the mid-20th century. The asset is of **low value** based on its evidential and historical value.

3.7.319 The medieval moated site of Beamont Otes (**6052**) also contained a scatter of post medieval finds (**6134**) including some pottery and a clay pipe system. The site has shown to be moated from a map dated to 1599 and is located approximately 80 m north of the draft Order Limits, immediately east of Woodhall Hill road, and approximately 860 m to the north of Chelmsford. The eastern part of the site also contains a broadly north/south aligned access road that is contained within the draft Order Limits. The post medieval asset is of evidential and historical value and is of **low value**.

3.7.320 Fieldwalking at the multi-period site of Broomfield Hospital recovered a small assemblage of post medieval pottery, brick, and tile (**6143**), which was probably the result of manuring. A further watching brief undertaken during the excavation of foundation trenches for a medical records store on the hospital site identified post medieval brick and tile (**6145**). The site is located c. 180 m east of the draft Order Limits at Blasford Hill, to the north-west of Broomfield. The site is of evidential value and is of **low value**.

## Chignall St James to Writtle

### *Designated Heritage Assets*

3.7.321 The **medium value** 'Brickbarns Farmhouse' (**1122197**) and 'Barn with Gable Dovecote to the North of Brickbarns Farm' (**1122198**) are Grade II listed buildings of evidential and historical value. The assets are located approximately 270 m east-south-east of the draft Order Limits, immediately to the south of Mashbury Road, and approximately 180 m west of the western edge of Chelmsford. Brickbarns Farmhouse is a two-storey timber framed and plastered house of early 17th century origin, however it has been largely renovated in the 20th century. There is a three-window range to the front of the house that also has a small gable in the centre. The ground storey had 18th century double hung sash windows with glazing bars. The roof is tiles with an original chimney stack with grouped diagonal shafts. The barn lies to the north of the farmhouse and is a small rectangular building with a tiled roof of 18th century origin. The barn is combined with a dovecote and probably only the remaining example in the County of its kind. The north and south gables have double walls from the eaves level and there are 27 nesting holes in each gable.

3.7.322 The setting of the assets shared and informed by their location within a former farming complex, by their interrelationship and by their relationships with the surviving non-designated elements of the farming complex, which are recorded on the first edition OS map of 1881. The setting is further informed by the surrounding agricultural landscape with which the assets have a historical and functional relationship. The assets and outbuildings have, however, been developed as four residential properties and the former farmyard has been divided up into garden areas for the properties. Also, the 20th century expansion of Chelmsford has eroded the wider rural setting and is now within 150 m of the assets to the south-east. The setting of the assets, therefore, makes a minor contribution to their value, and due to their change in function eroding the link to agricultural landscape, the setting does not extend to the draft Order Limits.

3.7.323 The **medium value** Grade II listed 'Cottages Immediately to the West of St James's Churchyard' (**1122200**) is of evidential and historical value. The asset is located

approximately 230 m north-west of the draft Order Limits, on the southern edge of the village of Chignall St James. The asset is a range of timber framed and weatherboarded cottages, now comprising of two tenements on one storey with attics. The terrace has a four-window range with casements, a tiled roof and four gabled dormers.

- 3.7.324 The setting of the asset is informed by its rural village location and by its relationship with Grade II\* listed former Church of St James 30 m to the east. The setting is further informed by the asset's open view of St James' Green immediately to the north, and by its relationship with the 19th and 20th properties on the western flank of St James' Green. The setting of the asset, therefore, makes a considerable contribution to its value, but due to the proximity of the Project, the setting extends to the draft Order Limits.
- 3.7.325 The **medium value** 'Chignal Hall' (**1170001**) and 'Granary at Chignal Hall' (**1247781**) are Grade II listed buildings with evidential and historical. The assets are located approximately 1.15 km north-west of the draft Order Limits, at the end of a track that leads to Mashbury Road in the east, to the north-west of Chignall St James. Chignal Hall is a two-storey 16th century plastered timber frame house originally built on an H shaped plan, however the cross-wings at the north and south ends have been rebuilt and the front of each faced in red brick. The centre part of the house is jettied on the upper storey of the east front and it has a four-window range. The windows in the former wings are double hung sashes with glazing bars and the windows in the centre part are casements. The roof is tiled and hipped at the north and south ends. The Granary lies to the south-east of the hall and is of mid-18th century origins with 19th and 20th century alterations. The barn is of two storeys and timber framed, but the ground floor has been underbuilt in soft red bricks with Flemish bond details. The first floor is rendered on the south elevation and all other elevations are weatherboarded. The roof is covered in concrete roof tiles with half hipped gables.
- 3.7.326 The setting of the assets is shared and informed by their location within a wider working farm complex. the setting is further informed by their interrelationship and by their relationships with surviving non-designated outbuildings, which are recorded on 19th and early 20th century OS mapping. A big complex of farm buildings to the north of the hall and recorded on the OS mapping have, however, been largely replaced by 20th buildings and barns. The setting is further informed by the surrounding agricultural landscape, with which the assets and outbuildings have a historical and functional relationship. The grounds of the hall are defined by high, evergreen hedgerows with scattered trees. The setting of the assets, therefore, makes a moderate contribution to their values, but due to the assets' boundaries and the mature tree lined hedgerows, copses and development of the intervening landscape, the setting does not extend to the draft Order Limits.
- 3.7.327 The **high value** Grade II\* listed 'Chobbing's Farmhouse' (**1306286**) and the **medium value** Grade II listed 'Barn at Chobbings Farm' (**1237444**) and 'Granary at Chobbings Farm' (**1237445**) are assets of evidential and historical value. The assets are located together approximately 365 m to the south-east of the draft Order Limits, immediately to the west of Woodhall Hill Road, on the outskirts of Chelmsford. The farmhouse and barn date to the 14th century and so are reported in the medieval section above. The mid-17th century, small square granary is located to the south of the barn and is timber framed, weatherboarded and has a red plain tile pyramid roof.
- 3.7.328 The setting of the assets is shared and informed by their location within a former farming complex, although this space has been divided in two providing garden space for two residential dwellings. The granary is located within the bounds of the

farmhouse property. The setting is further informed by the interrelationships between the designated assets and by their relationships with the surviving non-designated farm outbuildings, which are recorded on 19th and 20th century OS mapping. The adjacent agricultural landscape, with which the assets and outbuildings have a historical and former functional relationship, also makes a positive contribution to the setting, but the 20th century on ongoing expansion of Chelmsford has entirely removed this link to the south. The loss of function for the barn and the granary, the division of the former farmyard, the encroachment of modern housing from the south and the resulting erosion of agricultural land means the setting of the assets makes a minor contribution to their values. Due to distance and partial screening by development and mature tree lined hedgerows in the intervening landscape, the setting does not extend to the draft Order Limits.

- 3.7.329 The Grade II listed 'Little Boyton Hall' (**1264969**) is located on a private road 600 m north-west of the A1060, 1.8 km west-northwest of Chignall St James, 1 km west-northwest of the draft Order Limits. The hall is of **medium value** based on its designation and its evidential and historical value. The asset is a 19th century grey gault brick, two storey house with a parapet and a tiled roof.

The setting of the asset could not be assessed on the ground due to lack of access, and so the following is based on cartographic evidence and satellite imagery. The first edition OS map of 1881 records the asset, and Boyton Hall 780 m to the east-south-east, in an open agricultural landscape. Little Boyton Hall is shown in association with several outbuildings, and based on satellite imagery, these non-designated assets largely survive today. The map also shows ponds to the north and west of the asset and a large garden to the south. The northern pond and garden survive, and the available evidence indicates a copes was established to the east of the asset in the latter half of the 20th century. Satellite imagery has also identified the construction of large commercial premises around both halls. The commercial buildings associated with Little Hall cover a large area to the west and north-west completely obstructing views in these directions, whilst those premises associated with the Hall have blocked any intervisibility there may have been between the halls. The setting of Little Boyton Hall, based on the available evidence, makes a minor contribution to its value, but due to the distance, restricted views and development and mature vegetation in the intervening landscape, the setting does not extend to the draft Order Limits.

- 3.7.330 The Grade II listed assets 'White House' (**1235664**) and 'Crossways, The Beadle, Tupp'ny Breeze' (**1237527**) are in the small village of Boyton Cross, c. 720 m north-north-east of Roxwell, 640 m north-west of the draft Order Limits. The village itself is in the shallow valley of the Newland Brook, which feeds into the Roxwell Brook to the south. The assets are of **medium value** based on their designation and their evidential and historical value. The White House is a 16th to 17th century plastered timber frame, two story house that was refaced in the 18th century and has a tile roof. The second asset is split into three dwelling resulting in the title of Crossways, The Beadle, Tupp'ny Breeze. The asset was built in the mid-16th century and is a plastered timber frame, two storey house with a southern cross wing and mixed slate and tile roofs.

- 3.7.331 The setting of the White House is informed by its roadside (the A1060) within the settlement and by its view towards the Crossways, The Beadle, and Tupp'ny Breeze properties 140 m to the west-south-west. The setting is further informed by the asset's relationship with its non-designated outbuildings and with the non-designated property immediately to the south and recorded on the first edition OS map of 1881. The asset has a large garden to the rear (east) which contains trees and is largely

defined by mature tree line hedgerows which affords the asset a sense of enclosure and privacy. The setting of the asset, therefore, makes a considerable contribution to its value, but due to its topographic location, its mature garden and the topography, development and mature vegetation of the intervening landscape, the setting does not extend to the draft Order Limits.

- 3.7.332 The setting of Crossways, The Beadle, and Tupp'ny Breeze is informed by its set-back roadside location within the settlement and by its view towards the White house 140 m to the east-northeast. The setting is further informed by the asset's relationships with the non-designated Cook's Cottages to the south and the non-designated properties of the village flanking the A1060 to the east, some of which are recorded on the first edition OS map of 1881. The rear, west-facing aspect of the asset has views across open agricultural land, with which it has a historical relationship, to the west along the Newland Brook Valley and in the distance the tree shrouded Newland Hall Fisheries. The setting of the asset, therefore, makes a considerable contribution to its value, but due to its topographic location, and the topography, development and mature vegetation of the intervening landscape, the setting does not extend to the draft Order Limits.
- 3.7.333 The Grade II listed 'Crows Farmhouse' (**1120909**) is located on the western flank of Chignall Road on the modern north-western outskirts of Chelmsford and 580 m east-south-east of the draft Order Limits. The asset is of **medium value** based on its designation and its evidential and historical value. The two-storey farmhouse was built around 1600 and likely has a timber frame. The asset is faced with pargetting of unknown date and has a peg-tiled roof. The asset now serves as a domestic dwelling.
- 3.7.334 Ordnance Survey mapping of the 19th and 20th centuries record the asset in an agricultural landscape of field systems and dispersed farmsteads linked by winding country roads. This setting was maintained until the final decades of the 20th century which saw the rapid expansion of Chelmsford. Currently, the asset is located on the north-western outskirts of Chelmsford and views from the asset to the north-east, east and south are dominated by the streetscape of a large housing estate. To the rear (west) and north of the asset is a large garden containing mature trees and defined by mature tree lined hedgerows. Westwards beyond the garden is an 80 m wide band of scrubland containing scattered trees and defined by a tree line to west and beyond this is agricultural land. The Grade II listed assets Brickbarns Farmhouse (**1122197**) and associated barn (**1122198**) lie 260 m to the north-north-west, but the mature garden and band of scrubland negate views of these assets and the agricultural land. The setting of the asset, therefore, does not contribute to its value and it does not extend to the draft Order Limits.
- 3.7.335 The Grade II listed assets 'Dukes House' (**264894**), 'The Ferns' (**1235781**), '1 and 2 The Bishops' (**1235823**), 'Cherry Tree Cottages' (**1264909**) are located within the Roxwell conservation area. The last three of these assets are clustered in the north-east of the settlement c. 620 m north-west of the draft Order Limits. Dukes House is located at the north-west of the settlement c. 880 m north-west of the draft Order Limits. These assets are of **medium value** based on their designations and their evidential and historical value. Dukes House (**264894**) was built in the 16th century replacing a medieval manor house that is mentioned in the Domesday Book. The two-storey house was altered and added to in 1666 by Thomas Arthur Crush. There are cross wings on the north and south ends and 17th century gabled additions on the west side. The asset has a tiled roof. The Ferns (**1235781**) is an 18th century and later plastered timber frame, two storey house with a 19th century brick bay window, a small 20th century defunct shop window and a tiled roof. 1 and 2 The Bishops

(**1235823**), is an 18th century plastered timber frame, two storey house with a tiled roof that has now been faced in cement. A date panel bears the date 1796. Cherry Tree Cottages (**1264909**) comprises the gabled wing of a 16th century plastered timber frame house, with a jettied upper storey at the north end and a range of 18th to 19th century plastered timber framed cottages on the south. The front is now faced with modern ornamental plaster work. The gabled north wing is two storeys, the south range is one storey and attics, and the building has a tiled roof.

- 3.7.336 The setting of Dukes House (**1264894**) is informed by its location on the northern, south-facing aspect of the shallow Roxwell Brook valley. The setting of the asset is further informed by the surrounding working farm complex and by its relationship with its non-designated outbuildings, several of which are recorded on the first edition OS map of 1881. The agricultural land beyond the farmyard with which the asset and its outbuildings historical and functional relationship also positively contributes to its setting. The setting of the asset, therefore, makes considerable contribution to its value, however, due to distance, the built-up nature of the farmyard, and the topography, mature vegetation and development of the intervening landscape, the setting does not extend to the draft Order Limits.
- 3.7.337 The setting of The Ferns (**1235781**), 1 and 2 The Bishops (**1235823**) and Cherry Tree Cottages (**1264909**) is shared and informed by their roadside locations on The Street, Roxwell on the south side of the Roxwell Brook valley, and by their interrelationships and their relationships with other scoped out listed buildings within the conservation area, as well non-designated buildings that positively contribute to the character of the conservation area. The setting is further informed by their relationship with the Grade II\* listed Church of St Michael and all Angels (**1235784**) located approximately 80 m west of the assets. The setting of the assets, therefore, makes a considerable contribution to their value, but due to the restricted streetscape focus of setting, it does not extend to the draft Order Limits.
- 3.7.338 The Grade II listed assets 'Lightfoots' (**1235779**), 'Barn to the North-West of Lightfoot' (**1264908**) and 'Roxwell House' (**1235780**) are located south of Skreens Park Road, 230 m west of Roxwell 1.1 km north-west of the draft Order Limits. These assets are of **medium value** based on their designations and its evidential and historical value. Lightfoots (**1235779**), dates to the 16th century and replaced a house that is known to have stood on the house from 1347. The asset comprises a plastered timber frame, two storey house with three gables on the north-facing front elevation and a tiled roof. An encompassing moat is recorded on 19th and 20th century OS mapping, but this was backfilled in the latter half of the 20th century. The barn (**1264908**) also dates to the 16th century comprises a considerably restored plastered timber frame structure with a thatched roof, whilst the porches and aisle are tiled. Roxwell House (**1235780**) dates to the late 18th or early 19th centuries and comprises a weatherboarded timber frame, two storey house on a brick base. Wings project at the north and south ends and a porch projects from the centre of the east-facing elevation. The roof is tiled.
- 3.7.339 The setting of Lightfoots and its barn is informed by their location within a working farm complex, by their long historical relationship and by their relationship with Roxwell House. The setting is further informed by their relationships with the non-designated outbuildings of the farming complex several of which are recorded on the first edition OS map if 1881. The surrounding agricultural land, with which the assets and associated non-designated buildings have a historical and functional relationship, also contributes positively to the setting. The setting of the assets, therefore, makes a considerable contribution to their values, but due to distance and

the topography, mature vegetation and development of the intervening landscape, the setting does not extend to the draft Order Limits.

- 3.7.340 The setting of Roxwell House is informed by its location within its grounds, which are defined by mature tree lined hedgerows except for roadside to the north which comprises a high red brick wall. The setting is further informed by its relationship with its non-designated outbuildings to the south, which are recorded on the first edition OS map of 1881, and by its relationship with Lightfoots and the barn to the east. The surrounding agricultural landscape, with which the asset has a historical relationship, also contributes to the setting of the asset. The setting of the asset, therefore, makes a considerable contribution to its setting, but due to distance, screening by the Lightfoots farming complex and the topography, mature vegetation and development of the intervening landscape, the setting does not extend to the draft Order Limits.
- 3.7.341 The Grade II listed 'Tye Hall' (**1356875**) is located on the eastern flank of Tye Hall Chase, 480 m Skreens Park Road, 1.65 km west of the draft Order Limits. The hall is of **medium value** based on its designation and its evidential and historical value. The hall dates to the mid-17th century and comprises a brick faced timber frame, two storey house with as tiled roof. A parallel rear range was added in the late 18th century and a façade was added to the western elevation in the same century.
- 3.7.342 The setting of the hall is informed by location within a working farm complex and by its relationship with its associated non-designated outbuildings, several of which war recorded on the first edition OS map of 1881. The setting is further informed by the surrounding agricultural landscape with which the asset has a historical and functional relationship. The setting of the hall, therefore, makes a considerable contribution to its value, but due to distance and the mature vegetation, infrastructure and development of the intervening landscape, the setting does not extend to the draft Order Limits.
- 3.7.343 The Grade II listed 'Thatcher's Farmhouse' (**1235835**) is located on the northern flank of Vicarage Road, 9600 m east-south-east of Roxwell, 30 m west of the draft Order Limits. The farmhouse is of **medium value** based on its designation and its evidential and historical value. The asset comprises a 17th century plastered timber frame, two storey house that is now pebble dashed. There are gabled wings to the north-east and south-west and the roof is tiled.
- 3.7.344 The setting of the asset is informed by its location within a working complex of buildings and by its relationship with its non-designated outbuildings, particularly with the late 19th century rectangular courtyarded stable block just to the south-west, several of which are recorded on 19th and 20th century OS mapping. the setting is further informed by the surrounding agricultural land with which the assets have a historical and functional relationship. The setting of the asset, therefore, makes a considerable contribution its value, and due to the proximity of the Project the setting extends to the draft Order Limits.
- 3.7.345 The Grade II listed asset 'Hoestreet Farmhouse' (**1235763**), 'Granary Cottage, to South-East of Hoe Street Farm House' (**1247675**) and 'Little Thatchers' (**1235775**) are located west and east of Hoe Street, c. 1 km south-east of Roxwell, c. 125 m south-west of the draft Order Limits. These assets are of **medium value** based on their designation and their evidential and historical value. The farmhouse (**1235763**) was built around 1600 and it is believed James I stayed in the house in 1606 when it served as a lodge. The asset is a plastered timber frame, two storey house with a tiled roof, which originally had cross wings to the north-east and south-west. The farmhouse was altered and restored in the 20th century when the south-west cross wing was demolished, and a modern addition was built in period style. The north-east

cross wing is plastered and jettied on the upper storey. The granary (**1247675**), now an office, was built in the 17th century reusing some earlier timbers. The asset comprises a rendered timber frame structure on a red brick pier with a tiled roof. Little Thatchers (**1235775**) is a 16th century plastered timber frame house with a cross wing at the north end and a tiled roof. The main block is one storey with attics and the cross wing is two storeys with a jettied upper storey on exposed joists.

The setting of the assets is shared and informed by their location within a large complex of working farm buildings identified on 19th century mapping as 'Hoestreet'. The setting is further informed by the interrelationship between the designated assets and by their relationship with the associated non-designated outbuildings, several of which are recorded on the first edition OS map of 1881. The surrounding agricultural landscape, with which the assets and their non-designated outbuildings have a historical and functional relationship, also makes a positive contribution to the setting. There are some modern era outbuildings within the complex and there are some large, hanger style barns to the south. These additions do not, however, detract from the coherence of the group as working building and so the setting of the assets makes a considerable contribution their values. Due to the proximity of the Project and the introduction of pylons across the open farmland to the east, the setting extends to the draft Order Limits.

- 3.7.346 The Grade II listed 'Hickeringage' (**1264206**) is located on the southern flank of Old Roxwell Road, 2.1 km east-south-east of Roxwell and 600 m east of the draft Order Limits. The asset is of **medium value** based on its designation and its evidential and historical value. The asset comprises a plastered timber frame, two story house with later pargetting and a tiled, double pitched roof.
- 3.7.347 The setting of the asset is informed by its roadside location, by the course of the Roxwell Brook to the rear of the property and by its relationship with the non-designated outbuildings to the west, some of which are recorded on the first edition OS map of 1881. The setting is further informed by the surrounding agricultural land, with which the asset has a historical relationship, but this have been eroded by 20th century and later residential and industrial development. The modernised and re-routed Roxwell Road (A1060) lies just to the north of the asset, and this has introduced noise, light, and pollution in to the setting. The setting of the asset, therefore, makes a moderate contribution to its value, but due to its restricted nature, the setting does not extend to the draft Order Limits.
- 3.7.348 The Grade II listed 'Reed's Farmhouse' (**1237080**) is located 60 m north-west of Cow Watering Lane, 9600 m north of Writtle and 600 m east of the draft Order Limits. The asset is of **medium value** based on its designation and its evidential and historical value. The farmhouse is an early 19th century redbrick, two storey structure with a double pitched slate roof.
- 3.7.349 The setting of the asset is informed by its restricted location within its garden, which is largely defined by mature tree lined hedgerows. The large complex of former farm outbuildings apparent on 19th and 20th century OS mapping lies to the east of the farmhouse, and these have been developed as the Reeds Farm Estate Business Centre, which now houses numerous small businesses. The mature garden boundaries of the asset largely screen any views to the business centre whilst any views of agricultural land beyond are impeded by garden vegetation to the south and by a large plant nurseries to the north and west. The restricted setting of the asset, therefore, makes a minor contribution to its value, but due to the enclosure of the asset and loss of its wider setting, the setting does not extend to the draft Order Limits.

- 3.7.350 The Grade II listed asset 'Boards Farmhouse' (**1235720**) and 'Benedict Otes' (**1264216**) are located north and south respectively of an un-named road 630 m west of Newney Green and 1.3 km west-northwest of the draft Order Limits. These assets are of **medium value** based on their designation and their evidential and historical value. The farmhouse to the north (**1235720**) dates to the late 16th century and comprises a weatherboarded and plastered timber frame two storey house with east and west cross wings and a tiled roof. Benedict Otes (**1264216**) to the south is a 17th century or later plastered timber frame, two storey with attics house with a brick gable wall to the west elevation and a tiled roof. There are the remains of a moat that still holds water to the north of the house.
- 3.7.351 The setting of the asset is largely shared and informed by their roadside locations, by their interrelationships and by their relationships with their non-designated outbuildings and the non-designated dwelling Beren Court, most of which are recorded on the first edition OS map of 1881. The setting is further informed by the surrounding agricultural with which the former farm buildings have a historical and functional relationship. Although no longer working farms, the assets and their developed outbuildings retain their coherence as former farming complexes and so their setting makes a moderate contribution to their values. However, due to distance and the mature vegetation and development of the intervening landscape, the setting does not extend to the draft Order Limits.
- 3.7.352 The Grade II listed 'Newney Hall' (**1237228**) is located on the southern flank of an un-named road 1.8 km south-east of Roxwell and 200 m west of the draft Order Limits. The asset is of **medium value** based on its designation and its evidential and historical value. The hall comprises a late 16th century plastered timber frame, two story house with cross wings to the south-west and north-east and a tiled roof. The cross wings are jettied on the first storey on the north-west facing front elevation. There are considerable later alterations and additions including a gabled wing on the west end.
- 3.7.353 The setting of the hall is informed by its location within a working farm complex and by its relationship with its non-designated outbuildings, most of which are recorded on the first edition OS map of 1881. The setting is further informed by the surrounding agricultural landscape with which the asset and its non-designated outbuildings have a historical and functional relationship. The setting of the asset, therefore, makes a considerable contribution to the asset's value and due to the proximity of the Project, the setting extends to the draft Order Limits.
- 3.7.354 The Grade II listed 'Sturgeons House' (**1237071**) is located 170 m north-west of Cow Watering Lane, 670 m north-north-west of Writtle, 50 m south-west of the draft Order Limits. The asset is of **medium value** based on its designation and its evidential and historical value. the house is an early 19th century white brick, two storey structure with a slate roof.
- 3.7.355 The setting of the house is informed by its location within a working farm complex and by its relationship with its non-designated outbuildings. Many of the outbuildings recorded on 19th and 20th century mapping were, however, replaced by modern barns in the latter half of the 20th century with only a few elements of the earlier building complex surviving. The setting if further informed by the surrounding agricultural landscape with which the asset has a historical and functional relationship. The agricultural land and views to it from the asset have, however, been diminished by the 20th century expansion of the farm and by the development of the extensive Writtle University College Equine Centre and associated paddocks to the

west and south. The setting of the is, therefore, makes a moderate contribution to its value and due to the proximity of the Project it extends to the draft Order Limits.

- 3.7.356 The Grade II listed 'Blows Farmhouse' (**1235717**) is located on the western flank of an un-named road on the outskirts of Cooksmill Green, 2 km south-south-west of Roxwell and 2 km west of the draft Order Limits. The asset is of **medium value** based on its designation and its evidential and historical value. The asset comprises an early 17th century plastered and weatherboarded timber frame, two storey house with a tiled roof. The asset retains its original form with gabled cross wings to the north and south.
- 3.7.357 The setting of the asset is informed by its location at the northern limit of Cooksmill Green in what appears to be a working farm complex and by its relationship with its non-designated outbuildings, which are recorded on the first edition OS map of 1881. The setting is further informed by the surrounding agricultural landscape, with which the asset and its outbuildings have a historical and functional relationship. The grounds of the asset are defined by hedgerows and in places mature tree restricting views to the east and the Project. The setting of the asset, therefore, makes a considerable contribution to its value, but due to distance, the asset's mature grounds and the mature vegetation and development of the intervening landscape, the setting does not extend to the draft Order Limits.
- 3.7.358 The Grade II listed assets 'Armswick Farmhouse' (**1264954**), 'Former Barn to Armswick Farm' (**1235716**), 'Armswick Cottage' (**1264955**), 'Chase Cottage and 1, Wellington Cottages' (**1264970**), 'The Old Cottage' (**1235666**), and 'Kings Court Farmhouse' (**1264971**) are located loosely clustered in the small settlement of Cooksmill Green, 2.6 km west of Writtle and c. 1.8 km west of the draft Order Limits. Kings Court Farmhouse (**1264971**) dates to the medieval period and is reported in the appropriate section above. These assets are of **medium value** based on their designation and its evidential and historical value.
- 3.7.359 Armswick Farmhouse (**1264954**) comprises an 18th century plastered timber frame, two storey house with a tiled roof, which was renovated in the 20th century. The former barn (**1235716**) dates to the 17th to 18th centuries and comprises a weatherboarded timber frame structure, which has two large gabled entrance porches on the northern elevation and a tiled roof. Armswick Cottage (**1264955**), comprises an 18th century plastered timber frame, one storey with attics house with a tiled roof, which was renovated in the 20th century. Chase Cottage and Wellington Cottage (**1264970**) are a range of 18th century plastered timber frame, one storey with attics cottages with a tiled roof. The Old Cottage (**1235666**) is a 16th century plastered timber frame two storey house, which is now pebble dashed. The asset has a tiled roof and a cross wing to the south, which is jettied on the first floor.
- 3.7.360 The setting of these assets is largely shared and is informed by their settlement locations and by their interrelationships and by their relationships with non-designated characterful post medieval and early modern buildings within the village. The setting is further informed by the surrounding agricultural landscape with which the assets have a historical relationship and with some, a functional relationship. the setting of the assets, therefore, makes a considerable contribution to their values due to the settlement setting screening views to the east and the Project, the setting does not extend to the draft Order Limits.

## Writtle to Margaretting

### *Designated Heritage Assets*

The **high value** Grade II\* Registered Park and Garden of 'Hylands Park' (**1000197**) contains the **high value** Grade II\* listed building 'Hylands House' (**1264253**), and the **medium value** Grade II listed 'Cottage (¼ mile North-West of Hylands House)' (**1264142**), which are of evidential, historical and, in the case of the house, architectural value. The park (**1000197**) is located approximately 650 m east of the draft Order Limits, bordered to the west and north by the A414. Chelmsford borders the park adjacent to the A414 to the north-east. Hyland Park has been a public park since 1966 and is made up of late 19th century gardens that are set within a park of early 18th century origin, for which Humphry Repton produced a Red Book in the early 19th century. The Grade II\* Hyland House (**1264253**) is a large, cream, stuccoed winged mansion in the Neoclassical style. The imposing southern façade has a two storey, seven bay central block with a great Ionic portico and columns rising through two storeys, which was rebuilt 1986. The lower five bay flanking wings both have ground storey Ionic colonnades. The seven bay central section was built as a red-brick Georgian mansion by John Comyns in 1728. In the early 19th century, following advice from Humphry Repton, Cornelius Kortright added the portico and the east wing and covered the whole house in white stucco. The architect who detailed this work is not known, but it may have been J. A. Repton. In 1815, following its purchase by Pierre Labouchere, the balancing west wing was added. In 1842, the architect J. B. Papworth produced plans for John Attwood which resulted in the east wing being rebuilt, as well as the north wall of the west wing. Both wings were increased to two storeys and a further storey added to the central core. A new porte-cochère and servants' quarters which connected the house to the stables were added. During the late 20th century these mid-19th century alterations were removed, the house being restored to its early 19th century form. The early 19th century flint estate cottage (**1264142**) lies to the north-west of the house, on the edge of what was the boundary of the earliest part of the park, which dates from the early 18th century. The cottage is of two storeys and is double fronted with three windows. Once thatched, it now has a hipped tiled roof with central 'Tudor' stacks with three diagonal shafts of gault brick. There is a late 19th century lean to at the rear of the red brick cottage that also has a slate roof.

The setting of Hylands Park and Hylands House are intrinsically linked, and it is largely defined by their interdependence. Hylands Park is defined by tree belts and woods to the west and south, and by a tree belt and brick wall with the A414 London Road beyond, which follows the route of a Roman road, to the east. The northern boundary is less well defined, and in some places not delineated at all, although to the north-east Greenbury Way and associated planting marks its location. Hylands House is the focal point of the park and from the house the parkland rises to the south and west, and falls slightly to the east, with a more pronounced fall to the north. Consequently, the topography of the park and the boundaries to the west, south and east create a sense of, albeit expansive, enclosure as views in and out of the parkland are all but excluded. In marked contrast, the view from the north facing façade of the house is far more open and extends beyond the northern boundary of the parkland and on into the shallow Wid river valley. The landscape beyond the park at the time of its creation would have been rural in nature with perhaps just the spire of the Grade II listed St Mary's Church (**1141336**) in Widford visible above the trees and hedgerows. The church spire, just beyond the Wid river which crosses its north-east corner of the parkland, is still visible from points within the park, but the Wid valley beyond has been heavily developed. The commercial units of the large, sprawling industrial estate north of Greenbury Way can be seen, although they are low lying and views from the house and in various locations in the park are interrupted or at least broken by mature tree cover. Internally, the setting of the assets is informed buildings and features such as the listed Cottage, the paddocks,

the pleasure gardens, and prescribed routes around the parkland. Such routes would have been designed to reveal attractive vistas of the parkland, house and both combined as guests of the estate walked, rode, or took carriages along the routes, and modern-day visitors can still experience this. There has, however, been the addition of car parks to accommodate visitors, and whilst these are screened from the house they are located within the bounds of the park and, therefore detract from the park's setting. Also, the function of some outbuildings has changed to provide facilities for visitors. Overall, however, the setting of the park and house is enhanced by their mutual dependence and therefore makes a considerable contribution to their values. The setting of the park does not extend to the draft Order Limits to the west as the very intentionally placed tree belt and woodland, emphasise the internal focus of the asset. Likewise, the setting of the house does not extend to the draft Order Limits due to the tree belt, copses within the park and mature tree cover around the pleasure gardens.

- 3.7.363 The setting of the Cottage (**1264142**) is informed by its location within a loosely coalesced stand of trees within the parkland. Tree cover to the east completely screens the asset from Hylands House. There are broken views of the parkland beyond the trees in all directions but the view to the east does include glimpses of one of the modern visitor car parks. The setting of the asset, therefore, makes a considerable contribution to its value, but due to the restricted parkland nature of the setting, it does not extend to the draft Order Limits.
- 3.7.364 The **medium value** asset of The Old Mill (**1328795**) is a Grade II listed building of historical and aesthetic value. The mill is situated c. 90 m south of a private road with the residential dwellings of Butts Way flanking the thoroughfare to the north. The asset is located on the eastern bank of the Wid river, approximately 1.9 km east of the draft Order Limits, and approximately 1 km south-west of the outskirts of Chelmsford. The asset is a small one storey 18th century mill that was originally housed in red brick and built on a square plan. Soon after building a timber framed wing extended the mill on the land side. The roof is now ridged and hipped at one end and the power to the building was supplied by turbine, but no machinery survives. The asset is now a residential property. Peculiarly, the 18th century asset does not appear on the first edition OS map of 1881.
- 3.7.365 The setting of the asset is informed by the Wid river, from which it drew its power. The setting is further informed by the surrounding agricultural landscape with which the asset has a historical relationship, but this has been slightly eroded by the development of Butts Way 100 m to the north, a small cluster of 20th century buildings 130 m to the south and by the introduction of the railway 200 m to the west. Modern associated outbuildings, garages and a tennis court also intrude into the asset's setting. The setting of the asset, therefore, makes moderate contribution to its value, but due to distance and its restricted river valley setting, the setting does not extend to the draft Order Limits.
- 3.7.366 The Grade II listed 'Montagues Farmhouse' (**1122068**) and 'St Pauls Vicarage' (**1172156**) are located at the junction of Wyse Road and Highwood Road, 470 m west of Edney Common, 1.6 km west of the draft Order Limits. These assets are of **medium value** based on their evidential and historical value. Montagues Farmhouse (**1122068**) dates to the 18th century and comprises a red brick, L-shaped, two storey house with a tiled roof. St Pauls Vicarage (**1172156**) is an early to mid-19th century red brick, two storey house with a slate roof.
- 3.7.367 The setting of Montagues Farmhouse is informed by its location within a working farm complex, by its relationship with its non-designated outbuildings, most of which

are recorded on the first edition OS map of 1881, and by its relationship with the non-designated Church of St Paul on the opposite eastern flank of Highwood Road. The setting is further informed by its interrelationship with the vicarage (**1172156**) to the north and by the surrounding agricultural landscape with which the asset has a historical and functional relationship. the setting of the asset, therefore, makes a considerable contribution to the asset's value, but due to distance, mature tree cover in the asset's grounds and those of the church, and the copses, mature tree lined hedgerows and development of the intervening landscape, the setting does not extend to the draft Order Limits.

3.7.368 The setting of the vicarage is informed by its location within its large grounds and by its relationship with its outbuildings, some of which are recorded on the first edition map of 1881. The setting is further informed by the asset's interrelationship with Montagues Farmhouse (**1122068**) to the south, and the setting also includes the historical link with the non-designated Church of St Paul also to the south. The surrounding agricultural landscape with which the asset has a historical relationship also makes a positive contribution to the setting. The setting of the asset, therefore, makes a considerable contribution to the asset's value, but due to distance, the mature tree lined hedgerows of the asset's grounds, and the copses, mature tree lined hedgerows and development of the intervening landscape, the setting does not extend to the draft Order Limits.

3.7.369 The Grade II listed 'Writtle Park House' (**1305262**) is located on the eastern flank of an un-named road 750 m south of Edney Common, 990 m west of the draft Order Limits. The asset is of **medium value** based on its evidential and historical value. The asset was originally a 16th century courtyard house although this was very much altered in the 18th century. The north facing elevation has two Tudor crowstepped gables with pillar finials. The east facing elevation also has a crowstepped gable, whilst the south facing elevation has a parapet with a raised brick band. The north facing elevation appended by three perpendicular ranges. The asset is brick-built, of two storeys and has a tiled roof.

The setting of the asset is informed by its isolated location within its mature grounds and by its relationship with its non-designated outbuildings, some of which are apparent on 19th and 20th century OS mapping. the setting is further informed by the surrounding agricultural with which the asset, identified as Writtle Park Farm on the 1923 OS map, has a historical and functional relationship. The asset's grounds now, however, contain numerous mature trees, sometime tightly clumped, which screen views to and from the asset creating a sense of seclusion and privacy. The setting of the asset, therefore, makes a considerable contribution to its value, but due the screening vegetation of the grounds and Little Ebney Wood and Writtlepark Wood beyond, the setting does not extend to the draft Order Limits.

3.7.370 The Grade II list assets 'Southwoods' (**1237174**), 'Granary and Cart Lodge at Southwoods Farm' (**1237420**) and 'Barn at Southwoods Farm' (**1237421**) are located on the eastern flank of Margaretting Road c. 1.8 km south-south-west of Writtle and 100 m east of the draft Order Limits. These assets are of **medium value** based on their evidential and historical value. Southwoods (**1237174**) is a 17th century plastered timber frame, two storey house, which has a tiles roof and was much altered in the 18th century. The granary and cart lodge (**1237420**) are now a residential dwelling and comprises an 18th century weatherboarded timber frame structure with a tiled roof. The barn (**1237421**) is red brick built, has a tiled roof and dates to the 18th century. this asset has also been converted into residential dwelling.

- 3.7.371 The setting of the asset is shared and is informed by their location within a former farmyard, by their interrelationships and by their relationships with the non-designated properties to the south and elements of the former farming complex, most of which are recorded on 19th and 20th century OS mapping. The setting is further informed by the surrounding agricultural landscape with which the assets and their non-designated outbuildings have a historical and functional relationship. Although the farm is no longer working and the granary, cart lodge and barn have changed in function, the assets are still coherent as a former working complex and so the setting of the assets, makes a moderate contribution to their values. Due the proximity of the Project, the setting extends to the draft Order Limits.
- 3.7.372 the Grade II listed 'Barn Immediately North-West of Coptfoldhall Farmhouse' (**1247784**) is located 100 m north of an un-named private road c. 1.1 km north-north-west of Margaretting, 20 m east of the draft Order Limits. The asset is of **medium value** based on its evidential and historical value. The barn dates to the mid-to-late 18th century and is constructed of red brick in Flemish bond with a peg tile roof.
- 3.7.373 The asset could not be accessed and so its setting analysis is based on cartographic sources and satellite imagery. The setting of the asset is informed by its location within a former farming complex and by its relationship with a non-designated residential property immediately to the south first recorded on the 1897 OS map. The setting is further informed by the asset's relationship with surviving non-designated outbuildings of the farming complex, some of which are recorded on 19th and 20th century OS mapping. The surrounding agricultural landscape, with which the asset has a historical and functional relationship, make a positive contribution to its setting. Three large hanger style barns have been built 50 m to the west of the asset in the 21st century and the available evidence suggests the asset and some of the outbuilding have been developed and repurposed as commercial premises. The setting of the asset, therefore, makes a minor contribution to its value, and due to the proximity of the Project, the setting extends to the draft Order Limits.
- 3.7.374 The Grade II listed 'Bearman's Farmhouse' (1237406), 'Barn to south-east of Bearmans Farmhouse' (1237407), 'Outbuildings at Bearmans Farmhouse' (1237409), and 'Barn to east of Bearmans Farmhouse' (1264135) are in a farming complex on the eastern flank of Writtle Road, 680 m north-north-west of Margaretting, 70 m south-south-east of the draft Order Limits. These assets are of medium value based on their evidential and historical value. 'Bearman's Farmhouse' (1237406) dates to the medieval period and is reported in the appropriate section above. The barn to the south-east of the farmhouse (1237407) dates to the late 17th or early 18th centuries and comprises a weatherboarded timber frame, five bay structure with a tiled roof. The farm outbuildings (1237409) comprise an early 18th century stable and hay loft of weatherboarded timber frame construction with a tiled roof. The barn to the east of the farmhouse (1264135) dates to the late 17th century and comprises a weatherboarded timber frame, five bay structure with a tiled roof. The former farming complex appears to have been broken in to two separate properties now with the farmhouse (1237406), out buildings (1237409) and barn to east (1264135) forming one to the north and the barn to the south (1237407) and non-designated outbuildings forming the other to the south.
- 3.7.375 The setting of the barn to the south (**1237407**) is restricted to its immediate surroundings and to its stables and paddocks to the east due to its removal from the former farm complex, and screening to the west by modern residential development. The setting of the asset, therefore, makes a moderate contribution to its value, but it does not extend to the draft Order Limits. The setting of the remaining post medieval assets is shared and informed by their location within the former working farm

complex, and by their interrelationships and their relationships with the medieval Bearman's Farmhouse (**1237406**). The setting is further informed by the surrounding agricultural landscape with which the assets have a historical and functional relationship. The grounds of the assets are defined to the west, south and east, which are defined by thick, high (up to 5 m) evergreen hedges obscuring views in and out of the complex. There is less dense tree cover to the north and glimpses of the assets can be gained looking southwards along Writtle Road. The private road to Coptfold Hall Farm is located 70 m north to the north of the asset group, and the route is to be an access road for the Project. The setting of the assets makes a considerable contribution to their value, but whilst the asset is screened from the draft Order Limits to the west by the mature property boundary, the use of the access road may increase noises, dust, light, and vibration within the setting during the construction phase. The setting of the assets, therefore, extends to the draft Order Limits.

- 3.7.376 The Grade II listed 'Whitebridge Farmhouse' (**1304882**) is located on the southern flank of Maldon Road c. 1 km east of Margaretting, 1.7 km east-south-east of the draft Order Limits. The asset is of **medium value** based on its evidential and historical value. The asset comprises a 19th century two storey, colourwashed brick-built house on a L-shaped plan with a slate roof.
- 3.7.377 The setting of the asset is informed by its working farm complex location and by its relationships with its associated non-designated outbuildings, several of which are recorded on the first edition OS map of 1881. The setting is further informed by the surrounding agricultural landscape with which the asset and its outbuildings have a historical and ongoing functional relationship. The setting of the asset, therefore, makes a considerable contribution to its value, but due to distance and the mature vegetation, development and infrastructure of the intervening landscape, the setting does not extend to the draft Order Limits.
- 3.7.378 Based on satellite imagery, the Grade II listed 'The Spread Eagle Inn' (**1122030**) was demolished at some point after March 2011 and before April 2017. The asset was located on the north-eastern flank of Main Road at the north-eastern limit of Margaretting.
- 3.7.379 The Grade II listed 'The Limes' (**1152144**) is located on the north-eastern flank of Main Road at the north-eastern limit of Margaretting, 8600 m south-east of an draft Order Limits access road and 1.1 km east of the draft Order Limits. The asset is of **medium value** based on its evidential and historical value. The asset comprises a late 18th to early 19th century two storey red brick house with a tiled roof.
- 3.7.380 The setting of the asset is informed by its roadside location at the north-eastern extent of the settlement and by its relationship with the non-designated post medieval Folley Cottage immediately to the south-west, which is recorded on the first edition OS map of 1881. The setting is further informed by a long-range view to the south-east over minimally development open farmland. To the rear (north-west) and west of the asset is a copse that screens the asset from the A12 to the north and the Project to the west. The setting of the asset, therefore, makes a moderate contribution to its value, but due to copse the setting does not extend to the draft Order Limits.
- 3.7.381 The Grade listed assets 'Yew Tree Cottage and Peacock Cottage' (**1122031**), 'Lodge to Peacocks' (**1122032**) are located on the south-eastern flank of the B1002 in the north-eastern section of the Margaretting conservation area (**CA57**), and 930 m east-south-east of the draft Order Limits. These assets are of **medium value** based on their evidential and historical value. Yew Tree Cottage and Peacock Cottage (**1122031**) is an early-to-mid 19th century red and blue brick two story house with a

slate roof. The Lodge to Peacocks (**1122032**) is a small, early 19th century one story painted brick building with a slate roof.

- 3.7.382 The setting of the Yew Tree and Peacock Cottages is informed by its roadside location within the settlement, by its relationship the Grade II listed lodge immediately to the south-west and Peacocks parkland beyond. The setting is further informed by the asset's relationships with the post medieval and early modern non-designated residential properties flanking the A1002 that contribute to the character of the conservation area. The setting of the asset, therefore, makes considerable contribution to its value, but due to the restricted streetscape nature of the setting, it does not extend to the draft Order Limits.
- 3.7.383 The setting of the Peacocks Lodge is informed by its roadside location within the settlement and by its relationship with the Grade II listed Yew Tree and Peacock Cottages immediately to the north-east and by its station at the entrance to the Peacocks Estate parkland. The setting is further informed by the asset's relationships with the post medieval and early modern non-designated residential properties flanking the A1002 that contribute to the character of the conservation area. The setting of the asset, therefore, makes considerable contribution to its value, but due to the restricted streetscape and parkland nature of the setting, it does not extend to the draft Order Limits.
- 3.7.384 The Grade II listed 'Peacocks' (**1152200**) is located within its small park at the heart of the Margaretting conservation area (**CA57**), 980 m south-east of the draft Order Limits. The asset is of **medium value** based on its evidential, historical, and aesthetic value. Peacocks is a Regency period (1811 - 1820) house with stuccoed walls. The white painted north-west facing elevation of the asset has a parapet and a tetrastyle portico with fluted columns a modillion cornice and central modillion pediment. The main block has smaller wing appended to the rear.
- 3.7.385 The setting of the asset is informed by its location within its associated parkland and by its relationship with its non-designated outbuildings, most of which are recorded on the first edition OS map of 1881. The setting is further informed by a large lawned area to the south of the asset, defined by a high evergreen hedge and containing water features, a formally laid out garden and an orchard. Views from the asset almost entirely restricted to within the parkland by mature tree line hedgerow boundaries. There are, occasional glimpses of the white-faced house from the B1002. The setting of the asset, therefore, makes a considerable contribution to the value of the asset, but due to the restricted parkland nature of the setting, it does not extend to the draft Order Limits.
- 3.7.386 The Grade II listed assets 'The Red Lion Inn' (**1237593**) and 'Black Cottage' (**1385987**) are located on the north and southern flank respectively of the B1002 at the western limit of the Margaretting conservation area (**CA57**) and 480 m east of the draft Order Limits. These assets are of **medium value** based on their evidential and historical value. The inn was built as a timber frame, two storey farmhouse in the mid-to-late 17th century. It was refaced with brick in Flemish bond in the late 18th century has a lean-to to the rear and an extension to the west of 19th century date. It has a tiled roof. The asset was listed in Manor records of 1694 as 'Kettles'. It was purchased in 1719 by John Swan and leased in 1729 by his widow to Edmund Garrett of Margaretting, an innholder. Formerly known as the Butcher's Arms, it acquired its present name in the 1840s. The Black Cottage dates to the mid-16th century and is a plastered partially weatherboarded timber frame, two storey house on a brick plinth with a tiled roof. The asset was extended in the 20th century.

- 3.7.387 The setting of the assets is shared and informed by their roadside locations within the conservation area at the western limit of the settlement of Margaretting. The setting is further informed by their interrelationship and by their relationships with the early modern non-designated residential properties flanking the B1002 that positively contribute to the character of the conservation area. The agricultural landscape to the north and south of the assets, with which the assets have a historical relationship also makes a positive contribution to the setting. The setting of the assets, therefore, makes a considerable contribution to their values, but due to the restricted nature of the setting, it does not extend to the draft Order Limits.
- 3.7.388 The Grade II listed assets 'Parsonage Farmhouse' (**1235375**) and 'Granary South of Parsonage Farmhouse' (**1235376**) are located on the western flank of Parsonage Road, c. 80 m north-west of the railway close to the south-eastern extent of the Margaretting conservation area (**CA57**). Margaretting lies 400 m to the north and the draft Order Limits are 1.25 km to the west. These assets are of **medium value** based on their evidential and historical value. The farmhouse (**1235375**) is an early-to-mid 19th century red brick, two storey structure with a tiled roof. the Granary (**1235376**) is a 16th to 17th century square red brick building with a plinth and a tiled roof.
- 3.7.389 The setting of the asset is shared and informed by their location within a working farm complex, by their interrelationship and by their relationships with their non-designated outbuildings, several of which are recorded on 19th and early 20th century OS mapping. The setting is further informed by the surrounding agricultural landscape, with which the assets and their outbuildings have a historical and functional relationship, by the railway and by the Peacock Estate immediately to the north and west of the farm complex grounds. The farm complex is partially defined by mature tree lined hedgerows with the only open view towards the railway in the south-east. The setting of the assets, therefore, makes a considerable contribution to their value, but due the restricted farmyard setting of the assets and the mature tree lined boundaries, including those of the Peacock Estate, and the infrastructure of the intervening landscape, the setting does not extend to the draft Order Limits.
- 3.7.390 The **medium value** Grade II listed 'Martin's Farmhouse' (**1265086**) is of evidential and historical value and is located off the western flank Swan Lane c. 1 km east-south-east of Margaretting and c. 1.95 km east of the draft Order Limits. The asset dates to the 17th century and comprises a plastered timber frame house with a cross wing to the east and a tiled roof.
- 3.7.391 The setting of the asset by its working farm location and by its relationship with its non-designated outbuildings, some of which are recorded on the first edition OS map of 1881. The setting is further informed by the surrounding agricultural landscape, with which the asset and its outbuildings have historical and ongoing functional relationships. the setting of the farmhouse, therefore, makes a considerable contribution to its value, but due to overall distance and it being restricted to the farming complex and the surrounding agricultural land, the setting does not extend to the draft Order Limits.
- 3.7.392 The Grade II listed 'Margaretting Hall' (**1152104**) is located on the eastern flank of Church Lane, c. 1.2 km south-west of Margaretting, 50 m north of the draft Order Limits. The asset is of **medium value** based on its evidential and historical value. the hall dates to the early 19th century and comprises a red brick built, two storey house with a slate roof.
- 3.7.393 The setting of the asset is informed by its location within a working farm complex and by its relationship with its non-designated outbuildings, most of which are recorded on the first edition OS map of 1881. The setting is further informed by the long-

established Great Eastern Railway 180 m to the south-east and by the surrounding agricultural land with which the asset and its outbuildings have a historical and functional relationship. The Grade II\* listed medieval Church of St Margaret (**1152104**) lies 240 m to the south-east but due to mature tree growth in the graveyard, flanking the railway and along Church Lane, there is no intervisibility between the assets. The setting of the asset makes a considerable contribution to its value, and due to the proximity of the Project, the setting extends to the draft Order Limits.

- 3.7.394 The Grade II listed 'Barn to the North of Fristling Hall' (**1236737**) and 'The Granary At Fristling Hall' (**1391676**) are located off a private road 430 m south-west of Swan Lane, 1.4 km north-west of Stock and 1.6 km north-east of the draft Order Limits. These assets are of **medium value** based on their evidential and historical value. the barn dates to the 16th to 17th centuries and comprises a weatherboarded timber frame ten bay structure with a tiled roof. The granary dates to the 18th century and comprises a weatherboarded timber frame structure on a red brick plinth laid in at some point between 2011 and 2017.
- 3.7.395 The setting of the assets is shared and informed by their location within a former farm complex, by their interrelationship and by their relationships with the non-designated 19th century farmhouse immediately to the south-west. The setting is further in formed by the surrounding landscape with which the assets have a historical and former functional relationship. The boundaries of the farming complex were eroded as the function of the assets changed, and so the setting of the assets makes a moderate contribution to their values. Due to distance, and the mature tree lined boundaries and copses and development of the intervening landscape, the setting does not extend to the draft Order Limits.
- 3.7.396 The Grade II listed 'Ramsey Tyrells' (**1236593**) is located 50 m north of Back Lane, c. 1 km west-north-west of Stock and 1.2 km east-northeast of the draft Order Limits. The asset is of **medium value** based on its evidential and historical value. The core of the asset is likely a 16th century timber frame which was largely encased in red brick in the late 18th or early 19th centuries. The house is of two storeys and has a tiled roof.
- 3.7.397 The setting of the asset is informed by its location within a working farm complex and by its relationship with its non-designated outbuildings, several of which are recorded on the first edition OS map of 1881. The setting is further in formed by the surrounding landscape with which the assets have a historical and functional relationship. The asset's grounds are lawned to the south, west and north and are defined by mature tree lined fence lines. A small copse lies to the west beyond the asset's grounds. The setting of the asset, therefore, makes a considerable contribution to its value, but due to distance, the ground's boundaries, the adjacent copse and the topology, mature tree lined hedgerows, copses and development of the intervening landscape, the setting does not extend to the draft Order Limits.
- 3.7.398 The Grade II listed 'Imphy Hall' (**1247826**) is located off an un-named road c. 320 m west-south-west of Back Lane, c. 1 km west of Stock and 940 m east of the draft Order Limits. The asset is of **medium value** based on its evidential and historical value. The hall dates to the 17th century and comprises a rendered timber frame, two storey house partially encased in red brick in Flemish bond with a roof of handmade clay plain tiles.

The setting of the asset has undergone considerable change since that which is captured in the 1881 first edition OS map. The evidence indicates that the asset has been remodelled resulting in the loss of a north-north-east/south-south-west range

and all the outbuildings recorded on OS mapping have been demolished. The removal of the outbuildings, sometime in the latter half of the 20th century, facilitated the laying out of a designed garden with lawns, high evergreen hedgerows, a terraced area to the rear (north), and formal gardens and planting to the west. Large barns and/or stables were raised in the later 20th century on the approach to the asset from the east, but these are well screened from the asset by very high, evergreen hedgerows. A modern tennis court lies to the north-north-east of the asset. The front south-south-west facing elevation of the hall has an open view agricultural land with which the asset has a historical relationship. The setting of the asset, therefore, makes a moderate contribution to its value, but due the tree lined hedgerows defining the hall's ground and the topography and the mature tree lined hedgerows of the intervening landscape, the setting does not extend to the draft Order Limits.

- 3.7.399 The Grade II listed 'White's Tyrrells Farmhouse' (**1236733**) is located 50 m north of Ingatestone Road, c. 1.9 km west-south-west of Stock and 260 m east of the draft Order Limits. The asset is of **medium value** based on its evidential and historical value. The farmhouse comprises a timber frame two storey structure of unknown date encased in red brick in 18th or early 19th centuries. The asset has attics with three dormer windows and a tiled roof.
- 3.7.400 The setting of the asset is informed by its location within a working farm complex and by its relationship with its non-designated outbuildings, several of which are recorded on the first edition OS map of 1881. The setting is further informed by the surrounding agricultural landscape with which the asset and its outbuildings have a historical and functional relationship. There are modern later 20th century farm buildings to the east of the asset, but this is in keeping the function of the farming complex. Little Tyrells, a one storey residential property was built immediately to the west of the asset in the later 20th century, slightly detracting from the setting. The setting of the asset, therefore, makes a considerable contribution to its value, and due to the proximity of the Project, the setting extends to the draft Order Limits.
- 3.7.401 The Grade II listed 'Lilystone Hall' (**1236818**) is located immediately north-west of the junction of the B1007 Stock Road and Honeypot Lane, c. 500 m south-south-west of Stock and 1.85 km east of the draft Order Limits. The asset is of **medium value** based on its evidential, historical, and aesthetic value. The asset was built in 1847 and comprises a large two storey, grey brick house with stone parapet, cornice, frieze, and plinth.
- 3.7.402 The setting of the asset is informed by location within its own grounds. The grounds are moderately large, contain lawned areas and extensive tree cover and are defined by mature, thick tree lined hedgerows instilling a sense of privacy and seclusion. This restricted setting of the asset makes a considerable contribution to its value, but due to the mature tree cover within the grounds and beyond the property boundary to the west, the setting does not extend to the draft Order Limits.
- 3.7.403 The Grade II listed 'Kings Head Farm' (**1259302**) is located on the eastern flank of Stock Road, 1.2 km south of Stock, 1.3 km east of an draft Order Limits pipeline and 2.1 km east of the draft Order Limits. The asset is of **medium value** based on its evidential and historical value. the asset comprises a late 18th century farmhouse with a 19th century outshot to the north, which was heightened in the 20th century.

The setting of the asset is informed by its location within a former farming complex and by its relationship with its non-designated outbuildings, which are recorded on 19th and early 20th century OS mapping. The setting is further informed by the asset's relationship with The Old Kings Head public house 60 m to the south-south-

west, which is recorded on the first edition OS map of 1881. The surrounding agricultural landscape, with which the asset has a historical and former functional relationship. This historic link, however, has been eroded as the asset and pub were subsumed into the small hamlet that has developed at the junction of Stock Road and Smallgains Lane in the late 20th and 21st centuries. The setting of the asset, therefore, makes a moderate contribution to the asset's value, but due to its restricted nature, the setting does not extend to the draft Order Limits.

#### *Non-Designated Heritage Assets*

- 3.7.404 Montpellier's Farm is a post medieval asset (**6093**) comprising the farmhouse and outbuilding. The farmstead is of probable 16th to 17th century date and is located 75 m north of an draft Order Limits access road, c. 350 m to the east of the draft Order Limits and approximately 920 m to the south of Writtle. The site is of evidential and historical value and of **low value**.
- 3.7.405 Lee Farm is a post medieval asset (**6094**) comprising the farmhouse and outbuilding. The farmstead is probable 16th century date is located approximately 270 m south-west of the main draft Order Limits and 95 m south-west of a north-west/south-east aligned draft Order Limits access road. The farm is situated 240 m south-east of The Causeway between Writtle and Edney Common. The site is of evidential and historical value and is of **low value**.
- 3.7.406 Peacocks Homestead (**6174**) is located on the north-west flank of Main Road, Margaretting within the Margaretting conservation area. The non-designated Eveland Hall is located 50 m to the north. Peacocks Homestead is a late 19th century model farm designed by Frederick Chancellor for the estate of Colonel Disney. The farming complex served for a while as the coach house of Eveland Hall and now, at least in part, has been renovated. The asst is of **low value** based on its evidential and historical value.
- 3.7.407 Asset (**6096**) is a 19th century brick-built chapel on the west side of Coptfold Hall. It is possible the chapel is built on the site of the 12th century medieval Coptfold Chapel (**6048**), but there is no physical evidence to support this supposition. The chapel is located 250 m west of the draft Order Limits and 970 m to the north of the Handley Green. The asset is of evidential and historical value and is of **low value**.

## Modern

### Fuller Street to Little Waltham

#### *Non-Designated Heritage Assets*

- 3.7.408 A WWII ammunition shelter (**6087**) is located to the east of Boreham Road and south-east of Great Leighs. The remains of the shelter are in the south-east corner of Brickfields Meadow, a small wood to the east of Boreham Road, 30 m north-east of the draft Order Limits. The shelter is a typical 'Nissen-hut' type, of 14' x10', with corrugated iron roof sitting on low brick walls. Nothing of the roof has survived, but both brick walls remain in good condition up to their full 6' height, each with an entrance and doorway. This asset is of evidential and historical value and of **low value**.
- 3.7.409 The HER records the site of a WWII Floodlight (**6085**), identified from an aerial photograph taken in 1946, that has since been destroyed. The site is located to the west of Lyons Hall, approximately 1.5 km from Great Leighs and 220 m south-east of the draft Order Limits. This asset is of historical value and of **low value**.

- 3.7.410 An Auxiliary Unit Operational Base is identified by the HER approximately 50 m to the west of the draft Order Limits, to the south of Great Leighs (**6088**). The site is of importance due to its association with the British 'resistance' army during WWII. After the Dunkirk evacuations, a secret organisation acting as an 'underground' fighting force was set up. As a result, throughout Britain small cells of six men with knowledge of the local countryside were quartered in hidden operational bases, usually built underground, called 'auxiliary units.' Very little contemporary documentation survives on the location of these Operation Bases (O.B.) and any which come to light are through ex-members of the force or are discovered accidentally. The O.B. at Great Leighs is well known locally and was identified by Keith Seabrook, a farmer in the area who controlled a network of 70 cells across this part of the countryside. It is stated that this O.B. was built below ground in a large pit surrounded by trees to the south of Goodmans Lane. It is thought that more than one room was built which would have been equipped with bunks, table, stove, toilet etc. for the troops. The site was visited in 2006 when the pit, 80' in diameter and approximately 30' deep still exists with some surviving trees. Since the war a considerable amount of rubbish has been tipped in and it is not known whether anything of the original O.B. still survives below ground. The site has been marked to be assessed for statutory protection as an important historical WWII site. As a result, the site has evidential and significant historical value and is of **high value**.
- 3.7.411 A Cold War nuclear monitoring post (**6089**) is in a field on the east side of Braintree Road, north of Little Waltham, and approximately 210 m to the east of the draft Order Limits. A site assessment in 1999 described the asset as being in good external condition and the owner has also described the internal condition as excellent, but access has not been allowed. This asset is of evidential and historical value and of **medium value**.

### Little Waltham to Chignall St James

#### *Designated Heritage Assets*

- 3.7.412 The Grade II listed 'Little Waltham War Memorial' (**1456881**) is located on the eastern flank of The Street, Little Waltham, just to the south of The Street's junction with Winckford Close. The asset is of **medium value** based on its designation and its evidential, historical, and communal value. The granite wheel-head cross was unveiled on 21 May 1922 by Brigadier-General J. T. Wigan, was dedicated by the Rev Canon O. W. Tancock and it commemorates 22 local servicemen who died in WWI. Following WWII, seven names were added, including two women who were killed in a bombing raid on a local munitions factory.
- 3.7.413 The setting of the asset is informed by its roadside location within the settlement and within the Little Waltham conservation area (**CA56**). The setting of the asset makes a very considerable contribution to its value, but due to its restricted nature, the setting does not extend to the draft Order Limits.

#### *Non-Designated Heritage Assets*

- 3.7.414 The cropmarks at Minnow End (**6038**) are largely considered to be post medieval in date, but they do include a possible WWII bomb crater identified on RAF vertical photography. The site is partly located within the draft Order Limits, 250 m to the west of Little Waltham. The site has evidential and historical value and is of **low value**.
- 3.7.415 Six WWII pillboxes in a good state of survival have been identified within or close to the Langleys registered park (**1000241**), Great Waltham. These assets have evidential and historical value, are of **low value**, and comprise:

- A concrete type FW3/24 thick-walled Y-shape pillbox (**6064**), which faces east towards the river Chelmer approximately 305 m north-west of the draft Order Limits
- A concrete type FW3/22 thick-walled T-shape pillbox (**6065**), which faces east from a wide field overlooking Whites Plantation, approximately 250 m west of the draft Order Limits
- A concrete type FW3/28A artillery pillbox is located immediately alongside the western flank of the B1008 in a dense thicket of scrub (**6068**), approximately 50 m south-east of the draft Order Limits. Before construction of the bypass, the pillbox would have faced south-east across the river Chelmer and it was originally built to accommodate a 6-pounder gun, although the concrete pedestal no longer exists
- A thick-walled type FW3/24 WWII pillbox (**6066**) is located on the edge of Whites Plantation, which runs along the west bank of the river Chelmer, on a bend of the river facing south-east and approximately 25 m west of the draft Order Limits
- A thick-walled type FW3/24 WWII pillbox (**6067**) is located at the south edge of Whites Plantation facing south-east across the river Chelmer, approximately 10 m west of the draft Order Limits
- The final pillbox (**6069**) is a rectangular concrete structure with a blast wall located in a wide grassy field approximately 210 m south-west of (**6068**) and 10 m south-east of the draft Order Limits. All pillboxes are described as being in fine condition. The outer concrete is smooth with little deterioration and some original corrugated iron shuttering still survives. Internally, the walls, ceiling and central pillars are all undamaged with some internal wooden features surviving

- 3.7.416 The site of a former **negligible value** WWII road barrier (**6073**) of evidential and historical value is located on The Street on the western edge of Little Waltham and c. 90 m south-east of the draft Order Limits. Nothing of the asset now survives.
- 3.7.417 The site of a former **negligible value** WWII Ammunition shelter (**6086**) of evidential and historical value is located on the south-western outskirts of Little Waltham. Nothing of the asset survives above ground today.
- 3.7.418 A WWII north facing concrete Type FW3/24 thick-walled pillbox (**6070**) is located on the eastern flank of Chelmsford Road on the outskirts of Little Waltham and approximately 100 m south-east of the draft Order Limits. The asset retains its central Y-shaped pillar, as well as some internal corrugated iron sheeting and internal metal features. The asset has evidential and historical value and are of **low value**.
- 3.7.419 Another pillbox (**6074**) is located at the multi-period site of Ash Tree Corner, Little Waltham. The FW3/22 type pillbox is located just behind a thin hedge of trees on the south side of Ash Tree Corner. It is constructed of concrete and has a low entrance on its south-east side and is visible from the road, approximately 250 m south-east of the draft Order Limits. At the same site, two spigot mortar emplacements have been located. A 29 mm spigot mortar pedestal (**6071**) is located approximately 130 m south-east of the draft Order Limits, and two spigot mortar positions, one of which is extant (**6072**) are located approximately 120 m south-east of the draft Order Limits. These assets all have evidential and historical value and are of **low value**.
- 3.7.420 The site of a former **negligible value** thick-walled WWII Type FW3/24 concrete pillbox (**6179**) of historical and evidential value is located in a meadow to the south-east of Winckford Bridge, Little Waltham and c. 230 m east of the draft Order Limits. Nothing of the asset survives above ground today.

- 3.7.421 A WWII floodlight has been identified on the HER at Great Waltham (**6084**), approximately 210 m south-east of the draft Order Limits. The asset has been removed and the site is now an open field, The asset has historical value, and due to its removal, it is of **negligible value**.
- 3.7.422 An anti-tank ditch runs through the draft Order Limits at Little Waltham, immediately to the north of the settlement (**6105**). The asset was part of a series of inland defence lines established in response to the threat of German invasion. Several such defensive lines were planned, and this the General Headquarters Line, was the most significant, largest, and probably the most heavily fortified. The line ran from the North of England south to the Thames and then west across the country to the Bristol Channel. Virtually nothing of the earthwork survives today. The asset is of evidential and historical value and is of **medium value**.
- 3.7.423 A WWI Second Class Royal Flying Corps night landing ground was located at Broomfield Court, Chelmsford (**6011**). The asset was in use from 1916 to 1919, and then used as a civil aerodrome in the 1930s. The site occupies roughly 18 ha of farmland and is partly located within the draft Order Limits immediately to the south of Partridge Green, approximately 200 m west of Broomfield. The site has historical value, however there is little evidential value as it is unlikely that any evidence of the airfield and its related structures survive. As a result, the asset is of **low value**.

### Chignall St James to Writtle

- 3.7.424 A circular cut feature (**6008**) has been identified approximately 205 m to the west of the draft Order Limits to the north-east of Writtle. The feature is stated as being possibly either a bomb crater or an agriculturally related quarry. It was seen open on a RAF vertical photography from 1948 and then as a cropmark in subsequent images. The site has evidential value and is of **low value**.
- 3.7.425 A Floodlight base has been located at Thatcher's Farm, on Vicarage Lane, Roxwell (**6083**). An aerial photograph taken in 1946 shows the clear shape of an extant experimental floodlight standing in a field immediately to the west of Thatcher's Farm. A site visit in 2005 confirmed that the concrete bases of both the floodlight and its generator still survive within a small rough meadow. The site is located on an access road that is contained within the draft Order Limits, immediately to the north of Roxwell Road. The asset has evidential and historical value and is of **low value**.

### Writtle to Margaretting

- 3.7.426 A WWII floodlight has been identified to the south-west of Writtle (**6082**), approximately 220 m south-west of the draft Order Limits, and 35 m south of two draft Order Limits access roads. The asset has now been destroyed but was identified as an experimental floodlight with generator by aerial photographs taken in 1946 and 1947. The site is now the concreted car park of a shipping company located in the area. The asset is of historical value, but as it is no longer extant is of **negligible value**.

## Undated

### Fuller Street to Little Waltham

- 3.7.427 The cropmarks of undated linear features have been identified at Cole Hill (**6006**). The cropmarks are in a field that borders the draft Order Limits to the south at Fuller Street. The site lies between Cole Hill in the west, Fuller Street in the east and the river Ter to the south. The site has evidential value and is of **low value**.

- 3.7.428 The cropmarks of a series of linear features are possibly the remains of a multi-vallate enclosure (measuring approximately 100 m by 75 m) including related annexes and sub-divisions (**6055**). The asset is in a field approximately 160 m south of the draft Order Limits, immediately to the west of Cole Hill Road and 650 m west of Fuller Street. The asset is undated, but based on its morphology it is likely to be of Iron Age to Romano-British date. The asset has evidential and historical value and is of **medium value**.
- 3.7.429 Undated linear cropmarks have been identified south of Goodman's Farm at Great Leighs (**6016**). The cropmarks are in a field approximately 50 m south-east of the draft Order Limits, immediately to the south of Goodman's Lane. The asset has evidential value and is of **low value**.
- 3.7.430 The cropmarks of three small rectilinear enclosures (**6025**) have been identified in a field to the south of the Grade II listed Stonage Farmhouse (**1172474**). The asset is located immediately to the east of the A131 Braintree Road, and largely within the draft Order Limits. The asset has evidential value and is of **low value**.
- 3.7.431 The cropmarks of double ditched trackways, ring ditches, enclosures, and field boundaries (**6029**) have been identified in the fields to the west, north and east of Grade II listed Lowleys Farmhouse (**1305642**). The site borders the draft Order Limits to the west and is bisected by the A131 with Goodman's Lane to the north. Fuller Street is located c. 2 km to the east. The site has evidential value and is of **low value**.
- 3.7.432 Undated linear cropmarks (**6031**), thought to be old field boundaries, have been identified on land to the south-east of Goodman's Farm. The draft Order Limits run through the centre of the site, which lies approximately 235 m south of Goodman's Lane, 460 m east of the A131 and 1.9 km west-south-west of Fuller Street. The asset has evidential value and is of **low value**.
- 3.7.433 Undated cropmarks (**6053**) have been identified on land to the east of Whitbread's Farm. It is thought that the cropmarks relate to an undated extraction pit or small quarry, and a field boundary that appear on the first edition OS map. The site is located approximately 260 m west of the draft Order Limits and lies adjacent to the west side a north/south aligned draft Order Limits access road. The asset has evidential value and is of **low value**.
- 3.7.434 Undated cropmarks of two large circular pits, a field boundary, other linear features, and some amorphous features (**6056**) are located on land to the north of Hole Farm, Great Leighs. The draft Order Limits run through the centre of the asset, which is located between Paulk Hall Lane immediately to the west, and Cole Hill 600 m to the east. The asset has evidential value and is of **low value**.
- 3.7.435 Undated cropmarks of various linear and amorphous features (**6057**) have been identified on land south of Terling Spring. The amorphous features, which represent past extraction pits, are located partly within the draft Order Limits immediately to the south of Fuller Street. The asset has evidential and historical value and is of **low value**.
- 3.7.436 The undated cropmark of an extraction pit is located at a quarry to the west of Rectory Lane, Great Leighs (**6078**). The site is located approximately 50 m to the west of the draft Order Limits and 130 m east of the A131. The asset has evidential value and is of **low value**.

### Little Waltham to Chignall St James

- 3.7.437 An undated small woodland with weak bank and ditch earthworks (**6018**) is located 220 m south of Partridge Green and on the western flank of an draft Order Limits access road. The asset has evidential and historical value and is of **low value**.
- 3.7.438 A complex of undated cropmarks including field boundaries, enclosures, a large oval enclosure, and a ring ditch (**6059**), which the Selected Heritage Inventory for Natural England (SHINE) suggests may be a Bronze Age round barrow, is located on farmland to the south of Great Waltham. The complex borders the draft Order Limits to the south and borders the settlement of Great Waltham to its north and west. The asset has evidential and historical value and is of **medium value**.
- 3.7.439 Undated linear cropmarks (**6061**) are in a field to the west 480 m south-west of Partridge Green and partially within the draft Order Limits. The HER suggests the cropmarks represent probable post-medieval field boundaries. The asset has evidential and historical value and is of **low value**.

### Chignall St James to Writtle

- 3.7.440 The earthworks of an undated depression and shallow channel have been identified in Lee Wood (**6015**), approximately 180 m to the west of the draft Order Limits to the east of Edney Common. The site has evidential value and is of **low value**.

### Writtle to Margaretting

- 3.7.441 Undated linear cropmarks (**6003**) have been identified in a field at Bumpstead's Farm, immediately to the east of the draft Order Limits and 1.1 km south of Writtle. Some correspond to features recorded on the first edition OS map and so are likely of post medieval date or older. The asset has evidential and historical value and is of **low value**.
- 3.7.442 The cropmarks of undated field boundaries (**6004**) have been identified in a field at Lee Farm, partially within the draft Order Limits and c. 1.2 km south-west of Writtle. Several of the cropmarks correspond to features recorded on the first edition OS map and so are likely of post medieval date or older. The asset has evidential and historical value and is of **low value**.
- 3.7.443 The cropmarks of undated linear features and a double ditched trackway (**6005**) have been identified in a field at Coptfold Hall Farm, immediately to the east of the draft Order Limits and 9600 m north-north-west of Margaretting. The asset has evidential and historical value and is of **low value**.
- 3.7.444 Undated **low value** cropmark (**6173**) of evidential value have been identified around the Grade II\* listed Church of St Mary 2.1 km west of Stock and partially within the draft Order Limits. Although a low value is suggested for this undated asset, if it represents the remains of the lost medieval settlement of Buttsbury, it could potentially be of **medium value**.
- 3.7.445 The undated **low value** cropmarks of linear features and a possible WWII bomb crater (**6001**) of evidential value straddle the boundary between Section F and G on the eastern flank of Mountnessing Road, 2.1 km west-south-west of Stock and partially within the draft Order Limits.

## 3.8 Section G: Brentwood Borough Council and Basildon Borough Council (including part of Chelmsford City Council)

### Location

- 3.8.1 Section G of the Project is located wholly within the County of Essex and approximately follows the north/south aligned District border between Brentwood to the west and Basildon to the east. Section G begins at the Chelmsford/Brentwood District border between Little Hyde Farm to the west and Margaretting Hall Cottages to the east. From its northern limit, Section G heads south bypassing the settlement of Ingatestone, Shenfield, Billericay, and Basildon before terminating at the Brentwood/Basildon/Thurrock District border on the railway line between West Horndon to the west and Basildon to the east. Section G of the Project accounts for approximately 14.5 km of its overall length.

### Topography

- 3.8.2 From the Chelmsford/Brentwood District border at 65 m aOD the draft Order Limits crosses the A12 at a similar height before partially descending in to the Wid Valley.
- 3.8.3 The draft Order Limits descends the western flank of the Wid Valley and crosses the river at 40 m aOD before climbing the eastern flank of the valley to 50 m aOD. From here, the draft Order Limits passes through a gently undulating landscape between 50 m aOD and 60 m aOD before crossing the Stock Brook (a tributary of the Wid) at 45 m aOD and then the Wid at 44 m aOD. The draft Order Limits then gradually climbs to 48 m aOD at Old Church Lane before climbing further to 64 m aOD just north of the A129 between Shenfield to the west and Billericay to the east.
- 3.8.4 From the A129, the draft Order Limits heads south-south-east and continues to climb to 73 m aOD before passing through an undulating landscape between 54 m aOD where it crosses Havering's Grove Brook to 78 m aOD north of Botney Hill Road. The draft Order Limits crosses Botney Hill Road at 65 m aOD before turning to the south and climbing to 76 m south of the highway. From where it descends through a gently undulating landscape to 27 m aOD at the railway line on the Brentwood/Basildon/Thurrock District border.

### Geology

- 3.8.5 The solid geology of Section G is dominated by clay, silt, and sand of the London Clay Formation. There are also deposits of clay, silt and sand of the Claygate Member and sand of the Bagshot Formation and these deposits largely coincide with the higher portions of the Section G landscape. There are no recorded superficial deposits for some of Section G. Where recorded, the deposits comprise diamicton glacial tills of the Lowestoft Formation interspersed by head deposits of clay, silt, sand and gravel, river terrace deposits of sand and gravel, glaciofluvial deposits of sand and gravel, and alluvial clay, silt, sand, and gravel. The head, glaciofluvial, river terrace and alluvial deposit are restricted to the Wid and Crouch Valleys and their tributaries.

## Historic Landscape Characterisation

- 3.8.6 The Districts of Brentwood and Basildon are located largely within National Character Area 111: Northern Thames Basin, and Section G of the Project falls wholly within this region. National Character Area 111 is characterised by the suburbs of North London, historic towns, and cities and in the Project, by moderately dispersed settlements, arable land, and river valleys (Natural England accessed 14/04/2023).
- 3.8.7 In keeping with the previously encountered Essex Districts, the Northern Thames Basin (NCA 111) landscape within of the District of Basildon has been further divided into Historic Environment Character Zones (HECZ) as defined in the Basildon portions of Section G by the *Basildon Borough Historic Environment Characterisation Project* (BC and ECC 2011). The District of Brentwood, however, appears to have not taken part in the Historic Environment Characterisation Project and no related data was received from the Essex HER. The portion of Section G within the District of Brentwood will, therefore, be discussed below with reference to *Braintree, Brentwood, Chelmsford, Maldon, and Uttlesford Landscape Character Assessments* (Chris Blandford Associates 2006), which divides the Brentwood landscape into Landscape Character Areas (LCA).
- 3.8.8 At the Chelmsford/Brentwood District border, the draft Order Limits passes simultaneously in to LCA F7: Blackmore Wooded Farmland and LCA F10: Heybridge Wooded Farmland, although only a short 500 m long portion of Project falls within the former LCA. Historically, northern portions of LCA F7 were located within the medieval hunting grounds of Writtle Forest as discussed above (Section 6 – HECZ 10.4). Substantial pockets of woodland still survive, as does the historic settlement pattern of dispersed villages focussed on greens and commons, and scattered farmsteads in an irregular field and woodland pattern. The fieldscape is mixed and includes pre-18th century co-axial enclosure and pre-18th century irregular fields, probably of medieval origin or older. LCA F10: Heybridge Wooded Farmland is characterised by mature, undulating wooded farmland with a strong linear settlement pattern. Evidence of historic land use is dominated by irregular fields mixed in with the predominant co-axial field system of ancient origin. The co-axial fields are mostly aligned east to west. The commons were mostly enclosed by the 19th century, but part of their extent can be seen in the surviving field boundary pattern. Historically, the settlement pattern was dispersed, some of it being focussed on commons. There were also scattered farmsteads.
- 3.8.9 The draft Order Limits crosses Landscape Character Area F10: Heybridge Wooded Farmland from Little Hyde Lane from 1 km north-east of Ingatestone for 1.3 km to the south-east where it passes over the Wid river, back into Section F and in to HECZ 10.1 of the Chelmsford District. The draft Order Limits pass through a very narrow (c. 260 m) section of HECZ 10.1: Wid Valley, which in this location is characterised by important areas of meadow pasture. Beyond the shallow valley, the draft Order Limits pass in to HECZ 10.4: Stock and turns to the south. This zone is characterised by largely pre 18th century regular and irregular enclosure, which survives relatively well in the southern half of the zone. Areas of Ancient Woodland also survive across the zone. The history of the zone is represented in the archaeological record from the Bronze Age through to the post medieval period.
- 3.8.10 Immediately south of Stock Brook and 450 m north-east of Mountnessing Road, the draft Order Limits turns to the south-west and transitions back into LCA F10: Heybridge Wooded Farmland of the Brentwood District which is described above. From Mountnessing Road, the draft Order Limits passes through LCA F10 for 2.7 km in a south-south-west direction to Rayleigh Road, where it passes in to LCA F14:

Ingrave and Herongate Wooded Farmland. The draft Order Limits crosses a 1.4 km long portion of LCA F14 at its north-east limit before passing into the Basildon District and HECZ 1.3: West of Billericay. Landscape Character Area F14 is characterised by medium to large-scale predominantly arable fields delineated by mature hedged field boundaries, and patches of woodland. The fieldscape is dominated by fields with a strong north/south alignment, probably of medieval origin or older. The historic settlement pattern was dispersed with church/hall complexes, moated sites, and scattered farmsteads, and this is still evident in the landscape today although it has now been supplemented by modern development.

- 3.8.11 At the Brentwood/Basildon District border, the draft Order Limits passes in to HECZ 1.3: West of Billericay. This zone comprises a well-preserved historic landscape with an irregular fieldscape to the south and west of Billericay is shown on the OS 1st edition giving way to a more regular coaxial pattern to the east and north of the zone, both are of medieval and earlier origin. There has, however, been considerable field boundary loss throughout the zone. The historic settlement pattern comprises dispersed farmsteads with areas of Ancient Woodland and commons and is of medieval origin. Even though little archaeological work has been undertaken in the zone there is a wide range of archaeological evidence comprising: records of Late Iron Age and Romano-British finds throughout the zone, which likely relate to rural settlements; and earthworks in Bluntshall Wood which may be Roman or perhaps more likely to be associated with medieval woodland management. A post medieval pottery kiln site lies to the south of Billericay School. Undated cropmarks, but of possible Iron Age date have also been identified.
- 3.8.12 Heading southwards, the draft Order Limits passes in to HECZ 1.2: South of Little Burstead at Botney Hill Road. This zone comprises a rectilinear fieldscape possibly middle Saxon origin, although there has been 20th century boundary loss, and occasional small areas of woodland, some of which are ancient. A medieval church and hall complex lies in the centre of the zone with other individual farmstead part of a historic pattern of dispersed settlement. Prehistoric finds including a flint axe has been recovered from the zone indicating early prehistoric occupation in the area. Occupation of Romano-British date is attested by Roman building material reused within the structure of the 12th century church and by chance finds made in the fields around the church. Romano-British occupation is also indicated by a possible cemetery to the south of Broomhills where a burial urn has been recorded. Anglo-Saxon pottery has been found during investigations close to the church. There is the potential for the survival of palaeoenvironmental evidence in the alluvial deposits in the floor of the Crouch Valley.
- 3.8.13 At the A127, the Southend Arterial Road, the draft Order Limits passes simultaneously in to HECZ 8.1: Langdon Hills and West of Laindon in the District of Basildon and LCA G1: Horndon Fenland in the District of Brentwood. These are the final two landscape designation of Section 7 with Section 8 and the District of Thurrock to the south. The HECZ 8.1: Langdon Hills and West of Laindon is a largely rural zone, with a distinctive grid-like fieldscape of possible middle Anglo-Saxon origin. Historically, the settlement of the zone was both sparse and highly dispersed, with the medieval church and hall complex at Dunton Hall forming a small focus within the zone. There has been little archaeological work undertaken in the zone and the geological and soil conditions are not conducive to the formation of cropmarks.
- 3.8.14 The LCA G1: Horndon Fenland is a largely rural area defined by generally large fields with hedged boundaries and occasional trees. The grid-like fieldscape is of

possible middle Anglo-Saxon origin. The historic settlement pattern comprises dispersed farms, a handful of nucleated settlements and some moated sites.

3.8.15 The landscape of Essex is broken down further into smaller parcels described as Historic Landscape Character Types and defined in The Historic Landscape Characterisation Report for Essex, Volume 2 (Bennet 2011). The HLC Type data has been supplied by the Essex HER and analysis of it has shown that, in Section G, the Construction Zone passes through a landscape largely defined by low value areas of common post 1950s boundary loss, which accounts for 21.45% of the Essex landscape (Bennet 2011). Also included within the bounds of the Construction Zone in Section G are dispersed parcels of low value 20th century enclosure, 18th-20th century woodland plantation, built-up areas - urban development, an industrial area and water reservoirs.

3.8.16 Elsewhere within the Construction Zone in Section G there are parcels of:

- Common **low value** Pre-18th Century Irregular Enclosure (HEX24590, HEX24577, HEX7524, HEX32925, HEX24556, HEX24889, HEX24813, HEX24860), which accounts for 17.69% of the Essex landscape (Bennet 2011). These are irregular enclosures vary considerably in size and shape, forming both arable and pasture with sinuous edges and offset corners. They are probably the result of piecemeal enclosure and may originate from the medieval period or earlier
- Occasional **medium value** Piecemeal Enclosure by Agreement (HEX24670, HEX24927, HEX24929, HEX24951, HEX24952, HEX26084), which accounts for approximately 8.97% of the Essex landscape (Bennet 2011). These fields were created to subdivide a pre-existing earlier field system and are characterised by straighter boundaries. Dating of origin is difficult but they usually predate the introduction of the later formal Parliamentary Enclosure Acts, and thus may relate in certain parishes to the earlier acts of enclosure
- Rare **medium value** Ancient Woodland (HEX24815, HEX17066), which accounts for 2.54% of the Essex landscape (Bennet 2011). Ancient Woodland is defined by Natural England (2018) as 'land that has had a continuous woodland cover since at least 1600 AD'. The predominant species are deciduous, broad-leaf trees and shrubs. In the Essex HLC, this category also includes traditional wood-pasture, such as seen at Hatfield Forest, where single or small groups of pollarded trees occur in pasture alongside small coppice-with-standards managed woodlands
- Rare **medium value** areas of Boundary Loss – with relict elements (HEX33015, HEX31517), which account for 2.07% of the Essex landscape (Bennet 2011). These represent field boundary loss since the 1950s due to mechanisation and changes in agricultural practices. This may range from the loss of a single boundary merging two fields into one, or many field boundaries being removed to form a single field. The resultant field is a hybrid and palimpsest, with edges that may have several periods of origin. The surviving edges of these fields are of historic importance
- Rare **medium value** Irregular Sinuous Enclosure (HEX24820, HEX24931), which accounts for 2.74% of the Essex landscape (Bennet 2011). These fields have parallel edges which are sinuous, being in a similar orientation, but moving towards and away from each other, with short boundaries cutting across. They appear like co-axial fields, but without the parallel sides. This field type predates the earliest cartographic evidence and probably originate in the medieval period

- Very rare **high value** Co-axial Enclosure (HEX32883), which accounts for 0.7% of the Essex Landscape (Bennet 2011). These form a distinctive boundary pattern of fields with roughly parallel boundaries, sinuous in form with irregular subdivisions, forming an irregular brick-like sequence, often incorporating ancient lanes and sometimes woodland. It is thought these fields date to the Anglo-Saxon period and were predominantly grazing areas, hence their greater survival than arable fields

## Conservation Areas

- 3.8.17 There are eight conservation areas within Section G: Little Burstead (**CA14**), Fryerning (**CA15**), Herongate (**CA16**), Hutton Village (**CA17**), Thorndon Park (**CA18**), Ingatestone, High Street (**CA35**), Ingatestone, Station Lane (**CA36**) and Billericay Town Centre (**CA61**). They are discussed north to south.
- 3.8.18 Fryerning (**CA15**) conservation area is located approximately 1.3 km to the west of the draft Order Limits near to Ingatestone. The conservation area is located within a largely rural area surrounded by farmland. It is of **medium value** due to its historic, architectural, and aesthetic value and character. The village is located within a green belt and special landscape area.
- 3.8.19 Fryerning's historical and evidential values lies with its historical origin, which may date to the Roman period (Andrews and Kirkby-Taylor 2011 (Fryerning CAA)). To the south, within Ingatestone, is a Roman road and to the north of the conservation area is a known Roman villa. Although no archaeological remains have been located within the settlement which date to the Romano-British period, Roman building material found within the historic church of Fryerning (potentially from the villa site but this has not been confirmed) does indicate that there could be archaeological remains nearby. Fryerning was once part of a large Roman or more likely a Saxon estate called Ginges, along with others close by including Ingatestone, Margaretting and Mountnessing (ibid.). The Norman Conquest records that Fryerning was part of the land belonging to Robert Gernon. The Church of St Mary the Virgin (**1197282**), Grade I listed, dates to this time but has been greatly altered over the years. The Gernon family then gave part of their land to the Knights Hospitallers, this where the 'friar' or 'fry' originates in the first part of the settlements name (ibid.). Fryerning Hall (**1052243**), Grade II\* listed, and Grade II barn (**1197283**), are both thought to belong to the Knights Hospitaller. In the 16th century the village was known as *Fryer Inge*. Mill Green was the site of a major medieval pottery making industry which served the local community and further afield into London. All of the nine listed buildings (Church of St Mary the Virgin (**1197282**) Grade I, Fryerning Hall (**1052243**) Grade II\*, the rest are Grade II listed: cart lodge and stables (**1187241**), barn (**1197283**) and dovecote and granary (**1297227**) at Fryerning Hall, Huskins (**1197277**), Spilfeathers (**1197278**), Adkins (**1297222**) and Murcocks (**1297223**), within the conservation area (which have been scoped into the DBA) add historic and aesthetic value to the conservation area and add **group value**. This increases the value of the asset.
- 3.8.20 This historical and aesthetic value of the assets lies within its 20th century and art and craft style structure, except for one or two late medieval and Georgian buildings (ibid.). The concentration of the arts and crafts style housing is unusual in this part of Essex. The older buildings within the conservation area are typically red brick built, many of them retain their original character even though they have been modernised i.e., with new rendering, later roof material, later windows etc (ibid.). The Arts and Crafts style dominates most of the conservation areas buildings. Typically, this style of building has larger roofs (with Dormer windows and gable ends), more intricate red

brick detailing and designs and large chimneys. These building are often adorned with terracotta mouldings, tile clad walls and casement windows with small panes of glass (ibid.).

- 3.8.21 Fryerning is located on a high piece of land above two river valleys, to the south-east and the other to the south-west. That gives the asset some sweeping views over the lower valley areas, but these are partly screened from view by well-established vegetation lining the streets. These straight routeways offer internal views though the conservation area, specifically along the roads which contain grass verges instead of pavements and most houses are set back from the roads. This allows for parked cars to be hidden from view within the property limits of buildings. The lack of parked cars within the roadside, therefore, rarely intrude on the principle internal views of the conservation area (ibid.). These views open near to junctions, at the Church Green junction and where Mill Green Road meets Back Lane and Mill Lane (ibid.). These areas include wider green spaces such as verges and triangular grassed areas. There are several important buildings within the conservation area that have views. These are the Grade I listed church (**1197282**), the Grade II\* listed Fryerning Hall (**1197282**), both located at the south-western end of the conservation area, Hill House (not listed) and the Grade II listed Huskards (**1197277**, within the central part of the conservation area). Due to this, there setting is correspondingly more important (ibid.).
- 3.8.22 The conservation area is located within an agricultural landscape, to the south is the A12 and Ingatestone. These do not effect on the quiet, rural feeling of the asset. The quite peaceful agricultural setting of the conservation area adds to the value of the asset and allows its historical and aesthetic value to be retained and maintained. Overall, the setting makes a considerable contribution to the conservation area. The setting of the conservation area does not extend into the draft Order Limits due to the distance and topography.
- 3.8.23 Ingatestone High Street (**CA35**) conservation area is approximately 625 m to the west of the Order Limit towards the northern end of Section G. It is located within the eastern part of the settlement of Ingatestone. The asset is of **medium value** due to its high historic, architectural, and aesthetic value and character. This urban conservation area straddles the High Street, Market Place, The Limes, and parts of Fryerning Lane and Stock Lane. The properties here are a mix of residential, offices and shops with two areas designated for community use (St Edmunds Marys and St Marys Church (Grade I listed **1297196**) and Ingatestone Community Centre).
- 3.8.24 Ingatestone was located along a Roman road from London to Colchester, modern day High Street. A settlement may have been present here during this time or developed later (Fielder 2008, CAA). The name Ingatestone is derived from the Saxon words *Inga* and *Ginga*, these are interpreted as ‘the people of the district’. Later in the 13th century the settlement was known as *Ginge Abbatisse and Petram* (or *atte Stone*) – possession of St Mary’s Abbey. The stone may relate to glacial boulders now located at the junction of High Street and Fryerning Lane (ibid.).
- 3.8.25 The conservation area is focused on the historical core of Ingatestone which is medieval in origin (ibid.). Today the High Street reflects the medieval layout with its small tightly packed buildings located straight onto the pavement, the properties are thin with space to the rear, original these would have been yards or work areas for the shops and residential properties. These were known as Berges. Its historical and architectural character and value lie with its extant 18th and 19th century properties which replaced the medieval buildings (ibid.). Ingatestone, was during this time, a prosperous coaching settlement. The prominent style within the conservation areas is

Georgian, this is evident in the use of brickwork and delicate sash windows. Traditional shop frontages are in use or have been recreated (ibid.). The good retention of the Georgian material, fixtures and fitting adds to the character and value of the area and is considered a key feature of the conservation area (ibid.). Although little is likely to remain of any Roman or Saxon archaeological remains (due to the affect of the later settlement) the conservation area does retain some evidential value due to its medieval layout and retention of its Georgian frontage.

- 3.8.26 The setting of the conservation area is one of small busy rural town. The main road, the High Street, offers excellent internal and external views to and from the conservation area. This is due to the straight nature of the road. The High Street is a narrow two-lane road with small pavements on either side. As it is the main road it often gets congested with traffic (particularly at the main crossing of the High Street, Stock Lane and Fryerning Lane) and parked cars (outside of the commercial properties). This, and road (including road markings) and street furniture can detract from the aesthetic of the area (ibid.) even though historically the road had been used for traffic for hundreds of years, the increase in modern vehicles does add a sense of enclosure and overcrowding. At the north-eastern and south-western ends of the conservation area the views continue into residential neighbourhoods. The properties at the north-eastern end are more spread out than those to the south-west, which continues with its congested nature. The view to the south-east has excellent views into Ingatestone Station Lane (**CA36**).
- 3.8.27 The buildings lining the High Street are generally tightly built which creates a sense of enclosure. These properties are typically built onto the pavement. Carriage arches and narrow openings, along with breaks in the building line lead, lead off the High Street and provide vehicle and pedestrian access to back areas whilst maintaining the important sense of enclosure of the street (ibid.). These back areas contribute to the spatial and historical character of the conservation area. However, some of these back areas create untidy views and some are poorly surfaced and maintained (ibid.).
- 3.8.28 Conversely Market Place has an open spatial character. Properties here are set within large plots and gardens, verges and trees contribute to a green scene. These offer a more peaceful location to the busy High Street. Baker's Lane also differs from the High Street. It is narrow and enclosed, with no pedestrian walkway. It carries little traffic, and its straight route provides a view through from Market Place to Fryerning Lane (ibid.).
- 3.8.29 The conservation area is surrounded by residential properties, most are later and have little historic character. To the south-east of the conservation area, over the railway line, are agricultural fields. There are views towards the fields from the conservation area, apparent from the rear of the church. To the west, east and north are the continuation of Ingatestone. The trainline to the south interferes little with the hustle and bustle of the conservation area. The urban setting of the asset is considerable to the value of the asset. Due to the urban sprawl surrounding the conservation area, and the distance, the setting of the conservation area does not extend into the draft Order Limits.
- 3.8.30 To the west of Ingatestone High Street (**CA35**) is Ingatestone Station Lane (**CA36**) conservation area, located approximately 980 m to the west of the draft Order Limits. The conservation area is a mix of residential properties to the north of the railway line and large farm and farm buildings to the south. At the western end of the conservation area is a lake. The asset is also of **medium value** due to it connection with the railway line and aesthetic values.

- 3.8.31 Its aesthetic and architectural value lies with its large, detached properties, on the northern side of the railway, set back from the roads by gardens. These mainly date from the 19th and 20th centuries with strong Victorian styles. Most of the houses were designed by George Sherrin in the Vernacular Domestic style, often featuring red brick, clay tiles, and false half-timbered gables. The exceptions are the Ginge Petre Almshouse (1207767, Grade II listed, scoped out of DBA) and railway station (1279577 Grade II listed) which are in the Tudor revival style (Fielder 2008). The lake at the western side of the conservation area is part of The Gate House which was owned by Sherrin and is a key feature within the asset. The train station (1279577) was constructed in 1842 by the Eastern Counties Railway. The introduction of the station meant that the once prosperous shopping area dwindled, as its customers preferred to use the train to travel to other shopping districts (ibid.). On the positive side the introduction of the railway lines introduces a new wave of families wanting a peaceful country style living within easy commute of London. These families brought their wealth with them.
- 3.8.32 As with the other conservation area in Ingatestone, this conservation area is located along a Roman road (ibid.). However, no archaeological evidence for a settlement has been found within the conservation area. It is also possible that this part of the town has Saxon archaeology, but none has been discovered yet. It has therefore limited archaeological potential and evidential value.
- 3.8.33 The setting of the northern part of the conservation area is a residential neighbourhood. Although the main roads through the conservation area and the train station can be congested with traffic, this does not detract from the pleasing nature of the area. The key internal and external views within this part of the conservation area are located primarily along its main routeways: The High Street, later becoming Roman Road, north-east to south-west and Station Road, north-west to south-east (ibid.). The High Street/Roman Road is a straight wide road with wide pavements on either side. This differs from the High Street within the Ingatestone High Street (CA35). Both views out of the conservation area include residential neighbourhoods. The view to the north-west has excellent views into Ingatestone High Street (CA35). Lining the main road are mature trees and hedging which provide definition to the road edges. These create a well-established character to the area even where there has been new development.
- 3.8.34 The southern part of the conservation area has a more rural feeling and overlooks, from Hall Lane/Station Road, an agricultural landscape to the south and south-east. The railway line within this part of the conservation area is a key feature. Even though the railway is a known noise pollutant in the area, especially with the increase in rail usage since its creation, the noise doesn't detract from the quite residential nature of the area. This part of the conservation area contains private green grassed areas and is lined with well-established vegetation. This gives a sense of enclosed space. The vegetation lining Hall Lane, trees and hedges, ends at the edge of the conservation area. This allows for a sense of space and expansive views of the open countryside (ibid.).
- 3.8.35 The setting of the asset, both urban and agricultural, is moderately integral to the value of the asset. Due to the urban sprawl surrounding the conservation area, and the distance, the setting of the conservation area does not extend into the draft Order Limits.
- 3.8.36 The **medium value** Hutton Village (CA17) is located partly within the draft Order Limits west of the central part of Section G. There is no conservation area appraisal for this asset, so the information was gleaned from internet resources, the HER

(7010 -MEX1032571) and from the setting survey. Hutton has evidential and historical value. It already existed prior to the Domesday Book as small village; it is not clear if there is settlement evidence from any earlier time periods as no archaeological investigation have taken place to encounter any historical remains. The HER records that Hutton has medieval and post medieval assets in the form of the village green, church ([Hutton | British History Online \(british-history.ac.uk\)](https://british-history.ac.uk/hutton)), manor house (Grade II\* listed, **1280481**), vicarage, ducking stool, pillory, congregational chapel, school and a workhouse. These all suggest that the village was sizable to be able to be allowed to undertake their own punishments for crimes and enough of a population to warrant a workhouse. The manor house (**1280481**) also suggests that the settlement had wealth, potentially from agricultural or animal husbandry considering that the village was located within a farming landscape. As the HER has recorded many of the features mentioned, it is not unreasonable to assume that more archaeological remains could be located within the green areas or fields within to just outside of the conservation area. Therefore, there is high evidential value associated with this asset.

- 3.8.37 The aesthetic value of the conservation area resides with its well preserved historically characterful properties and intact green spaces. Many of the building within the conservation area are listed: two Grade II\* listed properties: Church of All Saints (**1297263**) and Hutton Hall (**1280481**, which includes stables). Along with 12 Grade II listed buildings: no's 35 (**1187339**), 64 (**1187381**), 52 (**1197223**), 60 and 62 (**1197224**), 43 and 45 (**1297238**), 56 and 58 (**1298775**) Hutton Village, Hutton Lodge (**1297239**), and its summer house (**1187399**), walled garden (**1197196**), coach house and stables at Hutton Hall (**1270481**), the school (**1197225**), Hutton House (**1279616**) along with its coach house and stables (**1197242**). All these properties have medium to high aesthetic value due to their character, style and retention of historical fixtures, fittings, details, and fabric. Other properties within this conservation area also retain some historic character, those along the Rayleigh Road are large semi-detached properties, whilst those along Hutton Village are smaller cottage style properties (some semi, others detached). All these properties add to the quaint and pleasing nature of the settlement.
- 3.8.38 The conservation area is set within an agricultural landscape with the modern settlement of Hutton to the north-west. The change in character between the older and historically character Hutton Village and modern Hutton to the north can be jarring. Hutton Village is quiet, modern Hutton is busier and more crowded. This has resulted in a slight effect to the quite nature of the conservation area especially to the north-west and along the Rayleigh Road which is busy with traffic. The southern end of the conservation area is quiet and peaceful. There are some pleasing views over fields and a green space from the southern end of the conservation area from the Church of All Saints. There are also views with the south-east and eastern sides of the conservation area overlooking the draft Order Limits. The setting and views of the asset help to inform the significance of the conservation area and maintain its historical and characterful aesthetic values. Overall, the setting makes a considerable contribution to the value of the conservation area. The setting of the conservation area extends into the draft Order Limits due to its proximity.
- 3.8.39 Billericay High Street (**CA61**) conservation area lies approximately 1.6 km to the east of the central part of the Order Limit. This urban conservation area is of **medium value** and is located within the centre of the city on the southern side of the railway. The High Street is busy with shoppers and traffic. The wide range of shops attracts locals and visitors. The noise and hustle and bustle of the visitors does not detract from the value of the asset.

- 3.8.40 The conservation area has evidential, historical, and aesthetic value. It is believed that the settlement started in the Romano-British period but there is scant archaeological evidence for this within the asset. This is due to the affect of urbanisation and lack of opportunity to archaeologically investigate. There is evidence for Anglo-Saxon occupation within the surrounding area but not within the conservation area boundary (Beacon Planning Ltd, no date, CAA). Again, this is due to the lack of opportunity to investigate rather than the lack of evidence. Billericay is not mentioned in the Domesday Book of 1086 but soon developed in the medieval period. This was due to the importance of the road going through the settlement which led to the ferry at Tilbury. Most notably after the murder of Thomas Becket in 1172 when the road was used as a pilgrimage route. Pilgrims would have used the river crossing and many would have stayed in accommodation near to the crossing (Beacon Planning Ltd, no date). This prosperity continued in the later medieval period (most notably in the 16th and 17th centuries). In 1620 the Pilgrim Fathers met in Billericay, potentially in no's 57-61 High Street (also known as Chantry House, Grade II listed 1122269, scoped out of DBA), before they set sail on the Mayflower. It is interesting to note that the town of Billericay was founded in Massachusetts, presumably the Pilgrim Fathers wanted to keep the connection between the two settlements.
- 3.8.41 Religion seems to have played an important part in the history of Billericay. A plaque on the wall of no. 91 High Street notes that this was the meeting place of the Billericay Dissidents who were licenced to worship there on the 2nd of April 1672. These dissidents would meet in private homes or barns and would later be allowed to create their own chapels. Later brick making became an important industry in Billericay and many of the products were used to create some of the Georgian houses (ibid.). During this time Billericay became a coaching town and its prosperity grew once more. The construction of the Great Eastern Railway in 1884, along the northern edge for the conservation area, marked the demise of the need of stagecoaches and the prosperity it once had. It was not until the post-war period that a new housing boom was initiated. This was due to the overspill from London which saw the rise in towns away from the capital (ibid.). Presumably the new occupants wanted more of a town than city feel to raise their families etc. This led to new shops and offices within the conservation area. These were designed with a 'modern' style of glass, steel and stretch-bond brick and concrete material (Beacon Planning Ltd, no date). Despite the modernisation of the High Street the conservation area retains many historical buildings, some are timber framed, others retain their Georgian designs. This gives the area a multi-period, multi-style historical character, some of the post-war buildings do detract from this aesthetic (ibid.).
- 3.8.42 Overall, the post medieval town of Billericay expanded in the form of ribbon development along the existing medieval street structure (modern day High Street and Chapel Street). It was not until the 20th century that the town took its present form (ibid.). However, the present properties that line the busy streets retain their medieval Burges plots. These can be seen at the northern end of the High Street as thin, tightly packed properties with long thin plots radiating out from the road. The High Street is a wide road with parking and wide pavements, which the shops are set onto. At the southern end of the High Street, the road is wider and with larger properties. Some were, and are, residential in nature but most have been turned to commercial use. Despite to the width of the road, parking, and pavements, at both ends of the High Street, the road does not feel crowded. At the southern end of the High Street is a large public park, Queen Elizabeth II Fields. This is surrounded by residential properties and gives a sense of space and calm. Only the properties to

the north of the park are historically characterful, the others are modern and detract from the character of the area.

- 3.8.43 Chapel Street is residential in nature and this thin road has thin pavements. Parking here is strictly off road, often in front of properties. Towards the northern end of the street are historically characterful properties which are small and thin. They do not have the long Burges plots as seen on the neighbouring High Street. However, they do not have the Georgian Style suggesting that they could be older in date, possibly even post medieval in date. Towards the southern end of the road are modern flats which detract from the historic character of the area. At the southern end are characterful properties which are larger and include a Georgian villa style property and several red brick semi-detached houses. At the end of Chapel Street is a public park, Mill Meadows. This is enclosed by well-established vegetation but gives a sense of space and quiet.
- 3.8.44 The key internal and external views within and out of the conservation area are along the High Street and Chapel Street. Each view, to the north-east, south-west and south-east, looks out onto residential and green spaces to the south and commercial to the north. Internally the views stretch along the streets, even though they gently curve they offer and retain their historical vistas.
- 3.8.45 The conservation area is surrounded by urban sprawl and residential properties. This adds to the busy and enclosed feeling of the conservation area. The setting of the asset contributes moderately to the value. Due to the urban sprawl surrounding the conservation area the assets setting does not extend into the draft Order Limits.
- 3.8.46 The **medium value** conservation area of Little Burstead (**CA14**) is located approximately 830 m to the east of the draft Order Limits within the central area of Section G. It is located within a rural area between Billericay and Basildon. These two towns were formed due to the post war building boom. Little Burstead is a rare survival of a small settlement which has agricultural origins and still maintains its historical character and peaceful tranquillity within a high point (on an escarpment) within a largely agricultural and countryside setting.
- 3.8.47 The historic character and value of the conservation area lies with its good retention of original fixtures, fittings, the style of its properties and use of building material (Beacon Planning Ltd, n.d. CAA). Most of the properties within the conservation area are timber framed, have weather board cladding and are brick built. There are a mix of cottages, larger villa style properties, farmhouses, and agricultural buildings. Most of the buildings within the conservation area are residential or function in nature i.e., houses or agricultural buildings, there are few social properties save for the village hall and school (ibid.). Within the western end of the asset are the private, larger houses, whilst at the eastern end are the more farm related properties. Most of the buildings have architectural and aesthetic value due to their pleasing style and construction. These include large windows, symmetrical front facades, central doorways, use of architectural detailing including sash windows, fanlights, and weather boarding (ibid.).
- 3.8.48 The history of Little Burstead potentially began within the Romano-British period. Evidence for this lies with several artefacts including coins and Roman material found built into the church (ibid.), which is set far to the south of the conservation area in an isolated location. However, no firm archaeological remains of Roman settlement, or earlier activity, have been found within the village. The name of the settlement is derived from the Anglo-Saxon name 'Burghstede' meaning fortified place. This could indicate that there is an Anglo-Saxon element to the history of the village. Again, there is no firm archaeological evidence for this. Prior to the Norman Conquest, Little

Burstead belong to Earl of Godwin (father of King Harold). The Domesday Book records that in 1086 Little Burstead belonged to the Bishop of London. During the medieval period it is believed that the settlement was disbursed with a few dominant manors located nearby (ibid.). The 18th and 19th centuries were a time of prosperity in this part of Basildon, especially with the tanning and brick making industries. However, these industries do not appear to have been undertaken within the settlement or its immediate surroundings. The village seems to have continued with its agricultural activities (ibid.). This resulted in the villages expanding with new farms and cottages. This history of the conservation area adds to its historical and evidential value.

- 3.8.49 Little Burstead sits on a slight escarpment. This plateau allows for the built form to be located along the main route ways (Laindon Common Road, Broomhills Chase, Clock House Road and Rectory Road) in and out of the conservation area (ibid.). Laindon Common Road is flatter at the western end of the village. It undulates gently, rising slowly from Laindon Common. The village is strung out along narrow lanes and is encircled by Laindon Common to the north, a golf course to the west and small woods or coppices together with a patchwork of small irregular pasture and arable fields (ibid.). This green and varied topography softens the affect of the busy A176 which connects the village to Billericay. The routes through the village are narrow and hedged but accommodate an increasing level of commuter traffic (ibid.). The River Crouch rises in The Wilderness, to the north-east of Stockwell Hall, and runs as a culverted stream under the road at the north-eastern boundary of the conservation area. At the southern end of the conservation area open fields to the south provide a view of the spire of the village's Church (**1170867**, Grade II\*, (ibid.) which is located c. 440 m to the south.
- 3.8.50 The conservation area's wider and external setting comprises agricultural land to the west, south and east, with a wooded area separating the farmland from the village to the east. To the north is a large golf course. Further to the east is the busy Noak Hill Road. However, neither the traffic nor the traffic noise impacts the quiet and rural tranquillity of the asset. Although the farmland and the golf course give a sense of space to the conservation area, the woodland to the east, the vegetation that surround the edge of the golf course to the north and some of the well-established tall hedges to the south and east that mark the farmland all act to enclose the settlement. Although there are few views out of the village, mainly due to trees and topography, the conservation area does overlook an area to the south-west towards and into the draft Order Limits. The setting of the asset is vital to the significance of the conservation area. With out the agriculture environment and peaceful nature the historical and aesthetic value would be reduced. Overall, the setting makes a considerable contribution to the value of the conservation area. The setting of the conservation area extends to the draft Order Limits.
- 3.8.51 The **medium value** Herongate conservation area (**CA16**) is located approximately 1.4 km to the west of the draft Order Limits towards the southern end of Section G. The conservation area mainly comprises of residential properties along three roads, Cricketers Lane, Brentwood Lane, and Billericay Road. It is a dispersed settlement typical for this part of Essex.
- 3.8.52 The conservations area has evidential, historical, and aesthetic values due to its location on the edge of Ingrave Common, its tightly knit groups of older characterful buildings, its amenities (including the public houses (the Green Man Inn, **12697266**, and the Boars Head **1205423**, both are Grade II listed and scoped out of DBA) along with its pond (Andrews and Brown 2009, CAA). The conservation area is a considered and characterful traditional village. The settlement is thought to have

begun in the medieval period (ibid.). The village took its name from Heron Hall, a Grade II listed building (**1197182**) located to the east of the conservation area but not located within the asset. The properties within the conservation area date between the 15th to 20th centuries. They are typically of the local vernacular and Georgian style (ibid.). The older building tends to be timber framed with plaster or weather board cladding, often painted white. The Georgian influences can be seen in the symmetry of the houses, the size and use of small glazing in the sash windows and use of red brick. The use of door cases is also an important contribution to the character of the conservation area. The roof of the properties tends to be steeply pitched and either covered in hand-made clay peg tiles, slates, or thatch. The use of low brick walls, picket fencing and hedges along properties boundaries, most prominently seen on the street side, are also a key component of the area (ibid.).

- 3.8.53 The conservation area encroaches along the margins of Ingrave Common. Due to this a linear character was created along the Common (ibid.). The asset has effectively a 'necklace' of green spaces formed by intersecting lanes and footpaths and bounded to the west by the Brentwood Road (ibid.). Buildings are arranged neatly down these spaces in Cricketers Lane, more irregularly to the south around the Heron Chase footpath and Button Common. There are secluded spaces east of the Brentwood Road, characterised by open grassed areas and trees, becoming more tightly enclosed to the south around Heron Chase (ibid.). Internal views are consistently good long along the main route ways within the conservation area (ibid.). Parking has an adverse effects on parts of the asset especially within the southern part of Cricketers Lane where there are rows of cars along the edge of the triangular green space (ibid.). This is mainly due to the lack of off-road parking here and occupants of the public house.
- 3.8.54 The wider setting forms an important part of the conservation area. To the north-east, east and south-east is wide open agricultural landscapes with a more wooded area to the south-east. To the north is the continuation of Herongate into Ingrave. To the west is the registered park and garden (**1000314**) and conservation area (**CA18**) of Thornden Hall. These and the countryside to the south and east gives a sense of quiet and open feeling to the conservation area. Without this space and peaceful nature, the value aesthetics of the asset would be reduced. Overall, the setting makes a considerable contribution to the value of the conservation area. Due to the distance the assets setting does not extend into the draft Order Limits.
- 3.8.55 To the west of Herongate conservation area is Thorndon Park conservation area (**CA18**) and Grade II\* listed Thorndon Hall registered park and garden (**1000314**). The asset is located approximately 750 m to the west of draft Order Limits at the southern end of Section G. This conservation area is of **high value** due to its group value with the registered park and garden. The conservation area and registered park and garden also contains two scheduled monuments (**1021225** and **1021226**) and a Grade II\* listed building (**1293260**). These all add to the value and significance of the conservation area.
- 3.8.56 Thorndon Hall is the site of an 18th century park and woodland which was a creation of Lord Petre and later altered by Lancelot (Capability) Brown (Historic England, no date, [THORNDON HALL, Herongate and Ingrave - 1000314 | Historic England](#)). Today it is a country park and golf course. The combined asset has historical and aesthetic values which lie with its creation in c.1412 when a brick lodge was built and an area of 300 acres was enclosed to create a parkland. In 1576 John Petre, later Lord Petre, rebuilt the house and remodelled the grounds. His descendant, the eighth Lord Petre, was a great plants man and garden designer, specialising in imports from

America. He too remodelled the house and the grounds by 1733. In 1766 and 1772 Capability Brown was commissioned to landscape the grounds into a more modern taste by the 9th Lord Petre, Robert Edward (Historic England, no date). Today the park covers an area of c.461 ha and the conservation area, c.488 ha, which incorporates the two scheduled monuments at the southern end of the registered park and garden (Historic England, no date). The park and conservation area contain many aesthetically pleasing assets including listed buildings (all but one of which have been scoped out of the DBA), a woodland known as The Forest, a walled garden, a golf course, a lake, and several grassland fields. These all add to charm and peaceful nature of the asset.

- 3.8.57 The conservation area and the registered park and garden wider setting is within a largely agricultural landscape with the village of Herongate and Ingrave to the north-east. To the north-west is a large, wooded area. To the south is the A127 which disrupt the quiet peaceful nature of the area. Towards the southern area of the asset are some views over the sweeping countryside that adds to the aesthetic value of the assets. This is disrupted, however, from the traffic noise of the A127. The setting of the assets helps to inform the value of the asset. Without the conservation area setting its value would be diminished. Overall, the setting makes a considerable contribution to the value of the conservation area, but due to distance and the development, infrastructure and mature copses and tree lined hedgerows of the intervening landscape, the setting does not extend to the draft Order Limits.

## Baseline Introduction

- 3.8.58 The following historic environment baseline for Section G of the Project is presented by chronological archaeological period and from north to south. Section G is further broken down into geographic subsections to allow the reader to orientate and to locate where on the appropriate figure a particular heritage asset is illustrated. These geographic subsections are largely defined by current settlements.

## Prehistoric Period

- 3.8.59 The prehistoric is underrepresented for Section G in the archaeological record and the HER. This is likely due to lack of investigation and recording of heritage assets from the period rather than reflective of an absence across Section G. In fact, it is likely that Section G hold similar archaeological remains for this period as in other sections in Essex.

## Mesolithic

- 3.8.60 A flaked flint axe/adze (**7038**) was recovered from the garden of 'Hilcrest'. Stock Road, Ingatestone approximately 105 m to the west of an arm of the draft Order Limits. The HER does not that the exact location of the asset is not known. This asset is of **low value** as it is an isolated find spot and have evidential value as it indicated that there is a Mesolithic presence, even though it is a small presence, within this part of Brentwood.
- 3.8.61 References are made to chance finds of a Mesolithic tranchet hand axe and an early Neolithic hand axe found close to Norsey Wood scheduled monument (**1019485**) and are included within the official list entry. Nosey Wood is located approximately 1.2 km to the east of the draft Order Limits within Billericay. These assets are of **medium value** as they are an indication that Norsey Wood has a potential early occupation or

activity site which is has not been fully investigated yet. Due to this they have evidential value.

- 3.8.62 Whilst no sites or features are known for these early prehistoric periods in Section G, such portable finds are at least evidence of movement through the landscape and may highlight potential for settlement nearby. Their presence does also indicate that occupation etc. could have occurred within the monument or close by from other prehistoric time periods.

## Bronze Age

### *Designated Assets*

- 3.8.63 The 'multi-period site at Norsey Wood' (**1019485**), is scheduled and located approximately 2.2 km to the east of the draft Order Limits within Billericay. As this asset comprises multiple period features, which Historic England has stated are all national importance, they have been discussed within their relevant time periods. This monument is of **high value** and has evidential value. The first time where archaeological remains are noted is from the Bronze Age.
- 3.8.64 The Bronze Age remains include a bowl barrow located within the southern part of the monument. Despite the mound being substantially intact it has been disturbed by antiquarian excavations. These excavations revealed that, potentially, later burials were located within the burial mound or close by. Within the centre of the barrow three middle Bronze Age urns were recovered. A second bowl barrow, now non-extant and outside of the scheduled area, was located nearby. This barrow was also excavated, and seven central urns were recovered. Only one contained created remains. The presence of this barrow indicates a possible cemetery and that there could be more barrows located close by and further additional later burials as the monument saw reuse.
- 3.8.65 Norsey Wood (**1019485**) is located on the eastern edge of Billericay. Immediately to the south-west is a wooded area, to the south is a railway line, to the south-east and further to the south is a residential neighbourhood. To the east is open countryside and agricultural fields. The setting of the asset is therefore a mix of residential and rural. The eastern side gives a sense of space and calm whilst the rest gives a sense of enclosure and noise. This noise does disrupt the setting of the asset. The setting, particularly the residential part and railway, detract from the significance and value of the asset. Overall, the setting makes a minor contribution to the value of the asset. Due to the urban sprawl of Billericay the setting of this asset does not extent into the draft Order Limits.

## Iron Age

- 3.8.66 Activity at Norsey Wood (**1019485**), scheduled monument, continued into the middle Iron Age. Pottery dating to this time was found within the northern part of the monument. The late Iron Age is also represented with an extensive cremation cemetery, which was discovered by the Victorians. The cemetery is classed as an 'unenclosed Iron Age urnfield'. Fifteen urns were recovered, all were wheel thrown and arranged either singularly or within small groups. One burial was not contained within a ceramic vessel. More burials were found during gravel extraction at both ends of the wood. Iron Age monuments are rare in Britain and urnfields are considered important sources of information of social structures, beliefs, and economy as it is believed that families were grouped together or those of a similar

status were buried near one another. Even the types of urns used can inform trade and local wares. Therefore, this asset has high evidential value and is of **high value**.

3.8.67 The asset's setting is discussed above at para 3.8.52.

## Roman Period

3.8.68 The Roman is underrepresented for Section G, although the assets that have been identified do suggest that there is settlement and other activity within this area. This is likely due to lack of investigation and recording of heritage assets from the period rather than reflective of an absence across Section G. Further investigation, partially where the Roman road (**7032**), which cuts across the draft Order Limits, could reveal more previously unrecorded archaeological remains from this time.

### *Designated Assets*

3.8.69 The scheduled monument 'Roman villa 100 m north west of Handley Barns' (**1008895**) lies approximately 985 m to the west of the draft Order Limits within the northern end of Section G. These **high value** archaeological remains have evidential and historical value. The villa is located on a south facing slope with a spring to the east. The villa comprised at least two (or more) important buildings. One lies along the western edge of Well Wood and the other c.80 m to the south. They both measure c.30 m. find scatters around both buildings, and further fields, reveal that these were high status buildings and had heating (fragments of box flues used for circulating hot air), red tesserae (from a pavement in the second building) other artefacts include roof and floor tiles, brick wasters (indicating that bricks could have been made on site), pottery shards (including Samian ware and amphora fragments) and coins (dating to Hadrian AD117-138). Surrounding the villa complex was a Roman farm and agricultural landscape, some of which have been incorporated into the scheduled area.

3.8.70 The setting of the villa today is of a quiet, rural, agricultural landscape. The villa would have overlooked an area to the south, this is like today except the views are screened by well-established hedges and tree lines that define the fields. To the east and west are dense patches of woodland that aid in enclosing the asset from each side. To the north are more agricultural fields. The setting of the asset makes a minor contribution to the significance and value of the asset. The setting of this asset does not extend into the draft Order Limits due to distance and intervening well-established vegetation.

3.8.71 Activity at Norsey Wood (**1019485**), scheduled monument, continued into the Roman period. The urnfield cemetery contained Roman burials which shows that activity within this area continued into this period. Several cremations found during gravel extraction at either end of the wood was found with flanged tiles. One more elaborate cremation was found within the scheduled area. This Roman burial was found within a large pit paved with stone and flanged tiles and contained a large amount of broken pottery. Cinders, ash and burnt wood were also present suggesting that cremation happened in situ, or the pyre remains were all deposited into the burial. Billericay is thought to be the location of a Romano-British settlement and Nosey Woods was used for burials. Archaeological evidence in the form of traces of industrial activity (a small smelting furnace), a small pottery kiln (with pots still in situ) were noted in the eastern quarry area. Whilst there is no direct evidence for substantial buildings, the common occurrence of Roman tile suggests this potential. This could indicate that the occupation could be related to ceremonial practices associated with the dead. As

with the other phases of activity on this site they have evidential value and are of **high value**.

- 3.8.72 The asset's setting is discussed above at paragraph 3.8.52.

#### *Non-Designated Heritage Assets*

- 3.8.73 Crossing the draft Order Limits at the northern end of Section G is a Roman road (**7032**). This road goes from Chelmsford (*Caesaromagus*) to London (*Londinium*) in a south-westerly direction through Ingatestone and Brentwood. Several archaeological interventions have been undertaken along the known route, but none have revealed any Roman archaeological remains associated with the road. Roman roads are an important archaeological asset. They often have earlier origins and can show the important routes utilised by the prehistoric and Roman occupants of Britain. The asset can further the historical environment knowledge on how these roads were created, used, and maintained. As this asset is part of a large network of roads though out Britain it is nationally importance, and therefore is of **medium value**, and has evidential value.
- 3.8.74 Located within the outskirts of Mountnessing, and approximately 140 m west of the draft Order Limits, was a finds scatter of Roman material (**7037**). These were recovered within the northern part of the field during a field walking event in 1974. 'Much' Roman tile and brock along with flue tiles were found towards the western end of the area walked. No pottery was recovered. The HER hypothesis that due to the lack of pottery, that these finds could have been a materials store for the construction of the Grade I Church of St Giles (**1208238**) located to the north-west of the find spot. The church contains some Roman material so it not unreasonable to assume that this could be residual material from the creation of the church. These assets are of **negligible value** as they are more than likely redeposited. They have limited evidential value as they show how building materials were re-used in later periods.
- 3.8.75 Located within Bluntswall Wood were earthworks of potential Roman date (**7021**). The now ploughed out site is located approximately 275 m to the east of the draft Order Limits within the middle of Section G, to the west of Billericay. They cannot be seen on aerial photograph nor Lidar data. The HER reports that the features were potentially a ditch and rampart which enclosed an area of c.40 acres. Within this area were several mounds, now also levelled. It is possible that these features are part of a Roman station as one was reported to be within this area, but its exact location is unknown. The present owner of the land reported that the features were like '...spokes of a wheel'. Located within the wooded area of this asset were several Roman coins and broken urns (**7036**). One of the coins was a 'brass' from the reign of Commodus (AD 177 to 192). These finds add weight to the idea that there was indeed Roman activity here, or nearby. These assets are currently of **low value**, but should the site be shown to represent Roman military activity, it could be on **medium value**. It does have the potential to contain historic and evidential value.

## Early Medieval

- 3.8.76 No early medieval records have been recorded within the draft Order Limits or study area for Section G of the Project. There are, however, numerous settlements recorded in the Domesday Book within Section G indicating a strong Anglo-Saxon presence in the area prior to the Norman Conquest.

## Medieval

- 3.8.77 The medieval period is represented mainly by settlements (and assets connected with them), most of which have continued into the modern period. This includes extant designated heritage assets including listed buildings and scheduled monuments, archaeological remains (some of them are scheduled due to their high value and archaeological importance), find spots and documentary evidence. Some of the conservation areas began within this time. The medieval period is rich in assets which show that this area of Essex was thriving during this time. The setting of most of the built assets have retained their historical setting, if only slightly altered which makes a considerable contribution to the value of the assets.

### Mill Green

- 3.8.78 'Potter Row Farmhouse' (**1207701**) and 'Richards Cottage' (**1297198**) are two Grade II medieval listed buildings located west of Mill Green Road, c. 1.4 km west of the draft Order Limits. The assets are located 135 m from each other. They have **medium value** based on their historical and aesthetic value. These two structures constitute significant historical assets. Potter Row Farmhouse, tentatively dating to c. 1400, however it is not clear which parts of the house date from this time. The house was once owned by the Petre family, who were a high-status family associated with Thorndon Hall (**1297212**) and Ingatestone Hall (**1187315**), both Grade I listed. A survey dated to 1556 records the house in detail. These details, and a later map from 1601 show that the house has been little altered since the 16th century. Key features of the building include: a pristine timber-framed structure with a weatherboarded and plastered façade. The roof is clad in hand made red clay tiles.
- 3.8.79 Richards Cottage, is a 15th-century building later expanded in the 20th century, represents a noteworthy example of evolving architectural styles. This property was also part of the Petre family estate and was recorded on detail and appears on the 1601 map. The documents show that the main body of the house has been retained despite the later extension and alterations in the 1970s when the structure was stripped to the frame and altered. Original features include: its timber frame, chimney stack and retention of its red handmade clay tiles.
- 3.8.80 Potter Row Farmhouse and Richards Cottage both enjoy rural settings. These assets are located along a tranquil muddy track enveloped by a canopy of mature trees, creating a secluded and peaceful ambiance. The properties are discreetly positioned, featuring large front gardens shielded by tall hedges. However, the setting, primarily closed off by dense vegetation, offers limited views, with the occasional glimpse to the north of the buildings. The presence of woodlands further adds to the secluded atmosphere, substantially contributing to the value of these assets. Nevertheless, due to the pervasive woodlands, their settings do not extend to the draft Order Limits. The assets setting would have originally been like the one they experience today. Due to this their setting contribute moderately to their value.
- 3.8.81 'Harding's Farmhouse' (**1297191**) is a Grade II listed building located east of Mill Green, c.1.3 km west of the draft Order Limits. As above this asset formed part of the Petre family estate. Documents show that the property was single story with a tiled roof and had a separate kitchen which was thatched. The property sat within 72 acres which is large for this area. And 1601 map shows that the house was timber framed, had attics, a door to the right end of the building, one window, a chimney to the left and a parlour within a solar. There is a possibility that some of this building was re-built in the 17th century, potentially when the building became two stores. It was subsequently renovated in 1969. Overall, the farmhouse has **medium value** based

on its historical and aesthetic value. These are based on its early construction date and good retention of 16th and 17th century features.

- 3.8.1 The assets historical setting would have been one of a quiet, rural agricultural landscape. The building may have been surrounded by farm related buildings or small outbuildings. An 1840's-1880's OS map shows that at this time a large farm complex was located to the north-west. Today the wider agricultural landscape has been retained but the immediate setting of the asset has changed. Gone are the outbuilding or farm buildings. these have been replaced by a modern housing estate. These are large and dwarf the listed building. To the south and south-west are large ponds, only one (eastern) of which appears on the 1840's-1880's OS map. This has also subsequently been enlarged. As the setting of the asset has changed it makes a minor contribution of the value of the listed building. Due to the overall distance and the mature copses and tree lined hedgerows of the intervening landscape, the setting does not extend to the draft Order Limits.

### Fryerning

- 3.8.2 Both 'Little Hyde Farmhouse' (**1197304**) and 'Little Hyde Farm Cottages' (**1207659**) are Grade II listed structures with **medium value** attributed to their historical and aesthetic value. They are both located south of Little Hyde Lane, c. 75 m south-west of the draft Order Limits and c.270 m from the A12.
- 3.8.3 Little Hyde Farmhouse dates to the medieval period and extended in the 18th, 19th, and 20th centuries. It is timber framed with red and black brickworks in a Flemish bond. Little Hyde Farm Cottages, was originally a hall, now converted into two cottages. It dates from the 15th century and extends in the 16th, 19th, and 20th century. It is timber framed with rough cast render (now painted a light colour) and the roof is clad in handmade red clay tiles. Early features include 16th century chimneys. Although much altered both properties retain their historical character.
- 3.8.4 Both the Farmhouse and Cottages are situated along a tranquil rural lane, with a farm complex opposite and neighbouring properties nearby. Positioned atop elevated ground, they are enveloped by open rural fields and agricultural land, with mature woodlands in the distance providing scenic views. However, the serenity of the setting is compromised by noise emanating from the nearby A12 road. Despite the picturesque surroundings, the setting makes only a minor contribution to the value of these assets. Additionally, the setting extends to the draft Order Limits.
- 3.8.5 'The Grange' (**1197279**) is a Grade II listed building located north-east of Fryerning, c. 940 m west of the draft Order Limits. The farmhouse holds a **medium value** primarily due to its historical and architectural value. With origins dating to at least the 16th century (or earlier) and subsequent modifications and extensions in the 18th to 20th centuries, the property showcases a well-preserved character. The property is timber framed and plastered with a red and blue brick façade in a Flemish bond. The roof is clad in handmade red clay tiles. The front range probably incorporates the timber structure of a 16th century or earlier house. A large 18th to 20th century extension is located to the rear and side of the property.
- 3.8.6 The setting of this asset is informed by its roadside location. Indeed, the property is situated at the edge of the road with a short driveway flanked by shrub hedges and mature trees. It is a brick structure with some white-washed sides, and there are tall hedges and mature trees in the vicinity. The location is peaceful and part of a linear dispersion of buildings along the road, surrounded by other characterful properties. Additionally, there is a presence of a red brick wall and a large outbuilding. Overall, the setting makes considerable contribution to the asset's value. However, due to the

surrounding woodlands, the property's setting does not extend to the draft Order Limits.

### Fryerning Conservation Area

- 3.8.7 Within the Fryerning conservation area (**CA15**) are six medieval listed buildings: The Grade I 'Church of St Mary the Virgin' (**1197282**), The Grade II\* 'Fryerning Hall' (**1052243**), and six Grade II 'Spilfeathers' (**1197278**), 'Adkins' (**1297222**), 'Murcocks' (**1297223**), Dovecote/Granary 10 Metres North-West of Fryerning Hall' (**1297227**), Cart Lodge and Stable Range 16 Metres North-East of Fryerning Hall' (**1187241**) and 'Barn 50 metres north of Fryerning Hall' (**1197283**). The cart lodge and stables date to the post medieval period but as they have group value and share the setting with the Fryerning Hall they are discussed in this section.
- 3.8.8 The Grade I 'Church of St Mary the Virgin' (**1197282**) is located within the southern part of the conservation area, c. 1.8 km west of the draft Order Limits. This church holds **high value** due to its evidential, historical, communal, and aesthetic value. It comprises a chancel and nave from the late 11th century, an early 16th-century west tower, and later additions and restorations. The chancel and nave are constructed with exposed coursed lumps of indurated gravel conglomerate, while the west tower is made of red brick in English bond. Notable features include a 19th-century vestry, a 19th-century south porch, and a 20th-century font of Caen stone.
- 3.8.9 The setting of the is informed by its location, being situated on the edge of a rural village on elevated ground, offering views over open fields. Its setting is characterised by its association with other listed buildings within the historic settlement of Fryerning, most of which are depicted on the first edition OS map of 1881. While the northern part of the village has seen residential development, the church remains in a peaceful, semi-open setting due to the presence of mature trees and vegetation. Although the nearby A12 introduces some traffic noise, the overall setting makes a considerable contribution to the church's value. Owing to the surrounding vegetation, the presence of the A12, and the proximity of the settlement of Ingatestone, the Project remains out of view from the church, and therefore, the church's setting does not extend to the draft Order Limits.
- 3.8.10 The Grade II\* 'Fryerning Hall' (**1052243**) is located c.100 m north of the Church of St Mary the Virgin' (**1197282**) and c. 1.8 km west of the draft Order Limits. Building forms part of a farm historic farm complex with the 'Dovecote/Granary 10 Metres North-West of Fryerning Hall' (**1297227**), the 'Cart Lodge and Stable Range 16 Metres North-East of Fryerning Hall' (**1187241**) and Barn 50 Metres North of Fryerning Hall' (**1197283**), all Grade II Listed, which has been converted and modernised.
- 3.8.11 The Hall holds **high value** due to its evidential, historical, and aesthetic value. Its intricate structure reveals its origins in the early 15th century, with later extensions in the 16th, 17th, and 18th centuries. The exterior features a mix of plaster, weatherboarding, and handmade red clay tiles. The house has a rich history and retains elements from various periods, with minimal alterations since the early 19th century. The three remained listed building within the farm complex, the dovecote/granary, the cart lodge and stables and the barn are all **medium value** due to their historic and aesthetic value. The dovecote/granary, believed to originate in the 16th century and later converted, offers insight into agricultural practices, characterized by its timber-framed structure and internal remnants of pigeon nesting boxes. The cart lodge and stable date to the early 17th century, altered in the 19th century. It is timbre framed, with a loft, and built out of red brick in a Flemish bond (now painted white) with handmade clay roof tiles. The cart lodge has two pairs of

vehicular doors and one plain boarded door. The stable has one pair of vehicular doors and one-half door. Despite the alterations to this building, it retains many of its original features. The barn, with origins dating back to the late 13th century and subsequent extensions, exemplifies traditional barn architecture, with timber framing and additions spanning different periods. Together, these four buildings provide a layered historical narrative of architectural evolution and cultural significance within the heritage context of the area.

- 3.8.12 The setting of Fryerning Hall is significantly influenced by its location in a farm complex with three other, later listed buildings, which create a cohesive heritage group. The four assets are all present and unchanged since they were first depicted on the 1881 OS map. The farm complex informs the setting of the three Grade II listed buildings. The barn has agricultural field to its north and west which gives it a sense of space. The Hall is situated within a private drive area, enclosed by distinctive red walls, and characterized by characterful properties. Views from the property extend south-east, offering glimpses of the lower ground on the opposite side of the road and open fields that slope downhill. The other properties are not visible from the entrance of the drive, maintaining a sense of seclusion and historical context in this unique heritage setting. Overall, the setting of the listed buildings at Fryerning Hall makes considerable contribution to their value but due to vegetation and later development such as the A12 or the settlement of Ingatstone, the setting does not extend to the draft Order Limits.
- 3.8.13 ‘Spilfeathers’ (**1197278**), ‘Adkins’ (**1297222**) and ‘Murcocks’ (**1297223**) are all located between c. 1 km and c. 1.8 km west of the draft Order Limits. They are of **medium value** based on their historical and aesthetic value. Spilfeathers dates to the late medieval period and has been much altered in the 20th century. It is timber framed, has plastered walls (painted a light cream colour), and has machined made roof tiles. The front elevation retains a 16th century, or earlier, jetty which is now under built.
- 3.8.14 Murcocks represents a blend of medieval and 19th and 20th century construction. It is timber framed, partly clad in red brick with and Flemish bond the rest is plastered. The roof is clad in handmade red clay tiles. The chimney is late 16th century, there is also a 17th century extension. Despite its later alterations the building retains its historic character and appearance.
- 3.8.15 Adkins dates to the late 14th century with additions from the 16th, 17th, and 20th centuries. It is timber framed, plastered (and now painted a light colour) and has a roof clad in handmade red clay tiles. The building was originally an open hall, but this was extensively altered or rebuilt in the late 17th century with alterations in the 20th century. Despite the alterations the house retains its historical character and is well maintained.
- 3.8.16 The setting assessment of these three listed buildings reveal the distinctive context in which each resides. Spilfeathers is enclosed within a mix of walls and hedges, nestled amidst a road and other period properties, providing a semi-rural village feel with a possible view from the rear. Murcocks stands back from the road by a garden and is located on the southern side of Back Lane. The front elevation overlooks an open green space at the junction of Back Lane and Mill Green Road. This and the garden give a sense of space along with the semi-rural feeling provided by the agricultural fields and village location. There could be views to the rear. Adkins enjoys a quiet rural lane, surrounded by manicured hedges and trees, with an open view to the east and southeast. Overall, the setting of these assets makes minor contributions to their value, but due to topography, vegetation, and modern

developments such as the A12, the setting of these assets does not extend to the draft Order Limits.

## Ingatestone

- 3.8.17 'Ingatestone Over the River Wid (That Part in Brentwood District)' (**1207790**) is a Grade II listed bridge located approximately 15 m west of the draft Order Limits. It dates to c. 1600 with 19th and 20th century alterations. It was constructed out of red brick and is approximately 130 m long. It has two central arches and one triangular cut water in between on each side. The asset's setting includes the water way beneath (aligned nearly north to south) and the road (aligned north-west to south-east) over the top. Surrounding the asset are agricultural fields and a farm complex to the south. The area is quiet and rural in nature, and the road is not busy. The asset's setting makes a considerable contribution to its setting. The bridge is of **medium value** and has historical and aesthetic values.
- 3.8.18 'Church of St Edmund and St Mary' (**1297196**) is Grade I listed and located in the Ingatestone High Street conservation area (**CA36**), along High Street and Star Lane and it is positioned c. 905 m west of the draft Order Limits. This church holds high evidential, historical, communal, and aesthetic value and is therefore of **high value**. Its historical significance stretches back to the late 11th century, with subsequent architectural evolutions in the 15th, 16th, and 17th centuries, enriched with later extensions in the 18th and 19th centuries. Its architectural features, such as the diverse brickwork, arches, and decorative elements, showcase a blend of historical periods, which adds to its value. The fittings, monuments, and inscriptions within the church further contribute to its historical value and, by extension, its overall value. The assets setting one of a busy rural village.
- 3.8.19 The setting of the Church of St. Edmund and St. Mary is significantly influenced by its location within the conservation area (**CA36**) and the fossilised medieval street plan of Ingatestone village. The immediate surroundings consist of the churchyard, providing a traditional ecclesiastical environment. To the north and east, there's a roadside setting along with the bustling high street to the north-west, which reflects the village's commercial aspect. Residential areas flank the church to the north-east and south-east, emphasizing its central role in the local community. Additionally, to the south-west, the presence of parkland introduces a sense of spaciousness and tranquillity, offering a pleasant contrast to the busy roads, shops, and houses. This combination of elements makes its setting a moderate contribution to the overall value of the church. Due to the residential development of Ingatestone and the development, infrastructure and the mature tree lined hedgerows of the intervening landscape, the setting of the asset does not extend to the draft Order Limits.

## Billericay

### *Designated Assets*

- 3.8.20 Nosey Wood (**1019485**) scheduled monument is located approximately 1.2 km to the east of the draft Order Limits within Billericay, also contains a medieval deer park and other wood banks. Nosey Wood during this time belonged to the Patre family. Wood banks were designed to prevent animals (stock and wild) from entering and damaging woodland. The banks were also used to keep animals from grazing on coppiced vegetation. The deer park and wood banks are valuable archaeological remains and evidence of how the woodland was managed during this time. This led to highly valued biodiversity which continues to this day. These features are a rare survival and are of **high value** and have evidential value as they can aid in furthering the knowledge of how the land was used and maintained. It is possible that Nosey

Woods could date back as far as the 13th century as the earliest record of the asset is 'Nosseheye' which included the Anglo-Saxon work 'haeg' or 'hey' which implies an enclosure. The Domesday book records that the wood was attached to the manor of Great Burstead which after the Norman Conquest was acquired by Bishop Odo, William the Conqueror's half-brother. It was later given to the Crown and in 1200 it was given to the Abbey of Stafrod Langthorne.

- 3.8.21 The asset's setting is discussed above at para 3.8.52.
- 3.8.22 The 'Church Of St Mary Magdalene' (**1170075**) is a Grade II\* located in the Billericay conservation area (**CA61**), c. 1.8 km east of the draft Order Limits. The Church of St Mary Magdalene, a place of worship, commands **high value** attributed to its evident historical, evidential, communal, and aesthetic value. The church boasts origins rooted in the 15th-century tower, an architectural gem of its era. Subsequent expansions and renovations, such as the 18th-century chapel rebuilding and 19th-century extensions, have layered its history. What makes this church particularly unique is the fusion of a late medieval tower with the stately Georgian body, resulting in an intriguing blend of Gothic and Classical elements, which holds substantial townscape value.
- 3.8.23 The setting of the church is significantly influenced by its position within a bustling residential town and a designated conservation area. The immediate environment is defined by the fossilised medieval High Street and by the asset's relationship with the numerous listed buildings that flank the thoroughfare. The setting is further informed by the asset's relationships with the characterful non-designated buildings that contribute to the nature of the conservation area. The High Street is a busy thoroughfare, and there can be congestion, however, overall, the setting of the asset makes a considerable contribution to its value. Due to its heavily urbanised location, the setting of the church does not extend to the draft Order Limits.
- 3.8.24 'Wardroppers Farmhouse' (**1293259**) is a Grade II listed building located north-west of Billericay, c. 15 m east to the draft Order Limits. This asset has a **medium value** based on its historical and aesthetic value. The farmhouse is a historical structure that dates to the early 16th century, with renovations and extensions carried out in the 20th century. It boasts a timber-framed construction with a plastered exterior and a roof covered in handmade and machine-made red clay tiles. The house consists of a main range featuring three bays and a continuous jetty at the front. A stair-tower with a lean-to roof is situated at the rear of the central bay. 'Wardroppers Farmhouse' is positioned adjacent to a rural road, with the property encompassed by expansive agricultural fields. The setting is primarily influenced by the surrounding agricultural landscape, reflecting its historical context and functional integration with the environment. Overall, the setting of the farmhouse makes considerable contribution to its value and due to an open view to the west. Due its location its setting extends into to the draft Order Limits.

#### *Non-Designated Heritage Assets*

- 3.8.25 Located partially within the draft Order Limits towards the northern end of Section G, 9600 m to the west of the outskirts of Billericay are the cropmarks of field boundaries (**7006**). The boundaries are apparent on the first edition OS map are likely of medieval or post medieval period date. They were likely ploughed out to accommodate the development of modern agricultural machinery which allowed for larger fields to be cropped. These assets are of **negligible value** as they show how the land was used by the local population. They have limited historical and evidential value because of this.

## Padham's Green

- 3.8.26 Begrums (**1293250**) is a Grade II listed building, located along Church Road, west of Padham's Green and c. 1.5 km west of the draft Order Limits. It is a historically and aesthetically valuable house, predominantly dating back to the 15th century with some early 17th, 18th, and 19th-century alterations. The building exhibits a classic timber-framed structure with plastered and weatherboarded exteriors, crowned with handmade red clay tiles. The overall external architectural integrity, along with these historic features, contributes to its **medium value**. Begrums is situated at the intersection of two moderately busy roads and is set back within a farm complex. Surrounded by expansive agricultural fields, the property remains visible from the road. To the west, a railway line further characterises its setting. This setting is predominantly influenced by its connection to the medieval and post-medieval historic settlement of Mountnessing (**7011**) in which it is located, and the surrounding historical agricultural landscape. Overall, the setting moderately contributes to the asset's value. However, due to factors such as distance and topography, the setting does not extend to the draft Order Limits.

## Mountnessing

### *Non-Designated Heritage Assets*

- 3.8.27 Located within a western arm of the draft Order Limits and beyond the 500 m study area are the remains of medieval Mountnessing (**7011**, **7023**, **7020** and **7022**). The dispersed village appears on two maps, one dated to 1775 and one to 1777. A later map of 1881 shows that, although most of Mountnessing is still dispersed, new properties have been grouped along the Roman road (**7032**), modern day B1002. Some of the buildings located on the earlier maps are still extant, these include the Grade I listed Church of St Giles (**1208238**), the late 16th century Mountnessing Hall (Grade II listed **1197325**), manorial holdings at Bacons Farn, Arnolds Farm and Thoby Priory. Surrounding Mountnessing Hall are the potential remains of a deserted medieval village (**7020**). However, not much is known about the village, but more is known about the Hall. The HER conjectures that surrounding the Hall was once a moat. The Domesday Book of 1865 records one and that the property at this time was owned by the Mounteney Family. A map from 1622 by Andrew Pease depicts a series of buildings at the site, probably connected to the Hall and not the deserted village, but what the function of these buildings were, have not been recorded. A water feature is present at the Hall, but this was only depicted on maps from the 19th century onwards so may not relate to the medieval manor. A field survey undertaken by Billericay Archaeological Society in 1974 within a field to the south-east of the church and Hall has revealed a spread of medieval pottery and peg tiles (**7023**) and a fishpond, this could relate to the deserted village or to other structures. Indeed, the HER has named this field as Mill Fields. Further evidence that there was an industrial building here lies in the adjoining field to the south where earthworks (**7022**) were found. These earthworks relate to a large dam at the west end of the extant wood. The river flows through a present breach in the dam at its southern end. Two other breaches lead to ditches, indicating that these are former river courses. Given the presence of the dam and the field to the north called Mill Field it is reasonable to assume that there was a mill located here. However, it is not clear if the mill building was located within Mill Field, the artefacts located in this field could indicate this, or if it was located near to the dam. A sketch of the earthworks show that they were c.90 m long by 15 m wide, averaging 2 m high with a leat running from the north end in a south-easterly direction for 250 m. The south-western part of the earthworks has been destroyed. All the assets are of **low value**, except for deserted medieval village (**7020**), which is of **medium value**. They all have historic and evidential value as they

relate to a local settlement within this part of Essex and help aid in the historical environmental knowledge of medieval villages within this part of Brentwood. Given how close these assets are to arms and the Order Limit, it is not unreasonable to assume that further assets connected to medieval Mountnessing could be located within the draft Order Limits.

## Hutton

### *Designated Heritage Assets*

- 3.8.28 Along The Old Church Road, north of Hutton is the 'Church of St Giles' (**1208238**), a Grade I located c.300 m north of one of the draft Order Limits' branches. This medieval church possesses significant historical, aesthetic, and evidential value. Its origins dating back to the late 11th century, along with later modifications in the 13th, 17th, and early 19th centuries, highlight its rich historical value. The distinct phases of architectural evolution, from the late Norman period to the Gothic Revival era, provide an insightful chronicle of changing architectural styles and ecclesiastical practices over the centuries. Notably, the exceptional timber belfry, a rare and well-preserved example from the 15th century, adds to its evidential value, representing superb craftsmanship of its time. In the picturesque rural landscape between Hutton and Billericay, this church maintains a sense of historical and architectural legacy, acting as a visual anchor and focal point for the local community. Its enduring presence, with the ancient trees in its churchyard and the historical gravestones, contributes to the serene countryside's unique character, further underscoring its aesthetic value. Overall, the 'Church of St Giles' holds a **high value** due to its historical, aesthetic, communal, and evidential value, spanning several centuries. It is a living monument that bridges the past and present, offering a tangible connection to the area's rich heritage and architectural evolution.
- 3.8.29 The church boasts a quiet setting, nestled within a meticulously maintained churchyard and adjacent to a substantial and characterful farm complex. The broader surroundings encompass a peaceful rural road and expansive agricultural fields, offering an expansive and serene atmosphere. This setting is profoundly enriched by its historical relationships, including ties to the deserted medieval village at Mountnessing (**7020**), as well as connections with the post-medieval Mountnessing Hall and Attached Walls, Railings, and Gates (**1197325**), forming a cohesive heritage group. The church's setting makes a considerable contribution to its value and extends to the draft Order Limits.
- 3.8.30 Within the Hutton Village conservation area (**CA17**), at its southern extent is the 'Church of All Saints' (**1297263**), a Grade II\* listed building. It is located c.130 m east of the draft Order Limits. The church holds **high value** based on its evidential, historical, communal, and aesthetic value. It was originally constructed in the early 14th century and underwent considerable rebuilding in 1873 by G. E. Street. The exterior of the church showcases remarkable features, and a small timber-framed belfry rises from the roof at the west end, adding to its unique character. The exterior of the church also boasts an intricately designed 14th-century doorway with decorative iron strap hinges.
- 3.8.31 The church is nestled within a characterful churchyard, creating a picturesque and serene setting. The churchyard is lush and green, adorned with numerous mature trees, offering a balanced mix of open and more secluded areas. Situated along a busy main road that traverses the village, the church holds a prominent position at the village's edge, directly opposite a woodland area. The surroundings feature open fields to the south, east, and west, further enhancing the rural atmosphere. The boundaries of the churchyard are marked by brick fencing and wooden fences,

maintaining a subtle yet inviting enclosure. The views from the church extend partially to the south, east, and west, with intermittent screening provided by the surrounding vegetation, creating a sense of quiet seclusion. Additionally, the setting is enriched by the fact that the church is located within the Hutton village conservation area (**CA17**) and 150 m south-south-east of the Grade II\* Hutton Hall (**1280481**), underscoring its historical value. The setting of the Church of All Saints makes a considerable contribution to its overall value, reflecting a harmonious blend of natural beauty, heritage, and tranquillity. This setting extends to the draft Order Limits.

#### *Non-Designated Heritage Assets*

- 3.8.32 The settlement of Hutton (**7010**) is a dispersed asset of several components ranging between c. 30 m to 1.3 km to the west and north of the draft Order Limits within the northern central parts of Section G. Documentary evidence states that the manor and rectory at Hutton were granted to Battle Abbey following the Norman Conquest. This indicates that there was a settlement already established prior to 1066. The Domesday Book of 1086 records that Hutton was a collection of 24 households. This number fluctuates until 1424, as do the name of the tenants, suggesting that the population was fluid and shifting. The documents also attest that Hutton's main source of income during this time was primarily sheep and cattle farming, this also included cheese production and the selling of fleece. The village seems to have been focused on the Church of All Saints (Grade II\* listed **1297263**) and Hutton Hall (Grade II\* **1280481**), with the occasional outlying cottage and farm. Pottery recovered from a field to the south of the church indicated that there could be archaeological remains of non-extant medieval buildings here. The village is of **medium value** as it relates to a local medieval village in Brentwood. The asset could enhance the historic environment knowledge on how medieval villages were built and survived until the modern period. Due to this it has historic and evidential value. Due to relative distance and the below ground nature of the potential remains the assets setting does not extend to the draft Order Limits.

#### **Little Burstead**

- 3.8.33 'The Church of St Mary the Virgin' (**1170867**) is Grade II\* and located c.1.26 km east of the draft Order Limits, along Rectory Lane, south of Little Burstead. This asset, a small rural Anglican church with origins dating back to the 12th century, holds a **high value** due to its evidential, historical, communal, and aesthetic value. Set in an isolated location amidst farmland, it features a mix of architectural elements spanning different centuries, including 14th century buttresses and 16th century windows. While it underwent reseating in 1888 and saw the addition of a toilet and kitchen in 1990, the historical fabric of the church remains well-preserved. The church also houses 19th century windows by Clayton and Bell, adding to its historical and aesthetic value. With its wealth of historical and architectural elements, this church, although small, holds a high value, serving as a testament to its enduring significance in the rural landscape.
- 3.8.34 The church is situated adjacent to a road, accessible via a small path enclosed by a fence, within a churchyard. The churchyard is enveloped by a canopy of mature trees, with expansive fields extending beyond this treeline. This locale is characterized by its rural and agricultural nature. Notably, traffic noise from both the nearby Church Road and the A127 is audible from the churchyard. The presence of dense surrounding trees obstructs the view of the church from the road. Nevertheless, except for the background noise from the road, the area offers a relatively quiet and profoundly peaceful atmosphere. Overall, the church's setting

moderately contributes to its value, and it does not extend into the draft Order Limits due to the presence of abundant vegetation and unique topographical features.

### Great Burstead

- 3.8.35 The 'Church of St Mary Magdalene' (**1122255**) is Grade I and located within Great Burstead, c. 2.5 km east of the draft Order Limits. The church holds **high value**, stemming from its deep historical roots and architectural diversity. Originating in the Norman era, with significant 14th and 15th-century expansions. The early 16th-century north and south porches, graced with imposing timber arches, enhance its architectural value. The sturdy west tower, crowned with a shingled spire, showcases remarkable craftsmanship. Inside, the church houses 18th-century wall monuments and meticulously restored 15th century benches in the south aisle, further enriches its historical and evidential value. Altogether, the Church of St Mary Magdalene stands as an invaluable testament to history, encompassing a diverse range of architectural styles and artistic treasures.
- 3.8.36 The Church of St Mary Magdalene enjoys a characterful setting in a churchyard enriched by the presence of numerous mature trees, creating a predominantly open ambiance. The churchyard is enclosed by a brick wall and is in proximity to the road's edge, albeit a busy one with considerable traffic noise. The church is surrounded by a blend of modern properties, forming the central focal point of the village. Although it is perched on higher ground, the views are somewhat obstructed by the surrounding trees. The village itself is positioned on the outskirts of a larger settlement. Overall, the setting makes a moderate contribution to the church's value. Also, the setting does not extend to the draft Order Limits.

### Heron Hall

- 3.8.37 At Heron Hall there is a collection of listed buildings and a scheduled monument that lie approximately between 900 m to 1.1 km to the west of the draft Order Limits towards the southern part of Section G. The listed buildings include Grade II\* 'Granary 5 metres south east of Heron Hall' (**1280702**), and the Grade II 'Heron Hall' (**1197182**), the 'Stable range 20 metres south west of Heron Hall' (**1197183**) and 'Granary/Court Hall 90 metres south east of Heron Hall' (**1205471**). The scheduled monument is the 'Moated site immediately east of Heron Hall' (**1016861**). All the assets have group value and inform the significance of one another. Collectively they have a **high value** and historic, evidential, and aesthetic values.
- 3.8.38 The scheduled moated site (**1016861**) is roughly rectangular in shape, c.90 m north to south and c.80 m east to west and the inside island is raised roughly 1 m above the surrounding landscape. The moat is c.18 m wide and 2 m deep and revetted in brick on the inner and outer edges. There is an outer bank measuring 20 m wide and 1.5 m high on the northern and eastern sides of the monument. Along the northern bank is a 2 m tall post medieval brick wall. A modern bridge is used to access the island and is in the south-east corner. This replaced the earlier causeway which was located within the centre of the southern arm of the moat.
- 3.8.39 There has been a manor located at this location since 1232 when it was known as 'Fynde god(s)hurne' and simply as 'Herne' in 1379. The Grade II Heron Hall (**1197182**), located to the west of the moated site, replaced the original hall in the late 17th century, it has 19th and 20th century alterations. This building was formally known as no.50 Heron Hall Farmhouse. It was built out of red brick with a Flemish bond (the gabled ends have reticular patterned brock work), the hipped roof is clad in hand made red clay tiles with parapet gables. Most of the building has been altered but several of the windows of the building are original but have later glazing.

- 3.8.40 To the south-east of the Hall is the Grade II\* granary (**1280702**). The building was constructed in the 15th century and altered in the 17th century. It was constructed out of high-quality red brick with and English bond. The gable ends of the building have been rebuilt in the 17th century using red and blue brick (to create a rectangular pattern like that at the Hall) in a Flemish bond. The roof is clad in hand made red clay tiles. It is rectangular in plan, aligned north to south. Its eastern side overlooks the moat. The property is two stories tall, and it retains several of its original features including windows Internally the timbres are original, some of the joints in the roof were constructed in a rare form, and potentially so are the wide floorboards. The granary is a rare survivor from the 15th century with its 17th century alterations, its high-quality brick and timber work is also unusual and there are no parallels with the building within Essex.
- 3.8.41 Located opposite the granary and to the south-west of the Hall is the Grade II listed stables (**1197183**). The building dates to the 17th century and was extended in the 18th. It was conducted out of red and blue brick with a Flemish bond. Its roof was clad in handmade red clay tiles, a Dormer window contains pigeonholes. This building is aligned north to south and is one stories tall with attics. The building overlooks a yard area to the east. the parapet gable ends of the original building have their original tiles; these form the letters J. T. This could be John Tyrell who built Heron Hall.
- 3.8.42 To the south-east of Heron Hall and of the south of the moat, is a Grade II granary (**1205471**). The granary was originally a court hall but is now a granary. It was constructed in the 17th century and altered in the 20th. It is two stories tall. It was constructed out of high quality red and blue brick in a Flemish bond. This building is unusually large to be just a granary. The presence of the windows, specifically in the second story, indicate that it could have been a manorial court hall, possibly with an ancillary function as a granary.
- 3.8.43 The setting of all the assets at Heron Hall inform one another and add significance and value. Originally the moated site would have been surrounded by agricultural fields and green spaces. There would have been farm related building on the site. This is not to dissimilarly to the setting of the assets today expect that the focus of the estate is no longer located on the moated site but to the west and south. The characterful properties and the good retention of original fixtures, fittings and building materials adds to the historic character of the estate. The Hall, granary and stables are all set around a courtyard with the moated site to the east. To the north, west and partly to the south are landscaped green areas. This is enclosed by a well-defined and well-established tree and vegetation boundary. This gives a sense of confined space to the assets. Within the wider area are agricultural fields. The granary and former manorial hall that is set away from the other listed buildings is set along the easter side of a yard area. To the north is the moated site. To the east is a grass area, to the south and west are later agricultural buildings. These give an enclosed feeling whilst the moat and the courtyard gives a sense of space. Within the wider setting, to the south and east, are agricultural fields. The area is overall quiet and peaceful. The setting of these assets makes a considerable contribution to the value of the listed buildings and the scheduled site. Due to the proximity of the draft Order Limits to these assets, and in particular the scheduled monument, their setting extend into the draft Order Limits.

### **Thorndon Hall**

- 3.8.44 The scheduled remains of 'Old Thorndon Hall and Gardens' (**1021226**) are located approximately 1.6 km to the west of the draft Order Limits within the southern part of

Section G. Adjacent to the south of the asset is another scheduled monument, the 'Former Parish Church and Churchyard of St Nicholas' (**1021225**). As they share the same setting they are discussed together. Both assets are also located within the Thornden Park conservation area (**CA18**), Old Hall is located within the Grade II\* Thorndon Hall registered park and garden (**1000314**) and the church is located immediately to the south. All the assets add significance to each other and have group value. Overall, the assets hold a **high value**, and they have evidential, historical, and aesthetic value.

- 3.8.45 There has been a manor or large house at Old Thorndon Hall, now scheduled archaeological remains (**1021226**), since 1086, the Domesday Book records that a Saxon manor known as 'Torninduns' was held by Suain of Essex. Later in 1414 its then owner, Lewis John, created a park of 300 acres to surround property. In 1573 Sir John Petre, first Lord Petre, bought the estate and immediately rebuilt the manor and redesigned the gardens. The eighth Lord Petre, Robert James, in 1734 undertook an ambitious project to rebuild the hall and landscape the gardens. A Venetian architect, Giacomo Leoni, was commissioned to redesign the property. The garden now included a water garden, a menagerie, colossal hot house (called the 'stoves' these were thought to be the largest in England at the time) and a large plant nursery. In 1763 the ninth Lord Petre, Robert Petre, demolished the Old Hall and built a new one to the north.
- 3.8.46 Excavations over the Old Hall have revealed at least three phases of building. The first dating to the early 15th century (Lewis John), the second was an Elizabethan manor created by Sir John Petre, first Lord Petre, and the last to the eighth Lord Petre, Robert James. The early 15th century manor was small and moated. By the mid-15th century, the house had been extended over the moat and transformed into a rambling country mansion. This manor was partly torn down in the 18th century and the east wing was rebuilt. The rest of the building was remodelled, and the rooms enlarged. A chapel, bakehouse, new farm buildings and a banqueting house were added. When the Hall was finally demolished in 1763, the building material was re-used of the New Hall. It is through that the six pillars in the southern façade were those used in the portico of the Old Hall.
- 3.8.47 The garden around Old Thornton Hall measured 200 m north to south and 400 m east to west. It was enclosed by a brick wall and had two gatehouses, one to the north and the other to the south. Archaeological investigations have revealed that the wall, gatehouses, and the internal layout of the gardens, survive as below ground remains. The Great Garden was to the north of the Hall, the orchard to the west and the stables to the east. An excavation over a large mound within the Great Garden revealed a large, 6.5 m, Georgian Dovecot. The asset is of **high value** due to its historical and evidential value.
- 3.8.48 The 'Former Parish Church and Churchyard of St Nicholas', also scheduled archaeological remains (**1021225**), is located to the south of the remains of Old Hall. The building is approximately 26 m by 8 m wide, the church yard in which the church centrally sat is measured at 100 m long and 30 m wide. The church was constructed in the 15th century. A cartographic image from a 1593 map shows that the church had a crenelated west tower, a weathercock, and a south porch. Scattered finds around the monument indicate that the church had a 15th to 16th century Flemish floor tiles.
- 3.8.49 Today the remains of the church are located on a slightly raised piece of land. The remains of the church have survived well as below ground archaeological remains. The asset is of **high value** due to its historical and evidential value.

- 3.8.50 Both assets are located within a green area. To the east and north-east is dense woodland, to the south are agricultural fields, to the north and west are grassland. These fields give a sense of space to the assets. The Old Hall site sits on a higher piece of land than the church. This would have afforded some sweeping views over lower areas to the south. Today these views are still retained but are disrupted by a well-established hedge. The church on the other hand is on a gently sloping land that slopes down to the south. There is nothing to disrupt the views from the asset over the lower areas. To the south of both assets is the A127. The noise from this road does disrupt the quiet and peaceful nature of the landscape. If they were not part of the tranquil landscape or conservation area, then the values of the assets would diminish. Overall, the setting makes a considerable contribution to the value of the assets. Due to distance the setting does not extend to the draft Order Limits.

### Herongate

- 3.8.51 'Mount Thrift' (**1205402**) is a Grade II listed building located east of Herongate, along Billericay Road, c. 900 m west of the draft Order Limits. Its origins trace back to the 16th century and even earlier, with extensions added in the 18th and 19th century. The house is timber-framed and has a charming roughcast rendered exterior, it has seen some modifications, like the addition of 19th century casements, but it retains a sense of historical charm. This blend of historical and aesthetic value positions Mount Thrift as a **medium value** asset.
- 3.8.52 Mount Thrift is located along a busy road but is set back from it, creating a buffer with a garden. Its wider setting is defined by rural agricultural fields with which it has a historic relationship, being an integral part of a farmyard. The setting is also informed by the agricultural landscape in the north and south with which the asset and its associated outbuildings have a historical and functional relationship. The setting of the asset makes a considerable contribution to its value, but due to distance, development along Billericay Road and mature vegetation, the setting does not extend to the draft Order Limits.

### Childerditch

- 3.8.53 The Grade II\* listed asset 'Rosebrook' (**1197195**) is located along Childerditch Street and is c. 2.3 km west of the draft Order Limits. The asset is **high value** and has historical and aesthetic significance. The House is c. 1500 in origin within 17th and 20th century alterations. The asset is timber framed and part exposed, rendered and weatherboarded. The asset has a peg-tiled roof and is in a 'L' plan formation and the southern-eastern wing is entirely 20th century and as such is not included in the listing.
- 3.8.54 The asset's setting contributes considerably to its value and comprises the heavily and maturely vegetated garden surroundings with a dense vegetated perimeter around the property. The asset is located within a small settlement surrounded by agricultural fields, with the conservation area of Thorndon Park and the registered park and garden of Thorndon Hall to the east and the settlement of Little Warley and a patchwork of agricultural fields to the west. To the north is Childerditch Wood containing Childerditch Pond. To the south are more agricultural fields and Southend Arterial Road A127 (c. 1.2 km south). The asset is in an area of low terrain, a small valley which stems from a high area of ground to the north around Scrub Hill. The setting of the asset does not extend to the draft Order Limits.

### Laindon

- 3.8.55 Located approximately 125 m to the west of the draft Order Limits within the central part of Section G, to the north-west of Laindon, are the archaeological remains of a

homestead moat known as Little Burstead-Whitehall Manor (**7027** - MEX41534). The manor was potentially built after 1253, it is not clear exactly when the property was constructed but it was defiantly in existence by 1285, when it was known as 'le Whyteheele'. The property was demolished in the late 13th to early 14th century and a new building replaced it. The new house was built in 1306. This house was located on a triangular platform and surrounded by a moat to the west and south with three rectangular fishponds to the east. This house lasted for 200 years. The manor was excavated by Billericay Archaeological and Historical Society between 1965 and 1969 and between 1975 and 1977. The HER does not report any of the findings for these phases of fieldwork. This asset is of **medium value** and has historical and evidential value. The asset would not have stood alone in the landscape, and it is possible that other medieval features associated with the high-status property could be located close by and given the proximity of the draft Order Limits it is not unreasonable to assume that there is a high possibility that archaeological remains associated with the manor could be located within the draft Order Limits.

- 3.8.56 A water filled moat (**7016** - MEX17671) and a possible DMV (**7017** - MEX17676) are located at Dunton Hall, partly within the draft Order Limits, to the west of Laindon, within the southern part of Section G. The moat (**7016**) would have encircled a large house or manor and was used for defensive purposes or an animal corral. The asset currently encircles a later property or farm complex and its north, west and eastern sides can be seen as a well-established vegetation boundary. To the south of the moated site is the possible deserted remains of the village (**7017**), likely associated with the listed Dunton Hall (**1338380**) and the Church of St Mary (**1122253**). This possible asset is no longer extant but could survive below ground as archaeological remains. These assets are of **medium value** as they related to a local non-extant manor and village in Brentwood. Due to this they have historical and evidential value. As both assets are partly within the draft Order Limits it is not unreasonable to assume that other medieval features connected with these assets could be located within this part of the draft Order Limits.

## West Horndon

- 3.8.57 The Grade II\* listed asset 'Church of All Saints' (**1197184**) is located down a track leading off the Brentwood Road, c. 1.5 km north of an arm of the draft Order Limits. The asset is **high value**, and it has evidential, historical, and aesthetic significance. The church is 15th century in origin, with 16th and early 17th century additions. The asset is built in red brick, of English bond bricks, with stone dressings originally made of fine oolite but repaired with various stones with a peg-tiled roof. It is aligned east to west. The church has had a history of vandalism, decay and theft and was in 1970 declared redundant, leading to extensive conservation. Excavations during this conservation stage revealed evidence of a Saxon or Norman building suggesting that the church has an earlier origin. It is, however, unclear if the present building is on the same alignment as the previous building.
- 3.8.58 The setting of the asset contributes moderately to its value. This is because of the changes the landscape which have occurred around the asset. When the asset was built the land would have been predominantly rural and agricultural land with patches of woodland, such as Picket Bushes present on the OS six-inch England and Wales map from 1866 to 1874, published 1881. Whilst the church is still located within the own graveyard with a vegetated boundary line surrounded by scrubby grass land, the wider landscape has changed. The main thoroughfare of the A127, Southend Arterial Road, now runs c. 70 m south of the asset with the small A128, c. 150 m to the east of the asset, joining the A127 next to the asset. To the north-east of the asset is the Heron Golf Club and to the north-west and west, Thorndon Country Park. There has

also been development to the south side of the A127, likely where the East Horndon Hall and Rectory were once situated as present on the OS six-inch England and Wales map from 1866 to 1874, published 1881. The asset is situated on an area of high ground, with extensive views from the asset from the south-west to the south-east. Because of the elevation of the asset, it is likely there would be intervisibility between the asset and the draft Order Limits. Because of the landscape changes and division that has happened with the transport network development in the region, as well as the disruption of the agricultural landscape with features such as golf courses, the setting of the asset does not extend to the draft Order Limits, despite the potential for intervisibility.

## Post Medieval

- 3.8.59 The post medieval period is mainly represented by settlements (and assets connected with them) some of which show continuation from the medieval period. This includes listed buildings, archaeological remains, find spots and documentary evidence. The setting of most of the built assets have retained their historical setting, if only slightly altered which makes a considerable contribution to the value of the assets. Non-designated crop marks of non-extant field boundaries show that the land has altered since this time by the creation of larger fields by the development of modern farming techniques. These assets add to local historical knowledge of how the land was worked during this time.

### Mill Green

- 3.8.60 'The Viper public house' (**1460278**), a Grade II listed building located in Mill Green, c. 1.6 km west to the draft Order Limits, holds **medium value** due to its historical and aesthetic value. It was originally developed from a pair of cottages in the mid-19th century and later expanded during the 20th century. It retains key characteristics that reflect this evolution, both externally and internally. The building is listed in CAMRA's National Inventory of Public House Interiors of Outstanding Historic Interest.
- 3.8.61 Its setting is informed by its roadside location. This white-washed pub is surrounded by a car park and a beer garden, with a small driveway fence. It faces tall trees on the opposite side, partially obstructing the view of the site. There is a car park and a road directly across from it, while the rear of the pub is bordered by numerous mature trees and is near a residential property. The immediate setting is relatively open, but the extended setting feels enclosed due to the abundance of trees, resulting in limited views. Despite this, the overall setting is peaceful and enhances the value of the asset albeit only a minor amount. However, due to several woodlands between the asset and the draft Order Limits, the setting of the asset does not extend to the draft Order Limits.

### Fryerning

- 3.8.62 'Huskards' (**1197277**) is located within the Fryerning conservation area (**CA15**), c. 1.6 km west of the draft Order Limits. It is of **medium value** based on its historical and aesthetic value. Huskards, with its complex history of alterations and now divided into five apartments, retains numerous original features from the early 18th century, reflecting a blend of periods and external and internal characteristics.
- 3.8.63 Huskards possesses a picturesque roadside setting, framed by a high brick wall, metal fencing, and lush vegetation, creating a tranquil atmosphere in a rural village. This characterful house overlooks slightly sloping terrain to the south-east,

contributing considerably to its value as well. Nonetheless the properties setting does not extend to the draft Order Limits, due to the presence of modern infrastructures such as the A12 along with the surrounding verdant landscape.

## Ingatestone Hall

- 3.8.64 The **high value** scheduled monument 'Barn at Ingatestone Hall' (**1002174**) (also Grade II\* listed - **1298752** - 'Granary 130 Metres North West of Ingatestone Hall') is located within the wider complex of Ingatestone Hall listed buildings centred 130 m east of Hall Road, c. 590 m south-east of Ingatestone, c. 780 m west of the draft Order Limits. The other listed buildings in the complex comprise: the **high value** grade I listed 'Ingatestone Hall' (**1187315**); the **high value** Grade II\* listed 'Gatehouse and courtyard ranges 30 metres west of Ingatestone Hall' (**1197286**); and the medium value Grade II listed 'Barn (now workshop) 100 metres west of Ingatestone Hall' (**1187269**); 'Byre 80 metres north west of Ingatestone Hall' (**1197287**), a 'Shelter shed and attached byre 100 metres north west of Ingatestone Hall' (**1197288**), a 'Barn 110 metres north west of Ingatestone Hall' (**1297189**), 'Lodge cottages 170 metres north west of Ingatestone Hall' (**1187393**), 'Cistern house 50 metres north east of Ingatestone Hall' (**1187282**), 'Garden wall extending 48 metres north from the gatehouse and courtyard range' (**1187300**); and 'Garden Wall North and East of Ingatestone Hall' (**1297190**). As a group, these assets are of **high value** and have historic, evidential, and aesthetic value.
- 3.8.65 The history of the estate began in 950 AD when King Edgar granted lands in Yenge-atte-Stone (Ingatestone) to the Abbey of Our Lady and Saint Ethelburga. The Sisterhood built a manor house within their lands. Later in 1535 King Henry VIII ordered his chief secretary, Thomas Cromwell, to inventory all religious order strongholds, this was beginning of the Dissolution. Cromwell proctor or assistant, William Petre, was tasked with visiting the monastic houses in southern England. Petre took a particularly liking to the manor in Ingatestone and soon leased and later bought the land. To absolve Patre of any wrongdoing during the Dissolution and Interdict of Excommunication imposed on Henry VIII, by Pope Paul IV, providing that Patre endowed an almshouse (this was located on Ingatestone High Street). Petre demolished the manor and replaced it with the present Ingatestone Hall. The Tudor style Hall (**1187315**) was built out of red brick with English bond over three stories. The roof has crow stepped gables with peg tiles with prominent octagonal and rectangular chimney stacks. The house was originally square in shape with a central enclosed courtyard. It was one of the first private houses to be built with piped water supply and flushing drains. It is thought that the ninth Lord Petre, Robert Petre, added the north wing to the house and demolished the Great Hall and dining chamber. This left the property 'U' shaped. In 1919 the house was in a state of decay. It was the 16th Lord's widow, Lady Rasch, who undertook the task of sympathetically restoring the property. During World War II the house became a Wanstead School for girls. Later in the 1950s the hall also housed Essex County Council Record Office. Today the Petre family still own and occupy the estate ([Visit Ingatestone Hall](#)).
- 3.8.66 The scheduled and Grade II\* granary (**1002174/1298752**) was constructed in the late 16th century out of red brick with a special form of Flemish stretcher bonds. It has two stories, and the roof is clad in hand made tiles. The granary is large for its size and a rare survival from the 16th century given that it is also largely unaltered. A barn that was included in the scheduling was appended to the granary to the north, but this has been replaced by a modern structure.

- 3.8.67 The Grade II\* gatehouse and courtyard (**1197286**) are located to the west of the hall. The building dates to the 15th and 16th centuries and altered in the 18th century. It is constructed of red brick in English bond and plastered timber frame and has a roof of handmade red clay tiles. It is 'L' shaped in plan and of two stores. The first-floor external walls are clad in plaster, with slight panelled decoration, and painted red. The west range has a central arched entrance way with a jettied room and clock tower above. The clock has one hand and 'Sans Dieu Rien' (a heraldic motto meaning 'Without God Nothing') written beneath it. Above the clock tower is a bell and weathervane.
- 3.8.68 The Grade II listed byre (**1197287**) dates to the mid-19th century and is constructed of red brick in a Flemish bond with dressing of black engineering bricks and a red clay 'Roman' tiled roof. The building is a good example of a scientifically designed byre from the 19th century agricultural improvement era and the use of engineering bricks to resist abrasion at the cattle entrances is noteworthy.
- 3.8.69 The Grade II listed barn (**1297189**) dates to the late 16th century and comprises a gas tar treated weatherboarded timber frame structure with a handmade tile clad roof. Internally there are some original features and later additions. All are of good quality and well-maintained, mainly due to the use of high-quality oak.
- 3.8.70 The Grade II listed shelter shed with attaches byre (**1197288**) comprises two walls of 16th century origin with the rest of the structure dating to the early-to-mid 19th century. The structure is built of red brick in Flemish stretcher and Flemish bonds and is roofed with handmade red clay tiles.
- 3.8.71 The Grade II listed lodge cottages (**1187393**) are of two stories and were constructed in the 19th century in the Tudor Revival style of red brick in English bond with a handmade red clay tile roof. The front elevation has gable ends with crow stepped edges, as can also be seen on the gable ends of the hall. The transomed casement windows are large and reminiscent of those seen at the hall.
- 3.8.72 The Grade II listed barn (**1187269**) at the southern edge of the complex is now a workshop. It was constructed in the 13th to early 14th century and rebuilt in the early to mid-16th century. It is of timber frame construction faced in mixed materials comprising plaster, weatherboarding, and red brick in English and Flemish bond. The roof is clad in red clay 'Roman' tiles. The early origins of this building and its retention of original and 16th century fixtures, fittings and building material make this building a rare example.
- 3.8.73 The Grade II listed north is garden wall (**1187300**) is of red brick in English bond and dates to the 16th century. It is aligned north/south and its southern end butts up against the gatehouse and courtyard range. The asset dates to the 16th century and is recorded on a plan of 1566 and a map by the John Walkers, father, and son, 1605, as forming the west boundary of a garden, as it still does.
- 3.8.74 The Grade II listed garden wall (**1297190**) to the east of the hall also dates the 16th century but it was partly rebuilt in the 18th to 20th centuries. It is built of red brick in English and Flemish bond and encompasses the garden of the hall. The asset was recorded on a plan of 1566 and in a detailed map by the John Walkers, father, and son, published in 1605. Although it has been partially rebuilt, its early construction date and retention of some of its original building material make this a rare surviving brick feature from this time.

- 3.8.75 Located within the walled garden to the east of the hall is the Grade II listed cistern house (**1187282**). It was constructed in the 19th century, or possibly earlier. It is made from red brick in English bond and has a single storey. The roof is clad in handmade red clay tiles. The building is circular in plan with a door at its northern side. This building is a rare example of its type.
- 3.8.76 The setting of the Ingatestone Hall complex is shared and informed by the interrelationships between the designated assets and by their relationships with the associated non-designated outbuildings that add character to the working farm environment. The setting is further informed by the surrounding quiet rural agricultural landscape with which the assets and the non-designated associated outbuildings have a historical and functional relationship. A copse to the west and a mature wooded boundary to the south of the complex obscure views in and out, but there are more open views to the north through to the east. To the east is the shallow Wid valley and a footpath links the Ingatestone complex with the Grade II\* listed Church of St Mary (**1264434** - see Section F) on the opposing eastern flank. The large garden areas to the north, east and south of the hall instil a sense of status and openness and despite mature tree lined boundaries views are available across the arable land to the north and the Wid valley and the church beyond in the east. The setting of the assets, therefore, makes a considerable contribution to their values and except for the two garden walls (**1187300**, **1297190**) and the cistern house (**1187282**), whose settings are restricted to the confines of the Ingatestone Hall complex, the shared setting of the remaining listed buildings and the scheduled monument extends to the draft Order Limits.

### Ingatestone

- 3.8.77 'Newlands Hall' (**1298740**) and 'Ingatestone Railway Station' (**1279577**) are two Grade II listed buildings located within the Ingatestone conservation area (**CA36**), c. 1 km west of the draft Order Limits. They both hold a **medium value** based on their historical and aesthetic value. The Hall House, built around 1884 by George Sherrin in the Arts and Crafts style, exhibits a striking red brick exterior with tile hanging and mock timber-framing. The railway station showcases a Tudor Revival style, it is characterised by red brickwork in English bond with black bricks in diaper patterns and limestone dressings. The station's design exhibits distinctive architectural features.
- 3.8.78 The setting of both Newlands Hall House and Ingatestone Railway Station is significantly influenced by their location within the conservation area (**CA36**), by their interrelationship and by their relationship with the extant railway. Newlands Hall House, situated along a track and near the railway station, is surrounded by a residential area to the north and west and south-west and rural landscape to the south-east. The asset was built after the creation of the railway; therefore, the railway line has been historically and presently part of the assets setting. There are potentially views from this asset overlooking a lower area to the south. However, this is disrupted by well-established vegetation that is partly thick even in winter. In contrast, Ingatestone Railway Station, a characterful and operational asset with a large car park, rests on the town's edge with a parallel-running railway. The setting of both assets benefits from the presence of fields to the east and tree lines contributing a moderate amount to their overall value. Due to distance and intervening well-established vegetation the setting of these two assets do not extend into the Oder Limits.
- 3.8.79 'Rays' (**1207624**) is a Grade II listed building located north of the Ingatestone settlement and c. 410 m west to the draft Order Limits. Its architectural tapestry with

origins dating back to the early 17th century, has evolved through the centuries. This timber-framed house, consists of three bays fronting the west, featuring a central axial stack and an entrance lobby. The structure has undergone various additions and alterations, with interesting features harken to its rich past. Maps from the mid-18th century offer glimpses into its architectural history, and its connection to the endowment of Wadham College adds to its historical value. Overall, this asset has a **medium value** due to its historical and aesthetic value.

- 3.8.80 Rays enjoys a unique setting, positioned at the terminus of a bustling settlement, and accessed via a trackway. The property is nestled within an enclosed garden, shielded from view by a substantial and mature hedge. To the north and east, it adjoins open fields, providing a picturesque contrast to the residential area that sprawls to the south and south-west. This distinctive setting makes a considerable contribution to its value, and notably, despite the presence of hedges and mature trees, however, its setting does not extend into the draft Order Limits.
- 3.8.81 Along Hall Lane, south of Ingatestone Hall (**1187315**), are two Grade II listed buildings 'Tilehurst' (**1197324**) and 'Bacons Farmhouse' (**1208217**), both located between c. 1.1 km and c. 1.3 km west of the draft Order Limits. Tilehurst, an architectural masterpiece designed by George Sherrin in 1884 for Sir Sebastian Petre, boasts a complex and intricate structure adorned with rich details, including chamfered stone surrounds and exposed false framing. Its historical value as a residence for Sir Sebastian Petre and its ties to Wadham College at Oxford add to its allure and value. On the other hand, Bacon's Farmhouse presents a charming amalgamation of early 17th-century timber framing and early 19th-century red brick construction, with an elegant, symmetrical facade that features sash windows and a Tuscan portico. Inside, it harmoniously blends historical character with 19th-century craftsmanship, creating a unique and historically significant property with links to the Petre. The present building is enclosed by a moat which probably dates to the medieval period. The present property probably replaced an older building contemporary with the moat. The moat today adds a sense of grandiose and evidential value to the property. Both properties hold a **medium value** based on their evidential, architectural, and historical value.
- 3.8.82 The settings of both 'Tilehurst' and 'Bacons Farmhouse' are significantly shaped by their location within a rural environment. Tilehurst is set back from Hill Road by a large garden and screened from the road by well-established vegetation. The southern end of the property, which has a separate entrance, almost abuts a private trackway. To the north and south-east of the property are wooded areas. This and the well-established vegetation that surrounds the properties garden gives secluded feeling. The wider setting includes agricultural fields and Bacons Farmhouse and farm complex to the west. To the south is a later house. The surroundings are quite and rural. Bacons Farmhouse, as previously noted, is surrounded by a moat, this in turn is mostly lined with trees, on both internal and external sides of the moat. This gives a secluded feeling to the building. The eastern side, however, is more exposed and has invisibility with the farm complex located here. Historical moated manor houses would not have stood in isolation. It is probably that the farm complex replaced medieval building or farm building located here. The farmhouse and moat are set back from the road by a large garden. The road here is lined with well-established vegetation which screens the asset from view. Surrounding the farmhouse and farm complex are agricultural fields. To the east is Tilehurst and to the west is a later property. Overall, the area in which the farmhouse is set is quite and rural in nature. Both assets historic and present setting would have been similar. Therefore, their setting makes a considerable contribution to their value. Neither

asset's setting extends to the draft Order Limits due to well-established vegetation and distance.

## **Billericay**

### *Designated Heritage Assets*

- 3.8.83 'Great Blunts Farmhouse' (**1122206**) is a Grade II listed building located north of Billericay, c. 1.27 km east of the draft Order Limits. This asset is of **medium value** based on its historical and aesthetic value. The farmhouse is a two-story, timber-framed, and plastered residence dating back to the 16th-17th century period. Historically, and presently, this would have been the farmhouse to a farm complex located to the north. The immediate set of buildings, which are large barns, appear to have been converted. However, the buildings just to the north of these appear to be a working farm. This allows the farmhouse and farm complex to retain some of historic value as it still retains its original function, if partly altered.
- 3.8.84 Great Blunts Farmhouse is positioned away from the road and is enveloped by an expansive landscaped lawn, imparting an open ambiance. It can clearly be seen from the road. The converted farm building to the north, and those still functioning behind, form a vital and historically accurate part of the farmhouse setting. In contrast, the wider setting is characterised by the bustling B1007 Stock Road and a nearby roundabout, with a steady flow of traffic to and from Billericay. To the south is the urban sprawl of Billericay and to the west is a golf course. All of this is greatly different to the original wider agricultural landscape, which has only been partly retained to the north, which the asset would have once stood. Overall, its setting makes minor contribution to its value due to the proximity with the settlement of Billericay. The assets setting does not extend into the draft Order Limits.

### *Non-Designated Heritage Assets*

- 3.8.85 Cropmarks and earthworks were located at Little Farm (**7005**) located partially within the draft Order Limits within the northern end of Section G, to the north-west of Billericay. These include non-extant field boundaries and a cropmark linear feature. The field boundaries may relate to the post medieval field system that was once located here. These would have been removed due to the development of modern farming techniques. Also located within this field is a WWII bomb crater. The field boundary cropmarks and earth work are of **negligible value** as they relate to how the local farming population managed their farmland. The linear feature could have more value as it could relate to a more complex archaeological feature but until it is archaeologically investigated this cannot be proven. At present it is of **unknown value** as it relates to an archaeological feature. The bomb crater is of **negligible value** as it is a common archaeological feature but does show when and where bombs were dropped during WWII and how they affected local inhabitants. All the assets have historical and evidential value as they could further the local historic environment knowledge on how the post medieval landscape was operated and when and where WWII bombs were dropped and how they were backfilled.

## **Padham's Green**

- 3.8.86 Three Grade II listed buildings are found in Padham's Green: 'Bibury' (**1197326**), 'Holly Cottage' (**1293215**) and '1 And 2, Padhams Green' (**1293209**). They are located c. 1 km west of the draft Order Limits. They collectively possess a **medium**

**value** due to their historical and aesthetic value. ‘Bibury’, dating primarily to the mid-16th century with possible earlier origins, has been extended in the 19th and 20th centuries, featuring a timber-framed structure with various cladding materials and tile roofing. ‘Holly Cottage’, originating from the 17th to 18th centuries and later extended in the 19th century and renovated in the 20th century, presents a timber-framed structure with weatherboarding and plaster, and red clay tile roofing. The asset ‘1 And 2, Padhams Green’, a pair of cottages, dating back to approximately 1800, display timber-framing rendered and weatherboarded exteriors, hipped slate roofing, and red brick central stacks. Each cottage exhibits sash windows with slender glazing bars, dormers with 19th century casements, and sloping bracketed hoods over their doors. These buildings collectively retain much of their original architectural character, particularly evident in the front elevation of ‘1 And 2, Padhams Green’, which retains its original appearance, although it has been rendered over. This architectural authenticity is a key factor in their medium value assessment.

3.8.87 The properties share a rural, tranquil setting. ‘Bibury’ is located at the end of a small settlement, enveloped by agricultural fields. Likewise, ‘1 And 2, Padhams Green’, sit at a corner within the settlement, between two roads with varying traffic levels, bordered by agricultural fields. ‘Holly Cottage’, too, is peacefully situated at the settlement’s edge, surrounded by picturesque fields. As a heritage group in Padham’s Green, their settings are intertwined and enriched by their shared historical connection with the medieval and post medieval dispersed settlement of Mountnessing (**7011**). Overall, their setting makes a considerable contribution to their value and despite open views to the east and south-east of these assets, their setting does not extend to the draft Order Limits.

3.8.88 Along Church Road, west of Padham’s Green, is ‘Jordons Farmhouse’ (**1297206**), a Grade II listed building, located c. 1.2 km west of the draft Order Limits. This farmhouse is a mid-19th-century double-range house made of red brick in Flemish bond with a slate roof. It retains original sash windows, and its central entrance features a simple doorcase. With a cement-rendered stack and an inscription dating it to 1841, this property holds **medium value** due to its evidential, historical, and aesthetic value.

3.8.89 The setting of ‘Jordons Farmhouse’ is influenced by its rural location as it overlooks an expanse of agricultural fields. Additionally, its setting is shaped by its historical connection to the medieval and post-medieval historic dispersed settlement of Mountnessing (**7011**) and its historical ties to the surrounding agricultural landscape. Overall, the setting make considerable contribution to the asset’s value. Due to the distance and topography the setting does not extend to the draft Order Limits.

## Mountnessing

3.8.90 Located partially within the draft Order Limits and approximately 390 m to the north-west are the post medieval remains of the dispersed village of Mountnessing (**7024** and **7029**). The first asset, a remains of a post medieval house platform (**7024**), are in field which also contained a medieval fishpond and possibly the remains of a medieval house (**7023**). Field survey by Billericay Archaeological Society in 1974 recovered peg tiles and a possible house platform located near to the medieval fishpond. It is possible that the medieval house was either replace by the post medieval one or was the one and the same building but altered in the post medieval period. Only archaeological intervention can establish if one of these hypotheses is true. The second asset is the site of a former post medieval house (**7029**). Artefacts recovered from this field include lathe, plaster, thatch, and pottery sherds, indicate that this was once the location of a property. However, the building does not appear

on the 1777 map of Mountnessing suggesting that it was non extant at the time or had yet to be built. Neither asset can be seen on Lidar nor historic aerial photography. These assets are of **low value** as they relate to a local property in this part of Brentwood and the development of medieval Mountnessing into the present-day settlement. They have historic and evidential value as they can further the local historic environment knowledge on how medieval housing developed or were adapted in the post medieval period, and how post medieval buildings were constructed, used, and then demolished.

- 3.8.91 Located in the next field to the above assets were a collection of post medieval artefacts (**7034**). These are located approximately 125 m west of the draft Order Limits. The finds, which were recovered from metal detecting, include: Georgian button and coins, Victoria coins, one Elizabeth I groat, lead seals, horse decorations, furniture fittings and buckles. These finds could be casual losses from people working the land during this time or they could be a previously unrecorded building located here. If this is so, then this could indicate that post medieval Mountnessing extend further than previously through. These finds also indicate that there could be more archaeological remains or finds from this period within the draft Order Limits. The finds are of **low value** as they relate to everyday life of a local settlement. They have historic and evidential value as they can show how a local population lived and worked.

## Hutton

### *Designated Heritage Assets*

- 3.8.92 There are 13 listed buildings within the Hutton Village conservation area (**CA17**) with a 14th just outside. These assets can be reported as three separate groups comprising: 'Hutton House' (**1279616**) and the 'Stable and coach house at Hutton House' (**1197242**) and 'Rear Garden Wall at Hutton House' (**1207708**) in the first group; 'Hutton Hall and attached stable block' (**1280481**) and 'Walled garden at Hutton Hall' (**1197196**) in the second group; and 'Hutton Village School' (**1197225**), 'Summer house in garden of Hutton Lodge' (**1187399**), 'Hutton Lodge' (**1297239**), '64, Hutton Village' (**1187381**), '60 and 62, Hutton Village' (**1197224**), '56 and 58, Hutton Village' (**1298775**), '52, Hutton Village' (**1197223**), '43 and 45, Hutton Village' (**1297238**) and '35, Hutton Village' (**1187339**) in the third.
- 3.8.93 The first group of assets is located at the eastern extent of the conservation area on the northern flank of the A129 Rayleigh Road. The three assets here are now elements of a school and nursery complex. The **medium value** Grade II listed 'Hutton House' (**1279616**) has evidential and historical value and was built in 1746 with 19th and 20th century additions and alterations. The asset consists of a two-storey house with attics built of red brick in Flemish bond with a peg tile mansard roof. there is a 19th century north/south aligned wing adjoined to the east of the house. The **medium value** Grade II 'Stable and coach house at Hutton House' (**1197242**) has evidential and historical value, lies 10 m to the north of the house and dates to the 18th century. The asset comprises a weatherboarded timber frame structure on a red brick plinth with a peg tile roof. The third asset in the group falls just outside the conservation area and comprises the **medium value** Grade II 'Rear garden wall at Hutton House' (**1207708**), which has evidential and historical value. The asset also dates to the 18th century and formally defined the northern boundary of formal gardens associated with the house and apparent on the first edition OS map of 1881. The wall is built of red brick in Flemish bond and stands to a height of 2.8 m.

- 3.8.94 The setting of these assets is shared and informed by their interrelationships and by their location within a former high status residential complex. The Hutton House complex is located just outside the eastern extent of Hutton Park, which was likely associated with Hutton Hall (**1280481**), as illustrated on the first edition OS of 1881. The parkland today is, however, much diminished and was largely developed in the later 20th century. The change in the function of the assets has reduced their former coherence as a group and the erosion of their wider setting through later development has contracted their setting. The setting of the assets, therefore, makes a minor contribution to their value. The setting of the garden wall is very much focused internally to the complex and so does not extend to the draft Order Limits. The setting of the house and stables, although somewhat reduced, does extend to the draft Order Limits.
- 3.8.95 The **high value** Grade II\* Hutton Hall and attached stable block' (**1280481**) and the **medium value** Grade II 'Walled garden at Hutton Hall' (**1197196**) are located close to the southern limit of the conservation area off the eastern flank of Hutton Village (road) and c. 130 m north-north-west of the Grade II\* listed 14th century Church of All Saints (**1297263**) (see medieval section). Hutton Hall dates to the 17th century with additions and alterations made in the intervening centuries. The two-storey hall with attics is built of narrow red bricks in English bond and has a peg tile roof. There is a 19th century extension to the south in red brick and similar in style to 17th century house. The wall is located immediately west of the hall and defines a garden area. The wall is 17th or 18th century in date and has clearly undergone alterations over the centuries as demonstrated by the differing bricks and bonds used in its construction.
- 3.8.96 The setting of the assets is shared and informed by their interrelationship, by their relationship with the church to the south and by their location within the parkland associated with the hall. Based on cartographic evidence, the parkland extended to the north ant the intersection of Hutton Village (road) and Rayleigh Road, to the west bordering Hutton House, to the south bordering the church and to the north-west including the rectory and its grounds. The boundaries of the parkland are still defined by the roads and green spaces, albeit farmland and gardens, still survive, although there has been intrusive residential development particularly along Hutton Village (road) and Rayleigh Road. The southern section of the parkland, in which the assets are located, is now very heavily wooded and other than glimpsed views of the assets from Hutton Village (road) in the west, views of the assets are entirely screened. The setting of the assets, therefore, makes a moderate contribution to their values. The loss of much of the parkland to farming and residential development and the thickly wooded surroundings of the assets has much reduced the extent of their setting, and so the setting does not extend to the draft Order Limits.
- 3.8.97 The **medium value** Grade II assets and 'Hutton Village School' (**1197225**), 'Summer house in garden of Hutton Lodge' (**1187399**), 'Hutton Lodge' (**1297239**), '64, Hutton Village' (**1187381**), '60 and 62, Hutton Village' (**1197224**), '56 and 58, Hutton Village' (**1298775**), '52, Hutton Village' (**1197223**), '43 and 45, Hutton Village' (**1297238**) and '35, Hutton Village' (**1187339**) have evidential and historical value and are located on the east and west flanks of Hutton Village (road) along the north-western edge of the conservation area.
- 3.8.98 Hutton Village School (**1197225**), now a nursing home, dates to the later 19th century and is built of red brick with yellow brick quoins and voussoirs, slate roof with deep eaves. The asset is rectangular plan with a small rectangular block attached to north-east corner. There is a large 20th century rear extension, but this is not included in the listing.

- 3.8.99 Hutton Lodge (**1297239**) dates to the 17th century and comprises two parallel north/south aligned ranges. Both are two stories with attics and are built of red brick in Flemish bond with some burnt headers, and a peg-tiled mansard roof. The summer house in the garden (**1187399**) dates to the 19th century and is timber built on a hexagonal plan with corner posts, a tall ogee tented roof and shaped eaves boards.
- 3.8.100 64 Hutton Village (**1187381**) dates to the late 18th with 19th and 20th century alterations and additions. It comprises a plastered timber frame, two story house with a peg tile roof. The asset was once two adjoining properties but is now one.
- 3.8.101 60 and 62, Hutton Village (**1197224**) dates to the 19th century and comprises a rendered timber frame, two storey house with a peg tile roof. The asset was once two adjoining properties but is now one.
- 3.8.102 56 and 58, Hutton Village (**1298775**) dates to the early 19th century with 20th century alterations and additions. The asset comprises two rendered timber frame, two storey adjoining properties with a 20th century flat clay tile roof.
- 3.8.103 52 Hutton Village (**1197223**) dates to the late 18th century with 20th century alterations and additions. The asset comprises a plastered timber frame two storey house with weatherboarded sides and a peg tile roof. The asset was built as two adjoining properties but is now one.
- 3.8.104 43 and 45 Hutton Village (**1297238**) dates to c. 1800 and comprises two joined plastered and weatherboarded timber frame, two storey houses with a peg tiled roof.
- 3.8.105 35 Hutton Village (**1187339**) dates to the early 19th century with 20th century alterations and additions. The asset comprises a rendered and weatherboarded timber frame, two storey house with 20th century panel pargetting and a 20th century flat tile roof. The asset was built as two adjoining properties but is now one.
- 3.8.106 The setting of the of the Hutton Village (road) group of assets is shared and informed by their interrelationships and by their relationships with the non-designated properties that contribute to the character of the conservation area. The setting is further informed by their village location and by the surviving fragmented parkland to the east. The setting of these assets, therefore, makes a considerable contribution to their value, but due to its restricted village nature, the setting does not extend to the draft Order Limits.
- 3.8.107 Along Arnolds Farm Lane, north of Hutton, are found three Grade II post medieval listed buildings: 'Arnold's Farmhouse' (**1297205**), the 'Barn 30 metres east of Arnold's Farmhouse' (**1293247**) and the 'Granary 13 metres north of Arnold's Farmhouse' (**1197323**). They are located c. 1.9 km west of the draft Order Limits. They all hold **medium value** based on their historical and aesthetic value. The farmhouse, primarily dating to the 17th century with later additions, is a striking blend of architectural styles, with its symmetrical entrance elevation featuring elements from the early 18th and 19th centuries, while retaining a fragment from a late 15th-century house at the rear. The barn, an 18th-century timber-framed structure, preserves the quintessential features of a traditional English barn, and the Granary, a 17th-century timber-framed building, supported on original brick piers, stands as a well-preserved example of historical agricultural architecture.
- 3.8.108 The setting of these assets is significantly influenced by their shared location within the same farm complex, emphasising their historical and functional interconnection. Additionally, their surroundings are shaped by the agricultural land with which they have a deep-rooted historical and functional association. This gives a sense of space

and quietness. This peaceful ambiance is however, disrupted by the railway and A12 to the west. Despite this modern intrusion their setting makes only a considerable contribution to their value. Their setting does not extend into the draft Order Limits due to the considerable distance and topographical features.

- 3.8.109 'Reaper's Croft' (**1297207**) is a Grade II listed building located north of Hutton, along Old Church Lane. It is situated c. 1.1 km west of the draft Order Limits. It is a cottage originating from the 18th century or the early 19th century with subsequent extensions in the 19th and 20th centuries, embodies a modest historical and aesthetic value. Its unpretentious timber-framed structure is reflective of the vernacular architectural style of its era, presenting an unjowled post framework and primary straight bracing. While some modifications have been introduced, such as 20th century casement windows with diamond leading and 20th century internal features, the building retains its historical character and offers a glimpse into the architectural traditions of its time, resulting in a cottage of **medium value**.
- 3.8.110 The setting of Reaper's Croft is informed by its roadside location within a small hamlet. The property's small garden serves to buffer it from the roadside. In the broader context, this setting is characterised by the presence of expansive agricultural fields, bestowing upon it a quiet and rural ambiance with a notable sense of space. The setting of the asset makes a considerable contribution to its value, but due to screening by other buildings in the hamlet, mature trees and hedges and mature tree lined hedgerows in the intervening landscape, the setting does not extend to the draft Order Limits.
- 3.8.111 The post medieval 'Mountnessing Hall and Attached Walls, Railings, and Gates' (**1197325**) is in the same area as the medieval 'Church of St Giles' (**1208238**), along Old Church Road and located c. 300 m north of the draft Order Limits. This Grade II listed country house, with its late 16th-century origins and subsequent transformations in the 18th and early 19th centuries, stands as a testament to evolving architectural styles across centuries. The retention of original features, such as handmade glass windows, enhances its historical charm. Furthermore, the iron railings and gate encircling the garden underscore the attention to detail in its design. Overall, Mountnessing Hall and its accompanying features, through their rich historical and aesthetic value, are of **medium value**.
- 3.8.112 This asset resides within a tranquil, rural landscape, which significantly enhances its overall value. Nestled back from a quiet country road and surrounded by a farmyard, the setting evokes a serene ambiance, offering picturesque vistas of the sprawling agricultural fields to the south. This location, characterised by the proximity of the 'Church of St Giles' (**1208238**), plays a pivotal role in preserving historical connections. The HER has reported that a possible moat (**7020**), once encircled a medieval property which the present Hall replaced. However, this is not extant and very few records confirm its presence. Overall, its setting makes considerable contribution to its value. Despite some tree lines, the setting extends to the draft Order Limits.
- 3.8.113 'Ellices' (**1297247**) is a Grade II listed building located east of Hutton, c. 65 m of the draft Order Limits. It is an early 19th-century house with some 20th-century modifications, holding a **medium value** due to its historical and aesthetic value. It is constructed from red brick with an irregular Flemish bond pattern and features a hipped roof with flat 20th century tiles. The house, rectangular in shape, has a front facade with three elegant windows on both floors. The northern side has twin hipped gabled roofs and two first-floor windows. The western and eastern ends echo the

design of the front facade, complete with a hipped roof and central stack. The western extension likely replaced a previous rear addition.

- 3.8.114 The setting of 'Ellices' (**1297247**) is characterised by its location at the end of a settlement, set back from the bustling main road via a small driveway. The asset enjoys a modest buffer from the road, thanks to a garden and a sizable hedge. Its broader setting encompasses the busy road and stretches out to agricultural fields to the north, west, and south, while the eastern view is dominated by neighbouring residential buildings including the Havering Grove Farm (**7042**) with which it has a historical link. Overall, its setting makes a minor contribution to its value, and it extends to the draft Order Limits.

#### *Non-Designated Heritage Assets*

- 3.8.115 A post medieval to modern railway crossing (**7041**) is located approximately 265 m to the east of the draft Order Limits within the centre of Section G, to the north-east of Hutton. This extant asset is shown on the 1898 OS map. Today it is protected by five-barred metal gates. Two other crossings (**7030/31**), now gone, were located close by and served the same function. These assets are of **negligible value** as they do not further the knowledge of the local historic environment data on how its post medieval and modern population cross a railway line. They do have limited historical and evidential value as could aid in identifying the way in which the post medieval population of Brentwood traversed the landscape.
- 3.8.116 A building survey was conducted at Rayleigh Farm on seven post medieval buildings (**7042**). The farm is located approximately 75 m to the east of the draft Order Limits within the central part of Section G, to the east of Hutton and west of Billericay. The HER does not provide much information on the farm, nor its buildings save for a mention of an early 19th century timber framed barn. Based on satellite imagery, the buildings are extant but now serve as residential properties. These assets are of **low value**, and they have historical and evidential value as they can further the historic environment knowledge on extant and non-extant post medieval farm or agricultural buildings within this part of Essex. They can provide information on how they were built, used, maintained, developed.

#### **Ingrave**

- 3.8.117 'Church of St Nicholas' (**1205640**) is a Grade II\* listed building within Ingrave, located c. 2.5 km of the draft Order Limits. This asset has a **high value** based on its evidential, historical, communal, and aesthetic value. Constructed in the early 18th century, it replaced two medieval parish churches that were closed by an Act of Parliament. Designed in the style of Hawksmoor, this red-brick church features notable architectural elements. The interior is predominantly plain but includes original doors, casements, and a charming octagonal font dating back to the early 16th century. The exterior exhibits semicircular arches, round casements, and impressive details such as the church's octagonal tower, crowned with semi-octagonal turrets. It holds numerous brasses and memorials, reflecting its historical connections. Notably, the church has a font, pulpit, and organ with historic significance, adding to its evidential and historical value. Its substantial aesthetic value is attributed to its architectural style, the integrity of the design, and the period elements that have been preserved.
- 3.8.118 The setting of the Church of St. Nicholas is characterized by its location within the churchyard, which is near an active school. It is surrounded by residential buildings and accessed via a private road, set back from the bustling main road that runs through the village. The churchyard features several mature trees, creating an open

atmosphere. While there are no immediate views from the churchyard, the church spire becomes visible from a distance. Additionally, a brick wall lines the roadside, providing definition to the church's presence within the community. Overall, the church's setting is marked by its close connection to the local school and residential area, offering a sheltered environment despite its proximity to the busy village road. Therefore, it makes a moderate contribution to the asset's value. Due to the distance, the setting of the church does not extend to the draft Order Limits.

- 3.8.119 'Heatleys' (**1197236**) is a Grade II listed building located along Middle Road, c. 2.1 km of the draft Order Limits. It is a **medium value** structure dating back to the 16th and 17th centuries. Its architectural value lies in its timber-framed and rendered structure, which has been added to and modified over the years, including substantial extensions in 1902. The house's layout suggests that it may have originally served as the Rectory for Ingrave in the early 17th century, providing accommodation for the clergy and various auxiliary buildings. It retains historical and architectural elements that contribute to its value as a Grade II listed structure.
- 3.8.120 Its setting is informed by its location in a rural area. The house is set back from a rural road in a yard surrounded by some mature trees. Further are agricultural fields giving a sense of space. Overall, its setting makes considerable contribution to its value, however, the setting does not extend to the draft Order Limits.
- 3.8.121 The **high value** Grade I listed Thorndon Hall (**1297212**) is located at the heart of the Grade II\* listed Thorndon Park registered park and garden (**1000314**), the Thorndon Park conservation area (**CA18**), c. 500 m west of the western outskirts of Ingrave, c. 1.4 km west of the draft Order Limits. Thorndon Hall was built as a large country house in 1764-70 by James Paine for Lord Petre, but it was converted in to 84 apartments in 1980. The asset comprises a porticoed Palladian palace rectangular central block with quadrant wing pavilions. The central and western section of the asset were burnt out in 1878 and the rest allowed to decay until the conversion of whole complex, including stables was undertaken in 1980.
- 3.8.122 The setting of the hall is informed by its location within the Thorndon Hall Grade II\* listed park and garden (**1000314**) and by its relationship with non-designated outbuilding to the east and west, which are recorded on the first edition OS map of 1881. The setting is further informed by the asset's relationships with the Grade II\* listed 'Chantry Chapel and Mausoleum' (scoped out of the DBA) and the Grade II listed 'Orchard House With Garden Wall and Orchard Wall' (**1197256**) c. 420 m to the south-west. Since the decline of the estate following its abandonment, however, features recorded on OS mapping such as the orchards, a formal garden, water features and landscape features have been lost. Furthermore, the imposition of two golf courses within the parkland has severely eroded the asset's link to the former open grasslands recorded on the 19th century OS mapping and they disrupt views across the parkland to the north and south. Due to some loss of the coherence of its parkland location and its change of function resulting in a large carpark to the north of the asset, its setting makes a moderate contribution to its value. The setting of the asset does not, however, extend to the draft Order Limits as it is restricted by the bounds of the country park.

## Botney Hill

- 3.8.123 'Botney Hill Farmhouse' (**1322862**), is located c. 60 m of the draft Order Limits, within Botney Hill. This structure is a Grade II listed 16th century timber-framed house with a cross-wing and distinctive gables, holds a **medium value** attributed to its historical and aesthetic value. The fusion of architectural elements spanning several centuries, alongside charming features enhance its aesthetic appeal.

- 3.8.124 The farmhouse is positioned adjacent to a bustling and noisy road, with a modest setback amidst a grassy area. It is integrated into a farmyard setting, creating a distinct agricultural ambiance. The broader surroundings encompass rural landscapes dominated by expansive agricultural fields. This setting assessment highlights the property's juxtaposition between a busy road and serene agricultural expanses, contributing to its unique character within the local environment. Overall, the setting makes considerable contribution to its value, and it does extend to the draft Order Limits.
- 3.8.125 Located approximately 110 m to the east of the draft Order Limits is the Grade II listed 'Sudbury Farmhouse' (**1170946**). The farmhouse is of **medium value** due to its evidential and historical values. The property dates to the 16th and 17th centuries, it was altered in the 18th century and renovated in the 20th century. It is two stories tall, timber framed, plastered (now painted) with the half-hipped roof clad in tiles. The building has two large distinctive chimneys, one is original, and one was rebuilt. The building faces Sudburys Farm Road set back by a garden. Immediately to the east of the farmhouse is the farm complex. The first barn may have been converted and the second barn, further along the road, is now in a different ownership and has been converted or residential purposes. Despite the alterations both sets of barns retain their historical character. The farmhouse overlooks, and is surrounded by, agricultural fields. To the west is a farm which now, presumable, farms the land which would have been owned by Sudbury farm. The assets setting, historically and at present, are very similar, even if the fields are no longer owned or managed by the listed farmhouse. Therefore, the setting of the asset makes a considerable contribution to the value of the farmhouse. Due to the flat topography, and proximity of the Project, the assets setting extends into the draft Order Limits.
- 3.8.126 To the east of the draft Order Limits, by approximately 675 m, is the Grade II listed 'Salmons Farmhouse' (**1338435**). The farmhouse is of **medium value** due to its evidential and historical values. The farmhouse was constructed in the 18th or early 19th century and comprises a weatherboarded timber frame structure. The roof is half hipped on its east and west sides, with a catslide to the north, and clad in tiles. It is two stories tall with attics. The farmhouse is still connected to its still working farm complex to the south. The farm complex has its own entrance but can still be accessed from the farmhouse. The farmhouse and farm complex are surrounded by well-established trees and along the roadside there is a well-established vegetation which mostly screens the assets from view. However, the farmhouse can be seen from the road through the entrance to its driveway. This gives a sense of enclosure to the farmhouse and farm complex. The farmhouse is set back slightly from the road by a garden and a gravelled driveway and parking area. The curving road to the west forms a junction with Sudbury Farm Road, there is a large green area to the south of this junction. The buildings of Ninge's Farm are located immediately north of the asset on the north-western flank of Tye Common Road and there is a farm shop further to the north-east and residential development along the western flank of Tye Common Road to the south of the asset. Ninge's Farm is recorded on the first edition OS map of 1881, but the buildings now appear to be residential properties. The present setting of the farmhouse is largely consistent with its historical setting. Therefore, the setting makes a considerable contribution to the asset's value. Due to the distance and intervening well-established vegetation the setting of the farmhouse does not extend into the draft Order Limits.
- 3.8.127 'Hatches Farmhouse' (**1170037**), a Grade II listed property, attains **medium value** due to its notable historical and aesthetic value. This house, a product of the 16th century, features a timber-framed structure with a jettied first floor and casement

windows. The roof is clad in tiles. It is located west of the Little Burstead conservation area (**CA14**), c. 735 m east of the draft Order Limits.

- 3.8.128 The setting of Hatches Farmhouse is characterised by its location adjacent to a busy road, although it can offer moments of tranquillity. The property is set back from the road, providing a buffer with a garden and a substantial hedge. It forms a part of a larger farm complex and is surrounded by a broader setting comprising agricultural fields and dispersed settlement to the south-west. This overall setting makes a moderate contribution to the asset's value, but due to an associated high evergreen hedgerow and mature trees and scrub flanking Hatches Farm Road to the west, the setting does not extend to the draft Order Limits.

### Little Burstead

- 3.8.129 'Stockwell Hall' (**1122207**) a Grade II\* listed property formerly owned by the Earl of Mexborough, is located within the Little Burstead conservation area (**CA14**), c. 700 m east of the draft Order Limits. This 16th-17th century timber-framed and plastered house, refronted in the 18th century, exudes historical and architectural value. Its façade features a parapet, and the double-hung sash windows, thoughtfully arranged, display glazing bars, complemented by moulded cornices and sills on stub brackets. The inclusion of louvred shutters adds to its aesthetic appeal. An open porch extends from the front. Notably, the east gable boasts a 18th century bellcote, beneath which rests a large clock face adorned with intricately crafted figures, initially composed of blackened bones, and subsequently replaced by wood. The roof, covered in classic tiles, offers visual interest with two small gabled dormers and a centrally positioned three-light gabled dormer, creating an attractive half-hipped roofline. Additionally, the property is accompanied by remnants of a moat, adding to its historical context. Although the building has been altered and retains few of its original features, its historical, architectural, and aesthetic qualities make it **high value**.
- 3.8.130 Stockwell Hall occupies a quiet setting along a rural country road, though it experiences moderate traffic. The property is set back from the road, encompassed by a well-maintained garden and substantial fencing, contributing to its seclusion. It marks the end of a quaint village, which greatly informs its setting. Beyond the immediate surroundings, the landscape extends to encompass a golf course and expanses of agricultural fields. The settlement atop a high ridge adds to the picturesque backdrop, although dense vegetation unfortunately obstructs any significant views. Additionally, Stockwell Hall's setting is influenced by its location within the Little Burstead conservation area (**CA14**) and its relationship with remnants of an unrecorded moat. The setting contributes considerably to the value of the asset, and due to vegetation and topographical features the setting does not extend to the draft Order Limits.
- 3.8.131 Within the **CA14** is also the Grade II listed building 'Hope House' (**1306258**). It is located along Clock House Road, c. 1.1 km east of the draft Order Limits. It is an early 19th-century red brick residence with hipped slate roof, offering **medium value** primarily attributed to its historical and aesthetic values. The house presents a stately presence, standing tall at three stories and boasting a symmetrical five-window range. Notably, the central section is stuccoed and features pilasters, creating a focal point that enhances its aesthetic appeal.
- 3.8.132 Its setting is primarily informed by its location within the **CA14** and a residential area. Shielded from the road by mature vegetation, the house stands at the heart of the village, adjacent to the village green. However, the immediate proximity to a busy main road, results in consistent traffic noise. The rural village environment provides a

serene backdrop. A gate, lined with a high brick wall and adorned with animal busts on either side, marks the property's entrance and hides it. Overall, the setting makes a moderate contribution to its overall value. Also, due to the presence of modern infrastructures, as well as the dense vegetation and topographical features, the setting does not extend to the draft Order Limits.

## Dunton

- 3.8.133 'Dower House' (**1197181**) is a Grade II listed building, located north of Dunton, along Billericay Road, c. 415 m of the draft Order Limits. This house, a residence with origins dating back to the early 17th century, possesses both historical and aesthetic value. The structure combines timber-framing from the early 17th century with brick cladding added around 1700. This fusion of architectural styles creates a visually intriguing and historically significant building. Despite some alterations in the 20th century, the house retains its historical value and integrity. Therefore, Dower House is considered of **medium value** due to its compelling blend of historical and architectural value.
- 3.8.134 Dower House is situated along a busy road, providing accessibility while maintaining a sense of privacy through its well-maintained garden. Located within a linear, dispersed settlement, the property enjoys a relatively restricted setting that combines its convenient roadside situation and semi-rural surroundings. This setting makes a moderate contribution to its value, but due to neighbouring properties with associated mature vegetation, the setting does not extend to the draft Order Limits.
- 3.8.135 'The Old Dog Public House' (**1205513**) is a Grade II located north of Dunton, along Billericay Road, c. 555 m of the draft Order Limits. The house, with its historical and aesthetic values, possesses a **medium value**. This early 18th-century timber-framed establishment has seen extensions and modifications in the 19th and 20th centuries, creating a layered historical character. Its distinctive weatherboarded exterior, featuring sash windows and original shutters, contributes to its aesthetic appeal.
- 3.8.136 The setting of the Old Dog Public House is informed by its roadside location within the dispersed residential settlement along Billericay Road. The setting is further informed by the asset's relationships with other built elements of the settlement and by agricultural land to the north and south-west with which the asset has a historical relationship. the setting of the asset, therefore, makes a moderate contribution to its value, but due to its restricted roadside nature, the setting does not extend to the draft Order Limits.

## Basildon

- 3.8.137 South-west of Basildon is 'Church of St Mary' (**1235020**), located c. 1.75 km east of the draft Order Limits. The church is Grade II listed and has **medium value** due to its historical and aesthetic value. Designed by William White in 1876, it is constructed from Kentish ragstone with sandstone plate-traceried windows and tiled roofs. The church features a three-bay nave with a north aisle, a lower chancel, a south porch, and a west tower. The interior highlights include an arcade with stout circular columns, beautifully crafted trussed roofs with ornate carved angels on the chancel ceiling, and an elegant geometric patterned floor, enhancing its historical and aesthetic worth.
- 3.8.138 The setting of the Church of St. Mary is influenced by its immediate proximity to a roadside, with the entrance facing the road. To the south, the church is bordered by the road and adjacent residences, while the north and west sides are encompassed by a substantial woodland. Beyond the woodland lie fields, which hold a historical

connection with the church. In summary, the church's setting makes a moderate contribution to its value, but it does not extend to the draft Order Limits.

## Herongate

- 3.8.139 The Grade II listed asset 'Park House' (**1205615**) is located along Brentwood Road, A128, c. 1.6 km west of the draft Order Limits. The asset is **medium** in value and has historical and aesthetic significance. The 18th century asset, extended in the early 20th century, is built from red brick in Flemish bond and is roofed with hand-made red clay tiles. The large early 20th century extension to the rear is Georgian in style.
- 3.8.140 The setting of the asset contributes considerably to its value. The asset is located on the border of the conservation area of Thorndon Park and within the registered park and garden of Thorndon Hall to the west and the settlement of Herongate to the north and Ingrave beyond that. The asset is located down a private driveway within a private garden setting, separated from the road by mature vegetation and high fencing. The asset is visible from the busy Brentwood Road however in some places. The setting of the asset is most rural but on a peripheral village setting. Whilst the setting of the asset has changed in some respects with the transition from some agricultural land to land in use for golf courses. Whilst this has changed part of the function of the landscape to the east, this does still maintain the more rural, vegetated nature of the landscape, also providing some screening between the asset and the draft Order Limits. The assets setting is linked mainly to its location within the registered park and garden of Thorndon Hall as well as the edge of the conservation area of Thorndon Park and the periphery of the settlement of Herongate. Because of this the setting of the asset does not extend to the draft Order Limits.

## Laindon

- 3.8.141 The Grade II listed asset 'Raybourne Cottage' (**1122243**) is located along Rectory Road, c. 1.75 km east of the draft Order Limits. The asset is **medium** in value and has historical value. The asset is a 17th-18th century timber-framed and plastered house. The asset comprises two-storeys, with a jettied first storey and has a cross wing on the northern end of the house and a tiled roof.
- 3.8.142 The setting of the asset contributes moderately to its value. The asset is located within a small private garden set back from the road down a long driveway. There is another much newer building built next to the asset that is not contemporary with the asset. Moreover, the asset appears to be in a poor state and may possibly be undergoing repairs. Aerial imagery from 2023 indicates that the roof is partially removed, and the roof timbers can be seen. The property is lined by a mature hedge with some mature trees. The asset has historically been located within a dominantly rural and agricultural landscape. Despite the immediate agricultural fields surrounding the assets property and their presence in the wider landscape, there has been a shift in some of the land use in the landscape surrounding the property. More of the rural land is now occupied by settlements, with a small settlement which has grown to the east of the asset and the substantial development of Laindon and Southfields to the south of the asset. Also, to the south of the asset, c. 660 m south is the modern development of the main thoroughfare of the Southend Arterial Road A127. As such the asset is located primarily in a rural landscape but that is on the periphery of a more growing urban landscape. Despite the possibility of intervisibility between the asset and the draft Order Limits, the setting of the asset does not extend to the draft Order Limits.
- 3.8.143 The Grade II listed asset 'Rose Cottage, Ivy Cottage' (**1122259**), is located along Dunton Road, c. 845 m of the draft Order Limits. The asset is **medium** in value and

has historical and aesthetic significance. The asset is 18th century in origin and is built from a timber frame then plastered and weatherboarded. The asset comprises one storey and has a tiled roof, half hipped at the east and west end with four hipped dormers.

- 3.8.144 The setting of the asset contributes moderately to its value. The asset is located along the Dunton Road within a small linear settlement, bordered to the north by the road and south by a large agricultural field. The historical setting of the asset was that of a purely agricultural landscape intersected by small patches of woodland and small settlement. This contrasts with the current landscape surrounding the asset which is much more heavily developed and has transitioned away from an agricultural landscape in some areas. This is particularly evident to the south of the asset, where beyond the immediate field to the south there has been great development in the form of the main thoroughfare of the A127 Southend Arterial Road, c. 190 m south and beyond that the vast sprawling settlement of Southfields with two large industrial parks to the south of the A127. To the north of the asset more of the rural and agricultural landscape has been maintained with large fields beyond the river Crouch still present. Because of the alternation to the landscape, the industrial development limiting views to the south, as well as the mature vegetation along the Dunton Road and the Brentwood Road separating the asset from the draft Order Limits, the setting of the asset does not extend to the draft Order Limits.
- 3.8.145 The Grade II listed asset 'Wayletts' (**1121459**) is located down a private driveway off the Brentwood Road in the small settlement of Dunton Wayletts, c. 75 m east of the draft Order Limits, which is located directly opposite the asset on the western side of a small off shoot of the Brentwood Road. The asset is **medium** in value and has historical value. The asset is 16th century in origin, built with a timber-frame, plastered and with a tiled roof. The west front was originally jettied on the upper story but in the 18th century was underbuilt.
- 3.8.146 The setting of the asset contributes considerably to its value. The setting of the asset has changed since its construction, from a small linear settlement of Dunton Waylett to a more sprawling linear settlement close to the main thoroughfare of the A127, Southend Arterial Road, which is located c. 110 m south of the asset. the asset is located within a well-maintained garden and is set back slightly from the roadside and behind a low brick wall which then rises to the north and there are various farm style outbuildings to the east of the asset that appear to be associated with the property. There are also other building structures which appear to be focused around a central courtyard on the OS six-inch England and Walkes map surveyed 1866 to 1874, published 1881, of which two are possibly still standing within the farm complex to the north of the asset's property, along with new additions. To the east of the asset is an open grass field which the asset over looks. Due to the proximity, the intervisibility between the draft Order Limits and the asset as well as the draft Order Limits passing through the fields opposite the asset which are part of its historical and functional setting as part of the farm associated with the asset's property, the setting of the asset does extend to the draft Order Limits.
- 3.8.147 The following two assets form a group on the edge of Dunton:
- 3.8.148 The Grade II listed asset 'Church of St Mary' (**1122253**) is located off Church Lane, c. 70 m west of the draft Order Limits. The asset is of **medium value** and has evidential, historical, aesthetic, and communal value. The asset was re-built in 1873 by William Gibbs Bartleet, incorporating 13th century, 14th century and 15th century medieval period style features, perhaps to mimic features of the earlier church on the site. The north-west bay of the chancel incorporates Tudor brickwork also. The asset

in 1995 was internally altered and divided for use as a residential building with the floor of the asset being raised. Some 15th century timbers supporting the belfry remain intact and in place, including substantial arch braces to a tie-beam.

- 3.8.149 The Grade II listed asset 'Dunton Hall' (**1338380**) is located down a private track which continues from Church Lane, c. 70 m east, 80 m north and 165 m west of the draft Order Limits. The asset is of **medium value** and has historical and aesthetic significance. The asset was likely built in the 18th century but has a 19th century brick front and was renovated in 1974.
- 3.8.150 The setting of both assets contributes moderately to their value. As OS six-inch map of England and Wales dating revised in 1895 and published 1898, shortly after the rebuilding of the Church of St Mary, indicates that the church and hall were in a rural and agricultural landscape, with the London Tilbury and Southend Railway (running east to the west) appearing in the landscape around the time the Church of St Mary was rebuilt. The hall still sits within its grounds with associated buildings as part of the property. The land immediately west of the assets now is in use by Dunton Hills Family Golf Centre. Also, just beyond the railway line, to the south, is a solar farm. To the east of the assets, just beyond the small linear settlement of Dunton, is a new gated bungalow residential development site with the large sprawling settlements of Southfields and Laindon beyond that. The assets whilst still within a more rural setting is located on the edge of a growing urban landscape. The assets are located on an area of higher ground, with lower terrain to the west and south, extending the assets views over the landscape. The proximity of the draft Order Limits to the assets and the open environment surrounding the assets, even with some mature vegetation surrounding the church grounds, means that there would be visibility between them and the draft Order Limits. Because of this proximity and intervisibility the setting of the assets does extend to the draft Order Limits.

## West Horndon

### *Designated Heritage Assets*

- 3.8.151 The Grade II listed asset 'Dunton Hills' (**1208245**) is located on the private road, Dunton Hills Farm, located off Tilbury Road A128, c. 290 m north of an draft Order Limits access road and c. 990 m west of the draft Order Limits. The asset is **medium** in value and has historical and aesthetic value. The asset comprises a house with an attached cottage which were built c 17th century with later 19th century and 20th century additions. The asset is built in black brick with red brick dressings. The cottage to the rear was restored in the 20th century in red brick with weatherboarding. The asset has a peg-tiled hipped roof and in in an 'L' plan formation.
- 3.8.152 The setting of the asset contributes considerably to the value of the asset. Whilst the asset is still surrounded immediately by some agricultural fields which make up its key historic setting and functional relationship to the landscape, there has been significant development surrounding the asset within the wider landscape. These changes include the addition of the London Tilbury and Southend Railway in the second half of the 19th century to the south of the asset, the Dunton Hills Family Golf Centre to the south and the main thoroughfare of the A127 to the north. The settlements of Laindon and Southfields have also grown considerably since the construction of the asset. Because of this the rural landscape surrounding the asset is beginning to be encroached upon by continued development in all directions. There would be a high level of visibility between the asset and the draft Order Limits

due to the high elevation of the land which the draft Order Limits passes through. The draft Order Limits also pass through the agricultural land close to the asset and as such the setting of the asset extends to the draft Order Limits.

### *Non-Designated Heritage Assets*

3.8.153 There are a series of non-extant field boundaries located within Section G:

- To the west of Fryerning, and partly within the draft Order Limits in the north of Section G (**7008** - MEX1031198)
- Located partly within the draft Order Limits within the central part of Section G, to the north-west of Billericay (**7007** - MEX1031193)
- Located adjacent to the draft Order Limits within the southern central part of Section G (**7003** - MEX1031044)
- Located partly within an arm of the draft Order Limits within the central part of Section G, to the south-west of Burstead (**7004** - MEX1031186)
- Located to the west of Billericay and approximately 185 m south of the draft Order Limits is a rectangular crop mark (**7044** - MEX1031044)

3.8.154 Some of these field boundaries can be seen on the first edition OS map. They became non-extant due to the development of modern agricultural machinery which allowed for larger fields to be cropped. It is not clear how old these field boundaries are but they more than likely date to the post medieval period as they conform to this time periods field boundary design. These differ from older time periods i.e., medieval fields were long and thin whilst post medieval fields were larger. These assets are of **negligible** value as they show how the land was used by the local population. They have limited historical and evidential value because of this. It is not unreasonable to assume that further features of this type could be located within the Oder Limits.

## Modern

3.8.155 The modern period for Section G comprises of assets from WWI and WWII which shows how the local population defended their villages and practiced vital trench digging. These aid in the understand where of there were certain critical or important junctions, roads etc.

### **Mountnessing**

3.8.156 A WWII bomb crater (**7001**) was located approximately 120 m west of the draft Order Limits. The crater can be seen as an earthwork. It is of negligible value and has limited historical and evidential value.

### **Billericay**

3.8.157 'Norsey Wood' (**1019485**), scheduled monument, also contained World War I slit practice trenches 300 m long. Slit trenches comprised of: a denticulated forward position with firing steps, each step is 5 m long, a series of connecting passages and a service trench. Although these trenches were common during the war few survive as many were backfilled after the war. The trenches in Norsey Wood are well preserved and are a rare survival of trench layout and construction. Due to their rarity and preservation, they are of **high value** and have evidential value. During World War II the woods were once again used for military purposes. Six trenches were cut, these were covered with corrugated iron and used to store ammunition. A much larger dug-out was also created, this required timber shoring and a ventilated ceiling,

also for munitions storage. These later features add to the history and importance of the asset. In 1979 the woods were designed a Site of Special Scientific Interest. This adds to the significance of the asset.

3.8.158 The asset's setting is discussed above in para 3.8.52.

### Hutton

3.8.159 An Alan-Williams steel turret (**7013**) was located approximately 80 m to the west of the draft Order Limits within the northern part of Section G. It could be seen standing on the grass beneath a tree in a field to the west of Church Lane and Rayleigh Road junction, in Hutton. However, this may not have been the assets' original location. The HER reports that this was south side of Rayleigh Road approximately 60 yards west of the junction, where the bus lay-by is now located. The lay-by may be the reason the asset was moved. The asset would have sat on rollers on a steel, circular tank set four feet into the ground. Two men would have manned a machine-gun inside which would have swing the turret through 360 degrees and provide fire support in the event of an assault on the road barrier at the junction. The turret is no longer extant.

3.8.160 Located close by was a road barrier (**7014**) and it was described as 12 pimples, wiring, and iron uprights. This is now non-extant. The two assets indicate that this road junction was of strategic local importance. The assets are of **negligible** value as they are no longer extant, and the turret was not located in its original position. These turrets and road barriers were not an uncommon feature during WWII. They do have historic value as it shows local defences were created and would have been manned by local troops or the home guard.

### Undated

3.8.161 The assets within this section are from no fixed time. They are mainly represented by crop marks which offer a variety of hints as to what they could be and from what time they are from. Once these assets have been archaeological examined, they function and date can, within reason, be established but until then they are unknown, and no conclusions can be made.

### Fryerning

3.8.162 The cropmarks of a small ring ditch and other linear features (**7015**) are located partly within the draft Order Limits within the northern part of Section G, to the east of Fryerning. The asset cannot be found on any online aerial photograph websites and could not be found on Lidar data. The HER is uncertain of the date of this asset but suggests that it could be a ring ditch, and therefore, potentially of prehistoric date representing a round house or small barrow. The asset is currently of **low value** but could potentially be of **medium value** if shown to represent prehistoric or funerary activity. It does have the potential to contain historic and evidential value.

### Billericay

3.8.163 A rectangular enclosure (7043) can be seen on Lidar within the eastern part of a field. The field is located within the draft Order Limits and within the central part of Section G to the west of Billericay. It is aligned nearly north to south. It is not clear what time this feature dates to. It does not confirm to the current field layout and no other similar features can be seen in surrounding fields. Archaeological intervention could date and established the nature and character if this asset. This asset is of **low value**, but if the enclosures are shown to be related to settlement activity, they could

potentially be of **medium value**. They have the potential to hold contain historic and evidential value.

- 3.8.164 Located partly within the draft Order Limits, within the southern central part of Section G to the south-west of Billericay, are three circular cropmark features (**7026**). The HER reports them to either be former ponds or possibly bomb craters, these could either be medieval, post medieval or modern in date. They are all c. 20 m in diameter. Also located within the same fields as these features are cropmark field boundaries. The first edition OS map shows that the southern field was a woodland at this time and the northern field was agricultural in origin. Two field boundaries can be seen in this northern field which cannot be seen today. What dates these field boundaries are as they conform to the layout of fields seen in the map. The field boundaries, particularly the eastern one is a continuation of a sweeping boundary that could be much earlier in date as it forms a large enclosure. These assets have historic and evidential value and are of **low value**.
- 3.8.165 A cropmark of a rectangular enclosure (**7009**) can be seen on aerial photographs (Google Earth Pro) in July 2013, June 2018, April 2020, March 2022, but it cannot be seen on Lidar data. The features are located partly within the draft Order Limits towards the southern part of Section G to the south-west of Billericay. The asset is located on a slightly raised area which overlooks an area to the south-east and south-west. The enclosure is aligned south-west/north-east. It has two long straight sides. The southern end could be curved but it is difficult to tell on the aerial imagery. The northern end maybe abutted by a non-extant trackway or field boundary. The date and function of this feature is unknown. Further cropmarks of another rectangular enclosure (**7025**), aligned nearly east/west) and other field boundaries can be seen in the field to the west. These do not conform to the present field alignment. Their date is therefore unknown, as is their function. Archaeological intervention could date and established the nature and character if this asset. These assets are of **low value**, but if the enclosures are shown to be related to settlement activity, they could potentially be of **medium value**. They have the potential to hold contain historic and evidential value.

## 3.9 Section H: Thurrock Council

### Location

- 3.9.1 Section H, the final Section of the Project, is located wholly within the County of Essex and the District of Thurrock. Section H begins at the Brentwood/Basildon/Thurrock District border on the railway line between West Horndon to the west and Basildon to the east. From its northern limit, Section H heads south bypassing the settlements of Bulpham, Horndon on the Hill, Stanford le Hope and East and West Tilbury before terminating at the Tilbury Substation 700 m north of the Thames. Section H of the Project accounts for approximately 14 km of its overall length.

### Topography

- 3.9.2 From the railway line on the Brentwood/Basildon/Thurrock District border at 27 m aOD, the draft Order Limits passes southwards through a very gently undulating landscape between 15 m aOD and 20 m aOD to Doesgate Lane. From here, the land gently rises to 41 m aOD immediately south-west of Langdon Hills golf course. The draft Order Limits then turns to the south-west and descends quickly to 15 m aOD 500 m east of the A128 where it turns once more to the south. The gently undulating

landscape from this point lies at 11 m aOD to 15 m aOD before it climbs to 30 m aOD immediately west of Orsett Road 725 m south-west of Horndon on the Hill. Turning to the south-east the draft Order Limits crosses Orsett Road and passes through an undulating landscape between 18 m aOD and 29n aOD before crossing the A13 at 22 m aOD. From the A13, the draft Order Limits climb through an undulating landscape between 28 m aOD and 35 m aOD and follows Buckingham Hill Road before curving around the north-west of Linford and then turning southward. The draft Order Limits then descends into a gently undulating landscape between 10 m aOD and 22 m aOD before crossing Church Road at 17 m aOD 260 m south-east of West Tilbury. The draft Order Limits then enters the low-lying Tilbury Marshes at between 1 m aOD and 5 m aOD and terminates Tilbury Power Station at 2 m aOD.

## Geology

- 3.9.3 The solid geology of the northern half of Section H consists of clay, silt, sand, and gravel of the London Clay Formation. As the Project approaches the Thames, the solid geology comprises of bands of clay, silt, sand and gravel of the Lambeth Group, sand of the Thanet Formation and finally chalk of the Lewes Nodular Chalk Formation. To the north of the Stanford-le-Hope By-Pass (the A13), the superficial deposits comprise head deposits of clay, silt, sand, and gravel incised by alluvial deposits of clay, alluvial clay, silt, sand, and gravel in the floors of watercourses that feed ultimately into the Mar Dyke river that flows into the Thames at Purfleet. South of the A13, the superficial deposits are mixed comprising head deposits of clay, silt, sand and gravel; alluvial clay, silt, sand and gravel in the floors of watercourses; sand and gravel of the Black Park Gravel Member; sand and gravel of the Boyn Hill Gravel Member; sand and gravel of the Taplow Gravel Member; sand and gravel of the Lynch Hill Gravel Member; and at the southern limit of Section H, alluvial clay, silt, sand and peat of the Tilbury Marshes.

## Historic Landscape Characterisation

- 3.9.4 Section H of the Project is wholly within the District of Thurrock and is located largely within National Character Area 111: Northern Thames Basin with its last 2.6 km south of Muckingford Road situated in National Character Area 81: Greater Thames Estuary. National Character Area 111 is characterised by the suburbs of North London, historic towns, and cities and in the Project, by moderately dispersed settlements, arable land, and river valleys; whilst National Character Area 81 is predominantly a remote landscape of shallow creeks, drowned estuaries, low-lying islands, mudflats and broad tracts of tidal salt marsh and reclaimed grazing marsh. In the east, in contrast to London in the west, it has few major settlements and retains its Medieval pattern of small villages and hamlets on higher ground and the marsh edges. Sea defences protect large areas of reclaimed grazing marsh and its associated ancient fleet and ditch systems, and productive arable farmland (Natural England accessed 14/04/2023).
- 3.9.5 The Essex landscape of the National Character Areas and within the District of Thurrock has been further divided into Historic Environment Character Zones (HECZ) as defined, in Section H, by the *Thurrock Unitary Historic Environment Characterisation Project* (ECC 2009). The information included in the following section of this report ending at paragraph 4.3.14 is largely draw from this source. The northern third of the Project in Section H is located within HECZ 8.2: Land between Bulphan and Langdon Hills. The zone comprises the eastern part of Bulphan Fen and the slopes rising to higher ground at Dunton, Langdon and Horndon. This is a

predominantly rural zone, with a dispersed historic settlement pattern with a fieldscape of rectilinear enclosures of ancient origin but with some boundary loss. There are several Medieval moated sites, as well as timber-framed farmhouses and barns of 15th-18th century date. The clay land is not conducive to cropmark formation; however, localised concentrations of archaeological deposits and sites indicate Prehistoric, Romano-British, and medieval settlement activity in this zone.

- 3.9.6 Heading south, the draft Order Limits passes in to HECZ 7.6: Sticking Hill. This zone has a dispersed settlement pattern comprising isolated farmsteads and there are several 16th to 18th century buildings, including Arden Hall at the north-east. The zone is predominantly rural, and its rectilinear fields would have been enclosed at an early date. There are cropmarks of a ring ditch and a linear track or boundary, but otherwise the archaeological character of the zone is not well defined. Evidence from pipeline work has shown the presence of Roman finds within the zone.
- 3.9.7 The next encountered zone is HECZ 7.5: Orsett Cock and land to north of the A13. This zone consists of an enclosed agricultural landscape of rectilinear fields with individual farmsteads including the 16th century timber framed Saffron Garden with its brick walled garden. There are extensive cropmarks throughout the zone demonstrating a range of archaeological features, which should have a high survival ratio due to the relatively undisturbed nature of the landscape. The zone has kept its ancient rectilinear system of fields with hedgerows, that likely has ancient origins. This zone is characterised by extensive cropmarks indicative of multi-period settlement. A circular cropmark, just to the west of Loft Hall, has been interpreted as a Class 2 Neolithic henge with two opposed entrances. Early Bronze Age burials were discovered in several pits during road widening for the A13, and there are several ring ditches. A Late Iron Age triple-ditched enclosure, characteristic of south Essex, was excavated in advance of construction of the Orsett Cock roundabout and an Iron Age open settlement has been excavated in the far south-west of the zone. Other cropmarks include annular and penannular gullies, rectilinear features, double ditches, pits and trackways, sub-rectangular enclosures, and a large curvilinear enclosure to the south-west of Saffron Garden. Although many of the cropmarks are undated, they represent a significant potential for the presence of multi-period archaeological deposits.
- 3.9.8 The draft Order Limits then passes simultaneously in to HECZ 7.2: Mucking and Linford and HECZ 7.3 Mucking Heath. HECZ 7.2: Mucking and Linford to the east has a landscape characterised by a gravel terrace and the head waters of Mucking Creek with the historic village of Mucking, which has Late Anglo-Saxon origins, is located on the edge of the terrace. Extensive nationally important excavations identified an earlier settlement further to the south-west, with evidence for occupation between the Neolithic and Anglo-Saxon periods. The agricultural landscape around the settlement was enclosed at an early date and there are patches of Ancient Woodland. The zone lies within a Pleistocene river valley, with the potential for deposits containing artefacts and faunal remains from the lower and middle Palaeolithic, and two hand axes were found to the north-west of Mucking churchyard. Extensive excavations within the zone have revealed evidence of early Neolithic activity whilst the Bronze Age is represented by round barrows, an extensive field system and two circular enclosures with two concentric ditches. Domestic and burial activity attests to continuing settlement during the Iron Age and Romano-British period and there was an early Anglo-Saxon hamlet associated with two cemeteries, which was abandoned sometime after the 8th century.
- 3.9.9 Historic Environment Character Zone 7.3: Mucking Heath, to the west, had a dispersed and polyfocal historic settlement pattern with an early enclosed agricultural

landscape of small irregular fields, although there has been some boundary loss. Between 1917 and 1919, the northern part of the zone was a first-class landing ground used by 78 Squadron RFC on home defence duties. Subsequently, a RASC camp was built, and AA batteries were installed before World War II. The zone lies within a Pleistocene river valley, with the potential for deposits containing artefacts and faunal remains from the lower and middle Palaeolithic. The main archaeological character is defined by the extensive cropmarks including the scheduled Orsett Neolithic causewayed enclosure which lies in the west of the zone. There are cropmarks of trackways, ring ditches and enclosures indicating extensive multi-period occupation from the Bronze Age through to at least the medieval period.

- 3.9.10 Heading south, the draft Order Limits again simultaneously passes in to two zones with HECZ 7.1: West Tilbury to the west and HECZ 7.11: East Tilbury and surrounding land to the east. The historic dispersed and polyfocal settlement pattern of HECZ 7.1: West Tilbury largely survives. West Tilbury, and the area to its south-west, includes a length of rampart with an internal ditch reputed to be the site of a high-status residential Saxon hall. Fields in the northern part of the zone, north of Muckingford Road, are early heathland enclosures dating to 16th century or possibly earlier. The zone lies within a Pleistocene river valley, with the potential for deposits containing artefacts and faunal remains from the Lower and Middle Palaeolithic and finds from the gravel pits at Gun Hill include a Lower Palaeolithic handaxe and several flint flakes and cores. There are extensive cropmark complexes comprising rectilinear and circular enclosures, linear features and pits and excavations in 1969-70 west of West Tilbury revealed a series of Late Bronze Age boundary ditches and postholes. There was also evidence for Iron Age domestic enclosures and Romano-British pottery kilns in this area. West Tilbury Common Field contains cropmarks that may represent a previous settlement centre, as well as evidence for strip farming which continued there into the 19th century.
- 3.9.11 The HECZ 7.11: East Tilbury and Surrounding Land comprises both rural landscapes and 20th century factory and housing developments. The historic settlement pattern within this zone was dispersed, although some ribbon development was established along the north/south route of a Roman road heading towards a former Thames crossing. The fieldscape suggests early enclosure, with small irregular fields characteristic of heathland assarts. The zone lies within a Pleistocene river valley, with the potential for deposits containing artefacts and faunal remains from the lower and middle Palaeolithic, although no Palaeolithic finds are known from this zone. There is a range of cropmarks in the zone and archaeological evaluation around East Tilbury has revealed multi-period occupation with Bronze Age enclosure. In the north-west of the zone a Bronze Age double-ditch round barrow was excavated in 1960, and there are ring-ditch and rectilinear enclosure cropmarks in the eastern and northern parts of the zone. An Iron Age enclosure was excavated in the south, and the Roman road may be pre-Roman in origin.
- 3.9.12 The draft Order Limits then passes in to HECZ 9.3: Low Street and West Tilbury Marshes. This zone comprises a rural landscape of small, rectilinear enclosed field systems on the grazing marsh to the south and contains the historic hamlet of Low Street. There are two potential Romano-British 'Red Hill' salt-working sites at the east of the zone and some Romano-British pottery was found in a gravel pit immediately south of Low Street. There are also a series of undated linear cropmarks in the north-east corner of the zone. The remains of World War II anti-glider trenches appear as low earthworks or cropmarks forming crosses within fields.
- 3.9.13 The draft Order Limits then passes in to HECZ 9.2: East Tilbury Marshes. The rural landscape of this zone consisted of predominantly small, irregular fields with

extensive drainage ditches that might suggest enclosure at an early date. This marshland reclamation would have provided extensive grazing, a characteristic feature of the Essex marshes, however, much of this landscape has subsequently been lost to quarrying. There is evidence for Romano-British settlement and land-use along the coastal marshland area including, below the present high tide level, the remains of hut circles with substantial scatters of 1st and 2nd century AD Roman pottery. Further pottery was found elsewhere along and close to the shoreline, and there is a possible 'Red Hill' Romano-British salt-working site in the north of the zone. A medieval sea wall was in the south-west of the zone, and World War II anti-glider trench, which appear as low earthworks or cropmarks forming crosses within the fields, are apparent. Within the zone there is also the potential for the survival of palaeoenvironmental sequences.

- 3.9.14 The draft Order Limits extends a little way in to HECZ 10.3: Tilbury Fort and Power Station at its south-western limit. This zone has the 17th century scheduled Tilbury Fort at its western edge but the small portion of the draft Order Limits that falls within the zone to the east is occupied by Tilbury Power Station. This zone, therefore, are not discussed further in the HLC section of this report.
- 3.9.15 The landscape of Essex is broken down further into smaller parcels described as Historic Landscape Character Types and defined in *The Historic Landscape Characterisation Report for Essex, Volume 2* (Bennet 2011). The HLC Type data has been supplied by the Essex HER and analysis of it has shown that, in Section H, the Construction Zone passes through a landscape largely defined by **low value** areas of common post 1950s boundary loss, which accounts for 21.45% of the Essex landscape (Bennet 2011). Also included within the bounds of the Construction Zone in Section H are dispersed parcels of **low value** 20th century enclosure, 18th-20th century woodland plantation, built-up areas - urban development, orchard, mineral extraction, and disused mineral extraction.
- 3.9.16 Elsewhere within the Construction Zone in Section H there are parcels of:
- Occasional **low value** dual-axis - rectilinear 'co-axial' fields (HEX2418, HEX31272, HEX2446, HEX31278, HEX2193, HEX31141, HEX2160, HEX2447, HEX31077), which account for 5.22% of the Essex landscape (Bennet 2011). Dual-axis or 'Dengie-form' fields are like co-axial fields but exhibit dual axes, meaning their field boundaries run in two directions, roughly at right angles to each other. The fields are small and irregular in form, with corners being slightly offset, sinuous rather than geometrically regular. They usually run parallel with or across the contours of the land, despite the land being relatively flat. This field type has a deep history, and some examples may have Romano-British or older origins; middle to late Anglo-Saxon dates have also been suggested
  - Occasional **low value** Piecemeal Enclosure by Agreement (HEX2444, HEX2201, HEX2207, HEX31167, HEX31081), which accounts for approximately 8.97% of the Essex landscape (Bennet 2011). These fields were created to subdivide a pre-existing earlier field system and are characterised by straighter boundaries. Dating of origin is difficult but they usually predate the introduction of the later formal Parliamentary Enclosure Acts, and thus may relate in certain parishes to the earlier acts of enclosure
  - Rare **medium value** Ancient Woodland (HEX2137, HEX2136), which accounts for 2.54% of the Essex landscape (Bennet 2011). Ancient Woodland is defined by Natural England (2018) as 'land that has had a continuous woodland cover since at least 1600 AD'. The predominant species are deciduous, broad-leaf trees and shrubs. In the Essex HLC, this category also includes traditional wood-pasture,

such as seen at Hatfield Forest, where single or small groups of pollarded trees occur in pasture alongside small coppice-with-standards managed woodlands

- Rare areas of **medium value** Boundary Loss – with relict elements (HEX31123), which account for 2.07% of the Essex landscape (Bennet 2011). These represent field boundary loss since the 1950s due to mechanisation and changes in agricultural practices. This may range from the loss of a single boundary merging two fields into one, or many field boundaries being removed to form a single field. The resultant field is a hybrid and palimpsest, with edges that may have several periods of origin. The surviving edges of these fields are of historic importance
- Rare **medium value** Enclosed Meadow (HEX2095), which accounts for 1.69% of the Essex landscape (Bennet 2011). These are sinuous fields that border rivers, often forming part of the flood plain of the river. Many of these areas were established in medieval times
- Rare **medium value** pre-18th century curvilinear drained reclamation (HEX41373, HEX41374, HEX41377), which accounts for 1.21% of the Essex landscape (Bennet 2011). This type is a coastal land drainage pattern of a sinuous or serpentine form, draining low coastal lands to estuaries or the sea. All examples of the type of pre-date the earliest map sources and may originate from the medieval or post medieval period

## Conservation Areas

### Horndon on the Hill

3.9.17 Horndon on the Hill is a **high value** conservation area (**CA27**) situated to the north-west of the larger settlement of Stanford le Hope and is c.430 m north-east of the draft Order Limits at its closest point. The conservation area is surrounded by rural fields and beyond that to the south the A13 and the sprawling settlement of Stanford le Hope. To the west of the conservation area is a newer residential section of the settlement of Horndon on the Hill. The conservation area is 4.45 ha in size and is aligned largely north to south along the main High Road which runs through the centre of the settlement and its historic core. At its closest point, the conservation area is 480 m north-north-east of the draft Order Limits.

3.9.18 The conservation area of Horndon on the Hill maintains much of the character of the medieval town, with alleys, street pattern, burgage plots and buildings still surviving. The earliest roots of the settlement are Saxon, and the settlement was likely the location of an 11th century Saxon mint, one of only three in Essex in the period. Some possible enclosure defences around the settlement may remain to the east of High Road. It is also likely the 13th century medieval church had a Saxon predecessor, as one is mentioned in the Domesday Book. However, most of what remains of the settlement is the medieval settlement pattern, when the settlement officially became a town and administrative centre for the growing wool trade, with some post-medieval additions and alterations. Overall, the Horndon on the Hill conservation area deserves its high value because of its evidential value, which traces the settlement's potential Saxon mint origins and the presence of a pre-13th century church documented in the Domesday book. Its historical significance is further exemplified by the thriving medieval trade centre and principal wool trade, reflected in the well-preserved medieval and post-medieval buildings that line the main High Road. Its aesthetic value is evident in the architectural diversity of these historical structures and although communal value has diminished over time, the

conservation area's picturesque and quiet setting, surrounded by rural fields, enhances its overall value.

- 3.9.19 The setting of the Horndon on the Hill conservation area is informed by views along High Road, South Hill, and Orsett Road, which take in the numerous medieval and post medieval listed buildings that line the routes as well as several other non-designated post-medieval buildings recognised as contributing to the character of the conservation area. The high facades of the buildings fronting onto the main thoroughfare of High Road and South Hill restrict outwards views with alleyways and Orsett Road providing only glimpses beyond. There are, however, some green spaces including the church's graveyard and on the approach to the settlement along South Hill, although these are privately owned gardens. The setting of the conservation area creates a sense of enclosure, and its insular nature emphasises the architecture of the buildings lining the fossilised medieval street plan. The setting of the conservation area, therefore, makes a substantial contribution to its value, but due to its insular nature and restricted external views, the setting does not extend to the draft Order Limits.

## Orsett

- 3.9.20 Orsett is a **high value** conservation area (**CA29**) situated to the north of the A13 and Chadwell St Mary and north-east of the settlement of Chafford Hundred. The conservation area is c. 1.4 km west of the draft Order Limits. The conservation area is flanked to the north, west and south by 20th century development and beyond that a rural agricultural landscape with some patches of dense vegetation on the north-western edge of the settlement. The conservation area is 6.18 ha in size and largely forms an L-shaped design along High Road and Rectory Road. At its closest point, the conservation area is 1.35 km west-south-west of the draft Order Limits.
- 3.9.21 The conservation area is focused on street plan the once small medieval market and fair, centred around the Church of St Giles and All Saints and the T-junction at High Road and Rectory Road. The conservation area also includes later areas of post medieval development. Orsett has Anglo-Saxon origins, with 61 households recorded in the Domesday Book putting it in the largest 20% of settlement recorded. The surrounding landscape has yielded evidence of Palaeolithic and later prehistoric activity, whilst cropmarks infer Iron Age/Romano-British settlement and agriculture. The **high** value of the conservation area is because of its evidential and historic value, with the medieval origins of the village present within the layout of the central part of the historic centre of the village, centred around the Grade I listed church of St Giles and All Saints (**1147049**); however, the village has seen significant 20th century expansion. The village also holds significant aesthetic value with the appearance of the built heritage and vernacular character of the structures within the conservation area, including the many early timber framed buildings close to the church. The buildings within the conservation area in many cases make use of locally sourced materials and skills. Many early buildings within the conservation area have features hidden behind facades following agricultural prosperity in the 18th and 19th centuries.
- 3.9.22 The setting of Orsett conservation area is informed by views along High Road and Rectory Road that take in the medieval church and the numerous post medieval listed buildings that line the routes as well as several other non-designated post-medieval buildings recognised as contributing to the character of the conservation area. Rectory Road is relatively wide and many of the buildings lining the thoroughfare are set back creating a moderately open streetscape, although external views are largely screened by the buildings themselves and by mature vegetation in

gardens to the rear. High Road by comparison is narrower, and with the notable exception of the church, buildings generally front directly on to the thoroughfare, resulting in a greater sense of enclosure. Again, views out of the conservation area are limited and are not considered to contribute to its character. The nature of conservation area is largely insular and focused on the fossilised medieval street plan, which emphasises the architecture of the listed and non-designated buildings and internal views to and from these assets. The setting of the conservation area, therefore, makes a substantial contribution to its value, but due to its insular nature and restricted external views, the setting does not extend to the draft Order Limits.

## West Tilbury

- 3.9.23 West Tilbury is a **high value** conservation area (**CA28**) located between Chadwell St Mary and East Tilbury, c. 2 km from the river Thames. The settlement of West Tilbury includes a conservation area which is split into a larger western section and a smaller eastern section. Tilbury (West and East) is recorded in the Domesday Book and the ongoing medieval history of the settlement can be observed with the continued presence of a medieval open field system, church, and other buildings. A medieval market and fair, dating from the 14th century, were once held on the site of the green in the centre of the village. West Tilbury Manor is likely built upon the remains of the former medieval 'Domesday Manor' adjacent to the church.
- 3.9.24 The western section of the conservation area includes, as well as the manor and church, the scheduled monument 'Earthworks near church, West Tilbury' (**1002199**), which may potentially represent the remains of the Saxon settlement, but also remains of earlier periods. Also included is The Great Common Field, as labelled on 19th century OS mapping, which is defined by Rectory Road, Turnpike Lane, Blue Anchor Lane and Muckingford Road and is a complete example of a medieval open field system. The listed buildings in this section of the conservation area are largely clustered around the Green and the medieval core of the settlement, but the church and hall with its associated barns outlie to the south and the 15th century Marshall's Cottage flank Blue Anchor Lane to the north. The church and hall, and the core of the settlement c. 180 m to the north, are situated on the edge of a low escarpment, and so the built form of West Tilbury is dominated by the adjoining and surrounding landscape (TC, 2007a). The draft Order Limits passes through the western section of the conservation area at its southern extent, immediately east of the church and scheduled monument.
- 3.9.25 The eastern section of the conservation area is focused on the Low Street group of buildings located at the junction of Church Road and Low Street Lane. The buildings include non-designated asset considered to benefit the character of the conservation area and two listed buildings one of which, Walnut Tree Cottage, dates to the 15th century. The draft Order Limits clip the southern extent of the eastern section of the conservation area.
- 3.9.26 The setting of the western section of the conservation area is informed by the interrelationships between the designated assets and non-designated buildings, particularly those assets arranged around the Green and on the fossilised medieval street plan. From here there are also key views to the north and The Great Common and Marshall's Cottages and to the church to the south whose bell tower can be seen from the Green breaking above the tree line. The setting is further informed by surrounding agricultural landscape, over which the conservation area has several open views particularly around the perimeter of The Great Common to the north and across the lower land south from the church. The setting of the eastern section of the conservation area is informed by the interrelationships between the two listed

buildings and those non-designated assets identified as contributing to the character of the conservation area. Internal views are, however, often interrupted by mature trees and hedges restricting intervisibility, but conversely introducing a sense of discovery as new vistas open as the traveller passes through. The setting is also informed by the surrounding agricultural landscape, and although not visible from the heart of the conservation area, there are wide, open views to the west, north and east from selected assets and from the thoroughfares. The high value of the conservation area is because of its historical and evidential value because of the long-standing human activity in the area with many crop mark features, through to Roman finds and road nearby. The activity in the conservation area has historical association with Queen Elizabeth I, where she addressed her soldiers during the Spanish Armada. Further value is present in the historic road layout illuding to longstanding periods of activity as well as the presence of the scheduled monument indicating development from a pre-Saxon to Medieval settlement. The Medieval preservation within the village is key, with little change happening to the plan of the village nor to the medieval open field system to the north. Further historical value is present in the 13 listed buildings within the conservation area. There is aesthetic value too in these buildings, with many listed buildings lining the quaint central triangular village green adding to the atmosphere of the village. Many of the buildings in the village retain their basic forms of architectural design, such as timber framing, but with some external alterations due to agricultural prosperity during the 18th and 19th centuries. Some medieval and Tudor buildings have maintained their timber frames however, these are mostly farm buildings, The setting of the conservation area makes a substantial contribution to its value and due to its intersection with the Project, the setting extends to the draft Order Limits.

## East Tilbury

- 3.9.27 East Tilbury is a **high value** conservation area (**CA30**) situated close to the banks of the river Thames, just to the west of the shoreline. The conservation area is located c. 960 m north-north-west of the historic core of East Tilbury, as illustrated on the OS six-inch map from 1863 to 1865 and is focused on the former factory complex of the British Bata Shoe Company and a large housing development of some 352 houses in a 'garden village' setting (TC 2007b).
- 3.9.28 The British Bata Shoe Company Factory complex and housing development was begun in 1933 following the purchase of farmland by Tomas Bata. The settlement was designed by architects of international importance from Zlin (now in Czech Republic), home of the parent Bata Shoe company. The housing was built in stages between 1933 and the mid 1960's with the oldest buildings found on Bata Avenue in the Czech style set in a staggered 'chequerboard' layout to maximise the garden space to each property. The eight structures forming 16 dwellings on the northern flank of Bata Avenue are all Grade II, whilst three of the large factory buildings to the south are similarly graded. All the remaining buildings of the factory complex and housing estate are significant as they contribute to the character of the conservation area.
- 3.9.29 The setting of the conservation area is informed the relationships between the factory buildings and housing, by the uniformity of the architecture for the two elements and by the planned nature of the settlement. The setting is further informed by views of the surrounding rural landscape, although this has been eroded to the east by later 20th century residential development. The **high** value of the conservation area is because of its historical value and its links to the Bata Shoe Company which led to the development to the area of settlement which is now covered by the conservation

area. The town is an example of a purpose-built industrial settlement, constructed with the factory and its workers in mind. Aesthetic value is also present within the conservation area due to the extensive and detailed level of planning that went into the design and layout of the settlement. This included the factory sites, housing, public facilities, and green spaces. This is highlighted in the division of the settlement into five separate zones, all indicating various styles of modern movement architectural style. Despite the loss to some of the public green spaces over time their landscaping and purpose within the settlement is still evident. The architecture of the settlement may not be considered stereotypically aesthetic, but it represents well the function design of the structures associated with the factories and how many structures were purpose built with a common style behind them all and the town. The setting of the conservation area makes a substantial contribution to its value, and due to clear views to the west and the Project from several of the factory buildings, the setting extends to the draft Order Limits.

## Gravesend

3.9.30 The settlement of Gravesend is located on the southern bank of the Thames opposite Tilbury on the northern bank. Evidence of prehistoric activity in the area is limited to stray finds including items such as Neolithic axes and Iron Age coins (GBC 2009a). Archaeological excavations within the town have identified evidence of Roman and Saxon settlement activity and so it is likely that Gravesend has sustained habitation since the early part of the Roman occupation of Britain. Gravesend is recorded in the Domesday Book and the ensuing medieval period saw the settlement develop as a market town as farming produce was traded along the river. The medieval town was centred around High Street and West Street and the Grade II\* listed Milton Chantry was built in the 14th century. The later medieval and post medieval periods saw the development of defensive structures including the scheduled monuments Gravesend Blockhouse and New Tavern Fort. The Industrial Revolution saw the residential and industrial expansion of the town with much of the industry focused on the production of building materials. In the latter half of the 20th century the town went into decline as the river lost its relevance to life in the town, but at the end of the century and on into this, there has been a general regeneration of the town, particularly along the riverside. Gravesend contains four conservation areas, which are situated within the Project study area, and these are assessed below.

## Riverside Gravesend

3.9.31 The **high value** Riverside conservation area (**CA33**) encompasses the river frontage of the settlement from St Andrew's Gardens south of Royal Peir Road in the west to the canal basin between Canal Road to the south and Gordon Promenade East to the north in the east (GBC 2009b). It includes the Gravesend Blockhouse and New Tavern Fort, both scheduled monuments, and extends to the south to include Gordon Pleasure Gardens and Gordon Recreation Ground. To the north, the conservation area includes Royal Terrace Pier, which extends out into the Thames. A striking feature of the conservation area is the large open space of the Gordon Pleasure Gardens, which contain the listed Milton Chantry and the New Tavern Fort scheduled monument. The pleasure gardens provide principal views including from the top of the fort across the river to Tilbury; from New Tavern Fort through the gateway into Milton Place; within New Tavern Fort; and from outside the gardens along the Thames shore towards the New Tavern Fort. The building stock of the conservation area is rich and varied comprising the 14th century chapel; 18th century government administrative buildings; 18th and 19th century fortifications; 19th century residential

two-storey housing; Early 20th century local amenity buildings; 20th century government administrative buildings; and 20th and 21st century blocks of flats. The buildings are of different scales, materials and designs creating an interesting mix of structures. Principal views of the streetscape flanked by these buildings include along Gordon Promenade and the river in both directions; along The Terrace to the spire of the parish church; from Royal Pier Road towards the Clarendon Royal Hotel; and from Khartoum Place into Gordon Gardens.

- 3.9.32 The setting of the Riverside conservation area is informed by the mixed and varied architectural styles of the building stock, which includes a scatter of listed buildings and non-designated buildings deemed to contribute to the character of the conservation area, and the relationships of the structure and how they interact with the open spaces. The setting is further informed by the Thames that greatly influenced the history and development of the town. There are open views to the north across to the northern bank of the Thames, particularly from within the pleasure grounds atop the earthworks of the fort. The **high** value of the conservation area is because of its historical and evidential value associated with the 14th century Milton Chantry and Post Medieval coastal defences, represent 170 years of estuarine defence, located at the heart of the conservation area. Aesthetic value is evident from the well-maintained pleasure gardens which joins onto the scheduled monument and extend to the east, and which joins onto the public promenade along the river to the north of the conservation area. Communal value is in the use of the conservation area primarily as a public space where people can also explore and engage with the heritage assets located within the scheduled monument. The setting of the conservation area makes a substantial contribution to its value but does not extend as far as the draft Order Limits.

### High Street and Queen Street Gravesend

- 3.9.33 The **medium value** High Street and Queen Street conservation area (**CA34**) is focused on the medieval core of the settlement. The High Street connects the town to the Thames to the north and the Grade II\* Town Pier, which developed from the original landing stage. For many centuries the High Street was the hub of the settlement, which prospered as the first port on the river for travellers and trade (GBC 2009c). The town flourished around the crossroads of Town Pier Square, East Street, West Street and High Street and its connection to the river led to its 19th century heyday when Gravesend became the most popular resort used by day-trippers coming from London by steamboat. The High Street is lined by tall, tightly packed historic buildings, several of which are listed, and Princess Street to the west and Queen Street to the east have also retained historic form and character leading to their inclusion in the conservation area. The high-density grid layout of the conservation area limits open public spaces; however, Elizabeth Gardens is located at the western end of the conservation area north of Crooked Lane and the Gardens of Rest surrounding the Grade II\* Church of St George and the adjacent Pocahontas Gardens are situated on the western flank of Princess Street. Many of the principal views are insular along the various thoroughfares of the conservation area and taking in listed buildings and non-designated structures considered to contribute to the character of the conservation area. There are, however, principal views across the Thames to its northern bank from the Town Pier, Elizabeth Gardens, and the public footpath along the shoreline.
- 3.9.34 The setting of the High Street and Queen Street conservation area is informed by its narrow streets, by the retention of its tall, historic buildings flanking the thoroughfares and the interrelationships between these assets. The setting is further informed by

the Thames that greatly influenced the history and development of the town. There are open views across the Thames, particularly from within Elizabeth Gardens and the Town Pier. The setting of the conservation area makes a substantial contribution to its value and this setting includes the Thames, but the setting does not extend as far as the draft Order Limits.

### Harmer Street Gravesend

- 3.9.35 The Harmer Street conservation area (**CA31**) extends from the Harmer Street/The Terrace intersection in the north to the Harmer Street/Milton Road intersection in the south. The conservation area is of **medium value** and encompasses the residential buildings lining the thoroughfares that were constructed as a planned development on former farmland in 1840 (GBC 2009d). Harmer Street was a prestigious development of four storey terraced townhouses that was built on a newly created road. The architect, A. H. Wilds, created a classical design with regular placement of windows and doors that extend along the road. At the southern end of Harmer Street, Berkley Crescent is lined with three storey yellow brick buildings in a semi-circular buildings arc with a colonnade and facing a clock tower. The development was the beginning of an enterprise to build a 'New Town' in the largely undeveloped Milton-next-Gravesend next to the crowded town and wharf area. In subsequent years the development was embellished by the laying of the Terrace Gardens to the north and the addition of the Royal Terrace Peir, the Grand Theatre, and the Grade II listed clock tower, which was built in 1887 with public donations to commemorate Queen Victoria's Golden Jubilee. Both the gardens and theatre are now lost, but the pier and clock tower remain with the former included in the Riverside conservation area. The conservation area is largely insular in nature with views along the throughfare hemmed in and directed by the high density of tall, four storey buildings. To the south, however, the continuation of New Town along the same road alignment in The Grove (formerly Upper Harmer Street) can be viewed from Berkeley Crescent and there are limited views through to other historic and modern residential developments outside the conservation area from Terrace Street and West Crescent Road at the rear of Harmer Street.
- 3.9.36 The setting of the conservation area is informed by its immediate, largely enclosed streetscape and views north and south along Harmer Street that takes in a handful of Grade II listed buildings. The setting is further informed by the interrelationships between the listed buildings and the non-designated assets that positively contribute to the character of the conservation area. Berkeley Crescent in the south creates an open space within the conservation area and allows for views along Milton Road east and west and to the south along The Grove. The setting of the conservation area makes a substantial contribution to its value, but due to limited external views, particularly to the Thames to the north, the setting does not extend to the draft Order Limits.

### Milton Place Gravesend

- 3.9.37 The Milton Place conservation area (**CA32**) is of **medium value** and lies to the east of the historic centre of Gravesend and encompasses the western flank of Milton Place, East Terrace, which terminates at The Terrace in the north, and small sections of Milton Road's shopping parade and Wellington Street in the south (GBC 2009e). Milton Place was laid out in the early 19th century on farmland immediately to the west of the scheduled New Tavern Fort earthworks and fortifications. From the 1820s the Milton Place properties were built as desirable residences, some of which were initially occupied by pilots who could view their ships at anchor and have easy access

to the riverside piers. Milton Place retains many of these fine early and mid-19th century houses with interesting Italianate and classical architectural features and proportions. East Terrace features an interesting mix of historic buildings with some modern development inserted between and generally has a tighter built form than Milton Place. The combination of tall prestigious buildings and modest terraced houses on varying building lines creates an exciting architectural juxtaposition, although there are some less successful 20th century additions to the streetscape. Principle views attributed to the conservation area include along Milton Place in both directions; along the north-east side of East Terrace in both directions; the now closed Pilot Public House from the south; into New Tavern Fort to the east; and north from East Terrace to the Grade II listed Custom House in the Riverside conservation area and the Thames beyond.

- 3.9.38 The setting of the conservation area is informed by views within and of its streetscape and by the interrelationships between the few scattered listed buildings and the non-designated assets that positively contribute to the character of the conservation area. The setting is further informed by views of the scheduled New Tavern Fort from Milton Place to the east, which contributes to the appreciation of time-depth and history. The view from East Terrace to the Thames and its northern bank beyond also contributes to the setting and emphasises the maritime origins of the settlement. This setting makes a substantial contribution to the value of the Milton Place conservation area, and despite views to the northern bank of the Thames, the setting of the conservation area does not extend to the draft Order Limits.

### King Street Gravesend

- 3.9.39 The King Street conservation area (**CA62**) is located approximately 1.88 km to the south of the draft Order Limits. It is of **medium value** and has aesthetic and historical value. The conservation area focuses on 18th and 19th century buildings connected with the commercial expansion of Gravesend (GBC 2007). The primary area is the central east to west aligned New Road, King Street and Milton Road. Some of these routes were established for stagecoach use. The buildings that line these streets have shop fronts on their ground floors and accommodation above. These buildings are occasional broken up by civic, public houses, the county court and a church, and residential properties (GBC 2007). All the buildings vary in style and height which adds to the richness of the heritage of the area. The conservation area is largely pedestrianised and great care has been given to retain many of the historical street furniture and public realm assets.
- 3.9.40 The conservation area lies to the south and east of the medieval core of Gravesham. It is surrounded by commercial and residential neighbourhoods. It is a busy part of Gravesend both with locals and visitors. The pedestrian access allows for a calmer pace of life and the route ways are congested with people and not cars. The route ways are a vital part of the conservation area. They have excellent views to other conservation areas to the west and east. There are few open or communal spaces within the area, so the flow and movement of people and traffic (in the non-pedestrian areas) are important. The setting and use of the conservation area adds considerably to its value. The setting does not, however, extend into the draft Order Limits due to the intervening urban form.

### Baseline Introduction

- 3.9.41 The following historic environment baseline for Section H of the Project is presented by chronological archaeological period and from north to south. Section H is further

broken down into geographic parcels to allow the reader to orientate and to locate where on the appropriate figure a particular heritage asset is illustrated. These geographic parcels are largely defined by current settlements but also occasionally by landscape features such as high points and valleys and by anthropogenic features such as roads and railways. Each parcel of Section H is introduced and described only in the first archaeological period where it is appropriate to be used to avoid repetition.

## Prehistoric Period

### Prehistoric

#### Stanford-le-Hope to Linford (east of the draft Order Limits)

- 3.9.42 This area of section H includes the land to the east of the draft Order Limits that is in and around Stanford le Hope, continuing south past Mucking and towards Linford. Stanford le Hope is a settlement which borders the A13 on the east side of the draft Order Limits, with an elevation of c. 12 m aOD. Stanford le Hope is situated north of the small settlement of Mucking and west of Corringham. The elevation of the land on the western boundary of the settlement is at its highest, rising to c. 40 m aOD by Buckingham Hill Road which is within the draft Order Limits and is the highest point within this area. Mucking is a small settlement close to the banks of the river Thames and the coastal marsh land, and as such has a lower elevation c. 6 m aOD. The settlement is slightly larger than that of Mucking and it situated just north of the 20th century settlement of East Tilbury. The terrain elevation around Linford is c. 13 m aOD, however the terrain to the north of the Linford rising towards Buckingham Hill Road and Hoford Road. The areas on land between Stanford le Hope to Linford that are outside of the settlements comprise of a mixture of rural fields and industrial areas (e.g., quarry).
- 3.9.43 A programme of archaeological monitoring including trial trenching and excavation revealed features from the Neolithic, Late Bronze Age and Roman period. These were found between approximately 70 m east and 385 m north-east of the draft Order Limits near East Tilbury (**8025**). The features included a late Neolithic to Early Bronze Age double enclosure consisting of an annual ditch with sub rectangular ditch extending to the west with an entrance to the south. A single cremation was located within the centre of the sub rectangular enclosure. A small Middle Bronze Age barrow and two other truncated barrows were also excavated. Possible double drove ways let up to these features. A Middle Bronze Age coaxial field system that was aligned north-east to south-west was located within the northern part of the excavation. A Late Bronze Age settlement, enclosed by a substantial ditch was identified in the eastern part of the investigated. Roman features included part of a field system and a number of pits and postholes. This and the pottery evidence suggest at a settlement nearby. These are of evidential value and are of **medium** value.

### Palaeolithic

#### Stanford-le-Hope to Linford (east of the draft Order Limits)

- 3.9.44 A multi-period site located c. 1470 m west and 126 m east of the draft Order Limits yielded lower palaeolithic implements of the Chellean lithic industry (**8003**), found on Saffron Garden Farm. They were found during a watching brief on an area stripped for a new barn. This asset holds evidential and historical value and is of **low** value.

- 3.9.45 A few rolled flint artefacts tentatively ascribed to the Palaeolithic period (**8125**) were recovered during a large archaeological evaluation of land partially within the draft Order Limits and 300 m west of Mucking. The assemblage, however, contained no clearly identifiable tools. The asset has historical and evidential value and is **low value**.

## Mesolithic

### Stanford-le-Hope to Linford (east of the draft Order Limits)

- 3.9.46 The HER records the asset 'Mucking Creek Valley' (**8107**) which is located c. 20 m east of the draft Order Limits. The HER records a macehead axe made from a naturally perforated nodule flint dated to either the Mesolithic or Neolithic periods. The macehead holds historical and evidential value and is of **low value**.
- 3.9.47 A Mesolithic site at Mucking (**8162**), located c. 320 m west and 330 m east of the draft Order Limits. Mesolithic activity at the site is indicated by the presence of a tranche axe, some microliths, and the use of a blade technology. The asset has evidential and historical value and is **low value**.

## Neolithic

### Stanford-le-Hope to Linford (east of the draft Order Limits)

- 3.9.48 An archaeological evaluation of land immediately west of Butts Lane, Stanford-le-Hope, and 125 m south-east of an draft Order Limits access road (**8031**) identified multi-period archaeological remains including two pits dated to the early Neolithic. These assets hold evidential and historical value for their below-ground remains and are of **low value**.
- 3.9.49 Archaeological excavations on the eastern flank of Brentwood Road, 480 m north-north-east of Chadwell St Mary and c. 170 m west and c. 245 m east of the draft Order Limits, identified a large Bronze Age circular enclosure and slight evidence of Neolithic activity (**8010**). The earliest material is represented by two joining late Neolithic sherds of Mortlake-style pottery from a pit and from the enclosure ditch and some residual flint artefacts. No features can be assigned to the Neolithic period. The artefacts hold evidential value and are of **low value**.
- 3.9.50 From 1965 until 1977, 18.22ha of farmland partially within the draft Order Limits and 300 m west of Mucking was archaeologically investigated in advance of mineral extraction. The fieldwork identified a multi period palimpsest of over 44,000 archaeological features that were excavated and recorded (Clark 1993). Evidence of possible Neolithic settlement activity (**8056**) comprising a polished stone axe, lithics, pits and pottery including early Neolithic Mildenhall ware and later Peterborough and Grooved wares, was identified during the archaeological fieldwork. The site has now been destroyed by quarrying. The settlement activity has evidential and historical value and is of **low value**.
- 3.9.51 A Neolithic axe head (**8133**) was recovered from farmland partially within the draft Order Limits, immediately south-east of Hoford Road and 1.1 km north-west of East Tilbury. The axe head has evidential value and is assessed as **low value**.

### South-west of the A13 to Chadwell St Mary (west of the draft Order Limits)

- 3.9.52 The area south-west of the A13 to Chadwell St Mary covers land west of the draft Order Limits, and includes Chadwell St Mary, Southfields, Orsett Heath, Orsett Golf Course, and terminates at Muckingford Road where West Tilbury begins. The

landscape outside of the settlements comprises mainly rural fields as well as a large golf course, with intervening roads and some larger thoroughfare roads such as A1089 and connecting roads to the A13. The highest point of land in this area is around The Bonners, Orsett Gold Course and Southfields at 36 m aOD. The elevation of the land then reduces towards Chadwell St Mary slightly, at around c. 24 m aOD, rising again within the settlement of Chadwell St Mary. The areas around Orsett Heath and High House Lane vary in elevation between c. 23 and 28 m aOD.

### *Designated Heritage Assets*

- 3.9.53 The scheduled monument 'Causewayed enclosure and Anglo-Saxon cemetery 500 m ENE of Heath Place' (**1009286**) is located c. 250 m north-west of the draft Order Limits and 650 m north of Chadwell St Mary. This asset comprises a Neolithic causewayed enclosure with evidence of Iron Age occupation and at least five Anglo-Saxon round barrows. The land slopes gently away from the monument towards the south into the valley of a small tributary of the Thames. To the east and west it slopes into smaller dry valleys. The monument is not visible at ground level; however, the monument survives in the form of buried features, recognised as cropmarks on aerial photography. The cropmarks include three circular ditches, interrupted by irregular causeways, c.160 m in diameter. The outer two ditches are 10 m apart and a palisade trench with three breaks, coinciding with those in the outer ditch, lies between the inner and middle ditches. Internal features including postholes and pits can be seen within the enclosed area on aerial photographs. Within the southern section of the inner circle, aerial imagery shows at least five round barrows evident as ring ditch cropmarks, ranging between c. 8 and 13 m in diameter, with a circular ditch c.1-2 m wide. Trail trenching and excavation that took place in 1975 confirmed that parts of the ditches and palisade were dated to the Neolithic. A continuous bank was once present between the two outer ditches, the material used was quarried from the interrupted ditches. The palisade, also a contemporary defensive feature, was present inside the middle ditch.
- 3.9.54 The immediate setting of the asset is that of a rural field, boarded to the west and the south by other rural fields, to the north by quarrying and to the east by the Brentwood Road and Orsett Golf Course beyond. The wider setting of the asset includes the A13, c. 550 m to the north of the asset, the settlement of Southfields, c. 755 m to the north-east of the asset and the settlement of Chadwell St Mary, c. 600 m to the south of the asset.
- 3.9.55 There is some vegetation screening between the asset and the draft Order Limits along the Brentwood Road, with the east side of the road lining the golf course boundary offering the densest screening. There is also vegetation screening within the golf course along the western and southern edge, and intermittently throughout. The land to the east within the golf course has a slightly higher elevation in the landscape, potentially offering some screening to the asset from the area of the draft Order Limits located on the east side of the Orsett Golf Course. There appears to be evidence for two possible palaeochannels, both converging at the south-eastern corner of the golf course. It is at this convergence point that a small unnamed water course is present, the path of the water course hugging the high land to the north-east of the settlement of Linford flowing through the settlement and into the Thames.
- 3.9.56 The setting on the asset on high ground and the potential for palaeochannels supported by the presence of a small water course near Linford today is likely linked to its historical setting in the landscape and the advantageous views and resources afforded to those who built the enclosure on this promontory of land. The setting of the asset was likely informed by the natural watercourses and its elevation, however,

the alterations to the landscape with development of transport, settlements and areas of industry have altered the setting of the monument, alongside the screening provided by the vegetation lining of the Brentwood Road and the elevated land of the golf course mean that the asset contributes moderately to its value and that the setting of the asset does not extend to the draft Order Limits. The causewayed enclosure has evidential and historical value and is assessed as **high value**.

### East Tilbury

- 3.9.57 East Tilbury is a settlement close to the banks of the Thames, c. 930 m to the west of the river, this area also covers the southern part of the settlement that continues down Princess Margaret Road up to Coalhouse Fort and the surrounding rural fields. East Tilbury lies to the east of the settlement of West Tilbury. The settlement is a relatively new settlement developed during the 20th century for the building of the Bata Shoe Company Factory and its workers. The elevation of the land is low here being close to the marshes at c. 8-10 m aOD. There is a slight rise in elevation just south of the settlement where Station Road meets Princess Margaret Road, whilst along Station Road to the west, the land rises to c.15 m aOD.
- 3.9.58 An archaeological evaluation and subsequent excavation were focused on farmland on the western outskirts of East Tilbury and at its closest it is c. 70 m east of the draft Order Limits. The fieldwork identified multi-period archaeological remains (**8025**) that included a Neolithic through to Bronze Age double enclosure and ditch, with a sub rectangular ditch extending to the west with an entrance on the south. A single cremation burial was located at the centre of the sub rectangular enclosure. The site holds evidential and historical value from the below ground archaeological remains and are of **medium value**.

### Area east of Tilbury

- 3.9.59 The area to the east of the modern settlement of Tilbury (located to the west of both West Tilbury and East Tilbury) comprises the settlement of Tilbury and the area around the Tilbury Fort to Tilbury Power Station to its south and the land to its immediate east. The elevation of the area is low and close to the marshy banks of the Thames estuary at c. 5-8 m aOD. The land in this area is comprised of industrial areas, housing, and infrastructure such as the Tilbury Power Station and Tilbury Sewage Treatment Works, the settlement of Tilbury and some rural fields, ultimately leading south to the banks of the river Thames. This area has an extensive military history, with Tilbury Fort, which continued into the 20th century with modern military assets present in the area. Now the area is used primarily by shipping and energy industries.
- 3.9.60 A findspot of a Neolithic flint arrowhead (**8120**) is located c. 1 km north-east of the Tilbury Power Station and c. 200 m east of the draft Order Limits. The asset has evidential and historical value and is **low value**.

## Bronze Age

### Thurrock Airfield to the A13 (west of the draft Order Limits)

- 3.9.61 The area of Thurrock Airfield to the A13 includes the land west of the draft Order Limits, including east of the Brentwood Road and small settlements such as Orsett and Baker Street. This area is comprised largely of rural land, with Orsett being the largest settlement in this area. The elevation of this area varies greatly with the highest areas to the south of the settlement of Orsett and bordering the A13 at c. 34 m aOD. The area around Baker Street is at c. 26 m aOD and the areas to the north

surrounding Orsett village and around Thurrock Airfield are lower in elevation at c. 4 m - 10 m aOD.

### *Designated Heritage Assets*

- 3.9.62 The scheduled monument 'Springfield style enclosure and Iron Age enclosures south of Hill House, Baker Street' (**1009287**) borders the settlement of Orsett and is located c. 2 km west of the draft Order Limits. The monument is located on a low flat-topped ridge on a sand and gravel terrace overlooking Orsett Fen to the north. The monument is represented by a series of buried features which have been recognised as cropmarks from aerial photography. The Springfield style enclosure includes an external ditch, c.70 m in diameter, with an entrance on the eastern side. The traces of a circular building and pits are visible as cropmarks on aerial photographs within the enclosure.
- 3.9.63 Springfield style enclosures are roughly circular enclosures usually found on a hilltop or spur of land and date to the middle/late Bronze Age, with some occupied into the early Iron Age. They are named after a site in Essex at Springfield, one of the few examples in the country which has been fully excavated. They are characterised by a single enclosure ditch with a simple internal bank or box rampart. There is usually one or more circular buildings within the enclosure, which may have many pits or postholes. Their function appears to be domestic and could yield information about the lives of those who occupied them. Typically found in eastern England, surviving as just cropmark sites usually identified through aerial photography, there are thought to be no more than 50 in total and as such all example are nationally important and of great value. The asset at Baker Street is a single ditched example with one circular building containing pits. The enclosure complex is of greater importance due to its association with an Iron Age settlement enclosure complex, demonstrating a continuation in use of the landscape as well as the development of domestic settlements in the area.
- 3.9.64 The asset is situated on the western edge of the settlement of Orsett, south of High Road and West of Mill Lane. The enclosure would have occupied a rural landscape prior to the agricultural development and field divisions present in the landscape today. The asset is located on an area of land that is higher than the land to the north but lower than the land to the south-east. The asset was likely located on this slightly elevated area of land so that it could command views over the landscape to the north and north-west as well as over the water course of the Mardyke which runs through the lowland to the north-west of the asset. Moreover, the asset would have also been close to palaeochannel to the south-east beginning on the south-eastern edge of the Orsett Golf course. Whilst there is the potential for a wider historical association and relationship between the asset and its setting in the landscape as discussed above in relation to watercourse and palaeochannels, the subsequent development since the Iron Age has divided up the land in such a way that there is significant screening and disruption of views by roads and settlements, as well as alteration to the landscape such as a golf course. Therefore, the setting of the asset contributes moderately to the value of the asset and the setting of the asset no longer extends significantly beyond its immediate setting, least not to the south-east and the far side of the settlement of Orsett. As such the setting of the asset does not extend to the draft Order Limits. The asset holds evidential and historical value and is assessed as **high value**.
- 3.9.65 The scheduled monument 'Crop mark complex, Orsett' (**1002134**) is located c. 2.9 km west of the draft Order Limits and is on the western edge of Baker Street and c. 950 m west of the settlement of Orsett and on the north-eastern periphery of the

larger settlement Chafford Hundred. The asset is a multiperiod site, spanning from the Bronze Age to Roman period, and includes activity dating primarily from the Bronze Age, with occupation evidence comprising roundhouses and other associated features, with a round barrow to the south-west of the site. An undated urnless cremation of a juvenile is also located on the southern edge of the site, but as such which period it is associated with is unclear.

- 3.9.66 The asset covers a large area which is now occupied in part by the A13 and the rural land surrounding the main highway through the landscape. The asset is located on an area of high ground within the landscape with low lying terrain to the north of the asset. This elevated aspect of the landscape was likely a key feature in the location of the settlement, which would have commanded views over the landscape to the north over a considerable distance. The placement of the settlement was likely influenced by the location of the Mardyke watercourse to the north-west of the asset, as well as a potential palaeochannel to the south-east, beginning on what is now the south-eastern edge of the Orsett Golf Course. The setting of the asset has changed greatly since its use with the landscape now divided and interrupted in many ways, including large highways, settlements, areas of industry and leisure, as well as the continuous division of rural land for agricultural purposes. As such the extent of the setting of the asset has likely been reduced since that of its contemporary landscape interrupted by main landscape features, in particular the settlement of Orsett, the A13 and A1089. As a result, the setting of the asset contributes moderately to its value and does not extend to the draft Order Limits. The assets hold evidential and historical value and is **high value**.

#### *Non-Designated Heritage Assets*

- 3.9.67 A hoard of five Late Bronze Age middle Bronze Age rapiers and palstaves (**8119**) was found in an old clay pit (now filled in) south of Ongar Hall, c. 190 m south of the draft Order Limits. The hoard has evidential and historical value and is of **low value**.

#### **Stanford-le-Hope to Linford (east of the draft Order Limits)**

- 3.9.68 An archaeological evaluation at Butts Lane, Stanford-le-Hope (**8031**) identified multi-period remains including pits, postholes, ditches, and gullies of middle to late Bronze Age date. Three free throws containing late Bronze Age artefacts were also found. The asset is located c. 130 m south-east of the draft Order Limits. The features hold evidential value and historical and are of **low value**.
- 3.9.69 Archaeological excavations on the eastern flank of Brentwood Road, 480 m north-north-east of Chadwell St Mary and partially within and to the east of the draft Order Limits identified a large Bronze Age circular enclosure with internal building, fences, pits, cremation burials and a sunken-floored structure (**8010**). Distinct phases of activity were assigned to the middle and late Bronze Age and the large finds assemblage included penannular gold rings; a copper alloy socketed axe; clay moulds and a crucible indicative of bronze casting; saddle querns; worked flints; 133kg of pottery; spindle whorls and clay weights suggesting textile production; perforated clay slabs and briquetage. The asset has evidential and historical value and is **medium value**.
- 3.9.70 A programme of archaeological monitoring excavation and watching brief fieldwork was undertaken along the line of the Coryton to Mucking, Mobil Power Cogeneration Gas Pipeline Project (**8146**). On the section of the pipeline east of Butts Lane, 600 m south of Stanford-le-Hope and 100 m east of the draft Order Limits a possible Bronze Age ditch was identified. The asset holds evidential and historical value and is **low value**.

- 3.9.71 Three scatter of prehistoric flint tempered pottery burnt flint and 82 lithics including five blades and a possible arrowhead roughout (**8126/8127/8128**) were identified during landscaping within the St. Cleres Hall Golf Course. The find site is located partially within the draft Order Limits and 100 m west of the south-western outskirts of Stanford-le-Hope. The finds hold evidential value and are of **low value**.
- 3.9.72 The archaeological evaluation of land adjacent to Walton Hall Farm, Stanford-le-Hope (**8030**) identified late Bronze Age pits, postholes, ditches, and a ring ditch from which pottery and lithics were recovered. The site is located partially within an access road of the draft Order Limits and to the north-west and south-east of Walton's Hall Road between Linford and Mucking. The assets hold evidential and historical value and are **low value**.
- 3.9.73 The investigation of the multi-period palimpsest of archaeological remains partially within the draft Order Limits and 300 m west of Mucking identified three phases of Bronze Age activity, with an additional asset just north of the palimpsest of assets, also within the draft Order Limits and c. 700 m west of Mucking. The assets, which are listed below, have historical and evidential value and are **medium** in value.
- Bronze Age features including a large ring ditch, 38 mm in diameter with internal buildings (four and six post structures), fences, pits, cremations, and a sunken-floor structure (**8054**). First observed through cropmarks, the features were excavated in 1978 and interpreted as a Late Bronze Age enclosure. the western side of the enclosure has been subsequently destroyed by gravel quarrying. Following this flint-gritted sherds and fragments of perforated clay slabs were found and then later a possible entrance with butt-ends c.3 m apart was observed. During the Middle Bronze Age, the enclosure comprised a ditch and internal bank, the bank possibly topped by a hedge, there may be three contemporary cremation burials also. This enclosure had two entrances, the main entrance to the east had a rivetted bank with a six-post arrangement. Excavations revealed that there were two distinct periods of occupation during the Later Bronze Age within the enclosure, with minor traces of Saxon occupation that followed. The Late Bronze Age enclosure followed similar lines of the Middle Bronze Age enclosure but was 0.5 m outside of the original ditch and did not have an internal bank. Excavations revealed many post holes, in and around the ring, making 3 circular buildings of four, five and six-post structures, two fence lines and two rectangular structures. More post holes were located to the south. Finds included penannular gold rings, copper alloy socketed axe, clay moulds and a crucible, saddle querns, worked flint, 133kg of pottery, spindle whorls, clay weights, perforated clay slabs and briquetage
  - An early Bronze Age beaker period burial (**8057**). The human remains were in extremely poor condition due to the acidic nature of the natural deposits but enough remained to identify a flexed inhumation. The burial was accompanied by grave goods comprising a complete corded beaker and 11 barbed and tanged arrowheads perhaps representing the deposition of a quiver. The rest of the beaker period pottery recovered across site represents a domestic assemblage (Healey 1993)
  - Early to middle Bronze Age remains comprising a burial, barrows, ring ditches and clay pits (**8058**), some associated with Deverel-Rimbury pottery and lithics (ibid)
  - Late Bronze Age activity dominated by the South Rings enclosure (**8059**). The enclosure is of the Springfield Type and comprised two concentric ditches which measured 4 m wide by 1.5 m deep and some 75 m in maximum external

dimensions, enclosing an area of 0.44 ha. The material from these ditches was used to form a box-revetted bank structure, probably topped by a palisade. The enclosure had two opposed entrances; the main, east entrance had complex entrance buildings with side chambers and gate structures. A circular gully, 12 m in diameter, comprised the principal internal structure. Other internal structures comprised four- and six-post settings, pits, and postholes. Artefacts include fired-clay loom-weights, fire bars, briquetage, and small assemblages of flint and bone; the latter suggesting a partly pastoral economy. Also found were bronze artefacts and crucible mould fragments metalworking debris indication metalworking. Deposition of human cranial fragments and quern stones in the primary fills of the main entrance terminals suggests that the site may have served a multiplicity of functions, both secular and sacred. Other structures in the late Bronze Age landscape include a cluster of three post-built round houses to the north-east and further pit and posthole concentrations (ibid)

### South-west of the A13 to Chadwell St Mary (west of the draft Order Limits)

- 3.9.74 The HER records the asset Cropmarks to the north of Mill House Farm (**8082**) which is located c. 20 m west of the draft Order Limits. The site spans from the late Bronze Age to early Iron Age and has cropmark features of ring ditches, linear-curved features, trackway, enclosures, pits, and a gully. There are also crop marks of a ring ditch and pair of parallel ditches. A circular cropmark is bisected by a hedge, perhaps a barrow as size rules out an Iron Age roundhouse. The HER records a Low Street enclosure that is a possible first century military feature. The asset also contains one of a small group of rectangular enclosures in southern Essex, they are noted as not being forts but still some form of defensive structure. Pottery found during an archaeological excavation was also consistent with late Bronze Age/ early Iron Age activity. The asset holds evidential and historical value and is **high value**.
- 3.9.75 A Bronze Age asset, cropmarks north-west of High House, is recorded c. 200 m south-west of the draft Order Limits (**8155**). The asset represents crop marks indicating two ring ditches, one which is c. 20 m in diameter and the other being c. 10 m in diameter. These ring ditches may be indicative of round barrows. The asset has the potential to have evidential and historical value and is **medium value**.

### East Tilbury

- 3.9.76 The HER records the multiperiod asset 'Land at East Tilbury and Linford Area of prehistoric ritual landscape and Roman field boundaries' (**8025**) which is located c. 180 m east of the draft Order Limits. Features of the site include a late Bronze Age settlement surrounded by a substantial enclosure ditch in the eastern part of the area. The HER records a Neolithic through to Bronze Age double enclosure and ditch, with a sub rectangular ditch extending to the west with an entrance on the south. Single cremation located in the centre of the sub-rectangular enclosure. Also recorded is a mini middle Bronze Age barrow and two further truncated barrows. Due to its evidential and historical value the asset is **medium value**.

## Iron Age

### Thurrock Airfield to A13 (west of the draft Order Limits)

#### *Designated Heritage Assets*

- 3.9.77 The scheduled monument, 'Springfield style enclosure and Iron Age enclosures south of Hill House, Baker Street.' (**1009287**) borders the settlement of Orsett and is located c. 2.04 km west of the draft Order Limits. The monument is located on a low

flat-topped ridge on a sand and gravel terrace overlooking Orsett Fen to the north. The monument is represented by a series of buried features which have been recognised as cropmarks from aerial photography. The Springfield style enclosure includes an external ditch, enclosing an area of c.70 m in diameter, with an entrance on the eastern side. The traces of a circular building and pits are visible as cropmarks on aerial photographs within the enclosure. An Iron Age domestic settlement and associated field system overlay the Springfield style enclosure. The settlement complex includes an 'L' shaped enclosure measuring 210 m by 130 m, surrounded by an enclosure ditch and at least one entrance on the eastern side. Inside this are at least four rectangular compounds which vary in size, believed to be paddocks and pens. Two circular buildings are present in the internal enclosure to the north-west, with pits and other features also present, likely representing the main dwelling area.

- 3.9.78 Springfield style enclosures are roughly circular enclosures usually found on a hilltop or spur and date to the middle/late Bronze Age, with some occupied into the early Iron Age. They are named after a site in Essex at Springfield, one of the few examples in the country which has been fully excavated. They are characterised by a single enclosure ditch with a simple internal bank or box rampart. There is usually one or more circular buildings within the enclosure, which may have many pits or postholes. Their function appears to be domestic, and such could yield information about the lives of those who occupied them. Typically found in eastern England, surviving as just cropmark sites usually, identified through aerial photography, there are thought to be no more than 50 in total and as such all examples are national importance and of great value. The asset at Baker Street is a single ditched example with one circular building containing pits. The enclosure complex is of greater importance due to its association with an Iron Age settlement enclosure complex, demonstrating a continuation in use of the landscape as well as the development of domestic settlements in the area.
- 3.9.79 The asset is situated on the western edge of the settlement of Orsett, south of High Road and West of Mill Lane. The asset would have occupied a rural landscape prior to most agricultural development and field divisions present in the landscape today. The asset is located on an area of land that is higher than the land to the north but lower than the land to the south-east. The asset was likely located on this slightly elevated area of land so that it could command some level of views over the landscape to the north and north-west as well as over the water course of the Mardyke way which runs through the lowland to the north-west of the asset. Moreover, the asset would have also been close to palaeochannel to the south-east beginning on the south-eastern edge of the Orsett Golf course. Whilst there is the potential for a wider historical association and relationship between the asset and its setting in the landscape as discussed above in relation to watercourse and palaeochannels, the subsequent development since the Iron Age has divided up the land in such a way that there is significant screening and disruption of views by roads and settlements, as well as alteration to the landscape with features such as a golf course. As such the setting of the asset contributes moderately to its value and the asset no longer extends significantly beyond its immediate setting, least not to the south-east and the far side of the settlement of Orsett. As such the setting of the asset does not extend to the draft Order Limits. Due to its evidential and historical value of its below ground's archaeological remains, the asset is assessed as **high value**.
- 3.9.80 The scheduled monument 'Crop mark complex, Orsett' (**1002134**) is located c. 2.9 km west of the draft Order Limits and is on the western edge of Baker Street and c. 950 m west of the settlement of Orsett and on the north-eastern periphery of the

larger settlement Chafford Hundred. The asset is a multiperiod site which includes activity dating between the Bronze Age to Roman period. The Iron Age activity at the site includes Late Iron Age area of agriculture and industry associated with a farmstead situated somewhere in the wider vicinity. Many rectilinear enclosures were discovered at the site, most of which date to the Iron Age, some Roman. The infilling of many of the ditches with natural silt, many of which were recut multiple times, hints at their continued long period of use, through the Iron Age and into the Roman period. Some ditches with evidence of water-logged hold the potential for the preservation of organic remains, with some well-preserved animal bones excavated during trial trenching. Pottery Kilns and briquetage are evidence of industry at the site and associated salt working.

- 3.9.81 The asset covers a large area which is now occupied in part by the A13 and the rural land surrounding the main highway through the landscape. The asset is located on an area of high ground within the landscape with low lying terrain to the north of the asset. This elevated aspect of the landscape was likely a key feature in the location of the settlement, which would have commanded views over the landscape to the north over a considerable distance. The placement of the settlement was likely influenced by the location of the Mardyke watercourse to the north-west of the asset, as well as a potential palaeochannel to the south-east, beginning on what is now the south-eastern edge of the Orsett Golf Course. The setting of the asset has changed greatly since its use with the landscape now divided and interrupted in many ways, including large highways, settlements, areas of industry and leisure, as well as the continuous division of rural land for agricultural purposes. As such the extent of the setting of the asset has likely been reduced since that of its contemporary landscape interrupted by main landscape features, in particular the settlement of Orsett, the A13 and A1089. As a result, the setting of the asset contributes moderately to its value and does not extend to the draft Order Limits. The assets hold evidential and historical value and is **high value**.

## Stanford-le-Hope to Linford (east of the draft Order Limits)

### *Non-Designated Heritage Assets*

- 3.9.82 The HER records an asset called 'Stanford le Hope - only 4 fig NGR' (**8122**) is possibly located within the draft Order Limits. The Iron Age find was a Belgic pedestal bowl. The asset holds evidential value and is **low value**.
- 3.9.83 The HER records an Iron Age asset at Mucking (**8060**) located within the draft Order Limits and beyond to the east. An assessment records that the site has been destroyed by gravel quarrying. A major shift in the settlement in the area occurred during the latter half of the first millennium BC to the northern enclosure. The north-east enclosure was divided by a substantial ditch with the enclosed remains of a circular feature. Towards the end of the middle Iron Age the western part of the site was occupied by a settlement of open round houses. In the later Iron Age two, possibly three nucleated settlements developed. The asset holds evidential value and is of **medium value**.

- 3.9.84 The HER asset Mucking-Linford-Holford Wood Road-Rainbow Shaw Pits (**8032**) is located within the draft Order Limits, extending beyond to the south. The site once occupied a gravel pit. Iron Age sherds were found at the site of a small, fragmented Iron Age settlement. The HER records features including a hearth, house, pit, post hole and settlement. The asset has evidential value and is **low value**.
- 3.9.85 The HER records the asset Mucking - Rainbow Wood (**8075**) is located within the draft Order Limits, extending beyond to the east. The HER assessment records excavated Iron Age postholes and pits. The asset has evidential value and is **low value**.

### **South-west of the A13 to Chadwell St Mary (west of the draft Order Limits)**

#### *Designated Heritage Assets*

- 3.9.86 The Scheduled Monument 'Causewayed enclosure and Anglo-Saxon cemetery 500 m ENE of Heath Place' (**1009286**) is a multi-period monument located c.260 m north-west of the draft Order Limits. This asset contains a Neolithic causewayed enclosure. The land slopes gently away from the monument towards the south into the valley of a small tributary of the Thames. To the east and west it slopes into smaller dry valleys. The monument is not visible at ground level; however, the monument survives in the form of buried features below the ground level, recognised as cropmarks from aerial photography. The cropmarks include three circular ditches, interrupted by irregular causeways, covering an area of c.160 m in diameter. The outer two ditches are 10 m apart and a palisade trench with three breaks, coinciding with those in the out ditch, lies between the inner and middle ditches. Internal features including postholes and pits can be seen within the enclosed area on aerial photographs. Within the southern section of the inner circle, aerial imagery shows at least five round barrows evident by ring ditch cropmarks, ranging between c. 8-13 m in diameter, with a circular ditch c.1-2 m wide and 0.35 m deep. Trial trenching and excavation that took place in 1975 confirmed that parts of the Neolithic causewayed enclosure dated to the Iron Age with a period of accompanied an early Iron Age settlement followed by a middle Iron Age enclosed settlement with a rectilinear ditched enclosure, located in the southern section of the monument.
- 3.9.87 The present setting of this asset has previously been discussed in section for the Neolithic causewayed enclosure as part of this monument. Much like with the setting of the Neolithic enclosure it is likely that the elevation of land on which the enclosure was built that influenced the setting and occupation of the land during the Iron Age. It is possible that the palaeochannels also contributed to the Iron Age settlement and activity similarly during Neolithic. An additional aspect to the setting of the Iron Age elements to the monument and the settlement is the presence of the Neolithic causewayed enclosure. This presence in the landscape may have offered a focal point for activity and represents an area of ongoing use of this landscape and the continued use of ancestral areas and structures.
- 3.9.88 The setting of the asset on high ground and the potential for palaeochannels supported by the presence of a small water course near Linford today is likely linked to its historical setting in the landscape and the advantageous views and resources afforded to those who built the enclosure on this promontory of land. The setting of the asset is related to its position in the landscape, and its historical relationship to its placement and purpose. However, the alterations to the landscape with development of transport, settlements and areas of industry have altered the setting of the monument, alongside the screening provided by the vegetation lining of the Brentwood Road and the elevated land of the golf course and therefore the contribution of the setting towards to the asset has been diminished and contributes

moderately to its value. Therefore, the setting of the asset does not extend to the draft Order Limits. The assets hold evidential and historical value and is of **high value**.

#### *Non-Designated Heritage Assets*

- 3.9.89 An asset detailing evidence of early Iron Age occupation referred to as 'Orsett-Causewayed Enclosure' (**8156**) by the HER, located c. 5 m west of the draft Order Limits, was identified during an excavation of 'Causewayed enclosure and Anglo-Saxon cemetery 500 m ENE of Heath Place' (**1009286**), in the southern central area of the causewayed enclosure. The upper level of the inner ditch of the causewayed enclosure contained early Iron Age domestic rubbish but most of the early Iron Age finds came from a scatter of pits. Many of the 140 or so postholes in this area were thought to be early Iron Age, although no coherent patterns were apparent. The Essex HER records a wider complex of currently undated cropmarks beyond the bounds of the scheduled monument but should any of these be linked to the activity within the monument they have the potential to be of **high value**.
- 3.9.90 The HER records the asset Cropmarks to the north of Mill House Farm (**8082**) which is located c. 23 m west of the draft Order Limits. The record details findings from a survey and archaeological evaluation (trial trenching) from which evidence indicates that the site spanned from the late Bronze Age to early Iron Age, however some of the features recorded could not be dated. The asset's features comprise cropmarks of ring ditches, linear-curved features, trackway, enclosures, pits, and a gully. There are also crop marks of another ring ditch and pair of parallel ditches. A circular cropmark is bisected by a hedge, perhaps a barrow as size rules out an Iron Age roundhouse. The asset record also details the Low Street enclosure that is a possible 1st century military feature, remains of a small group of rectangular enclosures in southern Essex, which are noted as not being forts but still some form of defensive structure, possibly 'works compounds, administrative bases, or collection centres on an imperial estate' Pottery which was excavated was also consistent with late Bronze Age/ early Iron Age activity. The asset holds evidential and historical value resulting from the below ground archaeological remains and is **high value**.

## **Tilbury**

### *Non-designated heritage assets*

- 3.9.91 The asset 'Tilbury Power Station' is an asset located on the northern bank of the river Thames, intersecting the draft Order Limits on its north-eastern corner, and extending beyond it to the west, south-west and south (**8020**). During excavations and evaluation, a series of peat horizons were identified in the northern part of the site, located in undisturbed alluvial deposits, these were dated to the Iron Age. The asset has evidential and historical value and is of **low value**.

## **Roman Period**

### **Langdon Hills Golf Country Club & Hotel to Saffron Gardens (east of the draft Order Limits)**

- 3.9.92 This area of section H is comprised of the land east of the draft Order Limits that includes the land between the Langdon Hills Golf Country Club to Saffron Garden which is just north of Stanford le Hope. The area of land south of the golf course varies between c. 18-36 m aOD. This area is comprised mainly of rural fields as well as the settlement of Horndon on the Hill, which is located c. 430 m north-east of the draft Order Limits at its closest point. The settlement is located north of the larger settlement of Stanford le Hope and c.935 m north of the Stanford le Hope Bypass. The oldest part of the settlement is aligned linearly along the main street, High Road, of which the conservation area of Horndon on the Hill (**CA27**) encompasses. The western section of the settlement comprises of a newer residential area adjoined to the older section of the settlement. As its name suggests Horndon on the Hill is situated on an area of high ground c. 40 m aOD at its highest point in the centre of the village along High Road, sloping downhill slightly towards the periphery of the village to c. 22 m aOD on the settlement's southern edge.
- 3.9.93 The following three assets are part of finds associated with archaeological investigations along the Horndon to Tilbury (Coalhouse Fort) Gas Pipeline.
- 3.9.94 The HER records the following asset as a Roman finds spot but also notes that finds from prehistoric to post medieval period, but no notable assemblages were found, and no specific finds are detailed in the asset description (MEX1036399 – **8108**). The finds were found during a 56% field walking survey from Stapleford Tawney to Horndon Field Walking Survey undertaken in 1993, located c. 15 m east of a draft Order Limits access road. The HER does not state in the report where exactly along the pipeline field walking survey route the finds were found, a route that extends far beyond the draft Order Limits. The asset has evidential value and is **low value**.
- 3.9.95 A pot with a simple rim in fine red fabric (**8118**), probably from a Romano-British beaker of Hadham ware found along the Horndon to Tilbury (Coalhouse Fort) Gas Pipeline. Located c. 110 m east of the draft Order Limits. The asset holds evidential value and is **low value**.
- 3.9.96 The HER records another Roman find along the Horndon to Tilbury Gas Pipeline, grey ware body sherds (**8117**). The asset is located within the draft Order Limits. The HER records further Roman finds along the Horndon to Tilbury Gas Pipeline (**8116**), a coarse grey ware pot body sherd, located within the draft Order Limits. The assets have evidential value and are **low value**.

### Thurrock Airfield to A13 (west of the draft Order Limits)

#### *Designated Heritage Assets*

- 3.9.97 The scheduled monument 'Crop mark complex, Orsett' (**1002134**) is located c. 2.9 km west of the draft Order Limits and is on the western edge of Baker Street and c. 950 m west of the settlement of Orsett and on the north-eastern periphery of the larger settlement Chafford Hundred. The asset is a multiperiod site which includes activity dating between the Bronze Age to Roman period. The Roman features of the site include some rectilinear enclosures, some of which were in continued use through the Iron Age into the Roman period. Industry activity related to pottery and evidence of associated salt-working industry is also present through the Iron Age continuing into the Roman period. Evidence includes fragments of Spanish Amphore and Gaulish Samian. These artefacts indicate that the inhabitants of the farmstead in the vicinity adopted a Romanised lifestyle, taking part in international trade networks. Most artefacts were indicative however of internal trade.
- 3.9.98 The asset covers a large area which is now occupied in part by the A13 and the rural land surrounding the main highway through the landscape. The asset is located on

an area of high ground within the landscape with low lying terrain to the north of the asset. This elevated aspect of the landscape was likely a key feature in the location of the settlement, which would have commanded views over the landscape to the north over a considerable distance. The placement of the settlement was likely influenced by the location of the Mardyke watercourse to the north-west of the asset, as well as a potential palaeochannel to the south-east, beginning on what is now the south-eastern edge of the Orsett Golf Course. The setting of the asset has changed greatly since its use with the landscape now divided and interrupted in many ways, including large highways, settlements, areas of industry and leisure, as well as the continuous division of rural land for agricultural purposes. As such the extent of the setting of the asset has likely been reduced since that of its contemporary landscape interrupted by main landscape features, in particular the settlement of Orsett, the A13 and A1089. As a result, the setting of the asset contributes moderately to its value and does not extend to the draft Order Limits. The assets hold evidential and historical value and is **high value**.

### **Stanford-le-Hope to Linford (east of the draft Order Limits)**

- 3.9.99 A programme of archaeological monitoring excavation and watching brief fieldwork was undertaken along the line of the Coryton to Mucking, Mobil Power Cogeneration Gas Pipeline Project (**8146**) which identified many multi-period features. On the section of the pipeline east of Butts Lane, 600 m south of Stanford-le-Hope and 100 m east of the draft Order Limits Roman pottery was identified, however this was abraded and may be residual. The asset holds evidential value and is **low value**.
- 3.9.100 An unnamed Roman road (**8015**) was located approximately 110 m south-east of the draft Order Limits. It was aligned north-west/south-east and ran through Linford. The current Princess Margaret Road and East Tilbury Road follow the alignment of the asset. This asset is of **medium value** and has evidential value.
- 3.9.101 The HER asset 'Butts Lane, Stanford-le-Hope, Essex' (**8031**) is a multi-period site that contains pits and postholes of Romano-British date, one containing some pottery. The asset is located c. 130 m south-east of the draft Order Limits. This asset has evidential is **low value**.
- 3.9.102 The HER asset 'Land adjacent to Walton Hall Farm, Linford, Stanford-le-Hope' (**8030**) is located within the draft Order Limits, extending beyond it to the east and the west. The HER asset is a multi-period site which included a Roman sherd. The asset holds evidential value and is **low value**.
- 3.9.103 The HER records a Romano-British asset at Mucking (**8061**) located within the draft Order Limits and extending beyond to the east has been destroyed by gravel quarrying. The Romano-British site comprised a settlement, agricultural enclosures, and industrial activity. The HER records find including a building, cemetery, double ditched enclosure, farmstead, granary, metal working site, mortuary enclosure, pottery kiln, round barrow, settlement, and trackway. The asset holds evidential value and is **medium value**.
- 3.9.104 The HER records the asset Mucking-Linford-Holford Wood Road-Rainbow Shaw Pits (**8033**) located within the draft Order Limits and extending beyond to the south-east. The site, excavated in 1955, was in a gravel pit and the finds included Romano-British pottery, a pottery kiln, a ditch, and corn drying kilns. The asset has evidential value and is **low value**.
- 3.9.105 The HER records the asset Mucking-Linford-Holford Wood Road-Rainbow Shaw Pits (**8034**) located within the draft Order Limits and extending beyond to the south-east. The site is located within a quarry pit and has been destroyed. The site comprises

mainly of pagan Saxon finds, however Roman pottery has been found at the site and pieces of Roman type Neidermendig lava quern stones located within a sunken feature. The asset has evidential value and is of **low value**.

### East Tilbury

- 3.9.106 The HER records the multiperiod asset 'Land at East Tilbury and Linford Area of Prehistoric ritual landscape and Roman field boundaries' (**8025**) which is located c. 180 m east of the draft Order Limits. To the north of the asset is a Romano-British field system, there was likely a settlement in the vicinity with pits, post holes and pottery present within the area. Field system ditches were also noted. This asset holds evidential and historical value and is **medium value**.

### West Tilbury

- 3.9.107 The settlement of West Tilbury is located south-east of the larger settlement of Chadwell St Mary and west of East Tilbury. The settlement of West Tilbury and its conservation area are spilt into two sections, with the larger section being the north-western section which includes settlement focused on Blue Anchor Lane and Rectory Road and encompasses a large field containing a medieval open field system. The topography of the settlement is mixed, with the larger north-western part of the settlement sitting on higher ground c. 24 m aOD and the lower section where Low Street Lane meets Church Road, and the elevation lowers to c. 8 m aOD.
- 3.9.108 Romano-British pottery (**8131**) was located just within the draft Order Limits to the north of West Tilbury. The pottery was dated to the 2nd century. It has evidential value and is of **low value**.
- 3.9.109 A Roman asset is recorded by the HER, named 'West Tilbury - Condoover's Pit' (**8121**), which is located c. 35 m north-east of the draft Order Limits. The findspot features Romano-British pottery from the 2nd century, which was found in the banks of an old gravel pit. It holds evidential value and is **low value**.
- 3.9.110 Several Roman urns (**8074**) were encountered the mid-1800s approximately 75 m east of the draft Order Limits near to Readmans Industrial Estate. These assets are of **low value** and have evidential value.

### Area east of Tilbury

- 3.9.111 A Romano-British burial site is recorded by the HER c. 160 m south of the draft Order Limits and c.450 m east of Fort Road (**8012**). Finds from the burials included iron and bronze bracelets. The asset holds evidential and historical value and is **medium value**.
- 3.9.112 The following three assets form a group along the Thames foreshore:
- 3.9.113 A findspot records that a Romano-British rim sherd (**8161**) was found along the Thames foreshore, close to another Romano-British findspot of 1st century Samian Ware (**8153**), and a site at East Tilbury, likely asset (**8154**) where below the 'present' high tide level, remains of a settlement of hut circles, which is associated with much 1st to 2nd century pottery that was found.
- 3.9.114 A findspot records some Romano-British 1st century Samian Ware which were found 1 m below Tilbury Fort in 1912 (**8153**), located c. 90 m east of the draft Order Limits. The asset is said to relate to a site at East Tilbury, likely asset (**8154**) where below the 'present' high tide level, remains of a settlement of hut circles, which is associated with much 1st to 2nd century pottery that was found. Much pottery was also found, including Samian, Salopian and Durobrivian wares, most belonging to the

2nd half of the 1st century. The evidence represents a potential settlement with a population of some density, able to buy Samian ware but similar enough to the group of native huts found at the East Tilbury site. The asset has evidential value and is **medium value**.

- 3.9.115 A Romano-British asset, 'East Tilbury Foreshore', is located right on the banks of the river Thames, located below the current high-tide level and c. 70 m east of the draft Order Limits (**8154**). The asset contains remains of a settlement of hut circles with much 1st to 2nd century pottery. Three adjacent huts were found in 1920 with a four fragmentary hut visible nearby. Preserved below the mud level, the two largest huts had a wattlework frame of three rings of stakes. A stone ring was found within the two innermost stake rings, with a similar ring found outside the outer stake ring. Features in one hut included a partition and circular platform, likely for a supporting post. Another hut had remains of wooden floor planking as well as an oven with clay walling, although the function of the oven is unknown. The entrances of the smallest hut were marked by thick posts. The huts included remains of clay daub walling and the amount of roofing tiles fragments indicate the huts were likely roofed with tiles. A shallow channel ran north-east to south-west to the east of the huts, with remains of flanking stakes, potentially a trackway to the old riverside. A spate of Samian pottery was found around the huts c. 100 yards both sides of the huts. Much of the pottery found was made by native pottery adopting a Roman influence, however there is no evidence that the pottery was made on site. It is proposed that this site acted as a landing place for traffic from Kent and beyond and that the amount of pottery seems too high for that of a normal hut settlement and that perhaps a ferry port was once here. Based on the asset's evidential and historical value the asset is **high value**.
- 3.9.116 A fragment of a Roman lamp (**8106**) with a lion relief was found approximately 100 m south of the draft Order Limits. The asset has evidential value and is of **low value**.

## Early Medieval

### Stanford-le-Hope to Linford (east of the draft Order Limits)

- 3.9.117 A programme of archaeological monitoring excavation and watching brief fieldwork was undertaken along the line of the Coryton to Mucking, Mobil Power Cogeneration Gas Pipeline Project (**8146**) which identified many multi-period features. On the section of the pipeline east of Butts Lane, 600 m south of Stanford-le-Hope and 100 m east of the draft Order Limits Saxon pottery was identified, however this was abraded and may be residual. The asset holds evidential value and is **low value**.
- 3.9.118 The HER asset 'Butts Lane, Stanford-Le-Hope, Essex' (**8031**) is a multi-period site that contains early medieval intercutting field system ditches. Three ditches are also mentioned as post medieval; however, it is mentioned that they follow an alignment like the early medieval ditches. The asset is located c. 130 m south-east of the draft Order Limits. This asset holds evidential and historical value and is **low value**.
- 3.9.119 A HER asset at Golf Course, St. Cleres Hall (**8129**) details an early medieval findspot. The HER records ten small, abraded sherds of grey vegetable-tempered ware. Given their relatively proximity to a known Saxon settlement at Mucking, it is possible that these sherds represent a surface scatter or contents of features which were destroyed during the topsoil stripping for the golf course. The asset is located within the draft Order Limits. The asset has evidential value and is **low value**.
- 3.9.120 The HER asset 'North Ring, Mucking' (**8055**) is located within the draft Order Limits, extending beyond the draft Order Limits to the east. Excavations in 1978 within a

large Bronze Age circular enclosure did not reveal any material which could be identified as Saxon. However, to the east of the enclosure 22 sherds of Saxon pottery were recovered from two sunken featured buildings. The pottery was predominantly grass-tempered which indicates a date in the 7th century. The asset has evidential value and is of **medium value**.

- 3.9.121 The following three assets form a group to the west of Mucking:
- 3.9.122 The HER asset 'Mucking: Early to Middle Saxon' (**8062**) is located within the draft Order Limits, extending beyond it to the east. The site has been destroyed by gravel quarrying. Finds include, a building, cemetery, a cremation, Grubenhaus, hearth, inhumation, pit, and settlement. The asset has evidential and historical value and is **medium** in value. The HER also records the asset 'Mucking: Middle to Late Saxon' (**8063**) which is located at the same location within the draft Order Limits, extending beyond it to the east. The site has been destroyed by gravel quarrying. The HER records that the settlement density diminished during the middle Saxon period and that sometime after the 7th to 8th century the settlement was abandoned and returned to an agricultural landscape. The features of the site include a ditch and two field systems. Both (**8062**) and (**8063**) have evidential value and are **low** in value.
- 3.9.123 The HER records the asset 'Mucking-Linford-Holford Wood Road-Rainbow Shaw Pits' (**8034**) located to the west of (**8062**) and (**8063**), on the opposite (western) side of Buckingham Hill Road to the other assets, and within the draft Order Limits and extending beyond to the south-east. The site is located within a quarry pit and has been destroyed. Some features of the site included part of an extensive settlement and small village found along with the surrounding boundary ditches, with pit huts and rectangular buildings.
- 3.9.124 The main features of the excavations included a two-period ditch system, rectangular house, weaving hut, and sunken feature buildings, as well as numerous pits and post holes that were recorded. The sunken features that were found were not specifically attributed to either of the two periods, although it has been suggest that at least one of them belongs to the period 1. The period 1 ditch system comprised narrow ditches of irregular build, forming enclosures. The period 2 ditch system was regular, with larger well laid out ditches forming two enclosures. The larger enclosure had a palisade formed by a double row of stakes whereas the smaller enclosure was not palisaded but instead had a rectangular house within it. This enclosure may have been added to the main palisaded ditch. The house has evidence of a fireplace and had two double rows of postholes. The weaving hut belonged to period 2 and is located north of the palisade, its walls were enclosed by postholes with evidence for the replacement of these. Twenty lead loom weights and mainly Saxon pottery as well as some 4th century Romano-British pottery, lead waste, a broken whetstone, and pieces of Roman type Neidermendig lave quern stones were found in the structure. A total of three sunken buildings were recorded, one was oval and had a central posthole and perimeter postholes for roof support. One of the other sunken buildings was rectangular with postholes close to the edge of the building as well as evidence for a hearth being used within it after it ceased to be used as a hut. Next to this sunken building were pits and postholes. The third sunken building had two large postholes in the middle at either end of the feature as well as other each end of the eastern corner. No evidence of fire was found within this feature. The fill of the site contained food bones, pagan Saxon pottery and Roman pottery, a pottery spindle whorl in the natural soil layer. Two pottery loom weights were found in the fill of the large central extern posthole, it is thought this hut was a working hut rather than a dwelling. Threshing floor is thought to be indicated by a bed of clay. Many types of Saxon pottery including bowls, jars and beakers were found with varying decorative

designs. Other finds include an iron arrowhead, bronze traces, charcoal or oak and birch, shells, animal bones and teeth of ox, sheep, horse and pig, glass fragments, quernstone fragments and flint flakes. The asset has evidential and historical value and is **high** in value.

### **Thurrock Airfield to A13 (west of the draft Order Limits)**

#### *Designated Heritage Assets*

- 3.9.125 The Scheduled Monument 'Crop mark complex, Orsett' (**1002134**) is located c. 2.3 km west of the draft Order Limits, on the western edge of Baker Street and c. 950 m west of the settlement of Orsett and on the north-eastern periphery of the larger settlement Chafford Hundred. The monument has limited listing description but is described as a multi-period site, some of the finds include ring ditches which are likely ploughed barrows and a large amount of substantial sized pits which are likely to be early Saxon Grubenhouses.
- 3.9.126 The asset covers a large area, between Baker Street and Chafford Hundred, which is now occupied in part by the A13 and the rural land surrounding the main highway through the landscape. The asset is located on an area of high ground within the landscape with low lying terrain to the north of the asset. This elevated aspect of the landscape was likely a key feature in the location of the settlement, which would have commanded views over the landscape to the north over a considerable distance. The placement of the settlement was likely influenced by the location of the Mardyke watercourse to the north-west of the asset, as well as a potential palaeochannel to the south-east, beginning on what is now the south-eastern edge of the Orsett Golf Course. The elevation of the land was a key factor not just for settlements but also as part of the funerary landscape associated with barrows. The continuation of occupation at the site of asset from Roman to early Saxon indicates the suitability of the area for occupation and the importance of this area in the landscape. The setting of the asset has changed greatly since its use with the landscape now divided and interrupted in many ways, including large highways, settlements, areas of industry and leisure, as well as the continuous division of rural land for agricultural purposes. As such the extent of the setting of the asset has likely been reduced since that of its contemporary landscape interrupted by main landscape features, in particular the settlement of Orsett, the A13 and A1089. As a result, the setting makes low contribution to the asset's value and does not extend to the draft Order Limits. Due to the archaeological remains the asset hold evidential and historical value and is **high value**.

### **South-west of the A13 to Chadwell St Mary (west of the draft Order Limits)**

#### *Designated Heritage Assets*

- 3.9.127 The scheduled monument 'Causewayed enclosure and Anglo-Saxon cemetery 500 m ENE of Heath Place' (**1009286**) is a multi-period monument located c.260 m north-west of the draft Order Limits, which contains early Saxon remains as well as a Neolithic causewayed enclosure. The asset also forms a group with another early medieval asset nearby, (**8157**) which occupies the same area as the scheduled monument, extending beyond it also. The land slopes gently away from the monument towards the south into the valley of a small tributary of the Thames. To the east and west it slopes into smaller dry valleys. The monument is not visible at ground level; however, the monument survives in the form on buried features below the ground level, recognised as cropmarks from aerial photography. The cropmarks include three circular ditches, interrupted by irregular causeways, covering an area of c.160 m in diameter. The outer two ditches are 10 m apart and a palisade trench with

three breaks, coinciding with those in the out ditch, lies between the inner and middle ditches. Internal features including postholes and pits can be seen within the enclosed area on aerial photographs. Within the southern section of the inner circle, aerial imagery shows at least five round barrows evident by ring ditch cropmarks, ranging between c. 8-13 m in diameter, with a circular ditch c.1-2 m wide and 0.35 m deep. Trial trenching and excavation that took place in 1975 confirmed that parts of the Neolithic causewayed enclosure dated to the early Saxon period, with two of the five ring ditches that were excavated represented round barrows containing inhumation burials in wooden coffins.

- 3.9.128 The present setting of this asset has previously been discussed under the section for the Neolithic causewayed enclosure as part of this monument. Much like with the setting of the Neolithic enclosure it is likely that the elevation of land on which the enclosure was built that influenced the setting and occupation of the land during the early Saxon period. It is possible that the palaeochannels also contributed to the early Saxon activity, similarly during Neolithic and Iron Age. An additional aspect to the setting of the early Saxon elements to the monument and barrows are the presence of the Neolithic causewayed enclosure and residual Iron Age alterations and perhaps remnants of the Iron Age settlement. This presence in the landscape may have offered a focal point for activity or perhaps represents an area of intermittent use of this landscape and the continued use of ancestral areas and structures and particularly in this case for funerary purposes.
- 3.9.129 The setting on the asset on high ground and the potential for palaeochannels supported by the presence of a small water course near Linford today is likely linked to its historical setting in the landscape and the advantageous views and resources afforded to those who built the enclosure on this promontory of land. The setting of the asset is related its position in the landscape, and its historical relation to its placement and purpose. However, the alterations to the landscape with development of transport, settlements are areas of industry have altered the setting of the monument, alongside the screening provided by the vegetation lining of the Brentwood Road and the elevated land of the golf course. Therefore, the setting of the asset now makes minor contribution to its value, and it does not extend to the Order Limits. Due to its complexity and potential for buried archaeological remains the assets has evidential and historical value and is **high value**.

### *Non-Designated Heritage Assets*

- 3.9.130 The Essex HER records a wider complex of currently undated cropmarks (**8157**). This asset forms a group with the scheduled Neolithic causewayed enclosure (**1009286**). The record details that within the inner circuit of the scheduled monument causewayed enclosure, four, potentially five ring ditches were found **high value**.

## Medieval

### **South of Shoeburyness via Southend and Basildon Service railway line to Langdon Hills Golf Country Club & Hotel (east of the draft Order Limits)**

- 3.9.131 This area of Section H includes land east of the draft Order Limits and comprises land South of Shoeburyness via Southend and Basildon Service railway line to Langdon Hills Golf Country Club & Hotel. Much of this land is made up of rural fields and the settlement of Langdon Hills on the edge of the settlement of Basildon. The elevation of the land is c. 12 m aOD around the northern extent of the area, rising in

elevation within the Langdon Hills Golf Country Club & Hotel grounds to c. 44 m aOD at its highest.

#### *Designated Heritage Assets*

- 3.9.132 The Grade II\* listed building of the Church of St Mary and All Saints (**1337108**) is located c. 1.3 km east of the draft Order Limits. The church is early 16th century in origin with 17th century and 20th century alterations. The church is made from red brick and ragstone rubble with limestone dressing and a plain tiled roof. The oldest parts of the church are the 16th century chancel, the 16th century windows within the nave and 16th century south-doorway with segmental head. The 2-bay arcade is 17th century, located in the north wall, and the brick south porch is also 17th century. The asset has a timber belfry which was rebuilt in 1842.
- 3.9.133 The immediate setting of the asset is that of graveyard of the church, which is well vegetated with heavy mature vegetation screening the asset from the roadside. The church is located within a small, scattered settlement of a few dwellings along Old Church Hill, close to other listed assets (**1111590**, **1147475**, **1244319**). The settlement and dwellings along Old Church Hill are surrounded by mainly rural land. Beyond the settlement and its perimeter are the larger and more recently developed settlements of Langdon Hills and Westley Heights to the north-east and another small linear settlement bordering Langdon Hills Golf Country Club & Hotel to the south-west. The setting of the asset is informed by its location in the rural settlement setting on the outskirts of Langdon Hills, located amongst some other historical assets of post medieval origin. The setting of the asset is informed by this rural vegetated setting which contributes positively to its value, the setting however does not extend to the draft Order Limits, screened by mature vegetation. The asset has historical, aesthetic, and communal value and is of **high value**.

#### **West Horndon to Thurrock Airfield (west of the draft Order Limits)**

- 3.9.134 This area of section H includes land west of the draft Order Limits and the land between West Horndon and Thurrock Airfield. Within this area much of this land comprises rural fields as well as the settlement of Bulphan which is located c. 500 m west of the draft Order Limits, on the western side of the A128 Bulphan Bypass. The settlement is surrounded by rural fields in its immediate and its extended setting. The topography of the land in and around Bulphan is low in elevation ranging from c. 7-10 m aOD. The rural area beyond the settlement is slightly lower in elevation in some places varying from c. 6-9 m aOD.

#### *Designated Heritage Assets*

- 3.9.135 The Grade II\* listed building the 'Old Plough House' (**1337059**) is located c.1.2 km west of the draft Order Limits. The property is 15th century hall house, with 16th century, 17th century and 19th century alterations. The asset is timber framed and plastered with a red plain tile roof and comprises two storeys. The asset has a red brick chimney stack with four diagonal shafts which is 16th century. Many original 16th century features remain including a mantel beam that bears the date 1632 scratched onto it. The rear of the property is where the 17th century and later alterations are. The chimney to the east end of the asset is 19th century.
- 3.9.136 The setting of the asset is that of a residential location on the outskirts of the village of Bulphan. The asset is on Brentwood Road located close to the main thoroughfare of the Bulphan Bypass. There is some intermittent vegetational screening close to the property disrupting the views towards the draft Order Limits. Surrounding the settlement of Bulphan and its peripheral properties are open rural fields. The setting of the asset is informed by what would have been in the ground of a working farm,

once Appletons Farm, however this farm does not seem to be present on current aerial imagery and maps which takes away some from the setting of the asset. Beyond the asset boundaries, there has been development to the area with the creation of a small settlement just north of the main settlement of Bulphan. Despite this the setting of the asset does moderately contribute overall to its value with the asset shielded around its perimeter by vegetation and the continued rural nature of the area. The setting of the asset does not extend to the draft Order Limits and screening opposite the asset in the form of vegetation and some modern residential properties to the south-east break up the view across the low-lying terrain of the land around the asset. The asset holds evidential and historical value, and the asset is of **high value**.

- 3.9.137 The Grade I listed 'Church of St Mary' (**1111617**) is located c. 1 km west of the draft Order Limits. The church is late 15th century in origin with extensive 19th century rebuilding. It is a limestone and flint rubble church. The setting of the asset is informed by its location within the church yard of the village of Bulphan and highlights the relationship between the church and the settlement and community it was built to serve. The church once stood opposite Bulphan Hall which no longer seems to exist in its original form if at all. A school is still present just north of the asset along Fen Lane, which is present on an OS map from 1842-52. The setting of the asset greatly contributes to its value, located within the church yard with some vegetation screening. Bulphan for a small settlement has grown greatly since the building of the asset, expanding south and east of the asset. The development of the village of Bulphan neither takes or adds to the value of the settlement but does provide some screening between the asset and the draft Order Limits, and because of this the setting of the asset does not extend to the draft Order Limits. The asset holds evidential, historical, aesthetic, and communal value and the asset is **high value**.

#### *Non-Designated Heritage Assets*

- 3.9.138 A Moat north of Noke Hall (**8137**) is recorded by the HER, c. 580 m west of the draft Order Limits. The moat is mostly water filled and still has its complete rectangular form. The asset was likely the home of Henry 'atte Noke'. Moats are rare high-status symbols, and assets associated with high status individuals, often Bishops. The asset has evidential and historical value and is of **medium value**.

### **Langdon Hills Golf Country Club & Hotel to Saffron Gardens (east of the draft Order Limits)**

#### *Designated Heritage Assets*

- 3.9.139 Horndon on the Hill is located c. 1.1 km east of the draft Order Limits and c.560 north of the A13 Stanford-le-Hope Bypass and the settlement of Stanford-le-Hope. The medieval listed building in the settlement is the Grade I listed Church of St Peter and Paul (**1337109**). The church is 13th century in origin with 14th and 15th century alterations. The church was built from Ragstone and flint rubble with some Roman and later brick with limestone dressings and tile roof. Further alterations were made in the 16th and 17th centuries with dormer windows inserted. A wooden lectern with turquoise and copper inlay was added in the late 19th century.
- 3.9.140 The setting of the church is informed by its relationship to the settlement of Horndon on the Hill and the role of the church in serving the community there. The immediate setting of the asset is that of its churchyard, with some mature vegetation and intentionally planted equally spaced trees lining the boarder of the church yard. The churchyard is boarded by a low brick wall, with some stone and flint sections.

Surrounding the settlement of Horndon of the Hill is a mostly rural open landscape of fields, with the nearest development lying to south, the A13 and then the larger settlement of Stanford-le-Hope. The church is almost certainly an original feature of the medieval settlement of Horndon on the Hill, when the medieval settlement that is still present today through the centre of the village, along High Road, was created. This preservation of the medieval plan of the settlement as well as other surviving medieval buildings contributes significantly to the value of the church. Whilst there has been some development to the settlement of Horndon on the Hill, both post medieval and modern, this has largely not encroached on the medieval centre of the village and rather has occurred as an expansion to the periphery of the settlement to the north and east and some to the south. The modern residential development close to the church offers some visual screening westward, further constricting the setting of the asset to the village centre. Because of this screening the setting of the asset does not extend to the draft Order Limits. The asset has historical, aesthetic, and communal value and is of **high value**.

- 3.9.141 The Grade II listed building 'Great Malgraves' (**1337107**) is a residence located within a farm complex, c. 50 m north of the draft Order Limits. The asset is 16th century or earlier in origin with 17th century alterations and extensions. The building is timber framed and plastered with a red plain tile roof.
- 3.9.142 The setting of the asset is that of a working farmyard with multiple farmyard buildings situated around the hard standing just north of the asset. The wider setting of the asset is that of rural fields with the Langdon Hills Golf Country Club & Hotel c. 380 m north of the asset as well as the settlement of Horndon on the Hill, 1.2 km south. The asset is surrounded by mature vegetation screening views to the west, south and partially to the east. Mature vegetation along the Lower Dunton Road also screens the asset and associated farm complex from view from the roadside. Whilst there have been some changes to the buildings within the farm complex associated with the asset, its continued use as a working farm since at least, according to mapping from an OS 1842 map contributes positively to the setting of the asset. The asset is located close the draft Order Limits, with the draft Order Limits pass through the field directly to the south of the asset and farmyard. As a result, the setting of the asset is likely to extend to the draft Order Limits. The asset holds historical value and is of **medium value**.
- 3.9.143 The Grade II listed building of 'Outbuildings Immediately (About 5 Metres) to the East of Arden Hall' (**1337123**) are located c. 1 km east of the draft Order Limits. The outbuildings are associated with a former 15th century house, rebuilt in the 18th century. The buildings are timber framed and rendered with a gabled plain tile roof. The asset has 19th century and 20th century alterations. The asset is **medium** in value.
- 3.9.144 The asset's setting is within the grounds of Arden Hall, located opposite Arden Hall (**1308529**) surrounded by other smaller out buildings as well as multiple other much larger modern barn buildings. OS Mapping from 1865-66 and 1938 indicate that there has been much change to the configuration and presence of the outbuildings within the hardstanding area of the farm complex within this time frame, with buildings both added and removed. Aerial imagery from the present day indicates further changes with the addition of the larger hanger style outbuildings and the removal of small buildings around the hardstanding close to the asset. This change in buildings to the large hanger style may represent the change in use of the industry at Arden Hall, from potential farming out buildings to what appears to be outbuildings used for a cleaning products supplier. This indicates a change in use and purpose of the original site of Aden Hall which does not contribute to the setting of the asset. The asset and

the wider Arden Hall complex are surrounded by rural fields and is close other farms, as such the wider landscape has largely maintained its rural agricultural character. The asset is located down a private track, leading off the B1007, and is located c. 570 m northeast of the settlement of Horndon on the Hill and c. 850 m north-west of the A13 Stanford le Hope Bypass. The setting of the asset contributes moderately to its value. The setting of the asset does not extend to the draft Order Limits, being screened by the asset Arden Hall and some vegetation screening where North Hill meets the B1007 closer to the draft Order Limits. The asset has historical value and has **medium value**.

### **Thurrock Airfield to A13 (west of draft Order Limits)**

#### *Designated Heritage Assets*

- 3.9.145 There is a scheduled monument located on the northern edge of the settlement of Orsett, c. 1.65 km west of the draft Order Limits, down a private lane which leads to Malting Lane. The monument is that of 'Bishop Bonner's Palace' (**1002196**), a medieval asset. The remains of the monument include a circular enclosure surrounded by a ditch c. 50 ft wide, possibly indicating the prior presence of a moat at the site. To the north is an oblong bailey enclosed by a ditch which is said to have been the residence of the Bishop of London.
- 3.9.146 The setting of the asset is the periphery of the settlement of Orsett, located in an area that is now dominated by mature vegetation, with some open grassy patches. From aerial photography there does not seem to be any remaining visible evidence of the structures of the asset, however there is a ring of vegetation which now denotes the location of the circular enclosure, and a rough rectangular shape can be seen outlining a patch of trees to the north-east of the enclosure, orientated width ways north-west/south-east. The earthwork remains are most evident on a revised OS map from 1938. The setting of the asset has changed greatly from its time in use and the settlement of Orsett has grown and extending to the site of the asset by the revised OS map from 1938. The expansion of the settlement of Orsett and the intervening houses, the vegetation surrounding the monument as well as pocketed vegetation east of the asset all provide visual screening between the asset and the draft Order Limits. Overall, the setting of the asset does not extend to the draft Order Limits. The asset has evidential and historical value and is of **high value** with the setting contributing moderately to its overall value.
- 3.9.147 The Grade I listed 'Church of St Giles and All Saints' (**1147049**), is in the Orsett conservation area (**CA29**), c. 1.6 km west of the draft Order Limits. The earliest part of the church dates to the 12th century with 14th, 15th, 17th and 19th additions and alterations. The church is built from flint and ragstone rubble with Reigate dressings, tiled roof, and weatherboarded spire. The assets setting is the church yard associated with the church, with an open grassy graveyard and some mature trees lining the boundary of the churchyard and some small trees placed amongst the graves. The boundary of the churchyard is lined by a flint wall. The asset is located on High Road (B188), the road at the heart of the village, containing many of the older more characterful buildings which are located close to the asset. Since the medieval period the settlement has been expanded upon, with the asset and High Road at its centre. The historical character of High Road has been maintained largely with the preservation of some older buildings, which significantly contributes to the setting of the asset. The asset is screened visually by vegetation and the expansion of the village in the direction of the draft Order Limits and as such the setting of the asset does not extend to the draft Order Limits. The asset has historical, aesthetic, and communal value and is of **high value**.

- 3.9.148 The Grade II listed 'Birch Cottage' (**1111559**) is in the Orsett conservation area (**CA29**), c. 1.5 km west of the draft Order Limits. The house is 15th or 16th century in origin and is timber framed and plastered with a thatched roof. The asset is **medium** in value. The asset is set back from Rectory Road, which adjoins to High Road at a T junction opposite the asset. Rectory Road appears to be another important early feature of the early settlement of Orsett. It is likely that the effects of the settlement of Orsett has impacted upon the setting of the asset, however this is marginal with some historical properties remaining and the largest area of modern development of the settlement being to the south-western section of Orsett. Aerial imagery indicates that there is some mature vegetation in the garden of the asset, on its eastern side, the side closest to the draft Order Limits. The setting of the asset would not extend to the draft Order Limits, as the setting of the asset is rooted inward of the settlement and in its relationship with the historic post medieval section of Orsett, as well as the ground of the property. Overall, the asset is of **medium value** based on its evidential, historical, and aesthetic value, with the setting contributing significantly to its overall value.
- 3.9.149 The Grade II listed 'Ongar Hall' (**1337060**) is located on the northern flank of a private road, 390 m west of the A128 Brentwood Road, 1.8 km north-west of Horndon on the Hill, 25 m north of the draft Order Limits. The asset is a 15th century plastered timber frame, two storey hall houses with a crosswing and a red plain tile roof.
- 3.9.150 The asset is situated within a large garden defined by walls and mature, high hedgerows. The asset is located close to some outbuildings also on the property. Its setting is informed by its historical relationship with the Grade II listed 'Timber Framed Barn at Ongar Hall' (**1111650**), located c.60 m to its south. Three buildings are visible on aerial photography that appear to also be on OS maps from 1876 and 1921. Since the OS mapping in 1921 there has been significant development along the eastern border of the asset's property, where once was an open field, is now a large area of hanger-like storage barns, vehicles, and other industry equipment, located within area of hardstanding. There seems to be multiple businesses operating in this industrial area east of the asset, and as such this aspect of the setting makes no contribution to the value of the asset. The draft Order Limits pass by the asset and so the setting of the asset does extend to the draft Order Limits. The has evidential and historical value and is of **medium** in value.

#### *Non-Designated Heritage Assets*

- 3.9.151 The HER records the asset 'Stanford le Hope' (**8037**), located c. 180 m east of the draft Order Limits. A moat was once there, as is indicated by a sketch plan from the OS second edition map but is now gone as the site has been destroyed. The asset now covers the edge of an agricultural field and a residential property and garden. The asset has evidential value and is **low** in value.

#### **Stanford-le-Hope to Linford (east of the draft Order Limits)**

##### *Designated Heritage Assets*

- 3.9.152 The Grade I listed building 'Church of St Margaret of Antioch' (**1111653**) is located c. 920 m east of the draft Order Limits. The asset is mainly 14th century is built but with extensive 12th and 13th century remains, as well as 15th and 19th century alterations. The building is built from ragstone rubble and some flint and limestone dressing, with a tiled roof.
- 3.9.153 The asset is set within a graveyard, with many mature trees lining the edge of the graveyard. The asset boundary is lined by medium height wall, built of multiple materials including brick and flint. There is a lychgate also present at the entrance to

the church. The asset is located at the centre of the oldest part of the settlement of Stanford-le-Hope, along Church Hill and the Green. The asset is located on a high point of ground, the highest point of land within the settlement of Stanford-le-Hope. This placement was likely a deliberate decision made when the church was constructed and the settlement was forming, the church then have far-reaching views from the tower, making it seen from beyond the settlement, indicating its importance in the landscape. An OS map dating back to 1873 provides insights into the late post-medieval development of Stanford-le-Hope, showcasing the expansion of the settlement. This historical map also highlights the introduction of a railway line on the western outskirts of the settlement, as well as the presence of Stanford-le-Hope station. Fast-forward to the OS map from 1945, and it becomes evident that the Stanford-le-Hope settlement had significantly expanded in all directions, with the church now occupying a central position. Additionally, at some point after this period, there was an extension of the residential area towards the northeast, crossing beyond the A1014. This places the asset on the south-western side of the entire settlement but still at the heart of the town centre. The mature vegetation that surrounds the church provides a high level of screening around the asset obstructing views from the asset towards the draft Order Limits. Overall, the asset is of **high value** based on its evidential, historical, aesthetic, and communal value, with the setting making a great contribution to its overall value but not extending to the draft Order Limits.

- 3.9.154 The Grade II\* 'Church of St John the Baptist' (**1337106**) is located c. 720 m east of the draft Order Limits. The asset is largely 1849-1852 in date, but there are earlier parts to the asset of 13th, 14th, and 15th century in date. The asset is located within the settlement of Mucking, at the centre of the settlement, set back from the road within a graveyard and separated from the road by a stone wall. The graveyard is populated by many mature trees which provide much screening to the asset, however there is less screening to the north where views to and from the asset are most visible. The asset is located close to some residential properties which are part of the village. OS mapping from 1873 to 1945 indicates that a vicarage was once located to the west and a school at the entrance to the graveyard on its south-western boundary corner. Both buildings are still present, The Vicarage (**1111587**) being a listed building.
- 3.9.155 The setting of the asset is informed by its settlement location, as a small parish church serving the local rural community in and around Mucking. The asset is located on very low ground compared to the surrounding areas and so the views to and from the church do not extend as far as some other religious buildings in the landscape. The cover provided by the vegetation reduces this visual extension and setting of the asset into the landscape also, as such the setting of the asset does not extend to the draft Order Limits. Overall, the asset is of **high value** based on its evidential, historical, and aesthetic value, with the setting contributing significantly to its overall value.

#### *Non-Designated Heritage Assets*

- 3.9.156 The HER asset 'Coryton to Mucking, Mobil Power Cogeneration Gas Pipeline Project' (**8146**) is a multi-period asset where medieval pits and ditches were found. A medieval kiln, and some medieval pottery, however this pottery was abraded and may have been residual, were recorded from a programme of archaeological monitoring excavation and watching brief. The asset has evidential value and is **low value**.

- 3.9.157 The HER records the asset 'Mucking: Medieval' (**8064**) which is located within the draft Order Limits, extending beyond it to the east. The has been destroyed by gravel quarrying. The late Saxon field system was modified in the medieval period. Features of the site include a field system, windmill, and aisled barn. The asset holds evidential value and is **low value**.
- 3.9.158 The HER records the asset Mucking-Linford-Holford Wood Road-Rainbow Shaw Pits (**8035**) which is located within the draft Order Limits extending beyond to the south-east. The site is located within a quarry pit and has since been destroyed. Sub-surface deposits revealed a small conical pit held 13th century pottery and several fragments of 14th century pottery were found a natural layer of ironstone. The asset has evidential value and is of **low value**.
- 3.9.159 Two medieval tiled hearths (**8163**) were encountered approximately 275 m west of the draft Order Limits. They are associated with the multi period site at Butts Lane (**8031**). The hearths were tile lined; the tiles were set on edge. They each measures c. 1 m square. The tiles were heat effected along the top edge. Associated pottery included Mill Green vessels dating to the 13th and 14th centuries. These assets are of **low value** and have evidential and historical value.
- 3.9.160 The HER asset 'Land adjacent to Walton Hall Farm, Linford, Stanford-le-Hope' (**8030**) is located within the Order Limits, extending beyond it to the east and the west. The HER asset is a multiperiod site, of which the finds included a medieval sherd. The asset has evidential value and is **low value**.

### **Little Thurrock**

- 3.9.161 The settlement of Little Thurrock is centred between the larger settlements of Chafford Hundred to the west, Grays to the south-west and Chadwell St Mary to the south-east. The area is largely residential with some open spaces amongst the residential roads and houses. The elevation of the land ranges between c. 24 m aOD to 30 m aOD across the residential area.

### *Designated Heritage Asset*

- 3.9.162 The scheduled monument 'Dene holes in Hangman's Wood' (**1002156**), c. 2.25 km west of the draft Order Limits, is located within the settlement of Little Thurrock, between Chafford Hundred and Grays to the west and Chadwell St Mary to the east. Only three of these groups of holes are now visible at the site and only one is open. Exploration of the tunnels took place in the 1880s by Essex Field Club which concluded the shafts went as deep as 80ft with three chalk side chambers on each side of the shaft. Whilst the record from HE does not provide more information about the assets use, many dene holes were often used a chalk extraction pit.
- 3.9.163 The setting of the asset lies within woodland at Handman's Wood which is located within the settlement of Little Thurrock, with residential roads to the east, south and west and King George's Field to the North. An OS map from 1898 shows little development close to the woodland, with areas relating to gravel works only in the area. This likely indicates that there was never much development around the woodland when the dene holes were being tunnelled and mined. The OS map from 1950 however, illustrates the vast level of development which occurred in the area during the modern period, with the settlement of Little Thurrock and Grays growing significantly and the former now boarding the site of Hangman's Wood. The asset is

visually screened by the woodland it is located within and by the development of Little Thurrock around the woodland, as well as to the east the development of the settlement of Chadwell St Mary. Because of this the setting of the asset does not extend to the draft Order Limits. Overall, the asset is of **high value** based on its evidential, historical, and communal value, with the setting making a moderate contribution to its overall value.

### **South-west of the A13 to Chadwell St Mary (west of the draft Order Limits)**

#### *Designated Heritage Assets*

- 3.9.164 The Grade I listed 'Church of St Mary' (**1111576**) is located c. 1.95 km west of the draft Order Limits. The church was built in the early 12th century and has 14th, 15th, and 19th century alterations. The church is built from flint rubble and ragstone with Reigate dressings and a plain tile roof. The asset is set within the graveyard associated with the church, which is located within the settlement of Chadwell St Mary, at the junction of Brentwood Road and Linford Road. The asset has some mature trees placed around its graveyard but not enough to provide substantial cover or screening. There is also a low wall around the border of the graveyard. The asset is located on an area on high ground, as it much of the settlement of Chadwell St Mary. The church itself is located at the edge of higher area of ground before the terrain begins to slope downhill to the south along Chadwell Hill. However, the church being much older than much of the current settlement, it is likely that the asset was built on this area of high ground to take advantage of the views to and from the asset and presence in the landscape that this elevated terrain provided. The asset is located within a dense urban setting now with mostly modern buildings surrounded the asset. However, there is one characterful thatched property opposite the asset which appears in the signage of the church, although this doesn't indicate whether they were constructed around the same time. The OS map of 1873 illustrates the small settlement of Chadwell St Mary at the end of the post medieval period was very small, with the asset at its centre. The OS map from 1923 indicates that the settlement still hadn't develop much during the early 20th century also. It is by 1947, indicated on OS mapping that development within the settlement begins, to the west of the church, but this development is still small compared to the level of development in Chadwell St Mary today. The mapping indicates that this development occurred mostly in the second half of the 20th century onward. Whilst the setting of the asset has changed dramatically, now part of a large modern town rather than small medieval village, the church is still serving the same purpose within the settlement. Due to the extensive development around the asset, its setting no longer extends as far as it once did and does not extend to the draft Order Limits. Overall, the asset is of **high value** based on its evidential, historical, and communal value, with the setting making a moderate contribution to its overall value.

#### *Non-Designated Heritage Assets*

- 3.9.165 The excavation of the Orsett Neolithic causewayed enclosure (**1009286**) also identified the parallel ditches of a possible medieval/post medieval trackway and field boundary ditches of similar date (**8158**). The Essex HER record for these remains extends to include a surrounding wider complex of undated cropmarks that may include further evidence of medieval/post-medieval agricultural activity. Any such remains would hold evidential and historical value and would be **low value**.

### **West Tilbury**

#### *Designated Heritage Assets*

- 3.9.166 The Grade II\* listed asset 'Marshall's Cottages' (**1337058**) is located c. 340 m north-west of the draft Order Limits. The asset is an early timber framed, part plastered and part weatherboarded 15th century house with crosswings and red plain tile roof. The asset is set on the edge of the settlement of West Tilbury, within the conservation area, along Blue Anchor Lane, positioned away from the road with a private driveway and garden at the front of the property. The property on which the asset sits, is lined by a mature hedge fence, as well as some brick walling along the roadside, and within the ground of the property are some mature trees. There is a newer property neighbouring the asset to the north and a farm complex with multiple outbuildings, including some characterful black weather boarded buildings to the east, on the opposite flank of Blue Anchor Lane. The asset backs onto an open medieval field system, which makes up a large proportion of the conservation area of West Tilbury. The asset is located north of the main central section of the village of West Tilbury. The draft Order Limits pass over Church Road and between Blue Anchor Lane and Low Street Lane, which is east of the asset. Much of the wider setting of the asset has been maintained, with the continued presence of the medieval open field system to the west of the asset and the plan of the surviving medieval centre of West Tilbury remaining, as well as the limited development that has occurred within the settlement and conservation area. OS mapping published in 1873 indicates that there were other buildings once present on the property closer to the road, however, subsequently no remains of these buildings are apparent today. The additional buildings on the plot appear to have been altered by the time the OS map from 1898 was published, there seems little change to the property then on the OS map from 1923. However, the OS map published in 1947 indicates that most of the buildings within the plot boundary of the Marshall's Cottages have been removed, including the asset. This doesn't seem to align with the continued presence of the 15th century assets existence through the to present day and is a mapping error.
- 3.9.167 The high evergreen hedges and trees that surround and provide a boundary to the property of the asset, and as such the setting of the asset is set within the bounds of the property. The farm complex on the east side of Blue Anchor Lane provides considerable screening between the asset and the Project, but due to the proximity of the draft Order Limits, it is likely the construction phase of the Project would introduce noise and perhaps glimpses of plant movement into the setting. The setting of the asset, therefore, extends to the draft Order Limits. Overall, the asset is of **high value** based on its evidential, historical, and aesthetic value, with the setting making a great contribution to its overall value.
- 3.9.168 The Grade II listed asset 'Well House' (**1308840**) is located c. 210 m north-west of the draft Order Limits. The asset is a late 15th century timber framed asset with extensions possibly made in the late 18th and late 19th century, encased in brick around the 1840s. The asset was originally a copyholding with c. 50 acres of the manor of West Tilbury Hall. The origins of the asset are uncertain, but it is thought that it started off as a later 15th century three-bay timber framed hall house with a two-storey solar. A redrawn map from 1804 indicated the addition of a large square-shaped extension of the west side of the asset, possible originally built of brick. By the published OS map of 1897, the entrance porch of the asset had been added to the east side and another small extension, a scullery to the north side and another small extension to the west side, the later removed in the 1960s to make way for a conservatory which has also itself subsequently been replaced and such is excluded from the listing. The 1970s garage and timber-clad single-storey building to the west, now also in use as a garage. A significant proportion of the original fabric of the buildings survives to the present, with potentially more original framing present in the areas of the asset currently covered in plaster. The medieval craftsmanship of the

house indicates that the asset was of high status. The asset has evolved over the last four centuries at least, accommodating the changing needs of the occupants, in particular the use of the house as a domestic building.

- 3.9.169 The asset is in the centre of the village of West Tilbury, in the larger north-eastern section of the conservation area, facing the central triangle green in the village. The grounds of the asset are lined with a white picket fence and medium height dense hedge. There is a lawned garden to the front of the property with some mature trees, the densest grouping of trees being to the south-east of the property, screening the property from a southern approach from Church Road. The side facing the village centre is more open with only a couple of mature trees. The village centre contains multiple characterful and listed properties which are visible from the asset, contributing to the setting of the asset. The setting of the asset, is largely contained to the grounds of the property, enclosed by the fence and hedge. This part of the setting contributes positively to the setting. Part of the setting of the asset does extend to its wider village setting, looking over the village green. This part of the assets setting also positively contributes to the asset with the maintenance of the historic medieval layout of the village as well as the survival of multiple post medieval assets around the village green. The setting of the asset does not extend beyond the boundary of the property or the village green central setting. There is some vegetation screening the junction of Church Lane, Rectory Road, and Blue Anchor Lane, where the asset is located close to the junction. This vegetation provides some mild screening but does not entirely screen the view from the property looking eastward towards the draft Order Limits, and so there is a possibility for intervisibility between the two assets. Despite this the setting of the asset does not extend to the draft Order Limits, being contained largely to the property and village setting. Overall, the asset is of **medium value** based on its evidential, historical, and aesthetic value, with the setting making a great contribution to its overall value.
- 3.9.170 The Grade II\* listed asset 'Church of St James' (**1111541**) is located c. 40 m west of the draft Order Limits. The asset is late 11th century or early 12th century, later altered in the 14th century and 1879. The asset is built in flint and ragstone rubble with limestone dressings and tiled roof. The asset is located within the conservation area and settlement of West Tilbury, specifically within the larger north-eastern section of the conservation area. The asset is located on Church Lane, set back from the main road behind a grassy verge between the graveyard boundary wall and the road. The church is lined by a boundary made of a thick hedge, at the entrance to the graveyard is a lychgate. The within the graveyard are headstones, mainly to the east and south and some scattered mature trees which offer some screening of the asset on its northern edge, with a denser patch of trees along the east and southern border of the graveyard. The asset is in use now as a private residence rather than as a communal church. The church is located on a plateau of high ground, of which the terrain then descends considerably downhill to the south. This positioning in the landscape was likely deliberate to provide the church with extensive views around the land, to and from the church and as far as the Thames estuary, highlighting its importance within the settlement of West Tilbury and the wider area. OS mapping from 1873-1923 indicates that there has been little change in development around the asset, with the layout of West Tilbury remaining largely consistent to its medieval layout. There is less vegetation screening to the east of the church, in the direction of the draft Order Limits. This considered as well as the proximity of the draft Order Limits to the asset, boarding the boundary of the asset, it is likely that the setting of the asset would be encroached upon by the draft Order Limits. This would likely add visual disruption to the extensive views associated with the church and its history and placement in the landscape as it passes by the church and the settlement of West

Tilbury. Overall, the asset holds historical and communal value and is **high value**, with the setting making a great contribution to its overall value and extends to the draft Order Limits.

- 3.9.171 The Grade II listed 'Walnut Tree Cottage' (**1111624**) is located c. 200 m north of the draft Order Limits. The asset is a 15th century house, with a timber frame, plastered with a red plain tile roof. The asset has 16th and 19th century alterations. The asset is in the smaller south-eastern section of the West Tilbury conservation area, on the western edge of the lower settlement, along Church Road, close to the junction with Low Street Lane. The asset is set back from the roadside, behind a private garden. There is also a large amount of mature vegetation providing partial screening of the asset from the road, when approaching from the west. The asset is neighboured by some other characterful properties. Aerial photography suggests that there is some form of industrial land and large hanger-style buildings to the south of the property. Surrounding the south-eastern section of the settlement of West Tilbury is mostly rural fields, as well as the London Tilbury and Southend railway positioned south-west to north-east, passing by the south-eastern edge of the settlement. The settlement, also referred to as Low Street on OS maps from 1898 to 1944, located at the end of the ancient lane of Church Road, and the historical group of buildings centred around Low Street are located here due to the activity surrounding The Church of St James (**1111541**) and the north-western section of the settlement of West Tilbury with its medieval origins. OS mapping from 1898 to 1944 illustrates the lack on development around Low Street and the continuity of the setting of the settlement and thus the setting of the asset. The setting of the asset is informed and complimented by its screened garden setting as well as the setting of the settlement of Low Street. The screening afforded by the mature vegetation surrounding the property means that the setting of the asset does not extend beyond its location within the boundary of the property and the views extending northward into the settlement of Low Street from the property. The setting of the asset does not, therefore, extend to the draft Order Limits. The asset has evidential and historical value and is **medium value** with the setting making a great contribution to its overall value.

## East Tilbury

### *Designated Heritage Assets*

- 3.9.172 The Grade I listed asset 'Church of St Katherine' (**1337129**) is located c. 2.1 km east of the draft Order Limits. The church is 12th century in origin with 13th and 17th century alterations and 14th, 15th, and 19th century additions. The church is built of flint and rubble with some Roman and medieval brick work, reigate dressings and a tiled roof. The asset is located within the settlement of East Tilbury, specifically the southern and older section of the settlement, as in the 20th century the settlement of East Tilbury expanding significantly to the north of the settlement around the Bata Shoe Factory. The older section of the settlement of East Tilbury is a linear settlement along Princess Margaret Road, leading to the estuary of the Thames at its southern end. The asset is located close to the scheduled monuments of the Coalhouse Fort battery and artillery defences (**1013943**) to the south, East Tilbury Battery (**1013880**) to the north and, the Second World War anti-aircraft battery at Bowaters Farm (**1012185**) to the west. All these scheduled monuments however are modern assets and are not contemporary with the construction of the church.
- 3.9.173 The asset was likely built to serve the settlement and residents of East Tilbury and the surrounding area. The settlement of East Tilbury is located on an area of higher

ground than the surrounding marshland by the estuary. This positioning on a higher point of land would enable greater views to and from the asset, highlighting its importance in the landscape, and depending on vegetation cover and screening making it visible from across the Thames and far along the foreshore of the estuary. It is likely that views from the church once stretched much further as evident from OS photography from 1873, where a sea wall is present close to the church and beyond is illustrated as marsh land up to the end of shoreline. The asset is in a graveyard that is elevated from the roadside by steps, leading to the asset. There is dense vegetation to the rear of the graveyard, to the east, which limits views to and from the church presently. There is also some mature vegetation screening the church to the south along the border of the graveyard and lining the road opposite and to the south of the church. This vegetation screening limits the setting of the asset to some extent. The setting of the church, therefore, makes a considerable contribution to its value, but due to overall distance, the roadside screening vegetation and the development, industry, and mature copses and tree lined hedgerows of the intervening landscape, the setting does not extend to the draft Order Limits. The asset has historical, aesthetic, evidential and communal value and is **high** in value.

## Area east of Tilbury

### *Non-designated Heritage Assets*

- 3.9.174 A medieval sea wall defence is recorded by the HER, located within the draft Order Limits, and extending beyond it slightly to the east (MEX6629 – **8101**). It is situated c. 1.4 km south-east of Tilbury. The asset has evidential and historical value and is of **low value**.

## Post Medieval

### West Horndon to Thurrock Airfield (west of the Order Limits)

#### *Designated Heritage Assets*

- 3.9.175 The Grade II listed 'Barnards' (**1166226**) is located c. 470 m south of the draft Order Limits. The asset is 18th century in origin and is a redbrick property with a timber frame and a red plain tile roof. The asset is located south-west of the village of West Horndon and is situated off the A128 Tilbury Road. The asset is located within the grounds of a large property, open to the public to visit as Barnard's Farm, with multiple gardens and buildings, a miniature railway line and a grassed runway apparent from aerial imagery and the property website. The area within the ground of the property is quite flat, as well as much of the land surrounding the property. To the north of the boundary of the property containing the asset is a railway line which passes over the A128 Tilbury Road.
- 3.9.176 The setting of the asset contributes moderately to its value. The asset is surrounded by mature vegetation mainly on its western, northern, and eastern side, providing some screening to the asset and making it completely invisible from the A128. OS mapping between 1876 and 1946 indicated little change to the buildings around the asset, however aerial imagery would suggest that there have been subsequent changes to the buildings present around the asset. The aerial imagery analysed alongside the OS mapping also indicates the changes that have occurred within the grounds and gardens of the property, with significant landscaping. The asset is well screened by vegetation to the north of the asset. The setting of the asset does not extend to the draft Order Limits north of the asset, as the setting of the asset is confined to the grounds of the property with its presence in the landscape to the

north divided by the railway line along the northern border of the asset. The has historical and aesthetic value and is **medium** in value.

- 3.9.177 A Grade II listed 'Field House' (**1166302**) is located c. 1.2 km south-west of the draft Order Limits. The property is a 16th century timber framed and plastered house with later 18th century additions and alterations.
- 3.9.178 The asset is located south of West Horndon down a private track that connects Dunnings Lane to the A128, there is another property along this lane, to the west of the asset that appears from aerial photography to be a farming complex. The asset is also situated opposite a complex of large hanger-style buildings, part of an air conditioning contractor company. The asset sits within a garden lined with a shrub like fence and some dense vegetation to the eastern side of the property. Surrounding the property are multiple open, flat rural fields, which allow for extensive views to and from the property. This landscape likely reflects the landscape that was present when asset was built, with the name of the asset suggesting a rural landscape.
- 3.9.179 OS mapping from 1872 to 1946 reveals a different plan and layout of the buildings opposite the asset to those present on aerial imagery from the present day. At some point in the mid to late 20th century onward there must have been alterations to the buildings opposite the asset, with some buildings having been removed and other erected in their place. The agricultural setting of the asset contributes considerably to its value. Despite the flat lay of the land surrounding the asset the setting of the asset does not extend to the draft Order Limits, with distant screening and landscape division by roads, a railway line, a golf course as well as other intersecting vegetation and buildings scattered across the landscape between the asset and the draft Order Limits. The asset holds historical, evidential, and aesthetic value and is **medium value**.
- 3.9.180 The Grade II listed 'Garlesters' (**1111648**) is located c. 1.1 km west of the draft Order Limits. The property is 16th century with extensive 17th century alterations and some later 19th century alterations.
- 3.9.181 The asset is located on the Brentwood Road, on the outskirts of the settlement of Bulphan, separated from the village centre by the Bulphan Bypass. The asset is close to other residential buildings situated along the Brentwood Road, one of which near opposite the asset is also listed, the Old Plough House (**1337059**). There are some more modern properties that neighbour the asset to the south-east which are new builds yet characterful. The asset is set back from the road, behind a grass lawn, with some mature trees along a wooden fence bordering the property. Next to the asset on its northern side is a large pond with a white bridge crossing the pond surrounded by dense shrub-like vegetation. The garden and pond setting adds positively to the setting of the asset, retaining the rural yet maintained feeling of the property. Moreover, the pond seems to be an older remnant of the property, possibly original, with the pond illustrated on OS mapping from 1876. This map also illustrates the lack of development around the asset at this time with the other main property at the time relating to a property names Appleton's Farm, containing the Old Plough House listed buildings today. As such the area around the asset would have had a distinctly rural feel with the settlement of Bulphan not yet expanding to reach the asset. OS mapping indicates that by 1921 significant development had occurred in the area, with the expansion of the settlement of Bulphan to the west and south of the asset. Further development has occurred since this with more development evident to the south and east of the asset from aerial photography.

- 3.9.182 The setting of the asset contributes considerably to its value. Its setting as a rural building has been largely maintained even with the development of Bulphan village with the modern extent of the village still surrounded by rural land and fields, with fields still present to the rear of the asset. The setting of the asset does not extend to the draft Order Limits, with its setting largely contained to its village setting now and within its garden setting to the rear of the property. The asset has historical and aesthetic value and is **medium value**.
- 3.9.183 The Grade II listed 'Slough House' (**1111652**) is located c. 2.5 km west of the draft Order Limits. The property is an early 18th century timber framed and plastered house with red plain tile roof. The property has some 19th century alterations.
- 3.9.184 The asset is located down China Lane, at the end of the lane where it turns into a private lane before the entrance of the property. There appears to be a fish farm located opposite the property as indicated on Google Earth (accessed 27/09/2023). China Lane leads off Fen Lane, the road that leads into Bulphan village, as such the asset is located on the outskirts of the settlement. The asset is located within a private garden lined by a medium height hedge and fence. To the west and the rear of the house is a rectangular hanger like building. The asset is otherwise surrounded by fields and is in a general rural landscape, with some rural features in the landscape which are still present, such as the Mar Dyke, which is also on the OS map from 1872. Sometime between 1872 and 1898 there were some changes to the buildings neighbouring the asset with the removal of a building named White Wills. OS maps from 1921 and 1946 again show further changes to the buildings north of Slough House, which continued through 2003-2004 and 2011-2013. The body of water used for the fish farm is not present on any of the earlier mapping and so much be a modern development post 1949. Despite the changes to some of these buildings and the addition of the fish farm, the area around the asset has remained quite unchanged in terms of its character, still be in a rural landscape, the biggest change being the business and patrons associated with the fish farm, as indicated by the car park opposite the farm on aerial imagery, added between 2011 and 2013.
- 3.9.185 The setting of the asset extends beyond the property to the fish farm visible from the asset as well as to the far boundary of the fields bordering the property, where the edges of the fields are lined with trees and vegetation, limiting the views beyond. The setting of the asset contributes considerably to the value of the asset. The setting of the asset does not extend to the draft Order Limits. The asset has evidential and historical value and is of **medium value**.

### **South of Shoeburyness via Southend and Basildon Service railway line to Langdon Hills Golf Country Club & Hotel (east of the draft Order Limits)**

#### *Designated Heritage Assets*

- 3.9.186 A Grade II listed 'Lower Dunton Hall' (**1111583**) is located c. 10 m north of the draft Order Limits. The asset is a 18th century brick house with 19th century additions.
- 3.9.187 The asset is located along Lower Dunton Road within a private gated property, c. 750m south-west of Langdon Hills, an area of Basildon. The asset sits behind a low wall with a grassy garden surrounding the property and is shielded from the road by mature vegetation lining the Lower Dunton Road, it is only visible through the gaps in the gate at the entrance to the property. The asset is located among a group of larger modern hanger style buildings within an extensive hardstanding area, there are also various machines and equipment located around the hardstanding and between the buildings which appear as if they are relating to farm, and as such this may be a large farming complex. As such the setting of the asset extends to the agricultural

fields surrounding the asset associated with the farm. East and west of the property are agricultural fields and to the north and south, a mix of industrial and residential areas and agricultural fields. OS mapping between 1876 and 1898 indicates some changes to the buildings close to the asset within the courtyard. Little change is present on the OS mapping until 1946 where the change occurs within the wider area, with residential development beginning north-east of the asset. As a result, the setting of the asset contributes moderately to its value. The draft Order Limits is due to pass directly in front of the asset, through the centre of the farming complex, and as such the setting of the asset extends to the draft Order Limits. The asset has evidential, historical, and aesthetic value and is **medium** in value.

- 3.9.188 The Grade II listed 'Doesgate Farmhouse' (**1146666**) is located c.90 m east of the draft Order Limits. The house is 17th century in origin and is timber framed and plastered with red plain tile roofing. There are some 19th century alterations. The asset is located off Doesgate Lane, set back from the road down a private gated drive and behind a large grass garden. The asset is slightly visible from the roadside due to intermittent screening from vegetation and fencing. The asset is also visible from the fields to the west of the property, in general the visibility of this asset has increased since 2018 when much of the vegetation around the property has been removed and construction has begun to the west of the property of what appears to be five new houses from aerial photography. The removal of the vegetation screening around the asset and the soon to be constructed dwellings would have an effect on the setting of the asset, with the removal of barn like buildings and supposedly a change in the function of the area around the asset from a farm with farm buildings to a new residential area.
- 3.9.189 The setting of the asset has already been altered by vegetation removal, the removal of the original farm setting and the construction of what appears to be five residential properties along the western side of the asset. The removed vegetation cover from the assets garden makes views to and from the asset more visible in the direction of the draft Order Limits. Once built the houses may provide some visual screening to the asset. And so, the setting of the asset contributes moderately to the assets value. Because of the proximity of the draft Order Limits to the asset and the agricultural land surrounding the asset, the setting of the asset does extend to the draft Order Limits. The asset has evidential and historical value and is of **medium value**.
- 3.9.190 The Grade II listed 'Langdon Hill Hall Farmhouse' (**1111590**) is located c.1.3 km east of the draft Order Limits. The building is a 18th century timber framed plastered farmhouse with a weatherboarded rear wing and red plain tile roof.
- 3.9.191 The asset is located down a private road which joins onto Old Church Hillin a private garden, with some hanger style outbuildings close to the asset. There is also some mature vegetation close to the property, mostly to the east and south. Surrounded the asset are rural fields, and to the east a woodland with the settlement of Langdon Hill situated on the other side of the woodland. The asset is located close to two other listed buildings, one medieval (**1337108**) and another a post medieval building (**1147475**). This asset is associated with Langdon Hill Hall, which was demolished sometime after 1946, when the hall is still present on OS mapping for the area. Therefore, the original setting of the asset when it was constructed has changed significantly, it no longer being part of the estate associated with Langdon Hill Hall. It is unclear whether this asset still functions as part of a working farm, possibly with the presence of the hanger-style outbuildings. Changes to the assets setting have occurred over time with this loss of the Langdon Hills Hall, and now the setting of the asset is largely contained to the extended garden area surrounding the outbuildings close to the property and the entrance from the private road. Despite the changes

surrounding the asset, the setting is still that of a rural small settlement, with woodland to the east and so the setting of the asset contributes considerably to its value. The setting of the asset does not extend to the draft Order Limits, with screening provided intermittently between the asset and the draft Order Limits, as well as the division of the landscape provided by Lower Dunton Road which passes between the two. The asset has evidential and historical value and is of **medium value**.

- 3.9.192 The Grade II listed 'Hall Farm Cottage' (**1147475**) is located c. 1.3 km east of the draft Order Limits. The cottage is 18th century in origin and is timber framed with weatherboarding and a red plain tile roof.
- 3.9.193 The asset is located down a small lane leading off Old Church Hill on the outskirts of Langdon Hills. The asset is located next to the medieval Church of St Mary and All Saints (**1337108**). The asset is surrounded on its western, southern, and south-eastern edge by nature vegetation; however, the asset is still visible from the road. There is less vegetation to the north of the property where it neighbours another residence. Historic mapping of the area from 1876 to 1946 indicates the limited development to the area around the asset during this time. The most recent development in the region, to the west in Langdon Hills, is beyond Hall Wood and out of sight of the asset. Because of this the setting of the asset has remained largely the same, still within a rural settlement setting surrounded by fields, shielded from much of the surrounding landscape by vegetation lining the property and as such the setting of the asset contributes considerably to its value. The setting of the asset does not extend to the draft Order Limits. The asset has evidential, historical, and aesthetic value and is **medium value**.
- 3.9.194 The Grade II listed 'The Parsonage House' (**1244319**) is located c. 1.5 km east of the draft Order Limits. The asset is a former parsonage, now house, built in 1875 by William White for the Reverend Enseby Digby Cleaver as the Parsonage to his St Mary's Church Langdon Hills. The design of the asset is that of an asymmetrical Gothic design in red Essex brick mainly in Flemish bond with some moulded brick and some stone dressings and tiled roofs with four brick chimney stacks. The asset is located within a small settlement on the outskirts of the larger settlement of Langdon Hills. The asset is set back from Old Church Hill by a private drive and manicured grass lawn. Located close to the Church of St Mary and All Saints (**1337108**), it is likely that the asset was built to serve the vicar based at the church, as further indicated by historical OS mapping from 1876 to 1949 which refers to the asset as a rectory. The historic mapping also indicates the limited development in the area, with some residential developments to the east close to the asset, and the development of the settlement of Langdon Hill, but this is further to the east beyond Hall Wood.
- 3.9.195 The setting of the asset is informed mostly by its vegetated garden setting, with much dense vegetation placed around the large garden, mainly to the south and west, in the direction of the draft Order Limits. The setting of the asset is also linked to the presence of the church, c. 100 m to the west. The asset is heavily screened by vegetation by the road, with Old Church Hill lined by tall vegetation. The setting of the asset as such contributes considerably to its value. The setting of the asset does not extend to the draft Order Limits. The asset has historical, aesthetic, and evidential value and is **medium value**.

## Langdon Hills Golf Country Club & Hotel to Saffron Gardens (east of the draft Order Limits)

### *Designated Heritage Assets*

- 3.9.196 The settlement of Horndon on the Hill contains a post medieval listed building, namely the Grade II 'Lower Thatched Cottage' (**1337133**), located c. 475 m north of the draft Order Limits. The asset is an early 19th century cottage, with a plastered timber frame and thatched roof, red brick chimney and early 20th century encasements. The asset is in the southern section of the settlement of Horndon on the Hill and its conservation area, along South Hill. The asset is located on high ground that is sloping to the south, however the views from the property are limited being a single storey building surrounded by other residential properties. To the rear of the property, to the west, are open fields, which border the settlement. Cartographic sources indicate that the residential development south of Horndon Hill commenced after 1944. Prior to this date there is no development to the south of the asset and as such the setting of the asset changed marginally following the development in the latter half of the 20th century with more residential development nearby. The asset is located not far south of the main High Street and the central parade of shops that occupy the historical centre of the settlement, the asset being an addition to the earliest central parts of the settlement but placed here due to the existing village. The setting of the asset is largely contained to the property of the asset and its setting within the southern residential section of the settlement.
- 3.9.197 The setting of the asset is visually screening from the rural fields to the west by the newer property which has been built on the western of the property containing the asset. This property provides some screening towards the draft Order Limits and contains the setting of the asset inward of the settlement and toward the road of South Hill rather than across the rural fields to the west. The peripheral rural settlement setting of the asset contributes considerably to its value. Despite the proximity to the draft Order Limits, within 500 m, the setting of the asset does not extend to the draft Order Limits. The asset has evidential, aesthetic, and historical value and is **medium value**.
- 3.9.198 The Grade II listed 'Wrens Park' (**1111588**) is c. 635 m south-east of the draft Order Limits. The asset is a 17th century timber framed and plastered house with a red plain tile roof, with some 19th century alterations. The asset is located within an open garden setting next to an active farm and close to multiple barn style buildings and what appears to be stables. Surrounding the asset and its associated farm complex are open rural fields, immediately by grass fields with crop fields beyond these. The surrounding fields close to the asset are likely the same as when the asset was built, with multiple rural open fields used for farming potentially by this farm and surrounding farms. The asset is located down a private track off North Hill, there is another property located down this private track, west of the asset. The asset is located north-east of the village of Horndon on the Hill. There is some visual screening between Horndon on the Hill and the asset along the B1007 and North Hill. OS mapping from 1944 indicates that there was once another farm located east down the same private track that the asset is located on, but current aerial imagery indicates that this farm has been removed since 1944. Some remains of the removed farm are still evident from aerial imagery.
- 3.9.199 The setting of the asset is within the garden and farmyard complex associated with the asset, with the setting extending to the far borders of the grass fields surrounding the property. The farm buildings located on the eastern side of the asset provide screening towards the asset. The agricultural farmyard setting of the asset contributes considerably to its value and the setting of the asset does not extend to the draft Order Limits. The asset has evidential, historical, and aesthetic value and is **medium value**.

- 3.9.200 The Grade II listed 'Arden Hall' (**1308529**) is located c. 980 m east of the draft Order Limits. The 18th century building is made of red brick with flared headers and a red plain tile roof. The asset is located down a private drive off the main road the B1007, which separates the asset from the settlement of Horndon on the Hill. The asset is located within a complex of hanger style warehouses spaced around an area of hardstanding. According to google maps this area now houses a cleaning product supplier, indicating a clear change in use to the land and buildings associated with the historical use of the assets setting, however the wider landscape character has remained largely the same, with open agricultural fields surrounding the property. OS mapping from 1876 to 1944 indicates multiple changes to the outbuildings within the property associated with Arden Hall, with more significant changes post 1944 is evident from comparing the historical mapping to current aerial imagery. Surrounding the asset and associated property are rural fields. Vegetation along North Hill to the west provides some screening towards the draft Order Limits.
- 3.9.201 The setting of the asset is focused on its association with the listed barn (**1337123**) to the east, buildings around the hard standing and the garden surrounding the property, as well as the surrounding farmland. Considering the changes to the barn like buildings and their use, but the general maintenance of the wider setting, the setting of the asset contributes considerably to its value. The setting of the asset does not extend to the draft Order Limits. The asset has evidential, aesthetic, and historical value and is **medium value**.
- 3.9.202 The Grade II listed 'The Gables' (**1111555**) is located c. 230 m east of the draft Order Limits. The asset is an early 17th century house which has been extensively altered. It has a timber frame and is plastered with a red plain tile roof. The asset is located on the periphery of the settlement of Horndon on the Hill, its setting is informed by its peripheral rural village location on Pump Street, a road lined with mature vegetation, the asset is located right on the road edge. The asset is referred to on earlier OS mapping from 1876 and 1898 as Myrtle Cottage, by the OS mapping of 1924 it has its current name. There is a large garden to the rear of the property, to the west, where some vegetation lines the border of the property offering some screening to the west.
- 3.9.203 The setting of the asset is contained to its residential plot and the boundaries of its large garden. It is also informed by its relationship with the Grade II '10, 11 AND 12, Pump Street' (**1111556**) which is located c.125 m to its south. Overall, the setting of 'The Gables' makes a moderate contribution to the asset's value and does not extend to the draft Order Limits. The asset is of **medium value** due to its evidential, historical, and aesthetic value.
- 3.9.204 The Grade II listed '10, 11 and 12, Pump Street' (**1111556**) is located c. 195 m east of the draft Order Limits. The asset is timber framed and plastered with a modern tile gambrel roof. The asset is located on the periphery of the settlement of Horndon on the Hill, its setting is informed by its peripheral rural village location on Pump Street, the view across the road to the east from the property looks onto open arable fields. Next to these properties are two newer properties which have a different style the older terrace of properties. The property is located close to the road edge, set behind a wide pavement come parking bay area. The setting of the asset is informed by its peripheral village location on the edge of Horndon on the Hill. The asset is bordered by dense vegetation to the north and open fields to the west and beyond the newer properties to the south.
- 3.9.205 Although there would be visibility between the asset and the draft Order Limits to the west, the setting of the asset, is the residential plot of the property and its location as

part of the rural settlement. Its setting is also informed by its relationship with the Grade II 'The Gable' (**1111555**) which is located c. 125 m to its north. Overall, the setting of '10, 11 and 12, Pump Street' makes a moderate contribution to the asset's value and does not extend to the draft Order Limits. The asset is of **medium value** due to its evidential, historical, and aesthetic value.

### **Thurrock Airfield to A13 (west of draft Order Limits)**

#### *Designated Heritage Assets*

- 3.9.206 The Grade II listed 'Timber Framed Barn at Ongar Hall' (**1111650**) is located c. 6 m south of the draft Order Limits. The asset is a 16th or 17th century timber framed and plastered barn with a red plain tiled roof and gabled midstrete to the west.
- 3.9.207 The asset is located within a wider industrial setting, just east of the associated Grade II 15th century Ongar Hall (**1337060**). The asset is nestled among new larger hanger style buildings within a large area of hand standing. Three buildings are visible on aerial photography that appear to also be on OS maps from 1876 and 1921. Since the OS mapping in 1921 there has been significant development along the eastern border, where once was an open field, is now a large area of hanger-like storage barns, many vehicles including lorries and other industry related equipment. Surrounding the asset, the large hanger style buildings according to google maps house various business, which have a negative effect on the setting of the asset. The asset was built as part of the complex of buildings associated with Ongar Hall (**1337060**, and whilst the setting of the properties surrounding the asset and its association with Ongar Hall have change with the industrial activity by the asset, the wider rural and agricultural settling of the landscape have remained, with the asset surrounded by fields in the wider landscape. Therefore, the setting of the barn makes moderate contribution to its value. The draft Order Limits pass immediately in front of the asset and as such the setting of the asset extends to the draft Order Limits. The asset is **medium value** based on its evidential, historical, and aesthetic value.
- 3.9.208 The Grade II listed building 'Wyfields Farmhouse' (**1337057**) and its 'Barn to North of Wyfields Farmhouse' (**1111646**) are located c. 50 m east of the draft Order Limits. The house is 17th century weatherboarded timber framed five-bay barn, with red plain tile roof and gabled midstrete to south, while the barn is a 19th century house in plastered brick with plain red tile hipped roof. They represent a heritage group enhancing their value. Based on their evidential, historical, and aesthetic value, the assets are **medium value**.
- 3.9.209 The assets are located c. 980 m north-west of the settlement of Horndon on the Hill, along Black Bush Lane. The setting of these assets is informed by their location in a farm complex and by relationship with each other and with the other building in the complex. The setting is further informed by the surrounding agricultural landscape with which the assets and associated outbuildings have a historical and functional relationship. The assets are located within a large grass field which borders agricultural land, some of which is accessed from the farmyard via the large grass field. It appears that the property in which the asset stands still operates as a working farm. The draft Order Limits pass within the agricultural field to the east, south and south-east. Overall, the setting of these two assets makes great contribution to their values. Nonetheless, it does extend to the draft Order Limits.
- 3.9.210 The Grade II listed 'Lorkins Farmhouse' (**1111626**), 'Weatherboarded Barn at Lorkins Farm' (**1146631**) and the Grade II 'Weatherboarded Cartlodge at Lorkins Farm' (**1337085**) are respectively located c. 100 m and c. 150 m south of the draft Order Limits.

- 3.9.211 The farmhouse dates to the 15th century with 17th and 19th century additions and alterations. It is timber framed with plastered walls and with a red plain tiled roof. It is two stories tall with a jettied first floor. The barn is a 17th century timber framed and weatherboarded barn with corrugated asbestos roof, with a gabled midstorey to the south, the other asset is a small 17th century timber framed and weatherboarded cart lodge with thatched roof. Due to their evidential, historical, and aesthetic value, the assets are of **medium value**.
- 3.9.212 The setting of these assets is informed by their roadside location within an active farm and caravan and camp site, off the B188, Conway's Road. They are c. 1.5 km north of Orsett and c.1.3 km north-west of Horndon-on-the-Hill. The properties are enclosed in a garden. Furthermore, their setting is enriched by the surrounding agricultural landscape, which has historical and functional connections to the assets. Because of this relationship with the surrounding landscape, their setting makes great contribution to their value. Moreover, due to the proximity of the draft Order Limits within the landscape occupying the field surrounding the asset and property, the setting of the asset does extend to the draft Order Limits.
- 3.9.213 The Grade II listed 'Conways Farmhouse' (**1337084**) is located c. 400 m south-west of the draft Order Limits. The asset is a mid to late 18th century bricked and timber framed which is plastered and has a red plain tile hipped roof. The asset is located on B188, Conways Road, close to the junction with Parkers Farm Road. The asset is located at the southern edge of the property, set back from the road by mid-high hedge and gravel drive. The asset is located within a large garden lined by vegetation. Beyond the boundaries of the property containing the asset are large open agricultural fields, there are some other properties nearby. Within the property there appears to be a lodging business in one of the buildings to the south-west of the asset. On historic mapping from 1876 to 1898 the asset is referred to as Moored in the Clays, later changing on OS mapping on 1921 to Conway's Farmhouse. The earlier mapping also indicates that there were other out buildings present on the property between 1976 to 1921 with further changes following 1921 comparing historic mapping with current aerial imagery.
- 3.9.214 The setting of the asset is informed by its relation to the farming landscape in which it is located. It is unclear whether the property containing the asset still operates as a working farm however this seems unlikely based upon aerial imagery. Nonetheless the rural agricultural landscape surrounding the asset has been maintained, preserving the historical setting of the asset. Overall, the setting makes great contribution to the asset's value. Also, although the asset is close to the draft Order Limits, within 1 km, the division of the field boundaries bordering the asset reduce the extent of the setting of the asset to the agricultural fields to the east and extend it more to the north and west. As such the setting of the asset does not extend to the draft Order Limits. The asset is **medium value** based on this evidential, historical, and aesthetic value.
- 3.9.215 The Grade II listed 'Parkers Farmhouse' (**1147501**) is located c. 600 m south-west of the draft Order Limits. The house is late 18th century, built in red brick with a red plain tile hipped roof. The asset is located on Parkers Farm Road, away from the road down a long private driveway. The southern boundary of the property along the roadside is lined with mature vegetation, screening the asset from the roadside. The borders of the property containing the asset is lined by mature vegetation on all sides. The asset is situated in a large garden, surrounded by open agricultural fields. OS mapping from 1976 to 1898 indicates that the asset had a different name, named Yammons and Downes, by OS maps from 1921 the asset is then referred to as Parker's Farm. The OS mapping also indicates that there have been significant

changes to the buildings close to the asset since 1921, where a large 'n' shaped building is located on the maps just north of the asset. It is likely that these were buildings associated with the farm and were removed when the farm fell out of use as aerial imagery doesn't indicate a working farm within the property containing the asset.

- 3.9.216 The asset's setting is informed by its location within the rural agricultural landscape and its history as a farm. It appears as if this asset no longer has this connection to farm activity, however the setting of the asset within its garden and agricultural landscape setting have been maintained. The setting of the asset does not extend to the draft Order Limits and instead is focused mostly within the garden environment of the entire property and the agricultural field surrounding the asset with its landscape based historical relationship. Therefore, the setting makes a great contribution to the asset's value. Overall, the asset is **medium value** based on its evidential, historical, and aesthetic value.
- 3.9.217 The Grade II listed 'Linstead Farm Cottages' (**1119792**) is located c. 130 m south-west of the draft Order Limits, c. 1.2 km east of Orsett. The asset is made up of three cottages 1,2 and 3, formerly a farmhouse and later farm cottages. The asset was built in the late 16th or early 17th century and was re-fronted and re-fenestrated in the 19th century. The asset is located along Orsett Road, set slightly back behind a white picket fence, shrub hedge and a short gravel drive. The asset is located within large grounds associated with the property, with dense vegetation to the south of the asset within the property borders.
- 3.9.218 The asset is visible from the roadside and is surrounded by large flat open agricultural fields. The assets setting is informed by its agricultural relationship to the landscape as farm cottages. Historic OS mapping from 1921 affirms its connection to the agricultural landscape, where it is documented as part of Linsteads Farms. Earlier maps from 1873 also mention the existence of Linsteads Farm, although the asset is not fully visible on these maps, as they terminate at the map's boundary, leaving the complete depiction of the asset inaccessible. This historic agricultural relationship with the landscape adds value to the property, however it no longer appears to operate as a farm, with many of the buildings present on earlier OS mapping now removed. As such the assets setting it is informed by the agricultural surroundings but no longer extends as far into the agricultural landscape, but to the boundary of the property and the field surrounding the property. As such the setting of the asset does not extend to the draft Order Limits. Overall, the setting makes great contribution to the asset's value. The asset is **medium value** based on its evidential, historical, and aesthetic value.
- 3.9.219 The Grade II listed 'Cholleys Farmhouse' (**1111647**) is located c. 160 m west of the draft Order Limits and c. 1.2 km west to Stanford le Hope. The asset is a 16th century timber framed and plastered house with red plain tile roof. There are some 19th century alterations to the property. The asset is located along Saffron Garde, close to the road edge with mature vegetation lining the roadside. The property is surrounded by large open agricultural fields. The property containing the asset has many outbuildings to the east of the asset and an area of hard standing between them. Surveying indicated that the asset is in a poor condition, with the roof partially caved in and part of walls missing and collapsed. There is boarding and fencing around the property and the vegetation has grown uncontrolled around the property. Surveying also indicated some minor level of activity within the property of the asset however, many of the outbuildings were in a poor condition, with graffiti on one outbuilding, overgrown vegetation and appeared to not be in regular use.

- 3.9.220 The assets historical setting is informed by its relationship to the agricultural landscape and the use of the asset and property within the landscape. However, due to its current poor condition, with building dilapidation of not just the asset but the surrounding outbuildings, some of which have been graffitied upon, the asset is no longer in use and as such its relationship to the landscape has suffered as a result, as both a functional property and within the farming setting. The vegetation has also grown to an extend over the property that views to and from the asset and restricted and not as they would have been. Because of this, despite the proximity of the asset to the draft Order Limits, the setting of the asset does not extend to the draft Order Limits and do not contribute to its value. The asset is **medium value** due to its evidential, historical, and aesthetic value.
- 3.9.221 The Grade II listed 'Whitmore Arms Public House' (**1337130**) is located c. 1.5 km west of the draft Order Limits. The building is an early 19th century house in rendered red brick with a grey slate hipped roof. This asset is also located within the Conservation Area of Orsett. The asset is located at the historic centre and heart of the settlement of Orsett, along Rectory Road, opposite the junction with the B188, High Road. The asset is located next to another listed building, Birch Cottage (**1111559**). The asset is located close to the road edge, with no screening from the road, making it visible and prominent along Rectory Road. The assets relationship to the landscape is its purpose as a public house which is there to serve the community of Orsett, both presently and historically.
- 3.9.222 The setting of the asset is tied to its location within the historic centre of the settlement, with Rectory Road and High Road being two of the main roads within Orsett during the medieval period, as indicated on historic mapping from 1873. This mapping also indicates the public house has a former name, the George Inn, however the OS mapping does not indicate when the name changes to its current name occurred. Because of this the setting of the asset is inward facing of the settlement and ties to the layout and structures along High Road and Rectory Road and as such does not extend to the draft Order Limits. Overall, the setting makes low contribution to the value's asset which of **medium value** due to its evidential, historical, and aesthetic value.
- 3.9.223 The Grade II listed 'The Bothy' (**1337128**) is located c. 960 m west of the draft Order Limits. The house is 16th or 17th century in origin and is timber framed. The asset also has 19th century alterations. The asset is located within the grounds of Orsett Hall, off Prince Charles Avenue, c. 350 m east of the settlement of Orsett. The asset is set back from the road down a gravel driveway, and it is shielded from the road by another building that it is joined onto. The asset is surrounded by some mature vegetation within the ground of Orsett Hall and on the opposite side of the road, provide visual screening to the property.
- 3.9.224 The setting of the asset is tied to its relationship within the ground of Orsett Hall, which is currently in use as a hotel, spa, restaurant, and wedding venue. Despite the change in use of the estate containing the asset, this has allowed a level of maintenance of the grounds and the surrounds of the asset, despite the removal of some of the buildings to the east of the asset that are present on OS mapping from 1873 but are no longer present. As such the setting of the asset is confined to the grounds of the Orsett Hall estate, shielded from view my established vegetation. As such the setting of the asset does not extend to the draft Order Limits. Overall, the asset is of **medium value** based on its evidential, historical, and aesthetic value, with the setting contributing significantly to its overall value.

- 3.9.225 The Grade II listed 'Loft Hall' (**1111649**) is located c. 960 m south-west of the draft Order Limits. The asset is a late 18th century house in red brick with a grey slate roof. The asset is located along the Brentwood wood, east of the village of Orsett. The asset is within a private garden which is boarded on the north, east and south by mature vegetation. The wider environment comprises large agricultural fields, with the A13 south of the asset at the end of the Brentwood Road. The asset is positioned just north of a group of buildings some of which look residential and other containing businesses. Historic OS mapping from 1898 indicates that there were once more buildings associated within the grounds of the asset as they appear grouped on the map. However, it seems these other buildings have been replaced subsequently with newer structures, as indicated from aerial photography, and google maps.
- 3.9.226 The setting of the asset has altered, with changes to the buildings once part of the land associated and these newer buildings appearing to be part of a separate property now. However, the setting of the landscape has remained the same with the continued presence of a rural and agricultural landscape surrounding the asset. The setting of the asset is confined to the garden of the property, shielded from the roadside by mature vegetation, as such the setting of the asset does not extend to the draft Order Limits. Overall, the asset is of **medium value** based on its evidential, historical, and aesthetic value, with the setting contributing significantly to its overall value.

### Stanford-le-Hope to Linford (east of the draft Order Limits)

#### *Designated Heritage Assets*

- 3.9.227 The Grade II\* listed 'St Clere's Hall' (**1111565**) is located c. 60 m south-east of the draft Order Limits. The asset is a farmhouse built in 1735 for James Adam, Clerk of the Stables to George II from 1727 to 1760. The asset is built in chequers brick, with a plain old tile mansard roof and brick end stacks. The asset is located along the A1013, Stanford Road on the outskirts of Stanford-le-Hope. The asset is set back from the busy road behind a line of mature vegetation and a long-paved driveway, lined either side by lawn. The boundaries of the property of the asset are lined by mature vegetation to the east, south and west. The setting of the asset has changed since its construction, once was surrounded by rural land, however now it is on the edge of the large settlement of Stanford le Hope and opposite the busy A1013 and A13. Many of the buildings alongside the asset located on historic OS mapping from 1898 to 1945 have been removed and replaced with modern housing. Overall, the setting does not contribute to the asset's value.
- 3.9.228 The setting of the asset has been affected quite considerably and as a result the setting of the asset is now confined to the mature vegetation boundary that surrounds the house and lawn. Given the asset's proximity to the pipelines located within the draft Order Limits, it is highly likely that the asset may experience impacts during the construction phase. Therefore, the setting might extend to the draft Order Limits. Overall, The asset is of **high value** due to its evidential, historical, and aesthetic value.
- 3.9.229 The Grade II listed 'Saffron Garden' (**1111557**) and 'Walls at Saffron Garden' (**1111558**) are located c. 100 m west of the draft Order Limits and c. 960 m north-west of Stanford le Hope. The house is 16th century with later alterations. It is timber framed and plastered with a red plain tile roof. The wall is late 16th century red brick walled garden, with gabled coping on diagonal courses. They are located within a farming complex associated with them, located off Saffron Gardens (road), just north of the A13. They are surrounded by agricultural fields beyond the farmyard setting. Although the house itself remains concealed from view as it is located within the

private land linked to the farm with some mature vegetation around, the wall is visible from the roadside.

- 3.9.230 The setting assessment for 'Saffron Garden' and 'Walls at Saffron Garden' is intricately intertwined, shaped by their shared location within a farm complex and their historical relationship with each other. Their setting is further enriched by the enduring historical and functional connections that both assets, along with associated outbuildings, maintain with the surrounding agricultural landscape. While 'Saffron Garden' remains within an active farmyard setting, it has seen transformations in the farmyard complex, with many older buildings that appeared on historic OS maps from 1898 to 1945 being demolished and replaced by larger, more modern structures, as evident from aerial photography. This reflects a dynamic evolution within the farm complex. In contrast, 'Walls at Saffron Garden' serves the purpose of enclosing the garden associated with the house and continues to be actively used alongside the farm. The setting of 'Saffron Garden' extends beyond the farmyard complex into the fields surrounding the farm, integrating with its agricultural context, while 'Walls at Saffron Garden' is confined to its position within the house gardens and the adjacent agricultural field, where the draft Order Limits pass through. As a result, the settings of both assets extend to the draft Order Limits, incorporating the agricultural fields that surround them. Overall, both assets are of **medium value**, underpinned by their evidential, historical, and aesthetic value, with their settings playing a substantial role in their overall value.
- 3.9.231 The Grade II listed 'Weatherboarded Barn at Waltons Hall' (**1337098**) and 'Waltons Hall' (**1111568**) are located c. 500 m south-east of the draft Order Limits and c 500 m north-east of Linford. There is also an draft Order Limits pipeline branch c. 300 m west and one c. 400 m north-east of the assets. The barn is a 17th century timber framed and weather boarded building with a corrugated iron roof. The hall is a 17th century property which was altered extensively in the 19th century. The asset was originally timber framed but is now clad in yellow stock brick with a red plain tile roof. The asset is located within the grounds of Walton Hall Farm Museum, which is located off Walton Hall Road, north-east of the settlement of Linford. They form a heritage group as part of a large farming complex. They are set back from the road, behind a grass lawn and metal railing gate and fencing that is covered in mature vegetation, offering some screening to the asset from the roadside. The barn is in use as a visitor's farm museum and is situated alongside other business within the other barn buildings with the property, such as a café and pet grooming. Both assets occupy a common setting that extends to a broader landscape characterised by vast open agricultural fields, neighbouring farms, the southern expanse of Linford Wood, and an eastern railway line. Their setting is intrinsically tied to their enduring historical agricultural relationship within this landscape, which has been preserved through the presence of the surrounding agricultural fields. The present status of the hall as part of a working farm remains uncertain, yet the historic farming landscape continues to thrive, maintained by the presence of these agricultural fields.
- 3.9.232 Overall, the setting of both the hall and the barn makes great contribution to their value. As the draft Order Limits passes through the agricultural fields bordering the property containing the assets, their setting does extend to the draft Order Limits. The assets are of **medium value** based on its evidential, historical, and aesthetic value.
- 3.9.233 The Grade II listed 'Turners Farm' (**1307175**) is located c. 600 m south-east of the draft Order Limits. There is also an draft Order Limits pipeline branch c. 300 m west and one c. 400 m north-east of the asset. The asset is 18th century in origin, timber framed and built in brick and plastered with a red plain tile roof. The asset is located

off Waltons Hall Road, north-east of the settlement of Linford. The asset is set back from the road beyond a brick wall and mature vegetation that lines the property providing some screening to the asset. To the west of the asset within the same property are some barn style farming buildings. The wider landscape surrounding the asset is that of large open agricultural fields, another farm opposite, Linford Wood to the South and a railway line to the east. OS mapping from 1873 and 1898 refers to the asset and its property as Flamburgh Hall and it is not until OS mapping from 1924 that the name of the property changes to Turner's Farm.

- 3.9.234 The setting of the asset is linked to its historical agricultural relationship within the landscape and the farming complex which surrounded the asset, which served as a residential building on the property. However, whether the asset is still part of a working farm is unclear. The setting of the asset is contained to the property boundaries and the surrounding agricultural fields surrounding the asset. The setting of the asset does not extend to the draft Order Limits however, due a boundary line made by vegetation on the western boarder of the field bordering the assets property. This vegetation boundary lines draws a division between the agricultural setting of the asset and the land containing the draft Order Limits. Similarly, to the east, the land is divided by Waltons Hall Road and a body of water which separates the asset from the draft Order Limits, mean the setting of the asset does not extend eastward to the draft Order Limits either. Overall, the asset is of **medium value** based on its evidential, historical, and aesthetic value, with the setting contributing significantly to its overall value.
- 3.9.235 The Grade II listed 'Sutton's Farmhouse' (**1111569**) is located c. 100 m south-east of the draft Order Limits. The asset is a late 16th century timber framed house which has been plastered and has a red plain tile roof. The asset is located along Walton's Hall Road, c. 250 m north-east of the settlement of Linford. The asset is located within a grassed garden with a 'L' shaped to the east, bordered by mature vegetation, screening it from the roadside. Surrounding the property are open agricultural fields, with two neighbouring farms to the east. The assets relationship to the landscape is tied to its farming history and activity within the agricultural landscape, however whether the asset is still part of a working farm is unclear. This historic farming landscape has been maintained through the presence of the surrounding agricultural fields.
- 3.9.236 The setting of the asset is within its garden and property setting as well as extending to the agricultural fields surrounding the property. As the draft Order Limits pass through the field just west of the property which seem to be linked to the property as apparent on aerial photography, the setting of the asset does extend to the draft Order Limits. Overall, the asset is of **medium value** based on its evidential, historical, and aesthetic value, with the setting contributing significantly to its overall value.
- 3.9.237 The Grade II listed 'The Vicarage' (**1111587**) is located c. 700 m east of the draft Order Limits. The asset is early 19th century in origin, built in yellow stock brick with a modern red tile roof. The asset is located within the settlement of Mucking, at the centre of the settlement, set back from the road, down a paved driveway shielded from the roadside by dense mature vegetation. The asset is no longer in use as a rectory and instead houses an office. The setting of the asset is linked to its relationship with the church and the community of the settlement of Mucking that the church would have served. Because of this the historic setting of the asset is linked to church, and whilst the church has maintained its function the asset has altered in use, the setting of the asset is still present from its prior use as a rectory.

- 3.9.238 The setting of the asset is centred within the settlement of Mucking and is location next to the church. The vegetation that surrounds the asset screens it visually from the surrounding land of the settlement. As a result, the setting of the asset does not extend to the draft Order Limits which are separate from the settlement and screening by vegetation and divided from the landscape of the settlement by a railway line and Butts Lane. Overall, the asset is of **medium value** based on its evidential, historical, and aesthetic value, with the setting contributing significantly to its overall value.

#### *Non-Designated Heritage Assets*

- 3.9.239 The HER asset records archaeological finds and excavated features in a multi-period site at South Garden Farm (**8003**), located 120 m east of the draft Order Limits. The post medieval remains include several postholes and a brick drain. The asset is **low value**.
- 3.9.240 'The asset identified as 'Mucking: Post medieval' (**8065**) is situated between the north-east of Linford and the south-west of Mucking, along Waltons Hall Road. During the post-medieval period, the area underwent field enlargement and amalgamation. However, by the mid-twentieth century, only remnants of its primary boundaries remained, alongside recent field boundaries. In this field system, a few isolated features were discovered, including sheep and other animal burials. Although these features couldn't be precisely dated, they are likely recent and indicative of the burials of diseased livestock. Unfortunately, the site has been destroyed due to gravel quarrying. Given the limited historical value and the site's destruction, it is assessed as having **low value**.
- 3.9.241 The HER asset 'Golf Course, St. Cleres Hall' (**8130**) is a post medieval findspot partially located within the draft Order Limits, extending east beyond the draft Order Limits. A light scatter of tile fragments of post medieval date was noted across the site of the golf course. The asset is **low value**.
- 3.9.242 The HER asset 'Land adjacent to Walton Hall Farm, Linford, Stanford Le Hope' (**8030**) is located within the draft Order Limits, extending beyond it to the east and the west. The HER asset is a multiperiod site which included a post medieval ditch. The asset is **low value**.

### **South-west of the A13 to Chadwell St Mary (west of the draft Order Limits)**

#### *Designated Heritage Assets*

- 3.9.243 The Grade II listed 'Weatherboarded Barn at Bareham's Brooding Kennels' (**1308981**) is located c. 400 m west of the draft Order Limits. The asset is a 17th century timber framed and weatherboarded barn.
- 3.9.244 The asset is located within a built-up area of large barn style buildings within a hard standing located down a long track off the Brentwood Road that leads to Orsett Golf Course. The complex of buildings containing the asset is located on the northern edge of Orsett Golf Course and south of Southfield, separated by an area of scrubby grassland. The asset is in the centre of these complex of buildings and as such the building is only partly visible from the roadside. The length of the road close to the asset is lined with a high hedge creating some screening to the south-east. Further screening is provided by vegetation across the golf course providing screening between the asset and the draft Order Limits. Historic OS mapping indicates that the asset and buildings around the asset were once part of a farm, Mucking Heath Farm,

which was north of Gray's and Orsett Gold Course and Mucking Heath on an OS map from 1946. This indicates a change in use of the asset from a farm building to the kennel that is now located within the asset. The relationship of the asset to the landscape has changed both with the changes to the surrounded landscape from a more rural agricultural landscape when the asset was in use as a farm, to a more build-up environment with the introduction of the Orsett Golf Course and the settlement of Southfield and the subsequent transformation of the asset from a working farm to a complex of buildings containing individual businesses. The setting of the asset, therefore, has reduced overtime to the confines of the complex of buildings and as such does not extend to the draft Order Limits. Overall, the asset is of **medium value** based on its evidential, historical, and aesthetic value, with the setting making a minimal contribution to its overall value.

- 3.9.245 The Grade II listed 'Heath Place' (**1111575**) is located c. 1.5 km west of the draft Order Limits. The asset is a late 18th century house built in brick and timber framing, plastered with a red plain tile roof.
- 3.9.246 The asset is located down a private track and driveway off Hornsbury Lane south of A13. The private road to the asset is lined with trees and there is more mature vegetation lining the western boarder of the house as well as a large patch of trees to the south of the asset. this vegetation offers some screening towards the side, as do the large barn style buildings to the east of the asset. The assets relationships to its setting are informed by its farming links to the rural agricultural landscape, of which it is surrounded by large agricultural fields which is the historic setting of the asset also, indicated by OS mapping from 1873. Because of this the setting of the asset does extend beyond the boundary of the property into the field bordering the property, which is it associated agricultural landscape. However, breaks and division across the landscape including field boundaries and the Brentwood Road means that the setting of the asset does not extend to the draft Order Limits. Overall, the asset is of **medium value** based on its evidential, historical, and aesthetic value, with the setting making moderate contribution to its overall value.
- 3.9.247 The Grade II listed 'Heath Cottage' (**1111574**) is located c. 2 km west of the draft Order Limits. The asset is a late 18th century cottage, timber framed and weatherboarded with a red plain tile roof. The asset is located on Hornsbury Lane on the periphery of the settlement of Orsett Heath, a smaller settlement on the outskirts of Chadwell St Mary. The Lane is lined with vegetation close to the property as well as the garden of the asset and the gardens neighbouring buildings being vegetated. The house is set back slightly from the road behind a grass garden and hedge row fence. The house neighbours an allotment, located to the south. To the west the asset is bordered by a large open agricultural field.
- 3.9.248 The setting of the asset is informed by its relationship to the landscape, which historically would have been an area of heathland as event from the name of the asset as well as indicated on OS mapping from 1873 prior to the major development of the settlements of Orsett Heath and Chadwell St Mary. As such the historic setting of the asset would have been that of a rural residence situated in the sparsely distributed settlement of Orsett Heath, which would have been close to the heath land, south-west of the asset and surrounded by an agricultural landscape. Since 1873 the areas of land to the west and the south of the asset, towards Chadwell St Mary and Little Thurrock have been developed substantially with the addition of the main road, the A1089, Dock-Approach Road to the west and the A1013 to the north and the A13 beyond that. The land to the north-east and east has remained the most unchanged with large open agricultural fields still present. As such the setting has changed to a large extend to a more build up form of settlement around the asset,

but still with a more rural setting being on the periphery of this development. As such the setting of the asset is contained to the grounds of the asset's property and inward of the settlement of Orsett Heath that it is a part of, where the heathland used to be. Therefore, the setting of the asset does not extend to the draft Order Limits. Overall, the asset is of **medium value** based on its evidential, historical, and aesthetic value, with the setting making moderate contribution to its overall value.

- 3.9.249 The Grade II High House (**1337091**) is located c. 590 m west of the draft Order Limits. The asset is a timber framed 18th century asset, plastered with a modern tile roof. The asset is located along High House Lane, east of Chadwell St Mary. To the south-east of the asset is a large quarry/aggregates site and to the north and west are open agricultural fields. Next to the house are some outbuildings and an area of hard standing. OS mapping from 1873 to 1947 depicts solely open fields surrounding the asset, with the quarry/aggregates site appearing to have been established at some point during the latter half of the 20th century.
- 3.9.250 The setting of the asset is informed by this historic agricultural and rural landscape, where the asset served presumably as part of a working farm. It is unclear whether the house is still in use as a functioning farm. Despite the development of the quarry the asset still retains some of its original historic setting and as such its setting extends to the remaining fields surrounding the asset. However, the setting of the asset does not extend to Horford Road which acts as a break in the landscape and as such the setting of the asset does not extend to the draft Order Limits. Overall, the asset is of **medium value** based on its evidential, historical, and aesthetic value, with the setting making moderate contribution to its overall value.
- 3.9.251 The Grade II listed asset Mill House (**1111577**) is located c. 730 m west of the draft Order Limits. The asset is an early 19th century structure built in grey gault brick with a grey slate hipped roof. The asset is located on Muckingford Road, east of Chadwell St Mary. The asset is surrounded by a sprawling farm complex and farmyard with a mixture of modern and characterful buildings. There appears to be much industry in and around the asset with two large hanger like barns to the north of the asset. OS mapping from 1947 indicates that much of the development to the farm complex must have occurred in the latter half of the 20th century with many of the current outbuildings do not present on the historic map. The name of the asset suggest that the asset may have had a historical function as a mill site in the rural landscape, potentially serving an agricultural community with the use of the mill.
- 3.9.252 The setting of the asset today has been encroached upon by the sprawling farmyard and gardens and grounds of the property containing the asset. the mature vegetated boarder of the property also contributes to setting defining it further within the bounds of the property. The High House Lane, Hoford Road and Muckingford Road, alongside the modern quarry works to the north of the asset limits the setting of the asset also from the wider rural landscape, and as such the setting of the asset does not extend to the draft Order Limits. Overall, the asset is of **medium value** based on its evidential, historical, and aesthetic value, with the setting making low contribution to its overall value.

#### *Non-Designated Heritage Assets*

- 3.9.253 The excavation of the scheduled Orsett Neolithic causewayed enclosure (**1009286**) also identified the parallel ditches of a possible medieval/post medieval trackway and field boundary ditches of similar date (MEX17782- **8159**). The Essex HER record for these remains extends to include a surrounding wider complex of undated cropmarks that may include further evidence of medieval/post-medieval agricultural activity. Any such remains would have evidential value and be of **low value**.

## West Tilbury

### *Designated Heritage Assets*

- 3.9.254 The scheduled monument 'Earthworks near church, West Tilbury' (**1002199**) is located within the draft Order Limits, extending beyond to the west. It has **high value** based on its evidential, historical, and aesthetic value. The earthworks have been obscured by gravel diggings and farm buildings. The location of the asset on high ground suggest it might have been the site of an early camp. South-west of the church is a length of rampart with an internal ditch which turns at right angles towards the north. The earthen work elements of the asset may imply a fortification purpose to its historical use, but this is not clear from the current recorded evidence.
- 3.9.255 The asset is located within the conservation area of West Tilbury, specifically the larger north-eastern section of the conservation area, located off Church Road. the asset is 2.48ha in area and located to the rear of three Grade listed properties and their grounds (**1308889**, **1111625**, **1111541**), although is not known if they are associated with the asset. The asset is positioned on the edge of an escarpment, with the north-eastern side of the monument on an area of high ground, c. 21 m aOD, and the south-western edge of the monument is positioned where this high land begins to slope downhill to the lower flatter ground below, c. 10 m aOD in elevation at the monuments lowest point. Because of its position in the landscape the asset would have had extensive far-reaching views across the landscape towards the Thames to the south, and towards the London to the south-west. This landscape positioning may indicate the use of the asset, likely a fortification or settlement, with the high ground providing a defensive role. The asset is not visible from church Road and the earth work remains of the asset, which are covered in shrub like vegetation as apparent on aerial imagery make it difficult to see from Gun Hill to the west and Coopers Shaw Road to the south-west and south. Nevertheless, the historical setting of the asset means that despite this, its setting would extend far towards the south-west and west, and in the case of the south, towards the draft Order Limits. furthermore, the draft Order Limits pass through the far eastern corner of the asset as it crosses Church Road and as such any activity within the draft Order Limits would have not just a setting effect but a physical impact to the asset. Because of this the assets setting does most certainly extend to the draft Order Limits, both the setting of the grounds of the asset as well as to the historical reaching views the asset would have commanded.
- 3.9.256 The Grade II listed buildings, 'Manor Farmhouse' (**1337089**) and 'Granary to North-East of Manor Farmhouse' (**1146758**) are located within the West Tilbury conservation area (**CA28**), and settlement of West Tilbury. They are situated along Blue Anchor Lane, 200 m north-west of the draft Order Limits. The farmhouse is a 17th century timber framed and weatherboarded building with a red plain tile roof. The granary is a late 18th century timber framed and weatherboarded structure with a grey slate hipped roof. The assets are in the larger northern section of the conservation area, close to the village centre and central village green. They are set back from the road behind a white picket gate and fence as well as a gravel driveway. There are also two mature trees which frame the entrance to the house, with a third on the south-western corner of the front garden. Around are large open fields as well as the medieval open field system which is part of the conservation area.
- 3.9.257 The setting of the assets is informed by their historical relationship to the settlement of West Tilbury, primarily a medieval settlement with later post medieval additions. OS mapping from 1873 indicates that they are associated with was once named

Bluehouse Farm, later changed to Manor Farmhouse, following 1873. The OS mapping from 1873-1947 indicates some minor changes to the other outbuildings on the property too, however the layout of the land containing the assets has largely remained the same. Furthermore, there has been little development close to the farm complex with the village centre retaining its character and layout with any developments post 1873 occurring to the western side of the village along Rectory Road. As such the setting of the assets is informed by the characterful and historic village centre but also to the surrounding agricultural landscape which was a key element to the historic activity of the settlement. The settlement, and so the assets, being on high ground extends the views of the setting across the open agricultural landscape and as such the setting of the asset does extend to the draft Order Limits which are close to the asset to the east passing through two of the agricultural fields that are close to the village and asset. Overall, the assets are of **medium value** based on their evidential, historical, and aesthetic value, with the setting making a moderate contribution to its overall value.

- 3.9.258 The Grade II listed 'The Cottages' (**1337090**) is located c. 250 m north-west of the draft Order Limits. The early 19th century house is built in grey gault brick with a modern tile hipped roof. The asset is located within the conservation area and village of West Tilbury, along The Green. The asset is in the larger northern section of the conservation area. The asset faces the central triangle green of the village and is set back from the road behind a grass lawn and thin wire fence separating the two properties that make up the asset and wooden fence along the front of the asset. The setting of the asset is informed by its historical relationship to the settlement of West Tilbury, primarily a medieval settlement with later post medieval additions. Historic OS mapping from 1873-1947 indicates that there has been little development close to the property with the village centre retaining its character and layout with most any developments post 1873 occurring to the western side of the village along Rectory Road evident from modern aerial imagery.
- 3.9.259 The setting of the asset is informed by the characterful and historic village centre but also to the surrounding agricultural landscape which was a key element to the historic activity of the settlement as the northern edge of the property backs onto the open medieval field system. Despite being set back from the road, the draft Order Limits would still likely be visible from the asset at it passes along the eastern border of the conservation area. The draft Order Limits pass through the conservation area of West Tilbury to the south, although, visibility from the asset to this section of the conservation area is limited. The setting of the asset is focused on its village green setting and so it does not extend to the draft Order Limits. Overall, the asset is of **medium value** based on its evidential, historical, and aesthetic value, with the setting making a moderate contribution to its overall value.
- 3.9.260 The Grade II listed 'Kings Head Public House' (**1111633**) is located c. 240 m north-west of the draft Order Limits. The asset is a late 18th century building with 19th century alterations. The property is built in brick and plastered over the top with a red plain tile roof. The asset is located within the conservation area and village of West Tilbury, along Blue Anchor Lane. The asset is in the larger northern section of the conservation area. The asset faces the central triangle green of the village and is located close to the road edge with only a small, paved gap separating the asset from the road. The setting of the asset is informed by its historical relationship to the settlement of West Tilbury, primarily a medieval settlement with later post medieval additions. Historic OS mapping from 1873-1947 indicates that there has been little development close to the property with the village centre retaining its character and

layout with most any developments post 1873 occurring to the western side of the village along Rectory Road evident from modern aerial imagery.

- 3.9.261 The setting of the asset is informed by the characterful and historic village centre but also to the surrounding agricultural landscape which was a key element to the historic activity of the settlement. The asset is first recorded as being an inn on OS mapping from 1898, earlier mapping does not indicate its use. The draft Order Limits would likely be visible from the asset as it passes along the eastern border of the conservation area. The draft Order Limits pass through the conservation area of West Tilbury to the south although, visibility from the asset to this section of the conservation area is limited. The setting of the asset is focused on its village green setting and so it does not extend to the draft Order Limits. As it has been a building of communal and public value at least during the late post medieval and modern period, this asset is of **medium value** also based on its evidential, historical, and aesthetic value.
- 3.9.262 The Grade II listed 'Post House' (**1308454**) is located c. 300 m north-west of the draft Order Limits. The asset is early 19th century in origin, built of yellow stock brick which has been part plastered and with a grey slate roof.
- 3.9.263 The asset is located within the conservation area and village of West Tilbury, along Rectory Road. The asset is in the larger northern section of the conservation area. The asset is located just along from the central triangle green of the village to the north-west and is located close to the road edge with a small pavement between the asset and the road. The asset still has its 19th century shop window present at the front of the property, an indication of the former uses of the property and its service within the community of West Tilbury. The asset faces some of the newer properties within the village as it faces away from the historic centre and central green. The asset marks the boarder of the western edge of the historic part of the historic buildings in the conservation area with the newer modern buildings continuing opposite and to the west of the asset. The draft Order Limits are unlikely to be visible from the asset due to the direction the asset is facing and its location on the western side of the settlement. However, the draft Order Limits do pass through the conservation area of West Tilbury to the south and as a result would influence the setting of the conservation area. But considering the visual separation between to asset and the draft Order Limits and its placement within the conservation area the setting of the asset does not extend to the draft Order Limits. Overall, the asset is of **medium value** based on its evidential, historical, and aesthetic value, with the setting making a moderate contribution to its overall value.
- 3.9.264 The Grade II listed 'The Bakery' (**1111634**) is located c. 240 m north-west of the draft Order Limits. The asset is a 19th century property built in yellow stock brick and with a plain tile roof. The asset is located within the conservation area and village of West Tilbury, along The Green. The asset is in the larger northern section of the conservation area. The asset faces the central triangle green of the village and is set back from the road behind a grass verge, a low brick wall and a small front garden lawn. The characterful property is close to other listed buildings centred around the village green.
- 3.9.265 The setting of the asset is informed by his historical relationship to the settlement of West Tilbury, primarily a medieval settlement with later post medieval additions. Historic OS mapping from 1873-1947 indicates that there has been little development close to the property with the village centre retaining its character and layout with most any developments post 1873 occurring to the western side of the village along Rectory Road evident from modern aerial imagery. As such the setting of the asset is

informed by the characterful and historic village centre but also to the surrounding agricultural landscape which was a key element to the historic activity of the settlement. The name of the bakery alludes to its function within the community of the village and the service it provided to the settlement. The asset faces north-east and the direction of the draft Order Limits which makes visibility between the two highly likely. The setting of the asset is focused on its village green setting and so it does not extend to the draft Order Limits. Overall, the asset is of **medium value** based on its evidential, historical, and aesthetic value, with the setting making a moderate contribution to its overall value.

- 3.9.266 The Grade II listed 'Barn To North Of West Tilbury Hall' (**1308889**) is located c. 80 m west of the draft Order Limits. The asset is a 16th century timber framed and weatherboarded barn. The asset is located within the conservation area and village of West Tilbury, along Church Road. The asset is in the larger northern section of the conservation area. The asset is set back from the road behind a large verge in front of the property, a low brick wall and mature vegetation behind as well as a grass lawn. The asset is partially screened from the roadside by the vegetation. Opposite the asset is the treelined Church Road with open fields beyond. The asset is on high ground, which along with its relationship to the asset West Tilbury Hall (**1111625**), indicate its historical relationship to the landscape and the settlement of West Tilbury. This also indicates much about the historic setting of the asset associated with a large residential home in a prominent place in the landscape and at the centre of a village.
- 3.9.267 The setting of the asset has not changed greatly in terms of its village setting, the village preserving its historic character and layout. However, the asset is no longer associated with the same property as West Tilbury Hall, with a boundary line evident between the two on aerial imagery as well as two separate driveways. The asset is now named Malagay Barn. Despite the vegetation lining the eastern side of Church Road there is likely to be visibility between the asset and the draft Order Limits as it pass through and by the conservation area. The elevation of the asset in this landscape also lends itself to further reaching views further increasing the likelihood of visibility. As a result of this intervisibility and the crossing of the draft Order Limits through the conservation area close to the asset the setting of the asset, of which the conservation area is key, would extend to the draft Order Limits. Overall, the asset is of **medium value** based on its evidential, historical, and aesthetic value, with the setting making a great contribution to its overall value.
- 3.9.268 The Grade II 'West Tilbury Hall' (**1111625**) is located c. 90 m west of the draft Order Limits. The asset is 17th century or earlier, with a timber frame and part weatherboarded with a red plain tile roof. The asset is located within the conservation area and village of West Tilbury, along Church Road. The asset is in the larger northern section of the conservation area. The asset is set back from the road behind a private gated driveway and concealed from the roadside by dense mature vegetation, as such the asset is not visible. The asset relationship to the landscape is linked to its location within the settlement of West Tilbury, part of the main settlement, slightly removed from the centre village green, likely due to the size and importance of the Halls historic estate.
- 3.9.269 The setting of the asset has not changed greatly in terms of its village setting, the village preserving its historic character and layout, however the asset is now located within a different property to a remaining listed barn historically associated with the asset. Due to the sheer density of vegetation screen on the eastern side of the asset it is unlikely there would be visible to the draft Order Limits to the east. The same cannot be said with the views from the asset to the south, where the terrain drop

sharply and there is the possibility for visibility between the asset and the draft Order Limits to the south and south-east. Because of the draft Order Limits passing through the conservation area close to the asset and the potential visibility between the asset and the draft Order Limits and the extensive views that could be command from the elevated vantage point of the asset which likely contributed to its located, the setting of the asset does extend to the draft Order Limits. Overall, the asset is of **medium value** based on its evidential, historical, and aesthetic value, with the setting making a great contribution to its overall value.

- 3.9.270 The Grade II listed 'Gun Hill Farmhouse' (**1146774**) is located c. 530 m west of the draft Order Limits. The asset is early 19th century in origin built in grey gault brick with a grey slate hipped roof. The asset is located close to the settlement of West Tilbury, situated off Gun Hill to the west of the village of West Tilbury. The asset is located down a private road that leads off Gun Hill. The asset is located within a grassed garden which sets it back from the private road. OS mapping from 1873-1947 indicates that there were once more buildings associated with the farm to the west of the farmhouse, but aerial imagery indicates that these have subsequently been removed. The asset is surrounded by open grassland with some mature tree patches to the north of the asset and a large agricultural field to the south. The asset is located at the bottom of a steeply sloping hill, which rises towards the junction between Gun Hill, Rectory Road, and Turnpike Lane. The assets relationship to the landscape is tied to its historic agricultural activity as a farm in a predominantly agricultural landscape. It is unclear whether the asset still functions as part of a working farm, but the removal of the historic outbuildings may indicate a ceasing of farming activity associated with the asset.
- 3.9.271 The setting of the asset now is reduced to the area north of the asset by the dense mature vegetation and the sloping of the land, however the setting extends beyond its garden to the agricultural field opposite the asset. the setting of the asset does not extend to the draft Order Limits to the south-east of the asset which are separated from this agricultural field opposite the asset by Coopers Shaw Road and Fort Road. Overall, the asset is of **medium value** based on its evidential, historical, and aesthetic value, with the setting making a great contribution to its overall value.
- 3.9.272 The Grade II 'Biggin Farmhouse' (**1111645**) is located c. 1 km west of the draft Order Limits. The asset is an 18th century brick, timber framed and plastered house, with a red plain tile roof.
- 3.9.273 The asset is located along a private track that leads off Biggin Lane, situated along a driveway from the track leading from Biggin Lane. The asset is surrounded by open grass fields to the north and agricultural fields to the south, with the small settlement of Biggin to the west and more grass and arable land to the east. The asset is located at the bottom of a hill that slopes upward towards the junction between Gun Hill, Rectory Road, and Turnpike Lane. The assets relationship to the landscape is informed by his historic agricultural activity and agricultural landscape setting as well as its proximity to the settlement of Biggin. OS mapping from 1873 indicates some changes have occurred within the property with compared with later OS mapping and modern aerial imagery, with some buildings removed from the property. Earlier OS mapping also indicates that the farm was previously known as Little Biggin, changing sometime after 1898 into its current name. It would appear from aerial imagery that the property is still in use as a functioning farm, maintaining this historic setting function-based relationship with the landscape. The landscape surrounding the asset has not changed much when compared to historic OS mapping from 1873 and indicates the landscape has retained much of its agricultural character. The setting of

the asset extends to the grassland behind the asset as well as the agricultural fields directly to the south of the asset, as such the setting of the asset does not extend to the draft Order Limits. Overall, the asset is of **medium value** based on its evidential, historical, and aesthetic value, with the setting making a great contribution to its overall value.

- 3.9.274 The Grade II 'Polwicks' (**1111623**) is located c. 320 m south of the draft Order Limits. The asset is 17th century or earlier in origin, built with a timber frame and clad with yellow stock brick and a red plain tiled hipped roof. The asset is in the smaller south-eastern section of the West Tilbury conservation area (**CA28**) off Low Street Lane. The asset is not visible clearly from the roadside as it is located down a gated private drive away from the main road. The asset is surrounded by some other buildings a paved parking area which is to the south of the asset. The northern edge of the asset is lined with mature trees offering some visual screening. The assets relationship to the landscape is part of the rural settlement centred around Low Street, as it is referred to on historic OS mapping from 1873-1944, during which time Low Street had its own station.
- 3.9.275 The setting of the asset is centred around its location with the settlement and the vegetation screening to the north and the surrounding buildings further contain the setting of the asset. The draft Order Limits do not pass through the conservation area as much as it does with the larger north-eastern section. Because of this and the screening of the asset by vegetation and its location down a private drive screening further by other buildings, the setting of the asset does not extend to the draft Order Limits. Overall, the asset is of **medium value** based on its evidential, historical, and aesthetic value, with the setting making a great contribution to its overall value.

## East Tilbury

### *Designated Heritage Assets*

- 3.9.276 The scheduled monument 'East Tilbury Battery' (**1013880**) is located c. 1.7 km east of the draft Order Limits. The battery is separate from the nearby Coalhouse Fort (**1013943**) and was built in 1889 to 1890 to support Coalhouse Fort with long-range fire. The asset is an example of a rare coastal 'Twydall Profile' form of defensive installation and is the best and most complete in the country. This defensive style of installation represents a shift in defensive tactics in the late 19th century from large visible installations to disguised installations. The survival of its sunken gun placements makes it even more important. The asset was built to support the guns at Coalhouse Fort and as such is part of a wider more complex sequence of defensive installations around East Tilbury and in the wider area due to their defence position at the approach to the London. The asset was decommissioned before WWI the remaining parts of the asset are very well preserved.
- 3.9.277 The asset is located on the eastern side of the southern half of the settlement of East Tilbury. The asset is located behind the houses and gardens along Princess Margaret Road. The asset was inaccessible during surveying via pathways that lead behind the houses due to the dense mature vegetation that lines the asset. The asset is very well concealed from Princess Margaret Road. The setting of the asset is informed by its coastal location close to the estuary of the Thames and is location to other coastal defences such as the Coalhouse. The asset is located on the far side of an area of higher ground from the draft Order Limits. The western side of Princess Margaret Road is higher in elevation than the east side where the asset is located which provides some topographic screening on top of the vegetation screening around the asset. The setting of the asset extends to the south-east of the asset

towards the Coalhouse Fort and the riverside of the Thames. The vegetation screening and the elevated land to the west of the asset limits the extent of the setting to the west meaning the setting does not extend to the draft Order Limits. Overall, the asset is of **high value** based on its evidential, historical value, with the setting making a great contribution to its overall value.

- 3.9.278 The scheduled monument 'Coalhouse Fort battery and artillery defences' (**1013943**) is located c. 2.1 km east of the draft Order Limits. The asset comprises: the foundations of a Henrician blockhouse coastal battery, a Victorian late 19th century fort and a late 19th century Quick-Firer battery and a low-level radar tower dating from World War II.
- The first phase of this scheduled monument is represented by the Henrician 'blockhouse' coastal battery, constructed in 1539/40 under orders from King Henry VIII, using timber and stone taken from St Margaret's Chantry nearby. The structure is no longer visible, but the landward ditch survives as a creek. Timber palisading along the shore may belong to this phase. This blockhouse provides great knowledge regarding Henrician coastal fortifications. It is well documented historically and has high archaeological potential due to waterlogging.
- 3.9.279 A jetty used to be next to the blockhouse, possibly to support the blockhouse but later used to land coal. After several phase of rebuilding the jetty served the Coalhouse Fort, joined by a full-gauge railway, almost intact apart from the tracks themselves. The fort was constructed in 1799, replaced in 1847-55 by a more complex structure, which was then replaced in 1861-74. This phase was then added to during WWI and WWII, falling out of military use in 1949.
- 3.9.280 Closer to the waterfront is the 19th century battery Quick-Firer guns and searchlights, a rifle range, and World War II low-level radar tower. Collectively they form an important group of defensive structures at Coalhouse Point. The asset is a remarkably well-preserved and is one of the finest examples of an armoured casement fort in England, with the jetty and railway line being an integral part of the fort. Built in 1893, this Quick-Firer battery is the only surviving purpose-built battery of its type in the Thames basin, with the rifle range associated with the fort being an unusual survival. Also surviving at East Tilbury are virtually intact World War II radar installations which, of that type, are known at only two other places in England making them extremely rare and important surviving features of the Coalhouse Fort, indicating a change in defences over 400 years also.
- 3.9.281 The asset is located along the estuary of the Thames at the southern extent of the settlement of East Tilbury and at the southern end of Princess Margaret Road. The asset is located within an open grassed area dotted with mature trees with some vegetation screening along the western side of the asset's perimeter. The asset has clear views across the Thames towards Cliffe, Gravesend and beyond into the rest of Kent, with some view upstream of the estuary toward Modern Tilbury. Between the asset and riverbank are large pools of water forming a U-shaped design mirroring the shape of the fort, as is clear from aerial photography. The wider setting of the asset on the northern bank of the Thames and south of the settlement of East Tilbury is that of open flat coastal grass land with some intermittent area of thick bracken like shrubs. The setting of the asset lies primarily in its use as a coastal fortification and its defences built to protect the Thames Estuary and in particular London from attack. The later phase of the asset forms a collective military association with the post medieval East Tilbury Battery (**1013880**) and the modern Second World War anti-aircraft battery at Bowaters Farm (**1012185**). The asset's setting does not extend to

the draft Order Limits. Overall, the asset is of **high value** based on its evidential, historical value, with the setting making a great contribution to its overall value.

- 3.9.282 The Grade II listed 'Buckland' (**1147796**) is located c. 630 m east of the draft Order Limits. The asset is an early 19th century house in grey gault brick with grey slate roof. The asset is located west of the settlement of East Tilbury and south-east of the smaller eastern section of the West Tilbury conservation area (**CA28**). The asset is located down a small road that leads off Station Road. The asset is concealed from the roadside by a curving driveway and dense mature vegetation surrounding the property on all sides. The asset is located within a rural environment on top of an area of high ground, the area to the south-east of the asset is lower in elevation. There is a large waste treatment plant to the south-east. Historic mapping from 1873 indicates that the asset was once called Tilbury Hall, the name of the asset changed by OS mapping from 1923 to its current name.
- 3.9.283 The asset's setting is informed by its rural location, however in more recent years there has been an increase in the industry in the surrounding area close to the asset with the presence of the waste treatment plant. OS mapping and aerial imagery also indicates that overtime the asset has become more encroached by mature vegetation since its name change, with vegetation coverage starting to the east and subsequently more vegetation growing around the asset and to the south. This dense vegetation limits the setting of the asset currently to its property setting isolating it from the surrounding landscape, as such the setting of the asset does not extend to the draft Order Limits. Overall, the asset is of **medium value** based on its evidential, historical, and aesthetic value, with the setting making a great contribution to its overall value.
- 3.9.284 The Grade II listed 'Smithy Cottage' (**1111554**) is located c. 500 m south of the draft Order Limits. The asset is a late 17th century timber framed and plastered cottage which is part weather boarded with a red pantile hipped roof. The asset is located on the edge of East Tilbury, south of the settlement of Linford, at the junction of Muckingford Road and Princess Margaret Road. The asset is located on a busy road and junction which makes the setting of the asset quite noisy. There are open fields to the east and west that give the area a sense of open space. Historic OS mapping between 1873 and 1944 illustrates the levels of development that have occurred around the asset across this period, with the area to the north within Linford being developed first. It is after 1944 that the development to the south of the asset and the development of East Tilbury occurred with the development of the Bata Factory and associated settlement.
- 3.9.285 The historic setting of the asset was that of a small rural settlement centred around the junction between the now Muckingford Road and Princes Margaret Road. Currently the asset is within a more built-up environment, still with rural elements with the surrounding fields, but a shift towards a mixed peripheral rural and urban location. The setting of the asset is now informed by its relationship to the two settlement and as such the setting does not extend far beyond the asset's boundaries and does not extend to the draft Order Limits. Overall, the asset is of **medium value** based on its evidential, historical, and aesthetic value, with the setting making a moderate contribution to its overall value.

## Area east of Tilbury

### *Designated Heritage Assets*

- 3.9.286 The scheduled monument 'Tilbury Fort' (**1021092**) is located c.750 m south-west of the draft Order Limits. Tilbury Fort is England's most spectacular example of a late 17th century coastal fort with 19th and 20th century alterations. The fort was built at a time when artillery had become the dominant feature of warfare and so the fort was built with massive low earthworks instead of stone fortifications to withstand the shock of bombardment. Many features of the original internal features remain, and the surviving magazines are a rare example of very unusual building type. The asset was constructed by the estuary to provide a form of defence along the river and to defend the capital. The design of the batteries and systems of bastions are Dutch in design, extremely rare in England and the best preserved and most complete example of the type. There are buried remains of the 17th century fort and Tudor blockhouse within the asset, these remains represent one of the earliest types of structure built exclusively for the use of artillery warfare, only 27 examples are known to survive and as such are nationally important. These features are particularly important in the case of Tilbury Fort representing a retained component of the 17th century defences.
- 3.9.287 The foreshore contains waterlogged deposits, including wooden pilings which would provide technical information on the construction techniques of the fort and allow for dendrochronological dating. Alterations made to defences by the 1859 Royal Commission placed Tilbury within the largest maritime defence programme since the time of Henry VIII, the programme prompted by fears of French naval expansion, resulted in 70 new and upgraded coastal forts and batteries known as Palmerston's follies. These defences formed the visible core of Britain's coastal defence system well into the 20th century, many of which were still in use by World War II, with the final military phase, such as the western pillbox an important part of the fort's history. The fort constructed in 1539 had a D shaped plan with two stories, the same as the similar forts found at Gravesend, Milton, Higham, and East Tilbury, ideal for gun port to command a wide field of fire across the river. Small, fortified barracks were located at all the sites included Tilbury, but no above ground remains survive. Alterations were made to the blockhouse in the late 16th century under threat of Spanish invasion. Following 1588 and the defeat of the armada the building was encircled by a ditch and counterscarp bank with drawbridge and timber palisade, inside which stood barracks and store buildings.
- 3.9.288 The blockhouses were maintained throughout the English Civil War but played little part in the conflict. In 1660 a new fort and battery were built under order by Charles II, it is these defences which remain largely to this day. Twelve of the original 14-gun positions survive on the West Gun Line, the East Gun Line has been severely eroded over time, leaving only a single platform. Some damage occurred to the fort during World War II with bombing destroying soldier barracks, the kitchen, mess hall, hospital with other structures being subsequently demolished, however the footprint of the barracks remain marked on the ground. There is a brick curtain wall and parapet to provide elevation for firing but also to absorb the impact from bombardment. The fort also contains defence moats, navigated by bridges and drawbridges, some of which have been replaced by modern replicas. The ability to manage the water in the moats was an essential part of the fort's defences. Tilbury saw no action during the 18th and 19th centuries despite still being in use and in 1859 the Royal Commission deemed the defences unfit for use and commissioned forts at locations such as Coalhouse, Shornmead and Cliffe Creek. Tilbury was then altered and made more efficient for use during World War I, although the fort didn't see any action until World War II.

- 3.9.289 The asset is located along the shoreline of the river Thames, to the east of Tilbury Docks and to the west of Tilbury sewage treatment works and Tilbury Power Station. The asset is accessible off Fort Road and there are public paths which pass through the grounds of the asset. the asset is located on low lying ground and has visibility to the southern bank of the Thames towards Gravesend and further into Kent. The asset's setting is informed by its coastal location which was a key part of the purpose and construction of the asset as a coastal defence. The settings asset has been confined on the northern bank of the Thames to the grounds of the asset due to the industrial development either side of the asset. much of the settings asset faces onto the river where much of its military attention would have been focused, with links to coastal defences such as Gravesend Blockhouse (**1005120**) and New Tavern Fort, Gravesend, including Milton Chantry (**1013658**) on the southern bank of the Thames. Because of this encroachment of already present industrial sites bordering the asset and the assets focus on the riverine environment and ties to other assets of a contemporary period of use and function the setting of the asset does not extend eastward towards the draft Order Limits which are on the eastern side of the current Tilbury Power Station. Overall, the asset is of **high value** based on its evidential, historical value, with the setting making a low contribution to its overall value.

#### *Non-Designated Heritage Assets*

- 3.9.290 A borehole survey and desk-based assessment was conducted in advance of a proposed of a biosolid dryer at Tilbury, located c. 140 m south of the draft Order Limits (**8152**). The survey did not uncover any archaeological remains during the borehole survey, but they did identify palaeoenvironmental remains with the potential for the survival for Bronze Age period remains. A watching brief of the site revealed some made ground on top of alluvial and peat layers. Remains here consisted of the foundation of walls and fence posts likely associated with the Marsh Farm, a post medieval farm, that was on the site prior to the construction of the water treatment works. The asset is **low value** based on its evidential value.

### **Gravesend**

#### *Designated Heritage Assets*

- 3.9.291 The scheduled monument 'Gravesend blockhouse' (**1005120**) is located c. 1.95 km south-west of the draft Order Limits. The asset has been partly dismantled in the past but significant remains of the 16th century blockhouse remain. The asset was a chain of defences commissioned by Henry VIII and forms a visual link to Tilbury Fort (**1021092**) across the river Thames, on the northern bank.
- 3.9.292 Blockhouses are defensive structures of widely varying design built specifically to house small artillery garrison and to protect gunners and ammunition from attack. Built in stone typically, they were built specifically to protect a feature or area usually close to a river, harbour, or anchorage. Most blockhouses had a tower and bastion or gun platforms, with the earliest dated to 1398. Distributed along the east, south and south-west coasts, there are 27 examples which are known to survive in various states of repair, mostly now destroyed or incorporated into later military constructions. The partial survival of the blockhouse at Gravesend preserves not only an understanding of the development of military defensive structures but also the lives of the soldiers stationed there. The asset is group of a group of Henrician defences including Tilbury Fort on the northern bank of the Thames. There is further potential at the blockhouse for investigation due to only partial excavation.

- 3.9.293 The blockhouse had a D-shaped plan with the curved front facing the river, and two angled faces southward, facing inland, and a curved bastion on the west side. It is this semi-circular western front that survives. The asset was built in brick and ashlar blocks and the gunports are still visible, including the iron retaining rings for the guns. Buried remains of the blockhouse survive under the carpark to the east and Royal Pier Road. The asset was built in 1539 under order of Henry VIII as part of his chain of coastal defences and was one of five blockhouses built along this stretch of the river, others included Tilbury, Highham, Milton and East Tilbury. The fire from the blockhouse at Gravesend crossed fire with that of the Tilbury Blockhouse and guarded the ferry crossing between Gravesend and Tilbury also. Repairs of the fort occurred in 1588 and 1667 and converted to a storage magazine for gun power in the 17th century, although the eastern guns were still armed. Remodelling of the gun lines occurred in the 1780s before being levelled in 1834 then, being partially demolished in 1844.
- 3.9.294 The setting of the asset is characterised by its riverine location as well as its relation to other military assets along this stretch of the Thames. The asset is located along Royal Pier Road with The Clarendon Royal Hotel situated south of the asset on the other side of the road. There is a carpark and multi-story building to the east which limits the view eastward down the riverside. The view along the river to the west is more open with views towards Tilbury Dock on the northside of the river, and the Historic Gravesend Pier. The asset is next to a picnic area to the north-west along the river. The setting of the asset is open with views across the river towards Tilbury Fort. This open view onto the river and to the far side of the river is the most significant aspect of the assets setting, which has been maintained largely, with only some visual disruption with buildings development along the riverside at Gravesend. And so, whilst there has been significant development around the asset overtime the purposeful setting in terms of use has been maintained looking out onto the river. Due to the asset's position away from the foreshore and their screening by the Tilbury Substation, the setting does not extend to the draft Order Limits. Overall, the asset is of **high value** based on its evidential, historical value, with the setting making a great contribution to its overall value.
- 3.9.295 The scheduled monument 'New Tavern Fort, Gravesend, including Milton Chantry' (**1013658**) is located c. 1.85 km south-west of the draft Order Limits over the river Thames. The asset is an unusually complete example of an 18th century fort which underwent modifications in the 19th and 20th century. Each stage of the fort's development is represented by a complete sequence of mounted guns. Within the grounds of the fort are the remains of the earlier chapel or chantry associated with the Lepper Hospital of St Mary the Virgin at Milton by Gravesend.
- 3.9.296 The fort has a complete sequence of mounted guns representing each stage of development and contains several unusual features which have been preserved in situ. The foundations of General Charles Gordons house remain in the fort. The fort shares a connection to Tilbury Fort on the northern bank of the Thames and displays defences strategies deployed over a 170-year period across this stretch of the Thames. Milton Chantry, a 14th century chapel of a medieval hospital is in the north-western corner of the asset. Few hospitals of this type can be located, usually the larger of this type and such any medieval hospital remains are considered of national importance. Milton Chantry has survived remarkably intact with many residual 14th - 19th-century architectural features. The Chantry is a rectangular stone building dated to c.1300 with timber floors from its conversion to a domestic property in the 16th century. In the late 17th century, the chantry was used as a Tavern and then in 1780 subsumed into the fort as accommodation. The chantry was utilised in WWII, with the

basement prepared as a gas decontamination centre with the building later passed into state care in 1972.

- 3.9.297 Both the fort and chantry are Grade II\* listed assets as well as being part of the scheduled monument. The New Tavern Fort was built in 1780 to 1783 to defend the Thames from the threat of French invasion, with crossfire over the Thames to Tilbury Fort. The first phase of the fort included a two-faced battery facing the river with a rampart joining it to another battery, with flat bottom ditch and wooden palisade in front of the asset. A brick wall with loopholes was added to the previously unguarded rear of the front at the end of the century. The fort was updated during the 19th century and in 1840 modernised to take heavier armament. New magazines were built as well as a wash house, coal store and guardroom. Between 1868 and 1872 new brick emplacements were added for 10 heavy guns with magazines below. Further additions in the form of concrete emplacement for breech-loading guns were built in 1905, joined by a walkway with magazine below. The importance of the fort declined during the 20th century and in 1930 became a public pleasure garden and during World War II the magazines were used as air-raid shelters.
- 3.9.298 The asset is located close to the edge of the river in Gravesend, with the Gravesend Promenade between the asset and the river and Gordon Pleasure Gardens to the east and Gordon Recreation Grounds to the south-east. The asset is surrounded to the west, south and east by the settlement of Gravesend with residential areas and high-rise buildings built close by. The key setting of the asset however has been maintained, that being the key view from the asset looking outward to the riverside and across to Tilbury Fort. This view on the Thames is the key setting of the beyond the boundary of the asset, so whilst Gravesend has seen much development the fort has been preserved by its placement in and around the gardens and its key views and settings for its historic military use have been preserved. Therefore, the setting makes a great contribution to the asset's value. The setting of the asset does not extend to the draft Order Limits, which do not obstruct this view out towards the river, nor to Tilbury Fort, which is separated from the draft Order Limits by Tilbury Power Station. The asset has historical and evidential value and is **high value**.
- 3.9.299 The scheduled monument 'Shornemead Fort' (**1484434**) is located c. 2.75 km south-east of the draft Order Limits on the southern bank of the river Thames. The coastal fort was built between 1861 and 1871 for the purpose of defending the Thames estuary. It was built on the site of a former battery from 1795 and a polygonal fort from 1847-1853. In the 1960s the fort was partially demolished. The asset was built following a report by the Royal Commission in 1859 regarding the defence of the United Kingdom and was built on the site of two previous batteries/forts. This fort forms part of the wider Thames defence associated with other military assets such as those across the river at Coalhouse Point, Gravesend, Cliffe and Tilbury. The asset is of architectural important as it showcases the form of a mid-19th century casement fort. There is much archaeological potential at the site for buried remains and deposits.
- 3.9.300 The asset is part of Britain's coastal defence systems and known colloquially as 'Palmerston's follies', where the first asset was built in 1795 following the outbreak of war with France. A new battery was later constructed in 1847-1853 following renewed threats between France and the United Kingdom, but this fort has a short life due to foundation problems. In 1859 due to the growing threat with France and their increasing naval power Britain's coastal forts were commissioned to be strengthen, particularly those protecting naval dockyards. It was commissioned that the Thames estuary be defended by triangle coastal forts, rebuilding defences at

Coalhouse fort, Shornemead and adding a new fort by Cliffe as well as the re-arming of Tilbury Fort and New Tavern Fort and later re-modelled.

- 3.9.301 The setting of the asset contributes considerably to its value. The asset is located to the east of Gravesend within a marshland environment right on the riverside of the Thames. The fort has no development around and has clear view out to the river towards Coalhouse Point and across the Thames, as well as upstream and downstream. The asset has a group association with the other coastal defences along this stretch of the Thames and the key setting of the asset includes the visibility between these defences as well as their maintained view out onto the river for this intended defensive purpose. There has been no development around the asset and Shornemead and as such the setting of the asset has been largely maintained in all respects. The setting of the asset does not extend to the draft Order Limits as the draft Order Limits do not encroach on the riverine environment of the forts. And because of the curvature of the river, the visibility between Shornemead and Tilbury Fort will not be encroached upon, nor between Coalhouse Point and Cliffe. The asset has historical and evidential value and is **high value**.

## Modern

### **South of Shoeburyness via Southend and Basildon Service railway line to Langdon Hills Golf Country Club & Hotel (east of the draft Order Limits)**

#### *Designated Heritage Assets*

- 3.9.302 There is a scheduled monument, 'Bulphan World War II bombing decoy, 850 m, and 890 m south-west of 'Doesgate Farm' (**1020998**), located c. 200 m west of the draft Order Limits and c.1.2 km east of Bulphan. The scheduled monument is covered by a larger HER asset (**8016**). The HER asset is located c.2 m west of the draft Order Limits and c. 750 m east of Bulphan, and is a decoy airfield, sited to protect RAF Hornchurch 6 miles to the west. The HER listing details a Stanton Shelter and Operations Block remain on the site (TQ 65298611 / TQ 65528603), and an Accommodation Hut for the personnel (TQ 64588534), likely referring to the buildings which are part of the scheduled monument. The asset has historical and evidential value and is **low value**. Due to the aerial bombardment that emerged during World War II air defence became a key aspect of warfare during the 20th century. These included early warning defences, anti-aircraft gunneries, and balloon barrages, but as in the case of the asset, decoys designed to draw and divert enemy attention from the intended points of attack. The decoy programme began in 1940 and included day and night dummy aerodromes, diversionary fires, simulated urban lighting and dummy factories and buildings. In total 839 decoys were recorded in England, many of which were successful in their efforts. Night shelters are a type of decoy mostly recorded in the eastern, central, and southern England. Very little survives of these decoys, making any remains significant and of national importance. The survival of the two successive Bulphan World War II bombing decoy night shelters is thus of great significance to the understanding of bombing decoy design.
- 3.9.303 The monument includes two shelters as part of a dummy aerodrome on the lower slopes of a hillside near Doesgate Farm. The decoys were built to draw attention away from bombing raids at RAF Hornchurch located 11 km to the west, used both day and night. Other features of the decoy site are no longer present, however, two-night shelters, one above and one below ground survive and are included in the scheduling.

- 3.9.304 The setting of the asset contributes considerably to its value, located within a rural landscape, within an agricultural field in an open landscape with gently rising topography to the east. This setting would have been like that of its contemporary setting, as is apparent from OS mapping from 1921, despite the decoy not appearing on the mapping. This large open agricultural landscape would have been key for allowing the bombarding to occur around the decoy site whilst not being close to many residential buildings. The draft Order Limits pass close to the asset in the neighbouring field, breaking up this open extending agricultural landscape around the asset. and so, despite much of the asset being removed and decommissioned following the end of the war the draft Order Limits are located within the landscape around the decoy site and thus the setting of the asset does extend to the draft Order Limits. This asset has historical and evidential value and is **high value**.

#### *Non-Designated Heritage Assets*

- 3.9.305 A WWII bomb crater has been identified via cropmarks, located c. 230 m east of the draft Order Limits (**8019**). The asset has historical value and **negligible value**.

#### **Thurrock Airfield to A13 (west of draft Order Limits)**

#### *Non-Designated Heritage Assets*

- 3.9.306 The site of the former **low value** Orsett Hall Estate Brick Works (**8139**) is of evidential value and located on the eastern flank of the A128 c. 1.6 km west-north-west of Horndon-on-the-Hill and partially within the draft Order Limits. The brickworks had a scotch kiln and it made handmade red bricks and pipes. It was located within the Orsett Hall Estate owned by Capt. Thomas Charles Douglas Whitmore, and later by his son Col. Sir Francis Henry Douglas Charlton Whitmore (1872-1962) who was Sheriff of Essex in 1922/3 and later became Lord Lieutenant from 1936 to 1958. The Whitmores were Lords of the Manor and principal landowners in Orsett and lived in Orsett Hall which stood in a park of 150 acres. The brickworks is apparent on the OS map of 1921.

#### **Stanford-le-Hope to Linford (east of the draft Order Limits)**

#### *Non-Designated Heritage Assets*

- 3.9.307 The HER asset named 'Road Barrier (destroyed), Stanford-le-Hope by-pass' (**8144**) is located c. 240 m east of the draft Order Limits. The asset is recorded as comprising 'Concrete pimples and sockets. Western End of By- Pass'. This road barrier was one of at least six around Stanford-le-Hope guarding all major roads into the town. The asset has historical value and is **low value**.
- 3.9.308 The HER asset named 'Road Barrier (destroyed), London Road, Stanford-le-Hope' (**8145**) is located 230 m east of the draft Order Limits. The asset is recorded as comprising 'Blocks and sockets. London Road'. An aerial photograph taken in 1946 shows anti-tank pimples north and south of London Road immediately to the east of Butts Lane. The asset has historical value and is **low value**.

#### **South-west of the A13 to Chadwell St Mary (west of the draft Order Limits)**

#### *Non-Designated Heritage Assets*

- 3.9.309 The HER asset 'WWI landing ground at Orsett' (**8017**) is located c. 48 m south-west of the draft Order Limits. This was a landing ground which operated between 1917-1919 and was used by 78 Squadron RFC on home defence duties. The site covered 80 acres; no permanent buildings were erected. The asset has evidential and historical value and is **low value**.

- 3.9.310 The HER asset (**8029**) located c. 40 m north-west of the draft Order Limits. A large military camp of over 300 buildings, once stood on the site, spread across many areas south of Stanford Road. In March 2012, the entire area of the camp has been excavated, probably for gravel workings. No buildings appear to remain. The asset has evidential and historical value and is **low value**.

## East Tilbury

### *Designated Heritage Assets*

- 3.9.311 The scheduled monument 'Second World War anti-aircraft battery at Bowaters Farm' (**1012185**) is located c. 950 m east of the draft Order Limits. The monument includes eight concrete gun placements with connecting roads and vehicle parks, magazines, and command post, forming two groups of anti-aircraft artillery. Anti-aircraft batteries are small clusters of artillery dedicated to firing at aerial targets, constructed during a period spanning WWI to the 1950s, with the asset being built during WWII, after which time missile batteries took over. Many were in the form on sandbag emplacements which left no substantial remains following their abandonment, others were in the form of concrete emplacements arranged around a command post. Anti-aircraft batteries were widely distributed around England, with a high concentration in the south-east, around London, but because of development in the area few have survived. The asset is one of the last surviving examples of such batteries in Essex and forms part of a series of defensive installations at Coalhouse Point. The asset includes eight concrete gun placements with connecting roads and vehicle parks, magazine, and command post. The battery forms two groups of anti-aircraft artillery, the earlier group comprises four octagonal emplacements with two entrances on opposite sides and protective outer banks. The second group of four emplacements comprise a deep circular pit lined with concrete with an adjoining sunken engine room. A gun turret no longer survives.
- 3.9.312 The asset is located west of East Tilbury and south of Station Road within an area which is characterised by dense mature vegetation, on an area of land lower in elevation to the land to the east and the west. The asset is associated with other military defences at Coalhouse Point and highlights the importance of military defences close to the coast in this area of southern Essex. The asset is concealed from the surrounding landscape by thick vegetation, and as such its setting in the landscape has changed since its time in use, where the landscape would have been more open for visibility towards to Thames. It's setting would have extended inland but also towards the river, with the threat of aerial bombardment traveling up river towards the capital and the docks along the Thames. The setting of the asset contributes moderately to its value, its location as an inland and riverine defence being key, however the overgrown nature of the nature disrupts its setting with views to and from the asset severely limited. The setting of the asset does not extend to the draft Order Limits to the west of the asset. The asset has historical and evidential value and is **high value**.
- 3.9.313 There are Grade II listed assets along the Bata Avenue which are built in a similar design and are the oldest factory housing within East Tilbury. These houses are 1930-33 in origin designed by Vladimir Karfik and Frantizek Gahura. The houses are all flat roofed. The houses form a group of listed assets on Bata Avenue. The assets are located between c. 830 m and 955 m east of the draft Order Limits, within the East Tilbury conservation area (**CA30**).
- 28 And 30, Bata Avenue (**1224101**)
  - 32 And 34, Bata Avenue (**1224061**)

- 3.9.314 These assets have a greater value as part of their group setting, built in the same style and in association with the Bata Factory company. The assets are located on the western side of Princes Margret Road which runs through the centre of East Tilbury. The assets are situated on the northern edge of the Bata Shoe Company factory building complex where their setting is closely tied. The asset, like the settlement, are located on flat ground close to the estuary commanding reaching views across the open agricultural fields surrounding the settlement. As evident from OS mapping from 1944 the assets represent part of the earliest phase of development of the settlement of East Tilbury as the settlement began to grow around the factory. As such the setting of the asset is tied to its relationship to the settlement of East Tilbury, of which retains most of its distinctive character and style as it did when constructed. The setting of the assets contributes considerably to their value and is informed by the factory complex and the original settlement and thus this where the setting is confined to. As such the setting of the asset does not extend to the draft Order Limits to the west, beyond the settlement and on the far side of the railway line the passes through East Tilbury. The assets have aesthetic, evidential and historical value and are **high value**.
- 3.9.315 There are a further three Grade II listed buildings within the East Tilbury conservation area that are associated with the Bata Factory complex. The Bata Industrial Building Number 12 (**1393328**) is located c. 1.2 km east of the draft Order Limits. Building 12 is the earliest surviving example of a welded-steel construction in the country and is one of the earliest and least altered Bata Factory buildings. The Building 13, Bata Factory (**1224103**) is located c. 1.24 km east of the draft Order Limits. The building is an exceptionally early and complete example of International Style building in Britain. The Bata Industrial Buildings Numbers 24 And 34 Victory House and Nelson House (**1393327**) is located c. 850 m east of the draft Order Limits. The two buildings are industrial buildings in the International Modern Movement style in both exterior and interior detailing which mirror the design of the Bata buildings to the Zlin prototypes most closely with the use of round columns. They are a rare example of interwar industrial settlement.
- 3.9.316 Much like with the residential assets along Bata Avenue, the Bata company factory buildings share a group value and setting within an industrial area to the south-west of the settlement. As evident from OS mapping from 1944 the factory buildings are some of the first to appear within the development of the settlement and within the factory development. The setting of the assets is focused on their association to one another within the settlement of East Tilbury where residential commercial buildings were also built to house and service the workers of the factory. There has been some development within the factory complex and now the site no longer houses the Bata Shoe Factory, but it is still in use as an industrial area with many businesses occupying the land and buildings. However, two of the three listed buildings, that are larger multi-storey buildings, Building 13, Bata Factory (**1224103**) and Bata Industrial Buildings Numbers 24 And 34 Victory House and Nelson House (**1393327**) appear not to be in use with only one of the assets, the single-story Bata Industrial Building Number 12 (**1393328**) appearing to still be in use. The setting of the assets contributes considerably to their value and is informed by the factory complex and the associated settlement and this is where the setting is confined to. As such the setting of the asset does not extend to the draft Order Limits to the west, beyond the settlement and on the far side of the railway line the passes through East Tilbury. The assets have historical, evidential, and communal value and are **high value**.

## West Tilbury

### *Non-Designated Heritage Assets*

- 3.9.317 Located within the West Tilbury conservation area (**CA28**) is a group of three Spigot Mortar Sites. The Spigot Mortar Site (destroyed), at Manor Farm, West Tilbury (**8006**), is located c. 170 m north-west of the draft Order Limits and is a WWII Spigot Mortar Emplacement was situated next to the road, the site of which is now overgrown. A concrete slab and possible alcove cover remain visible, but a pedestal is no longer visible. A Spigot Mortar Pit is located c. 10 m west of the draft Order Limits (**8004**), in a corner of a field on the east side of the St James Church. The asset has a central pedestal surmounted by a pintle. The pit is half-filled and two of the four original alcoves have been demolished, as well as the pedestal now being in a deteriorated state. This position in the landscape would have provided its occupants with uninterrupted views across the countryside to the south-east. The third Spigot Mortar Pit is located within the draft Order Limits (**8005**). The asset is located within a patch of overgrown bushes on the south side of Church Road and was placed there to guard the road approach to West Tilbury from the East. Of the 29 mm Spigot mortar pit, most of the pit has now been filled in but the tops of the ammunition alcoves, the pedestal and stainless steel pintle all appear in excellent condition, indicating a well-preserved example. What makes these assets unusual is that they were made as a pair. The assets have evidential and historical value and are **low value**.
- 3.9.318 A modern asset is recorded by the HER, named as Road Barrier (destroyed), Cooper's Lane, West Tilbury (**8151**), which is located c. 144 m north-west of the draft Order Limits. The HER notes 'Blocks and Sockets, near foot of Gun Hill'. It is thought that the road barrier stood across Cooper's Lane, 30 yards from the junction with Fort Road. The asset has historical and evidential value and is **low value**.
- 3.9.319 A modern asset is recorded by the HER, named 'Anti-glider ditches SE of Bowaters Farm' (**8068**), which is located within the draft Order Limits, extending beyond it to the east, west and south. There is a spread of anti-glider ditches located north and north-east of the Tilbury Power Station. The asset has historical and evidential value and is **low value**.
- 3.9.320 The remains of Low Street Brick Works (**8023**) were located approximately 220 m south-east of the draft Order Limits. The works operated from the early 1900's, closed in 1910's – 1920's and then reopened in 1933 and closed again in 1967. The bricks made during these times were stamped with L.S.B (Low Street Brickworks). The asset has historical and some evidential value. Overall, it is of **low value**.

## Tilbury

### *Non-Designated Heritage Assets*

- 3.9.321 Tilbury Power Station is a modern asset located on the northern bank of the river Thames, intersecting the draft Order Limits on its north-eastern corner, and extending beyond it to the west, south-west and south (**8020**), making up part of the Thames corridor industrial landscape. The power station was a coal and oil fired mid twentieth century power station. Archaeological evaluation in the area found extensive truncation and land raising throughout the site of the former power station, there were few finds at the site and much of the land is contaminated. Tilbury B, completed in 1969, dwarfs the earlier station of Tilbury A, completed in 1958, with its taller boiler house. A WWII pillbox was recorded during a walk over survey of the site as

recorded by the HER; however, it is not indicated where within the asset this was located. The asset has evidential and historical value and is of **low value**.

## Undated

### Langdon Hills Golf Country Club & Hotel to Saffron Gardens (east of the draft Order Limits)

#### *Non-Designated Heritage Assets*

- 3.9.322 Several findspots of pottery and flint were recorded along the gas pipeline route (**8124**). The c. 22 km pipeline cross the draft Order Limits c. 410 m NW of Horndon on the Hill but there is no record of where the finds were recovered from, as such most assets have not been given a HER identifying number. The asset evidential and historical value and is **low** in value.
- 3.9.323 A single undated ditch with a regular U-shaped profile was recorded during a watching brief on the construction of a 19 km long natural gas pipeline (**8014**), which crosses the draft Order Limits, the eastern terminus of the excavated section of the pipeline located c. 530 m north-west of Horndon on the Hill. The pit was aligned parallel to and c.108 m to the east of, the present field boundary. The asset has evidential and historical value and is **low value**.

### Thurrock Airfield to A13 (west of the draft Order Limits)

#### *Non-Designated Heritage Assets*

- 3.9.324 A HER asset details finding from Orsett-Barrington's Farm, Loft's Farm (**8036**) and the extensive cropmarks to the north-east, east, and south of Barrington's Farm, extending under it. Multiple undated features have been identified including a Ditch; Ring Ditch; Linear Feature; Trackway; House; Pit; Grubenhaus; Field Boundary; Square Enclosure; Enclosure and a Henge. The asset is located c. 220 m north of the draft Order Limits. The asset has evidential and historical value and is **medium value**.
- 3.9.325 The HER records another undated asset named Orsett (**8047**) which details the presence of Cropmarks-linear features, probable field boundaries and pits. The asset is located c. 120 m north of the draft Order Limits. The asset has evidential and historical value and is **low value**.

### Stanford-le-Hope to Linford (east of the draft Order Limits)

#### *Non-Designated Heritage Assets*

- 3.9.326 The HER records Cropmarks south of Saffron Garden (**8071**), the asset is located within the draft Order Limits and extends beyond it eastward and westward. The cropmarks are of a possible large curvilinear enclosure, in addition to various other rectilinear features, some of which represent former field boundaries. The asset has evidential and historical value and is **low value**.
- 3.9.327 The HER record the asset near Dame Elyns (**8051**), located c.120 m east of the draft Order Limits. The asset is a circular enclosure/large ring ditch, 25-30 m diameter,

with several entrances uncertain. The asset has evidential and historical value and is **low value**.

- 3.9.328 The HER records the asset 'Stanford le Hope' (**8049**) which is located within the draft Order Limits and extends beyond the draft Order Limits eastward and westward. The asset comprises multiple cropmarks, with a series of three rectilinear enclosures (two joined), a trackway, a small ring ditch, and a possible second ring ditch (large) in the corner of the opposite field and this one has a central 'pit'. The asset has historical and evidential value and is **medium value**.
- 3.9.329 The HER asset 'Butts Lane, Stanford-Le-Hope, Essex' (**8031**) is a multi-period asset site. There are a series of post holes and pits at the site, some of which are undated. The asset is located c. 130 m south-east of the draft Order Limits. The asset has evidential and historical value and is **low value**.
- 3.9.330 The HER asset 'Geophysical Survey Report - Land at East Tilbury, Essex' (**8026**) is located within the draft Order Limits and extends beyond it to the east and west. The geophysical survey identified a rectilinear enclosure, ring-ditch, and linear features. The asset has historical and evidential value and is **medium value**.
- 3.9.331 The HER records the asset Mucking Creek Valley (**8087**) is located within the draft Order Limits, extending beyond to the east. The features of the site include cropmarks of a sub-rectangular enclosure and trackway. The enclosure has an entrance to the south and two to the west, and the track intersects the western side of the enclosure to then join internal linear features. The asset has historical and evidential value and is **medium value**.
- 3.9.332 The HER records the asset Linford (**8095**) which is located c. 250 m east of the draft Order Limits. The features of the asset include cropmarks of a rectilinear enclosure, and aerial photography shows possible double ditched trackway and pit. The asset has evidential and historical value and is **low value**.

### **South-west of the A13 to Chadwell St Mary (west of the draft Order Limits)**

#### *Non-Designated Heritage Assets*

- 3.9.333 The Essex HER records a series of undated features (**8160**), located c. 5 m west of the draft Order Limits, amongst the scheduled Orsett Neolithic causewayed enclosure (**1009286**) within a wider complex of multi-period cropmarks. The cropmarks represent **low value** ditches, pits, post holes enclosure, sub-rectangular enclosure and trackways that have historical and evidential value. Any remains however, are shown to be related to the Neolithic and Anglo-Saxon periods within the scheduled area might to considered to be of **high value**.
- 3.9.334 A cropmark of a ring ditch (**8048**) was located 5 m north of the draft Order Limits within the south-western corner of Orsett Golf Course. This asset is potentially now non-extant due to the creation of the golf course. The asset evidential value and is **low value**.
- 3.9.335 The HER asset 'Cropmarks SW of Dame Elyns' (**8072**) is located c. 20 m south of the draft Order Limits. The asset records cropmarks of a former field boundary. The asset evidential and historical value and is **low value**.
- 3.9.336 The HER asset 'Orsett-Collingwood Farm' (**8104**) is located partially within the draft Order Limits, extending beyond it to the north-west. The asset records linear and other features seen in fields north and south of Collingwood Farm. The asset has evidential and historical value and is **low value**.

- 3.9.337 The HER asset 'Mucking Heath' (**8046**) is located c. 10 m west of the draft Order Limits. The HER records cropmarks of a small rectangular enclosure, linear features, ring ditches, possible trackway. The asset has evidential and historical value and is **medium value**.
- 3.9.338 The HER asset 'East of Brook Farm' (**8050**) is located c. 80 m west of the draft Order Limits. The HER records cropmarks of two widely spaced parallel ditches aligned north-east/south-west, cut by a rectangular enclosure, with an entrance possibly in the southern side. The asset has evidential and historical value and is **low value**.
- 3.9.339 The HER records the asset West Tilbury - Mill House Farm (**8088**) which is located within the draft Order Limits and extends beyond it to the west. The HER records crop marks of a ring ditch, pit, and linear features. Aerial photographs from 1979 shows a possible sub-rectangular enclosure. The asset has evidential and historical value and is **low value**.
- 3.9.340 The cropmark assets West Tilbury- High House (**8083**) and Cropmarks north of High House (**8066**) are both located partially within the draft Order Limits, extending beyond to the west. Undated cropmark enclosures were recorded at (**8083**) and linear feature cropmarks and a possible enclosure were recorded in 2011 at (**8066**). The assets have historical and evidential value and a **low** value.
- 3.9.341 The HER records an asset East of Mill House, Chadwell St Mary (**8084**) which is located c. 210 m west of the draft Order Limits. A series of cropmarks indicate rectilinear enclosures, ditch alignments, linear features, ring ditches, penannular ditch, pits, parallel ditches, trackway, and hut circle. The asset has evidential and historical value and is **high value**.

## East Tilbury

### *Non-Designated Heritage Assets*

- 3.9.342 Undated cropmarks are located at 'West Tilbury - Coal Road, East of Low Street Lane' (**8076**) which is in the eastern border of the draft Order Limits. The cropmarks comprise of a ring ditch and enclosure and are visible on aerial imagery. The asset is of evidential and historical value and **medium value**.

## West Tilbury

### *Non-Designated Heritage Assets*

- 3.9.343 Undated cropmarks (**8090**) are recoded at Holford Farm which is located c. 220 m north-west of the draft Order Limits within the north-eastern section of the conservation area of West Tilbury (**CA28**). The cropmarks include linear features, ditch and ring ditch observed within various maps and aerial imagery. The asset is of evidential and historical value and **medium value**.
- 3.9.344 The HER records the asset Holford Farm (**8089**) c. 210 m north-west of the draft Order Limits and located within the northern section of the conservation area of West Tilbury (**CA28**). The asset contains a large cropmark complex, some of which has already been destroyed to the west of Turnpike Lane. Features include two parallel ditches, which may indicate the origins of a roman road, stretching from Rectory Lane to Muckingford Road in the north. At the angular junction of Turnpike Lane and Muckingford Road there is a cropmark of a polygonal enclosure which is described a likely prehistoric, with possible entrances to the east and south-east, with the possible roman road and north-south trackway passing over it. mA scatter of pit-like cropmarks is also present, which may represent a settlement of sunken buildings. Other cropmarks indicate enclosures, ring ditches, trackways, pits, linear features,

double ditches, and parallel ditches. An assessment of the site highlights its potential for pre-Saxon to medieval development. The asset is of evidential and historical value and of **medium value**.

- 3.9.345 'Manor Farm' (**8086**) is located immediately east of West Tilbury conservation area (**CA28**), to the right of Blue Anchor Lane and Church Road. The asset is located partially within the draft Order Limits and extend beyond to the north-west. Features of the asset including linear, rectilinear features, ring ditches and a possible trackway. The asset is of evidential and historical value and of **medium value**.
- 3.9.346 A further asset located between the two sections of the West Tilbury conservation area (**CA28**) and north of Church Road (**8099**). The asset is located partially within the draft Order Limits and extends beyond it to the south-east. The asset contains cropmarks of enclosures and linear features. Photographs from 2003 shows a partial enclosure which may be a new feature to record. Further aerial photography from 2019 shows field boundaries and possible pits. The asset is of evidential and historical value and of **low value**.

## **Tilbury**

### *Non-Designated Heritage Assets*

- 3.9.347 'The west side of East Tilbury marshes' (**8102**) is located c. 250 m east of the draft Order Limits. The asset includes an undated potential 'red hill', and remnants of the salt making process including a saltern, briquetage and sherds. The asset is of evidential and historical value and of **low value**.
- 3.9.348 The undated asset of 'Wick House' (**8100**) borders the southern extent of the draft Order Limits and is c. 100 m south-east of the Tilbury Power Station. The only information concerning this asset noted by the HER is that the house has been identified through '*documentary evidence*'. The asset is of evidential and historical value and of **low value**.

## 2.3 Conservation Areas

Project ID	Name	Local Authority
CA43	Thrandeston	Mid Suffolk
CA44	Mendlesham	Mid Suffolk
CA45	Badley	Mid Suffolk
CA46	Palgrave	Mid Suffolk
CA47	Mellis	Mid Suffolk
CA48	Finningham	Mid Suffolk
CA49	Wickham Skeith	Mid Suffolk
CA50	Needham Market	Mid Suffolk

## 2.4 Registered Parks and Gardens

2.4.1 There are no Registered Parks and Gardens within Section B.

## 2.5 Non-designated Heritage Assets

Project ID	HER Reference	Reported Period	Name
2000	MSF782	Paleolithic	Pit On East Side Of Hascot Hill Valley
2001	MSF22863	Paleolithic	Wortham Ling
2002	MSF21996	Paleolithic Mesolithic lithic	Wortham Ling, Wortham
2003	MSF3942	Mesolithic	Old Bury Road
2004	SF-F69971	Mesolithic-Neolithic	A Fragment Flint Working Debris
2005	SF-D6D237	Mesolithic-Neolithic	A Fragment Of Mesolithic To Early Neolithic Flint Working Debitage, Or Possibly A Late Mesolithic Microlith.

Project ID	HER Reference	Reported Period	Name
2006	SF-4AB911	Mesolithic-Neolithic	Two Fragments Of Mesolithic To Neolithic Flint Working Debris
2007	SF-A8C524	Paleolithic, Mesolithic, Neolithic Bronze Age	46 Flint Lithic Implements
2008	MSF3482	Undated, Neolithic	Causewayed Ring Ditch Of Undated Date.
2009	MSF4506	Neolithic	Oval Cropmark, Bullen Farm
2010	MSF5371	Undated, Neolithic	Possible Neolithic Long Bronze Age Arrow.
2011	MSF8200	Undated	Old Rifle Range
2012	MSF21997	Pre-historic-historic, Roman, Medieval	Wortham Ling
2013	SF-026FC0	Neolithic	A Body Sherd Of A Neolithic To Bronze Age Carinated Pot
2014	SF-BD63E7	Neolithic, Bronze Age	An Incomplete And Re-Worked Polished Flint Axe Of
2015	MSF30206	Neolithic, Bronze Age	Flint Scatter
2016	SF-66E0D7	Neolithic, Bronze Age	An Assemblage Of Eight Lithic Implements
2017	SF-66F6A1	Neolithic	An Unpatinated Snapped Flint Long Flake Or Blade
2018	SF-613695	Neolithic, Bronze Age	An Unpatinated Flint Flake Or Blade Struck Roman A Grey/Black Flint.
2019	SF-CCDD1A	Neolithic, Bronze Age	A Complete Flint Neolithic Retouched Flake
2020	SF-CC9537	Neolithic, Bronze Age	A Complete Flint Neolithic To Early Bronze Age Flint Core
2021	SF-7CB84A	Neolithic, Bronze Age	27 Worked Flints And Debitage
2022	SF-0351B9	Neolithic, Bronze Age	Eight Flakes Of Flint Working Debitage
2023	MSF13539	Bronze Age	Findspot Of A Fragment, Very Corroded
2024	MSF15524	Bronze Age	Rook Hill Farm ('Field 4')
2025	MSF18514	Undated	Findspot Of A Tanged Flint Arrowhead
2027	MSF5584	Bronze Age	Findspot Of A Tanged Arrowhead
2028	MSZ27175	Bronze Age	Cropmark Of Two Ring Ditches

Project ID	HER Reference	Reported Period	Name
2029	MSZ27176	Bronze Age	Cropmark Of A Large Ring Ditch
2030	MSZ27165	Bronze Age	Cropmark Of A Concentric Ring Ditch
2031	MSZ27166	Pre-historic-historic	Cropmark Of A Ring Ditch
2032	MSF23027	Undated	Cropmark Of A Small Single Ring Ditch
2033	MSZ27170	Bronze Age	Cropmarks Of A Ring Ditch
2034	MSZ27173	Pre-historic-historic	Cropmark Of A Sub-Circular Ring Ditch
2035	MSZ27154	Pre-historic-historic	Cropmarks Of A Partial Ring Ditch
2036	MSZ27172	Pre-historic-historic	Cropmark Of An Oval Enclosure
2037	MSF8356	Undated	Small Mound Or Possible Bronze Age Barrow Of Undated Date.
2038	MSF8733	Undated	Possible Concentric Ring Ditch Of Undated Date Traversed By An Irregular Enclosure.
2039	MSF8734	Undated	Ring Ditch Of Undated Date, Within An Irregular Enclosure.
2040	MSZ27171	Bronze Age	Cropmarks Of A Partial Ring Ditch
2042	MSF21803	Bronze Age	Findspot
2043	MSF19872	Early Bronze Age to Early Medieval	Multi-period Finds Scatter
2044	MSF42550	Undated	Copper Alloy Looped Spearhead
2045	MSF44636	Bronze Age	Hoard
2046	MSF19916	Bronze Age	Findspot Of A Bronze Age Socketed Axe Fragment.
2047	MSF21654	Pre-historic	North Of Ashburnham Farm
2050	SF-B61EC4	Bronze Age to Iron Age	Four Worked Flint Implements
2051	SF-4ACB15	Bronze Age to Iron Age	Two Small Unpatinated Fragments Of Flint Flakes
2052	SF5104	Bronze Age to Iron Age	Incomplete Copper-Alloy Razor
2053	SF-6ACE84	Bronze Age to Iron Age	A Body Sherd Roman A Handmade Pottery Vessel

<b>Project ID</b>	<b>HER Reference</b>	<b>Reported Period</b>	<b>Name</b>
2054	SF-1DA805	Bronze Age	A Fragment Roman The Tip Of A Spearhead
2055	SF-4514E3	Bronze Age	A Flint Flake
2056	SF-7AAF54	Bronze Age to Iron Age	Group Of 10 Flints, All Flakes Mainly Squat, Hard Hammer
2058	SF-F59824	Bronze Age	An Incomplete Cast Copper-Alloy Axe
2060	SF-57C843	Bronze Age	An Incomplete Copper-Alloy Fragment, Possibly Roman The Tip Of A Blade, Perhaps A Sword Or Dagger.
2061	SF-CF2139	Bronze Age	A Fragment Of A Copper Alloy Bronze Age Socketed Axe
2062	MSF13263	Iron Age	Large Park Field
2063	MSF14371	Iron Age	Findspot Of An Iron-Age Miniature Terret Ring.
2064	MSF19647	Iron Age	Castle Road Offton
2065	MSF244	Iron Age	Park Farm
2068	MSF5585	Iron Age	Iron-Age Settlement Site
2069	MSF8275	Iron Age	Field E Of Beans Lane
2070	MSF8345	Iron Age	Hill House Farm
2071	SF-F55093	Iron Age to	A Fragment Of A Probable Bronze Age Knobbed Terret
2072	SF-DABE83	Iron Age to	Bronze Unit
2073	SF-FCD8E0	Iron Age to	Silver Iron Age Coin Fragment, "Early Face Horse" Type (Gregory 1992 Type Ca).
2074	SF9210	Iron Age, Roman	Copper Alloy Brooch, Colchester Type
2075	SF-5F6E40	Iron Age to	Bronze Coin, Trinovantian, Of Cunobelin, Corroded And Abraded.
2076	SF-430688	Iron Age	A Handmade Body Sherd Roman A Pottery Vessel
2077	SF-3CBDE0	Iron Age	A Cast Copper-Alloy Object, Possibly A Mount
2078	SF-FB1A30	Iron Age	A Body Sherd Roman A Handmade Ceramic Vessel

Project ID	HER Reference	Reported Period	Name
2079	SF-89DC1D	Iron Age	A Complete Silver Iron Age Half Unit
2080	SF-86367F	Iron Age	A Complete Silver Iron Age East Anglian Inscribed Unit Of Antedios, Dating To C.AD 10-30
2081	SF-85B4C1	Iron Age	A Fragment Of A Copper Alloy Iron Age Probable Bronze Ages Trap Fitting
2083	SF-A94627	Iron Age	A Copper-Alloy Iron Age Unit Or A Core For A Plated Silver Unit Of The North Thames Region/Uncertain Tribe, Dating To 60 BC- 20 BC.
2085	SF-ACE684	Iron Age, Roman	An Incomplete Copper-Alloy Late Iron Age Early Roman Nauheim Derivative Brooch
2086	SF-C45795	Iron Age, Roman	A Fragment Of A Copper-Alloy Late Iron Age To Early Roman Langton Down Bow Brooch
2087	SF-16E8E6	Iron Age, Roman	A Cast Copper Alloy Terminal Or Head, Button And Loop Fastener Or Strap Fitting
2088	SF-D97566	Iron Age, Roman	Copper Alloy Brooch Fragment
2089	SF-DF5957	Iron Age, Roman	Copper Alloy Brooch, Colchester Type
2090	SF-82C006	Iron Age, Roman	Copper-Alloy Item
2091	SF-61C9A7	Iron Age, Roman	The Worn Incomplete Wings And Upper Bow Fragment Of A Copper-Alloy Late Iron Age To Early Roman Langton Down Type Bow Brooch
2092	SF-61E177	Iron Age, Roman	The Worn Incomplete Wings And Upper Bow Fragment Of A Copper-Alloy Late Iron Age To Early Roman Langton Down Type Bow Brooch
2093	SF4129	Iron Age, Roman	Copper-Alloy Brooch, Aucissa Type. Missing Pin, Corrosion Around Iron Hinge Bronze Ager
2094	SF-455124	Iron Age, Roman	Body Sherd With Flint Temper
2095	SF-56C387	Iron Age, Roman	A Very Worn And Corroded Fragment Of A Copper-Alloy Of A Roman Bow Brooch Most Similar To A Rosette Type

Project ID	HER Reference	Reported Period	Name
2096	SF-0FA451	Iron Age, Roman	A Complete Copper-Alloy Cosmetic Mortar
2097	SF-1CC5B6	Iron Age, Roman	An Incomplete Cast Copper-Alloy Iron Age, Roman Rosette Brooch
2098	SF-D24C51	Iron Age, Roman	An Incomplete Cast Copper-Alloy Colchester Bow Brooch
2099	SF-D25EF8	Iron Age, Roman	An Incomplete Cast Copper-Alloy Colchester Bow Brooch
2100	SF-3460B2	Iron Age, Roman	A Body Sherd Roman A Roman Grey Ware Belgic Storage Vessel
2101	SF-E18355	Iron Age, Roman	An Incomplete Copper-Alloy Late Iron Age, Roman Langton Down Brooch
2102	SF-2FA385	Iron Age, Roman	A Worn And Incomplete Cast Copper-Alloy Rosette Brooch
2103	SF-083EE3	Iron Age, Roman	An Incomplete Copper-Alloy Zoomorphic Vessel Mount
2104	SF-31A241	Iron Age, Roman	An Incomplete Copper-Alloy Centre-Looped Cosmetic Mortar
2105	SF-4A287D	Iron Age, Roman	An Incomplete Copper Alloy Iron Age To Early Medieval Type C Penannular Brooch
2106	SF-76C196	Iron Age, Roman	An Incomplete Cast Copper-Alloy Cosmetic Mortar
2107	SF-553A2F	Iron Age, Roman	An Incomplete Copper-Alloy Late Iron Age Early Roman Brooch
2108	SF-E79FDD	Iron Age, Roman	An Incomplete Copper-Alloy Iron Age, Roman Brooch Of The Colchester Type
2109	SF-CCD124	Iron Age, Roman	A Complete Iron Age, Roman Copper-Alloy Penannular Brooch
2110	MSF11787	Roman	Roman Artefact Scatter Of Pottery
2111	MSF12173	Roman	'Gateford'
2112	MSF12216	Roman.	Findspot Of A Roman Puddingstone Quern.
2113	MSF12566	Roman	Roman Road
2114	MSF13265	Roman	Big Field
2115	MSF13358	Roman	Close To Middle Farm, Ringshall

Project ID	HER Reference	Reported Period	Name
2116	MSF13360	Pre-historic	North Of Middle Farm, Bronze Age King
2117	MSF18513	Pre-historic	Findspot Of A Neolithic Polished Flint Chisel And Small Axe

### 3.3 Conservation Areas

Project ID	Name	Local Authority
CA7	Dedham	Colchester
CA25	Lawford	Tendring
CA26	Ardleigh	Tendring
CA40	Higham	Babergh
CA41	Stratford St Mary	Babergh
CA62	chantry park	Ipswich

### 3.4 Registered Parks and Gardens

List Entry	Name	Grade	Hyperlink
1000271	Chantry Park	II	<a href="https://historicengland.org.uk/listing/the-list/list-entry/1000271">https://historicengland.org.uk/listing/the-list/list-entry/1000271</a>

### 3.5 Non-designated Heritage Assets

Project ID	HER Reference	Reported Period	Name
3000	MEX1039637	Modern	Langham Camp, Ipswich Road, Colchester - POW
3001	MSF11981	Prehistoric	Sub-square or circular ring ditch traversed by double ditched enclosure
3002	MSF4526	Neolithic	Axe, found AD 1924 on Sir Arthur Churchman's estate about 8 chains south of Abbey Oaks Farm.
3003	MSF18079	Bronze Age	Aerial photograph (S1) of possible ring ditch, circa 25m diameter, in field north of Lodge Cottages - may be Modern.
3004	MSF5133	Bronze Age	Ring ditch, circa 30m diameter (S1).
3005	MSZ27296	Bronze Age	Cropmark of a partial ring-ditch which probably represents a ploughed-out Bronze Age round barrow
3006	MSZ27351	Bronze Age	Cropmarks of a series of boundaries, forming incomplete paddocks/fields with an indication of

Project ID	HER Reference	Reported Period	Name
			central trackway. Also a small ring ditch.
3007	MEX12579	Neolithic	Neolithic axe found east of Ardleigh, N of Frating Road and W of orchards
3008	MEX8171	Neolithic	Neolithic axe found north of Frating Road, Ardleigh
3009	MEX12583	Neolithic	Polished stone chisel found east of Ardleigh scheduled area
3010	MEX36543	Neolithic	A stone axe found in Dedham
3011	MSF4528	Late Bronze Age	Two LBA pits: oblong pit with charcoal and remains of two LBA urns; pit with LBA pottery.
3012	MSF4529	Iron Age	Two pits with IA pottery
3013	MEX36376	Bronze Age	A La Tene terret found east of Broomhouse
3014	MEX9775	Late Iron Age to Roman	A coin of Cunobelinus and pottery found at Blackbrook Hill, Langham
3015	MEX9782	Late Iron Age to Roman	A pottery vessel found Blackbrook Hill, Langham
3016	MEX1036590	Iron Age	Cropmarks and archaeological remains of Iron Age/Roman/Early Medieval date at Wick Farm, Ardleigh, Essex
3017	MEX1036591	Iron Age to Roman	Small quantities of Roman finds found during fieldwalking. Excavation revealed a small area of Late Iron Age/Roman activity at Wick Farm, Ardleigh
3018	MSZ27310	Post Medieval	Earthworks of three parallel ditches
3020	MSF11749	Roman	Pottery scatter east of Burstallhill
3021	MSF4527	Roman	Valley Farm Pottery scatter
3022	MSF4530	Roman	Cremation urn and other pottery
3023	MEX9880	Undated	Cropmarks of field boundaries west of Oak Tree corner
3024	MSF5076	Roman	Wooden piles (possibly Rom bridge)
3025	MEX9881	Undated	Cropmarks west of Springfield Farm
3026	MSF18242	Post Medieval	A1071; Hurdle Makers Hill, site of Milestone
3027	MEX12705	Prehistoric	Pottery sherd from north edge of Ardleigh Schedule area
3028	MEX36375	Roman	Roman coin found east of Broomhouse
3029	MEX36377	Roman	Roman coin found east of Broomhouse
3030	MEX36379	Roman	Scatter of oystershell, brick, and five Roman bronze coins found east of Langham
3031	MEX36572	Roman	Scatter of Roman tile found west of Langham Hall

<b>Project ID</b>	<b>HER Reference</b>	<b>Reported Period</b>	<b>Name</b>
<b>3032</b>	MEX9817	Roman	Scatter of Roman tile found at Perry Grove, Langham
<b>3033</b>	MEX11565	Roman	East-West possible Roman road through Horsleycross Street
<b>3034</b>	MEX9887	unknown	Cropmark of a penannular enclosure north west of Rookery Farm
<b>3035</b>	MEX9292	Roman	Cropmark of a possible Roman road extending east-west north of Little Bromley
<b>3036</b>	MEX9781	Roman	Scatter of Roman pottery found at Blackbrook Hill, Langham
<b>3037</b>	MEX9784	Roman	Stone figure of infant from a front garden in Purney Heath
<b>3038</b>	MEX1031552	Roman	Cropmark of linear field boundaries north of Cottsgreen Farm
<b>3039</b>	MEX43488	Roman	Cropmarks of enclosures, field boundaries and trackways at Grange Road
<b>3040</b>	MEX8786	Roman	A possible Roman pottery kiln west of Pyghle Farm, Ardleigh
<b>3041</b>	SF-4745D6	Undated	A cast lead object of uncertain date or function
<b>3042</b>	MSF4638	Medieval	Birch House Farm: Moat
<b>3043</b>	SF-FC7AE4	Roman	A worn copepr-alloy Roman sestertius of uncertain Antonine ruler, c.138-193 AD. Reverse: Uncertain figure standing left, uncertain object in left arm, right arm outstretched.
<b>3044</b>	SF-B24BFF	Medieval	A copper-alloy Medieval composite strap end, dating to AD 1270-1450
<b>3045</b>	MEX9899	Prehistoric	Glebe House Cropmarks: Consisting of linear features, ditched trackways and an oval enclosure
<b>3046</b>	MSF42547	Post Medieval	Birch House Farm is a farmstead visible on the 1st Ed Os map. The farmstead is laid out in a regular full plan with additional elements.
<b>3047</b>	MSF4639	Medieval	Moat at Colesgreen Farm
<b>3048</b>	MSF4642	Medieval	Scatter of Medieval pottery found 1973
<b>3049</b>	MEX9908	Undated	Glebe House: Linear Cropmarks
<b>3051</b>	SF-B15E12	Post Medieval	A copper-alloy Rose farthing of Charles I, c.1625-1649 AD. As North, 1975: no. 2291
<b>3052</b>	MSF42446	Post Medieval	Cane's Farm is a farmstead visible on the 1st Ed Os map. The farmstead is laid out in a dispersed

Project ID	HER Reference	Reported Period	Name
			plan with the farmhouse set away from the yard.
3053	SF-33A873	Medieval	A silver Medieval penny of Edward I c.1302-1310 AD
3054	SF-33CF74	Medieval	A silver Medieval penny of Edward III c.1369-1377 AD
3055	SF-33EEF7	Medieval	A very worn silver Medieval penny, probably of Edward III c.1351-1377 AD
3056	SF-3424D3	Medieval	An incomplete silver Medieval penny, possibly of Henry V, c.1413-1422 AD
3057	SF-062C84	Medieval	A complete cast copper-alloy bar mount with pendant loop
3058	SF-0646D0	Medieval	An incomplete cast copper-alloy buckle frame. It is a d-shaped frame which is oval in section
3059	SF-066032	Medieval	A cast copper-alloy buckle frame. It is an oval lipped frame with a plate and is d-shaped in section.
3060	SF-067394	Medieval	A cast copper-alloy buckle frame. It is an oval frame with an integral plate which is rectangular in section
3061	SF-068AB4	Medieval	A cast copper-alloy strap. It is a sheet metal strap end which is folded, it is rectangular in shape and in section
3062	SF-079753	Post Medieval	A fragment of a cast copper-alloy buckle frame. It is the outside edge of a buckle frame, the rest of which is missing due to old breaks
3063	SF-07C933	Medieval	An incomplete cast copper-alloy strap end. It is circular in shape and rectangular in section
3064	SF-07F463	Medieval	An incomplete cast copper-alloy strap fitting. It is rectangular in shape and in section and is comprised of two plates held together with a single circular separately cast rivet
3065	SF-081067	Post Medieval	An incomplete cast copper-alloy hooked tag
3066	SF-0824C3	Medieval to Post Medieval	An incomplete cast copper-alloy possible buckle frame tag which appears to be part of the outside edge of a buckle frame
3067	SF-08DE94	Medieval to Post Medieval	An incomplete cast copper-alloy buckle frame. It is a large double trapezoidal frame which is

Project ID	HER Reference	Reported Period	Name
			rectangular in section with a central bar for the pin which is missing
3068	SF-090306	Medieval to Post Medieval	A cast copper-alloy key cast in a single piece and has a circular bow which is oval in section
3069	SF-17B8D3	Early Medieval	A cast copper alloy strap fitting or swivel of Medieval date. It consists of a pair of annular frames. The larger of the two is D-shaped with a circular section and has zoomorphic terminals
3070	SF-17FC34	Medieval to Post Medieval	A cast copper-alloy tap handle of Medieval or Post-Medieval date. It comprises a tapering cylinder with a central circular perforation. On top of which is a cast flat cockerel
3071	MEX9906	Undated	Cropmark of a north/south aligned ditched trackway near Langham
3072	SF-186864	Post Medieval	A copper-alloy jetton. Both faces are very worn but one is certainly an orb design and the other is probably a rose.
3073	SF-1888A7	Post Medieval	A copper-alloy rose and orb jetton of Post-Medieval date by Nuremburg master Hans Schultes II AD 1586-1603
3074	SF-191856	Post Medieval	A silver threepence of Elizabeth I c. AD 1570-1579.
3075	SF-193A57	Post Medieval	A very worn silver coin of Elizabeth I c. AD 1558-1603. Possibly a threepence
3076	SF-1A41B5	Post Medieval	A Richmond round farthing of Charles I c. AD 1625-1649
3077	SF-1B8808	Medieval to Post Medieval	Two fragments of cast copper-alloy of uncertain date, most likely the result of metal working
3078	SF-1D41F1	Post Medieval	An incomplete cast copper-alloy barrel tap spout of Post-Medieval date. It is circular in shape and is broken at both end due to old breaks. There is a ridge along the top and down the centre
3079	SF-1D6346	Medieval to Post Medieval	A cast copper-alloy circular bar. It is probably an incomplete handle, possibly for a casket or drawer, most likely of Medieval or Post-Medieval date. It is circular in section and is broken
3080	YORYM-59B7	Medieval to Post Medieval	A cast copper alloy double looped buckle frame. The buckle frame and strap bar survive intact, but the pin

Project ID	HER Reference	Reported Period	Name
			is missing. Iron corrosion can be seen on the strap bar. Neither loop of the frame has a pin
3081	SF-D9EEA2	Early Medieval	A well-made cast copper alloy Viking lozengiform openwork brooch in very good condition. This brooch measures 30mm by 30mm in size. The front face of this brooch is decorated
3082	SF-E451A4	Medieval	A cast copper-alloy buckle of Medieval date. It has an oval frame with offset and narrowed cylindrical bar, and thickened outer edge. The outer edge is cylindrical in form and has a slightly curved profile
3083	SF-A2E9B6	Medieval to Post Medieval	A fragment of a silver gilt finger ring, only the bezel now survives due to old breaks. The bezel is in the form of two clasped hands. This finger ring is most likely to be of later Medieval or early post Medieval in date
3084	SF-4731E4	Post Medieval	A copper-alloy Rose and Orb jetton of Nuremberg Master Hans Krauwinckel II, c.1586-1635 AD. As Mitchiner 1988: no. 1574. The jetton has a central circular aperture
3085	MEX9917	Undated	Cropmark of part of an irregular shaped enclosure west of Hill House
3086	SF-A231C0	Post Medieval	A silver halfgroat of Charles II, c.1660-1662 AD
3087	SF-595F1F	Medieval	A complete silver Medieval penny of Edward I, dating to the period AD 1300-1302. Minted in Durham
3088	MEX28520	Modern	Boxted WWII Airfield
3089	SF-092E29	Medieval	An incomplete (cut half) silver Medieval penny of Henry II to Henry III, dating to the period AD 1180-1247. Uncertain class. Minted in London by uncertain moneyer.
3090	MEX1036593	Medieval to Post Medieval	Small quantities of post Medieval tile and pottery was recovered during fieldwalking, later excavation revealed Medieval /post Medieval field ditches, At Wick Farm
3091	MCC10039	Medieval to Post Medieval	Churchyard of St Mary's Church, Langham
3092	MCC9122	Undated	Cropmarks of ditches aligned predominantly NE-SW near Langham

<b>Project ID</b>	<b>HER Reference</b>	<b>Reported Period</b>	<b>Name</b>
<b>3093</b>	SF-B1D0BF	Early Medieval to Medieval	A copper-alloy Early Medieval stirrup-strap mount, dating to AD 1000-1100. It is sub-pentagonal in plan and it has a slightly rolled flange protruding backwards from its base.
<b>3094</b>	SUR-CF810A	Medieval to Post Medieval	A fragment of a copper alloy purse frame of Late Medieval to Early Post Medieval date, consisting of a curved length of the frame.
<b>3095</b>	MEX8233	Medieval	Complete rectangular moat at Ardleigh Wick
<b>3096</b>	MEX9878	Undated	Cropmark of an enclosure on Ardleigh Heath
<b>3097</b>	MEX1036592	Medieval and Post Medieval	Medieval finds were found during fieldwalking, later excavation revealed probable Medieval/post Medieval field ditches and trackway on Wick Farm, Ardleigh
<b>3098</b>	NMP Data		Historic field boundaries shown on OS map 1840-1880s
<b>3099</b>	SF-42D903	Bronze Age	Bronze tool hoard including a small socketed probable chisel or possible axe with another fragment visible within it
<b>3100</b>	MEX9457	Prehistoric	Pyroxene, jadeite axe, Campbell Smith type lia
<b>3101</b>	MCC9168	Post Medieval	Dedham Heath. Large historic heath shown on the 1777 Chapman & Andre Map, to the south of Dedham village
<b>3103</b>	MSF21136	Medieval to Post Medieval	Burstall Hall. L-shaped remnant of possible sub-rectangular moat surrounding Burstall Hall
<b>3104</b>	MSF24863	Medieval	Redhouse Farm is a farmstead visible on the 1st Ed Os map.
<b>3105</b>	MSF42545	Post Medieval	Coles Green Farm is a farmstead visible on the 1st Ed OS map
<b>3114</b>	MSF26530	Post Medieval	Burstall Hall is a farmstead visible on the 1st Ed OS map
<b>3123</b>	MSF42447	Post Medieval	Hill Farm farmstead is visible on the 1st Ed OS map
<b>3125</b>	MSF42546	Post Medieval	Longlands Barn is a field barn visible on the 1st Ed OS map
<b>3126</b>	MSF42552	Post Medieval	Rookery Farm is a farmstead visible on the 1st Ed OS map
<b>3128</b>	MSF42558	Post Medieval	An unnamed farmstead is visible on the 1st Ed Os map.
<b>3129</b>	MSF15837	Post Medieval	Post Medieval bridge shown on a map of 1783.

<b>Project ID</b>	<b>HER Reference</b>	<b>Reported Period</b>	<b>Name</b>
<b>3131</b>	MSF43788	Post Medieval	Cherryground is a farmstead visible on the 1st Ed OS map
<b>3132</b>	MSF43860	Post Medieval	Noakes Barn is a farmstead visible on the 1st Ed OS map
<b>3133</b>	MSF44940	Post Medieval	Pipers Went (Pipers Vent Farm), Raydon. 19th century farmstead and farmhouse
<b>3134</b>	MSF45026	Post Medieval	Hill Farm, Sproughton. 19th century farmstead and farmhouse
