## United Kingdom of Great Britain and Northern Ireland's Nationally Determined Contribution

The Paris Agreement provides for the international community to keep the increase in global average temperature to well below 2°C above pre-industrial levels, and to pursue efforts to limit the temperature increase to 1.5°C.

In December 2020, the United Kingdom of Great Britain and Northern Ireland (the UK) communicated its Nationally Determined Contribution (NDC) to the United Nations Framework Convention on Climate Change (UNFCCC) in line with Article 4 of the Paris Agreement. In its NDC, the UK commits to reducing economy-wide greenhouse gas emissions by at least 68% by 2030, compared to 1990 levels.

At COP26 in November 2021, which the UK hosted in Glasgow, Parties resolved to pursue efforts to limit global temperature increase to 1.5°C. They recognised that this would require rapid, deep and sustained reductions in greenhouse gas emissions and accelerated action in this critical decade to 2030.

Parties also agreed in paragraph 29 of the Glasgow Climate Pact to "revisit and strengthen the 2030 targets in their NDCs as necessary to align with the Paris Agreement temperature goal by the end of 2022, taking into account different national circumstances"<sup>1</sup>.

In light of the Glasgow Climate Pact and the urgency conveyed by the latest science, the UK has been through a process to revisit its NDC and ensure it is aligned with the Paris Agreement temperature goal, whilst exploring ways to strengthen it in line with best practice. This process involved analysis of a range of factors including the latest available science, expectations in the Paris Agreement and the Glasgow Climate Pact, the UK's existing 2050 net zero commitment, and energy security, as well as advice and evidence from the Climate Change Committee and other independent commentators.

The UK has strengthened its NDC in several ways, and these updates are reflected in the information to facilitate clarity, transparency and understanding (ICTU) accompanying the NDC, in compliance with Decision 4/CMA.1<sup>2</sup>. In summary, these updates include:

 Clarifying how the UK's target - which remains a commitment to reduce economy-wide greenhouse gas emissions by at least 68% by 2030 on 1990 levels - aligns with the Paris Agreement temperature goal;

<sup>1</sup> Decision 1/CMA.3 https://unfccc.int/documents/460950

<sup>2</sup> Decision 4/CMA.1 https://unfccc.int/documents/267463

- ii) Explaining more fully how the UK will deliver its NDC by 2030, taking account of policies and plans announced since the NDC was first submitted in December 2020;
- iii) Updating on the progress made in expanding the territorial scope of the NDC to include the UK's Crown Dependencies and Overseas Territories; and
- iv) Improving other detailed aspects of the ICTU, for example information on the UK's approach to levelling up, gender, green skills, public engagement, Just Transition and how the UK is supporting other countries with delivery of their NDCs.

The UK submitted its updated Adaptation Communication<sup>3</sup> to the UNFCCC in October 2021, ahead of COP26, in compliance with Decision 9/CMA.1<sup>4</sup>. The Adaptation Communication sets out the UK's domestic and international ambition and action on adaptation and resilience.

The UK submitted its first Finance Biennial Communication to the UNFCCC in 2020<sup>5</sup> in fulfilment of Article 9.5 of the Paris Agreement. The UK will submit its second Finance Biennial Communication by the end of 2022.

<sup>&</sup>lt;sup>3</sup> UK's Adaptation Communication to the UNFCCC

https://unfccc.int/ACR/United%20Kingdom%20of%20Great%20Britain%20and%20Northern%20Ireland <sup>4</sup> Decision 9/CMA.1 https://unfccc.int/documents/193407

<sup>&</sup>lt;sup>5</sup> UK's Biennial Finance Communication to the UNFCCC <u>https://unfccc.int/documents/267241</u>

### Information to facilitate clarity, transparency and understanding

In line with Article 4, paragraph 8 of the Paris Agreement and Decision 4/CMA.1 the UK submits the following ICTU.

1. Quantifiable information on the reference point		
а	Reference year	For carbon dioxide (CO2), methane (CH4) and nitrous oxide (N2O), the reference year is 1990.
		For hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), sulphur hexafluoride (SF6) and nitrogen trifluoride (NF3) the reference year is 1995.
		These reference years are consistent with those used in the UK's domestic emissions reduction targets under the Climate Change Act (2008).
b	Quantifiable information on the reference indicators, their values in the reference year(s), base year(s), reference period(s) or other starting point(s), and, as applicable, in the target year	Reference indicator: Net <sup>6</sup> greenhouse gas (GHG) emissions in MtCO2e. The reference indicator (MtCO2e) in the reference years (1990 and 1995) will be based on the 1990-2030 UK GHG Inventory submitted to the UNFCCC in 2032. The value for the target year (2030) will be based on applying a 68% fixed percentage reduction target to the reference indicator value.

<sup>&</sup>lt;sup>6</sup> Net emissions means total anthropogenic emissions minus total anthropogenic removals of greenhouse gases. GHG sinks are defined by the UNFCCC as "any process, activity or mechanism which removes a greenhouse gas from the atmosphere".

С	For strategies, plans and actions referred to in Article 4, paragraph 6, of the Paris Agreement, or polices and measures as components of nationally determined contributions where paragraph 1(b) above is not applicable, Parties to provide other relevant information	Not applicable <sup>7</sup> .	
2. Tin	ne Frame		
а	Time frame and/or period for implementation, including start and end date, consistent with any further relevant decision adopted by the Conference of the Parties serving as the meeting of the Parties to the Paris Agreement	1 January 2021 - 31 December 2030.	
b	Whether it is a single-year or multi-year target, as applicable	Single-year target in 2030.	
3. Sco	3. Scope and coverage		
а	General description of the target	An at least 68% economy-wide net reduction in GHG emissions by 2030 compared to reference year levels.	

<sup>&</sup>lt;sup>7</sup> The use of not applicable acknowledges that certain guidelines are not always relevant to a Party's NDC depending on the type of NDC target that has been set.

b	Sectors, gases, categories and pools covered by the nationally determined contribution, including, as applicable, consistent with Intergovernmental Panel on Climate Change (IPCC) guidelines	The sectors, gases, categories and pools covered by the UK's NDC are based on the 2006 IPCC Guidelines for National Greenhouse Gas Inventories, the 2013 IPCC Kyoto Protocol Supplement and the 2013 IPCC Wetlands Supplement. The UK also looks forward to implementing methodologies introduced by the 2019 Refinement to the 2006 IPCC Guidelines in the future. <b>Sectors covered</b> Energy (including transport); Industrial Processes and Product Use (IPPU); Agriculture; Land-use, Land-Use Change and Forestry (LULUCF); and Waste. <b>Gases covered</b> CO2, CH4, N2O, HFCs, PFCs, SF6 and NF3. <b>Pools covered</b> All LULUCF pools are included in the NDC: above ground biomass, below ground biomass, litter, deadwood soil organic carbon and stocks of harvested wood products.
C	How paragraphs 31(c) and (d) of decision 1/CP.21 were taken into consideration	<ul> <li>The UK's NDC includes all IPCC sectors and GHGs covered by the UK's current reporting obligations under the United Nations Framework Convention on Climate Change (hereafter referred to as "the Convention") and the Kyoto Protocol.</li> <li>Territorial scope of the UK's NDC</li> <li>The NDC for the United Kingdom of Great Britain and Northern Ireland ("the UK's NDC") encompasses emissions and removals from England, Scotland, Wales and Northern Ireland.</li> <li>It also includes emissions and removals from the UK Crown Dependency of the Bailiwick of</li> </ul>

Jersey and the Overseas Territory of Gibraltar, following the extension to them of the UK's ratification of the Paris Agreement (and hence the territorial scope of the UK's NDC).
Extension of the UK ratification of the Paris Agreement to the Crown Dependencies of the Bailiwick of Guernsey and to the Isle of Man is in progress and expected to be completed shortly. The UK Government (here on referred to as "His Majesty's (HM) Government") is consulting with other UK Overseas Territories on extension to them of the UK's ratification of the Paris Agreement.
In the UK GHG Inventory submission to the UNFCCC, the UK reports emissions on behalf of the Crown Dependencies (Jersey, Guernsey, Isle of Man) and the Overseas Territories (Bermuda, Cayman Islands, Falkland Islands, Gibraltar) which are covered by the UK's ratification of the Convention. Collectively, emissions from these Crown Dependencies and Overseas Territories currently constitute approximately 1% of total UK emissions <sup>8</sup> .
International Aviation and Shipping emissions
Emissions from International Aviation and Shipping are not included in the scope of this NDC, in line with advice from the Climate Change Committee (CCC), the UK's independent advisors. The UK currently reports these emissions as a memo item in the UK's GHG Inventory, <sup>9</sup> and is supportive of efforts to reduce these emissions through action under the International Civil Aviation Organisation and the International Maritime Organisation.

<sup>&</sup>lt;sup>8</sup> Under the UK's Climate Change Act the scope of emissions covered is limited to those emitted in the UK and UK coastal waters. Therefore, emissions from UK Crown Dependencies and Overseas Territories are not included in UK carbon budgets.

<sup>&</sup>lt;sup>9</sup> UK National Inventory Submission 2022: Common Reporting Format (CRF) (Convention) tables <u>https://unfccc.int/ghg-inventories-annex-i-parties/2022</u>

4. Planning processes		
а	Information on the planning processes that the Party undertook to prepare its nationally determined contribution and, if available, on the Party's implementation plans, including, as appropriate:	
a(i)	Domestic institutional arrangements, public participation and engagement with local communities and indigenous peoples, in a gender- responsive manner	Dependencies and Overseas Territories that the Paris Agreement has been extended to (See section 3c). The UK employs a range of institutional structures – at national, sub- national and local level - to enable economy-wide emissions mitigation, as well as numerous policies and measures to underpin delivery. The Department for Business, Energy and Industrial Strategy (BEIS) is responsible for the
		strategic oversight of the UK's international climate and energy policy, and for HM

Government's domestic climate and energy policy. The Devolved Administrations <sup>10</sup> in Scotland, Wales and Northern Ireland and the Crown Dependencies and Overseas Territories have control over certain policy areas to deliver emissions reductions, while HM Government retains control over a number of other policy areas. The approach taken by each government will differ, drawing on the range of powers at their disposal.
The legally binding Climate Change Act 2008 sets a framework for the UK to reduce GHG emissions and build capacity to adapt and strengthen resilience to climate risks <sup>11</sup> . The Act originally committed the UK to cut its emissions by at least 80% below the 1990 baseline level by 2050 <sup>12</sup> . On 27 June 2019, this target was amended, committing the UK to a legally-binding target of net zero emissions by 2050, set on a whole-economy basis.
The Climate Change Act introduced carbon budgets for the UK, which cap emissions over successive five-year periods and must be set 12 years in advance. The first six carbon budgets cover the period from 2008-37.
The Act also established the Climate Change Committee (CCC) – the independent statutory body that advises HM Government and Devolved Administrations on climate change mitigation and adaptation, including emissions reduction targets. When providing advice, the CCC considers a wide range of factors including the UK's international obligations under the Paris Agreement and the UNFCCC.
As climate change policy is devolved, the Devolved Administrations in Scotland, Wales and Northern Ireland have their own statutory emissions reduction targets. The Crown Dependencies and Overseas Territories are also responsible for setting their own emission

<sup>&</sup>lt;sup>10</sup> The Devolved Administrations refers to the Scottish Government, Welsh Government and Northern Ireland Executive.

 <sup>&</sup>lt;sup>11</sup> The UK's Adaptation Communication provides further detail on UK domestic and international adaptation ambition and action.
 <sup>12</sup> UK Climate Change Act (2008) <u>http://www.legislation.gov.uk/ukpga/2008/27/contents</u>

reduction targets. HM Government and the Devolved Administrations have established governance arrangements at ministerial and official level to co-ordinate the approach to meeting net zero. HM Government will work on delivery of the UK NDC with the Crown Dependencies and Overseas Territories that have had the Paris Agreement extended to them.
Scotland has its own distinct framework of statutory climate change targets, set under the Climate Change (Scotland) Act 200913 and amended by the Climate Change (Emissions Reduction Targets) (Scotland) Act 201914. This legislation includes targets for Scotland to reach net zero greenhouse gas emissions by 2045, and interim targets of 75% and 90% reductions in emissions by 2030 and 2040 respectively, relative to a 1990-95 baseline. To help ensure delivery of the long-term targets, the Scottish framework also includes statutory annual targets for every year to net zero.
<ul> <li>Wales' emission targets are set through the Environment (Wales) Act (2016)<sup>15</sup>. In March 2021, the Senedd increased its ambition and formally committed Wales to achieving net zero emissions by 2050. Alongside the net zero target, the Act was updated to reflect the revised interim targets and the second and third carbon budgets, which are now set as: <ul> <li>Carbon Budget 2 (2021-25): 37% average reduction (without the use of international offsets)</li> <li>Carbon Budget 3 (2026-30): 58% average reduction</li> <li>2030: 63% reduction</li> <li>2040: 89% reduction</li> <li>2050: at least 100% reduction (net zero)</li> </ul> </li> </ul>

 <sup>&</sup>lt;sup>13</sup> Climate Change (Scotland) Act (2009) <u>https://www.legislation.gov.uk/asp/2009/12/contents</u>
 <sup>14</sup> Climate Change (Emissions Reductions Targets) (Scotland) Act (2019) <u>https://www.legislation.gov.uk/asp/2019/15/enacted</u>
 <sup>15</sup> Environment (Wales) Act (2016) <u>https://www.legislation.gov.uk/anaw/2016/3/contents/enacted</u>

The Climate Change Act (Northern Ireland) 2022 <sup>16</sup> received Royal Assent on 6 June 2022. This provides a basis for setting targets for the reduction of emissions. The Act includes a target of 100% reduction in emissions by 2050, against the 1990-95 baseline. For more information on the UK's and Devolved Administrations' approach to tackling climate change, please see Chapter 3 in the UK's Eighth National Communication <sup>17</sup> and the
CCC's Insight Briefings <sup>18</sup> . The UK's NDC was informed by the UK's commitments under the Paris Agreement, the UK's legally binding net zero commitment and guidance from the CCC, amongst other factors. The ICTU was prepared in collaboration with HM Government departments and the Devolved Administrations.
The process to revisit and strengthen the UK's NDC in line with the Glasgow Climate Pact was led by BEIS and agreed through HM Government governance structures at official and Ministerial level, including through the Climate Action Implementation Cabinet Committee (see Section 6 for more on the process followed).
Policies and measures
Delivery of the UK's NDC will draw on a range of policies and measures already in place, as well as policies and measures that will be developed in the future.
The UK's Net Zero Strategy, published in 2021, sets out how the UK will deliver on Carbon

 <sup>&</sup>lt;sup>16</sup> Climate Change Act (Northern Ireland) (2022) <u>https://www.legislation.gov.uk/nia/2022/31/contents/enacted</u>
 <sup>17</sup> UK's Eighth National Communication to the UNFCCC <u>https://unfccc.int/documents/572623</u>

Budgets 4, 5 and 6 and the Nationally Determined Contribution, and keep us on track to achieve net zero greenhouse gas emissions by 2050 <sup>19</sup> . It includes policies and proposals to reduce emissions for each sector of the economy, and cross-cutting action to support the transition to net zero by 2050. The Net Zero Strategy was submitted to the UNFCCC in October 2021 as the UK's revised Long-Term Low Emission Development Strategy under Article 4, paragraph 19 of the Paris Agreement.
Since publishing the Net Zero Strategy, economic conditions have changed significantly, due primarily to the Russian invasion of Ukraine. Energy prices and inflation have risen sharply, the former to record levels. The UK Prime Minister has therefore announced an independent review of the Government's approach to meeting its net zero 2050 target, to ensure it is delivered in a way that is pro-business and pro-growth.
Underpinning the Net Zero Strategy the UK has also published a range of sectoral strategies, which will support delivery of the NDC by 2030. These include the Energy White Paper <sup>20</sup> , the North Sea Transition Deal <sup>21</sup> , the Industrial Decarbonisation Strategy <sup>22</sup> , the Transport Decarbonisation Plan <sup>23</sup> , the Hydrogen Strategy <sup>24</sup> and the Heat and Buildings Strategy <sup>25</sup> . Most recently, the British Energy Security Strategy <sup>26</sup> sets out how Great Britain will accelerate homegrown power for greater energy independence <sup>27</sup> .
As COP Presidency the UK also built international support for, and signed up to, a range of

<sup>&</sup>lt;sup>19</sup> Net Zero Strategy: Build Back Greener <u>https://www.gov.uk/government/publications/net-zero-strategy</u>

<sup>&</sup>lt;sup>27</sup> Energy Policy is devolved to Northern Ireland, and as such the British Energy Security Strategy applies to England, Scotland and Wales (Great Britain).

sectoral pledges announced at COP26 in November 2021. These include the Global Coal to Clean Power Transition Statement <sup>28</sup> , the Statement on international public support for the clean energy transition <sup>29</sup> , the Glasgow Leaders Declaration on Forests and Land Use <sup>30</sup> , the Glasgow Breakthroughs Agenda on clean energy, road transport, steel, hydrogen and agriculture <sup>31</sup> , the Zero Emission Vehicles (ZEVs) Declaration <sup>32</sup> , the Product Efficiency Call to Action <sup>33</sup> , and the Global Methane Pledge <sup>34</sup> .
Since its NDC was first communicated in December 2020, the UK has made progress on a range of specific policies and measures that will support delivery of the NDC. For example, as of September 2022, when the UK submitted its updated NDC, the UK has:
<ul> <li>Invested substantially in clean energy, committing up to £1.7 billion to increase the UK's nuclear energy production and over £1.6 billion to advance offshore wind capacity to meet the UK's 50GW target by 2050;</li> </ul>
<ul> <li>Published the first three investor roadmaps for automotive, hydrogen and carbon capture, usage and storage (CCUS). These are the first in a series of roadmaps to be published over the course of 2022 for each sector of the Government's Ten Point Plan for a Green Industrial Revolution, showcasing how the UK is delivering on its green</li> </ul>
<ul> <li>commitments;</li> <li>Launched the £240 million Net Zero Hydrogen Fund to drive the industry forward and developed plans for the next stage of the Hydrogen Village trial, where 2,000 occupied</li> </ul>

<sup>&</sup>lt;sup>28</sup> Global Coal to Clean Power Transition statement https://ukcop26.org/global-coal-to-clean-power-transition-statement/

<sup>&</sup>lt;sup>34</sup> Global Methane Pledge https://www.globalmethanepledge.org/

<ul> <li>12 months;</li> <li>Committed to phase out unabated coal power by 2024 and to fully decarbonise the power system by 2035;</li> <li>Committed to ending HM Government's direct support for the fossil fuel energy sector overseas;</li> <li>Committed to ending the sale of new petrol and diesel vehicles by 2030, and for all new cars and vans to be fully zero emission at the tailpipe by 2035 - and launched a consultation on this in April 2022<sup>35</sup>;</li> <li>Undertaken to explore updating and expanding 'Ecodesign' product regulation which sets minimum requirements to phase out the least energy and resource efficient products from the market; and</li> <li>Begun considering the recommendations from the Climate Change Committee to set targets for ore-based steelmaking to reach near zero emissions by 2035.</li> <li>Additionally, the UK's agriculture sector will contribute towards the UK's NDC, and HM Government will support farmers to take up low carbon practices and technologies, simultaneously helping to improve business productivity and profitability gains. As highlighted in the Net Zero Strategy built on the detail set out in the England Tree Action Plan<sup>36</sup> and England Peat Action Plan<sup>37</sup>, on how the UK will use nature-based solutions (including peatlands and trees), to tackle climate change and help aver its impacts. Initiatives include:</li> </ul>
---

<sup>&</sup>lt;sup>35</sup> Policy design features for the car and van zero emission vehicle mandate: https://www.gov.uk/government/consultations/policy-design-features-for-the-car-and-van-zero-emission-vehicle-zevmandate

 <sup>&</sup>lt;sup>36</sup> England Trees Action Plan 2021 to 2024 <a href="https://www.gov.uk/government/publications/england-trees-action-plan-2021-to-2024">https://www.gov.uk/government/publications/england-trees-action-plan-2021-to-2024</a>
 <sup>37</sup> England Peat Action Plan <a href="https://www.gov.uk/government/publications/england-peat-action-plan">https://www.gov.uk/government/publications/england-trees-action-plan-2021-to-2024</a>

<ul> <li>The £750m Nature for Climate Fund, which is helping to protect, restore, expand and support the resilience of habitats such as peat bogs and woodlands;</li> <li>Support for farmers and landowners to create woodland and restore peatlands; and</li> <li>Exploration of setting a long-term tree planting target through the UK's Environmental Targets.</li> </ul>
Under the Kigali Amendment to the Montreal Protocol, the UK is taking ambitious action to phase down the UK's use of hydrofluorocarbons (HFCs). As committed to in the Net Zero Strategy, HM Government will conduct a review of the F-gas Regulation <sup>38</sup> and publish a report in due course. This will set out any further measures the UK can take to reduce HFC use in favour of climate friendly, energy efficient alternatives.
Collectively, these strategies, pledges, policies and measures will support delivery of the UK's NDC by 2030, as well as the UK's domestic carbon budgets and net zero by 2050.
The Climate Change Committee's Progress Report to Parliament, published in June 2022, included a range of recommendations on how the UK can make further progress in delivering against its emissions reduction targets including the NDC39. HM Government will respond to the Committee's report, and update on the progress made on the delivery pathway to Net Zero in due course.
The UK's Adaptation Communication contains more details on the UK's adaptation plans.
The UK will submit its Methane Memorandum at COP27 in November 2022.

 <sup>&</sup>lt;sup>38</sup> F-gas Regulation <u>https://www.legislation.gov.uk/eur/2014/517/contents</u>

Devolved Administrations
Under Scotland's statutory framework, a Climate Change Plan setting out policies and proposals to meet the emissions reduction targets must be published at least every five years and prepared with reference to a set of statutory Just Transition and Climate Justice principles. In March 2021, the Scottish Government updated its Climate Change Plan <sup>40</sup> (which should be read alongside the original 2018 Plan <sup>41</sup> ), setting out over 200 policies and proposals to cut greenhouse gas emissions across all sectors of the Scottish economy over the period to 2032. The updated Plan reflects the increase in target ambition from the Climate Change (Emissions Reductions Targets) (Scotland) Act 2019, in response to the global goals of the Paris Agreement.
Under the Environment (Wales) Act, each new administration is required to set out a plan containing policies and proposals to meet the carbon budget. The Welsh Government has taken the first step towards a net zero pathway for 2050 in publishing Net Zero Wales <sup>42</sup> , in October 2021, covering Wales's second carbon budget period 2021–25. It contains 123 policies and proposals across all ministerial portfolios and looks beyond to start building the foundations for Wales's third carbon budget and 2030 target, as well as net zero by 2050. The plan focuses on the need to "outperform" this second carbon budget of 37% average reduction in emissions, in line with the Climate Change Committee's recommendation. This is because Wales's third carbon budget (2026–30) requires an average reduction of 58%, reflecting the huge step change Wales needs to make if its actions are to have time to take effect.

<sup>&</sup>lt;sup>40</sup> Securing a green recovery on a path to net zero: climate change plan 2018–32 - update <u>https://www.gov.scot/publications/securing-green-recovery-path-net-zero-update-climate-change-plan-</u> 20182032/

<sup>&</sup>lt;sup>41</sup> Climate Change Plan: third report on proposals and policies 2018-32 <u>https://www.gov.scot/publications/scottish-governments-climate-change-plan-third-report-proposals-policies-2018/</u> <sup>42</sup> Net Zero Wales <u>https://gov.wales/net-zero-wales</u>

In October 2021, the Department of Agriculture, Environment and Rural Affairs launched a public consultation on a Green Growth Strategy for Northern Ireland <sup>43</sup> . The Green Growth Strategy is the Northern Ireland Executive's multi-decade strategy, balancing climate, environment and the economy in Northern Ireland. It sets out the long-term vision for tackling the climate crisis and will be underpinned by the provisions of the recently passed Climate Change Act (Northern Ireland) 2022 with which it closely aligns. This longer-term Strategy will be delivered through a series of Climate Action Plans aligned to carbon budget periods, the first of which is to be developed by the end of 2023 and which will set out a series of policies and proposals to achieve the first carbon budget for the period 2023-27. The Green Growth Strategy is currently awaiting sign off by the NI Executive. Additionally, The Path to Net Zero <sup>44</sup> is Northern Ireland's current energy strategy and sets a long-term
vision of net zero carbon and affordable energy for Northern Ireland by 2050. Local authorities Local authorities play an essential role in driving action to tackle climate change with significant influence in energy, housing and transport. Across the UK, local authorities are actively driving progress on net zero. Local Government can also attract net zero private sector investment, which complements national approaches to attracting net zero investment.
<ul> <li>HM Government works closely with local government and has provided support to help them contribute to delivering net zero. This includes:</li> <li>Establishing five Local Net Zero Hubs, each covering a region of England. The Hubs promote best practice and support local authorities to develop net zero projects and</li> </ul>

Gender-responsive action
The UK recognises that women and girls – alongside other marginalised people – are disproportionately impacted by climate change and are also critical leaders and agents of change in climate action. The UK is dedicated to promoting equality and inclusion, including women's empowerment, gender equality and the implementation of the UNFCCC Gender Action Plan. Public authorities must fulfil responsibilities set out under the UK's Equality Act (2010) <sup>45</sup> , which covers a range of protected characteristics.
The UK has agreed nuclear <sup>46</sup> and offshore wind sector <sup>47</sup> deals with specific targets established to increase workforce diversity. The UK also supports industry-led initiatives like POWERful women <sup>48</sup> in order to address the lack of gender diversity in the green economy. The UK signed up to the Clean Energy Ministerial Clean Energy Education and Empowerment (C3E) Initiative <sup>49</sup> in 2020. This initiative aims to advance women's participation in the clean energy revolution and enable greater gender diversity in the clean energy professions. Under the UK's G7 Presidency, G7 countries reaffirmed and strengthened their commitments under the Equal by 30 Campaign, the Clean Energy

 <sup>&</sup>lt;sup>45</sup> UK Equality Act (2010) <u>https://www.legislation.gov.uk/ukpga/2010/15/contents</u>
 <sup>46</sup> Nuclear Sector Deal <u>https://www.gov.uk/government/publications/nuclear-sector-deal</u>
 <sup>47</sup> Offshore Wind Sector Deal <u>https://www.gov.uk/government/publications/offshore-wind-sector-deal</u>
 <sup>48</sup> POWERful women <u>https://powerfulwomen.org.uk/</u>
 <sup>49</sup> C3E Initiative <u>https://c3e.org/</u>

Ministerial campaign under which countries have committed to working towards equal pay, equal leadership and equal opportunities for women in the clean energy sector by 2030 <sup>50</sup> .
The UK joined the International Energy Agency (IEA) Gender Advisory Council in 2021, which is intended to guide work on gender diversity and improve equal opportunities in the energy sector. It will help to take forward the IEA Gender Diversity Initiative and will strengthen collaboration with C3E and Equal by 30.
During its COP26 Presidency, the UK sought to advance gender equality in its own climate action, to urge others to enhance gender-responsive climate action in their national contexts, and to learn from and amplify the good practices of other countries and observer organisations. The Glasgow Climate Pact resulted in strengthened language on gender and inclusion. The UK has provided funding and support to widen participation including the full, meaningful, and equal participation and leadership of women in all aspects of the UNFCCC.
The UK continues to work with delivery partners to capture the impacts of International Climate Finance (ICF) programmes on certain groups of people and to embed gender mainstreaming into every stage of the programme cycle. The UK's Climate Ambition Support Alliance (CASA) <sup>51</sup> has provided funding for the active participation of women from Small Island Developing States (SIDS) in negotiations and has supported the European Capacity Building Initiative's (ecbi) Women Negotiator Mentoring Initiative. The UK PACT (Partnering for Accelerated Climate Transitions) <sup>52</sup> programme has developed gender equality and social inclusion (GESI) guidance <sup>53</sup> . This includes a requirement for applicants to state how their projects could support women and/or marginalised groups. As part of its commitments under

 <sup>&</sup>lt;sup>50</sup> Equal by 30 Campaign <u>https://www.equalby30.org/en/content/about-campaign</u>
 <sup>51</sup> CASA <u>https://casaclimate.org/</u>
 <sup>52</sup> UK PACT <u>https://www.ukpact.co.uk/</u>
 <sup>53</sup> UK PACT GESI Guidance <u>https://www.ukpact.co.uk/about/resources</u>

the Generation Equality Forum's Action Coalition on Feminist Action for Climate Justice <sup>54</sup> , the UK will strengthen collection and use of data on gender, inclusion and climate.
Just Transition
The UK is dedicated to supporting workers, communities and businesses to transition to net zero. HM Government convened the Green Jobs Taskforce <sup>55</sup> to advise on the actions that government, industry and the education sector can take to create the skilled workforce to deliver net zero while supporting workers in high carbon sectors with the transition. It will also look to explore what actions can be taken across industry to improve diversity in the green economy, including improving data collection and transparency.
Signed by over 30 major donor countries under the UK's COP Presidency, the International Just Transition Declaration <sup>56</sup> commits, for the first time, to embedding labour and human rights principles into overseas funding in developing and emerging economies. This supports a range of activities, from supporting social dialogues to investing in new, decent jobs for all. The Declaration also commits countries to ensuring that workers and communities in outgoing high-carbon supply chains are supported, and that procurement is made from green supply chains that adhere to minimum labour standards.
The UK recognises the critical need to work in partnership with high emitting developing countries who want to take ambitious climate action and accelerate their clean energy transitions. Just Energy Transition Partnerships (JETPs) tailor international support to individual countries' plans focused on the many thousands of people who still rely on fossil fuels for their livelihoods. The UK is leading efforts to deliver the ground-breaking South

<sup>&</sup>lt;sup>54</sup> Gender Equality Forum's Action Coalition on Feminist Action for Climate Justice <u>https://forum.generationequality.org/action-coalitions</u>

African JETP announced at COP26 and is working together with G7 and other partners to support further JETPs <sup>57.</sup>
Public participation and engagement
As agreed at COP26, the Glasgow Work Programme on Action for Climate Empowerment highlights the key role that a broad range of stakeholders - such as national, regional and local governments, non-governmental organisations, scientists, youth, women and indigenous peoples - play in fostering greener economies.
The UK is a Party to the Aarhus Convention, a United Nations Economic Commission for Europe (UNECE) Treaty which provides for access to information, public participation in decision making and access to justice in environmental matters.
The UK's NDC has been informed by guidance from the Climate Change Committee (CCC), in the context of the UK's legally binding net zero commitment. In producing its advice the CCC relies on a range of evidence, including expert and stakeholder sources. For example, the CCC has in the past run public calls for evidence, roundtables and workshops with non-governmental organisations (NGOs), industry stakeholders and trade associations, and held more than 200 meetings with individual stakeholders across all sectors. More information on this can be found in the CCC's Insight Briefings <sup>58</sup> .
The approach towards the UK's NDC was discussed in meetings with NGOs, civil society and business groups, and covered in correspondence with representatives of these groups

<sup>&</sup>lt;sup>57</sup> Six-month update on progress in advancing the Just Energy Transition Partnership <u>https://ukcop26.org/six-month-update-on-progress-in-advancing-the-just-energy-transition-partnership-jetp/</u> <sup>58</sup> Advising on the level of the UK's carbon budgets, CCC (2020) <u>https://www.theccc.org.uk/wp-content/uploads/2020/10/CCC-Insights-Briefing-4-Advising-on-the-level-of-the-UKs-carbon-budgets.pdf</u>

and interested Parliamentarians. A copy of the UK's updated NDC will be laid in the UK's Houses of Parliament.
The Net Zero Strategy is a key element of how HM Government informs the public about achieving the UK's carbon commitments. A wide range of stakeholders were engaged to support the development of the strategy, including organisations that represent business interests, NGOs, local sectors, and public facing bodies. In 2020, BEIS invited a diverse group of 93 members of the public to join deliberative dialogues on net zero, to get an insight into their understanding and views of net zero, their perceptions on what role the public should play in reaching net zero and how we can best bring the public along with us. The findings of these dialogues were considered and informed the development of the Net Zero Strategy.
HM Government has also run and funded public workshops and deliberative dialogues on a range of net zero issues such as net zero homes, heating, transport decarbonisation, hydrogen, food, Carbon Capture Use and Storage (CCUS), Advanced Nuclear Technologies (ANT), energy, and the environment. HM Government also ran a public consultation on the approach to the UK Emissions Trading Scheme <sup>59</sup> in March 2022.
The Welsh Government's Engagement approach around Climate Change 2022-26 <sup>60</sup> was published in June 2022 and provides a framework for working with Team Wales partners around the delivery of Net Zero Wales (Carbon Budget 2) <sup>61</sup> . A new draft Strategy for Public Engagement and Action on Climate Change 2022-26 will be published for consultation in October 2022.
The Scottish Government launched a new Public Engagement Strategy for Climate Change

 <sup>&</sup>lt;sup>59</sup> Developing the UK Emissions Trading Scheme <a href="https://www.gov.uk/government/consultations/developing-the-uk-emissions-trading-scheme-uk-ets">https://www.gov.uk/government/consultations/developing-the-uk-emissions-trading-scheme-uk-ets</a>
 <sup>60</sup> Welsh Government's Engagement approach around Climate Change (2022-26) <a href="https://gov.wales/engagement-approach-around-climate-change-2022-26">https://gov.wales/engagement-approach-around-climate-change-2022-26</a>
 <sup>61</sup> Net Zero Wales (Carbon Budget 2) <a href="https://gov.wales/net-zero-wales-carbon-budget-2-2021-2025">https://gov.wales/net-zero-wales-carbon-budget-2-2021-2025</a>

in September 2021 <sup>62</sup> . The Strategy recognises the vital role of public and community engagement in facilitating a societal transition to a net zero and climate resilient nation. Scotland's Climate Assembly brought together over 100 people, broadly representative of the Scottish population, to learn about, discuss and make recommendations on how Scotland should change to tackle the climate emergency in a fair and effective way. The full report of Scotland's Climate Assembly was laid in Scottish Parliament in June 2021, with the Scottish Government issuing a detailed response to their recommendations in December 2021.
The Northern Ireland Executive, in developing and bringing forward policies and strategies such as the Green Growth Strategy, the Path to Net Zero Energy Strategy <sup>63</sup> and the recently passed Climate Change Act (Northern Ireland) 2022 have undertaken extensive engagement with a wide range of stakeholders. This engagement will continue with the development of the first Climate Action Plan for Northern Ireland and other key deliverables arising out of the new legislation.
The UK will continue to carry out a wide range of engagement with a cross-section of society including experts, industry, non-governmental organisations, trade bodies and the wider public, helping to shape plans and policies for reaching net zero emissions by 2050.
Youth and Children
The Glasgow Climate Pact urges Parties and stakeholders to ensure meaningful youth participation and representation in multilateral, national and local decision-making processes. The UK will continue to ensure that young people are engaged in both the design and implementation of climate-related policies where relevant. For example, the UK Department

 <sup>&</sup>lt;sup>62</sup> Scottish Government's Public Engagement Strategy: <a href="https://www.gov.scot/publications/net-zero-nation-public-engagement-strategy-climate-change/63">https://www.gov.scot/publications/net-zero-nation-public-engagement-strategy-climate-change/</a>
 <sup>63</sup> Northern Ireland's Path to Net Zero Energy Strategy: <a href="https://www.economy-ni.gov.uk/publications/energy-strategy-path-net-zero-energy">https://www.economy-ni.gov.uk/publications/net-zero-nation-public-engagement-strategy-climate-change/</a>

		for Education (DfE) engaged Civil Society, NGOs, educators and young people to develop a sustainability and climate change strategy for the education and children services system. This included a youth panel so young people could share their views and inform the development of the strategy.

Ocean and marine environment
The UK's vision for the marine environment is for clean, healthy, safe, and biologically diverse ocean and seas. The sustainable use, protection and restoration of the UK's marine environment is underpinned by the UK Marine and Coastal Access Act (2009) <sup>69</sup> , the Environment Act (2021) <sup>70</sup> and Fisheries Act (2020) <sup>71</sup> , UK Marine Policy Statement <sup>72</sup> , Marine Strategy <sup>73</sup> , commitment to an ecologically coherent well-managed network of Marine Protected Areas, and Joint Fisheries Statement. Through the UK Marine Strategy, HM Government and Devolved Administrations are working closely together to achieve Good Environmental Status (GES) in the UK's seas.
The UK's National Adaptation Programme <sup>74</sup> outlines how the UK will address marine climate risks by introducing a Sustainable Fisheries policy, giving consideration to climate change in marine planning, building ecological resilience at sea.
The Scottish Government has set out a new Blue Economy vision for the sustainable management of Scotland's seas, establishing long term outcomes to 2045 and including a dedicated climate outcome to support ecosystem health, improved livelihoods, economic prosperity, social inclusion and wellbeing. New actions to increase protection of the marine environment include; delivery of a network of highly protected marine areas by 2026, fishery management measures across the Marine Protected Areas network by 2024 and introduction of a Scottish Wild Salmon Strategy. New evidence is also being delivered

<sup>&</sup>lt;sup>69</sup> UK Marine and Coastal Access Act (2009) <u>https://www.legislation.gov.uk/ukpga/2009/23/contents</u>

<sup>&</sup>lt;sup>74</sup> UK's National Adaptation Programme https://www.gov.uk/government/publications/climate-change-second-national-adaptation-programme-2018-to-2023

through the Scottish Blue Carbon Forum, building upon actions set out in the second Scottish Climate Change Adaptation Programme <sup>75</sup> to address Scotland's marine climate risks.
In November 2019 the Welsh Government published the first Welsh National Marine Plan <sup>76</sup> . This sets out policy for the next 20 years to achieve healthy and resilient seas and marine ecosystems, in support of a thriving, sustainable economy. The Plan provides the strategic framework to enable renewable energy generation at sea.
The draft Marine Plan for Northern Ireland <sup>77</sup> , published in April 2018, supports the UK Marine Policy Statement, the UK Marine Strategy and the UK's vision for the marine environment. The sustainable development of Northern Ireland's marine area is further underpinned by the Marine Act (Northern Ireland) 2013 <sup>78</sup> and the Marine and Coastal Access Act 2009 <sup>79</sup> . The Plan represents the first step in sustainably managing Northern Ireland's marine area in supporting economic, environmental and social objectives. A second iteration of the Plan is currently being drafted which will take account of the advancements in science, technology, policy and legislation, particularly in relation to climate change mitigation and adaption including Blue Carbon, Sustainable Fisheries and Offshore Renewable Energy. The Marine Plan for Northern Ireland is expected to be finalised, adopted and published in 2023.
Terrestrial biodiversity
Given the mutually reinforcing effects of climate change and biodiversity loss on people and

<sup>&</sup>lt;sup>75</sup> Climate Ready Scotland: Climate Change Adaptation Programme 2019-24 (2019) <u>https://www.gov.scot/publications/climate-ready-scotland-second-scottish-climate-change-adaptation-</u> programme-2019-2024/pages/6/

 <sup>&</sup>lt;sup>76</sup> Welsh National Marine Plan (2019) <u>https://gov.wales/welsh-national-marine-plan-document</u>
 <sup>77</sup> Draft Marine Plan for Northern Ireland <u>https://www.daera-ni.gov.uk/sites/default/files/consultations/daera/Marine%20Plan%20for%20NI%20final%2016%2004%2018.PDF</u>
 <sup>78</sup> Marine Act (Northern Ireland) (2013) <u>http://www.legislation.gov.uk/nia/2013/10/contents</u>

<sup>&</sup>lt;sup>79</sup> UK Marine and Coastal Access Act (2009) https://www.legislation.gov.uk/ukpga/2009/23/contents

the planet, an integrated approach is the only way to address these issues. HM Government is developing a 2030 strategic framework for international climate and nature action that will set out the UK's integrated approach to tackling both challenges.
The UK will fulfil its responsibilities under the Convention on Biological Diversity (CBD) <sup>80</sup> , the Ramsar Convention <sup>81</sup> and the Leaders' Pledge for Nature <sup>82</sup> - including implementation of the CBD vision that by 2050 biodiversity is valued, conserved, restored and wisely used, maintains ecosystem services, sustains a healthy planet and delivers benefits essential for all people. This will provide significant climate mitigation and adaptation benefits.
UK domestic biodiversity policy is devolved. In England, the UK's 25 Year Environment Plan (25YEP) <sup>83</sup> set out the aim to support nature's recovery and restore historical losses, including for the marine environment. Since then, HM Government has introduced the Environment Act 2021 that introduces ambitious measures to address the biggest environmental priorities of our age, including restoring nature. The Act requires a new, legally binding and world-leading target to be set to halt the decline in species abundance by 2030. This is in addition to setting at least one long-term legally binding target for biodiversity. In England, the original plan was to publish a standalone strategy to replace Biodiversity 2020. The delays to the development of the CBD Global Framework however have provided an opportunity to integrate ambitions and approach to nature recovery into a refreshed Environmental Improvement Plan (EIP), set to be published by January 2023. This will link together the different objectives, plans and mechanisms for achieving biodiversity targets and recovering nature.

 <sup>&</sup>lt;sup>80</sup> UK Country Profile, Convention on Biological Diversity <u>https://www.cbd.int/countries/?country=gb</u>

 <sup>83</sup> A Green Future: Our 25 Year Plan to Improve the Environment <u>https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment\_data/file/693158/25-year-</u> environment-plan.pdf
The Scottish Government is committed to delivering improved and enduring benefits to the natural environment through the Environment Strategy for Scotland <sup>84</sup> . Sitting beneath this, the Scottish Biodiversity Strategy <sup>85</sup> will take account of the new post-2020 global biodiversity framework and targets for the Convention on Biological Diversity's 2050 vision. The Scottish Biodiversity Programme <sup>86</sup> has been created to coordinate all activity on biodiversity including the development of a future strategic framework for biodiversity that compromises both
terrestrial and marine aspects.
The Nature Recovery Action Plan (NRAP) is the National Biodiversity Strategy and Action Plan for Wales <sup>87</sup> . It sets out how the Convention on Biological Diversity's Strategic Plan for Biodiversity and the associated Aichi Biodiversity Targets are addressed in Wales. The
NRAP has been refreshed for 2020-21 to prioritise the maintenance and improvement of resilient ecological networks and transformative change. Relevant actions include developing the new Sustainable Land Management scheme and the National Forest for Wales, work to
improve the condition of Protected Sites Network, and the National Peatland Action Programme. The NRAP will be realigned to address the post-2020 framework for the Convention on Biological Diversity in line with commitments made under the Edinburgh
Declaration <sup>88</sup> and the Leaders' Pledge for Nature.
In Northern Ireland, the Department of Agriculture, Environment and Rural Affairs (DAERA) completed a public consultation on a future Environment Strategy for Northern Ireland in
January 2022 <sup>89</sup> . This will be Northern Ireland's first overarching Environment Strategy and subject to the approval of the Northern Ireland Executive, it will be adopted as Northern

<sup>&</sup>lt;sup>89</sup> Environment Strategy Consultation Northern Ireland https://www.daera-ni.gov.uk/consultations/environment-strategy-consultation

Ireland's Environmental Improvement Plan under the Environment Act 2021.
A new Biodiversity Strategy for Northern Ireland is being developed to take account of the post-2020 framework and targets for the Convention on Biological Diversity's 2050 vision. This strategy will commit Northern Ireland to relevant actions on a number of important issues, including implementing nature-based solutions for tackling climate change and reversing biodiversity loss in line with the commitments made under the Edinburgh Declaration and the Leaders' Pledge for Nature.
Education and skills
The UK is strengthening awareness of and building consensus in tackling climate change through various education initiatives at all stages of life, including: a new education course on climate science for 16- to 18-year-olds; a Green Home Grant Skills Training competition to support training for installation of energy efficient and low carbon heating measures; and initiatives as part of the UK's Offshore Wind Sector Deal.
The UK also supports gender balance in physics and computing to increase Science, Technology, Engineering and Mathematics (STEM) take up amongst girls. For example, the UK is funding the Institute of Physics to deliver the Improving Gender Balance research trial. This randomised control trial will scale up an approach that has shown significant early promise in increasing girls' uptake of A level physics. Since 2010, there has been a 31% increase in girls' entries to STEM A levels in England, and there are now one million women working in core STEM occupations. Between 2010 and 2019, the number of women accepted onto full-time STEM undergraduate courses also increased by 34% in the UK.
The Net Zero Strategy sets out HM Government's plans to work with industry to create the skilled workforce to deliver net zero. This includes green apprenticeships, retraining

bootcamps, publishing a climate and sustainability strategy for education and children services, and establishing the Green Jobs Delivery Group with industry. The Green Jobs Delivery Group is the central forum through which government, industry and other key stakeholders work together to ensure the UK has the workforce needed to deliver a green industrial revolution.
Additionally, HM Government is proud to have published the Department for Education's Strategy for Sustainability and Climate Change for Education and Children's Services in April 2022. The strategy sets out key actions in climate education and green skills which will equip children, young people and adult learners with the knowledge and skills needed to contribute to the green economy. This includes the development of a new GCSE in Natural History, to be taught in schools by 2025. This GCSE will give young people a further opportunity to engage with and develop a deeper knowledge and understanding of the natural world.
The Scottish Government's Climate Emergency Skills Action Plan provides a framework for skills planning, development and investment across sectors of the economy known to be crucial to achieving net zero. As part of this, the Green Jobs Workforce Academy was launched in August 2021 and is an invaluable step in preparing Scotland's current and future workforce for green careers. For workers in high carbon sectors, the Scottish Government has committed to launch a Skills Guarantee – to ensure that individuals who are making the move to employment in new, green jobs, have access to career guidance and retraining opportunities. In addition, Scotland's Curriculum for Excellence <sup>90</sup> incorporates an emphasis on the cross-cutting theme of Learning for Sustainability – a term that brings together sustainable development education, global citizenship and outdoor learning. A refreshed and

<sup>&</sup>lt;sup>90</sup> Scotland's curriculum – Curriculum for Excellence <u>https://scotlandscurriculum.scot/</u> 30

strengthened Learning for Sustainability Action Plan <sup>91</sup> will help to ensure that all children and
young people in Scotland have the opportunity to experience this vital area of education.
The Welsh Government is investing in people to develop the skills needed for a low-carbon, circular economy, including reskilling workers in existing industries. The Welsh Government will seek to exploit the opportunities of this transition to secure greater added value in sectors like energy and housing (timber in construction and modular housing).
In Northern Ireland, the Department for Economy's 10X Economy <sup>92</sup> sets out the vision for
the 2020s as a decade of innovation bringing opportunity and growth. The Energy Strategy discusses the substantial and underpinning role of skills development in delivering on
Northern Ireland's commitment to a net zero carbon future – and the focus on innovation, research and development is reinforced in the Green Growth Strategy. The Skills Strategy consultation <sup>93</sup> recognises that a transformational change in skills is required to take
advantage of Northern Ireland's scale, yet whilst addressing the challenges in the skills sector. A Skills Audit to identify the skills and training needs for energy decarbonisation is planned for 2022-23. Skill Up, a flexible skills programme, also provides a range of
opportunities in the green technologies area, with courses and qualifications available in hydrogen, heat pumps, retrofitting, solar and electrical vehicles across the further and higher education sectors in 2022 and 2023.
Sustainable lifestyles and sustainable patterns of consumption and production
The UK is committed to delivering a sustainable food system, ensuring that everyone has access to nutritious and healthier food, while meeting our commitment to broadly maintain

<sup>&</sup>lt;sup>91</sup> Learning for sustainability: action plan (2019) <u>https://www.gov.scot/publications/learning-for-sustainability-vision-2030-action-plan/</u>

 <sup>&</sup>lt;sup>92</sup> 10X Economy - an economic vision for a decade of innovation <a href="https://www.economy-ni.gov.uk/publications/10x-economy-economic-vision-decade-innovation">https://www.economy-ni.gov.uk/publications/10x-economy-economic-vision-decade-innovation</a>
 <sup>93</sup> A Skills Strategy for Northern Ireland – Skills for a 10x Economy <a href="https://www.economy-ni.gov.uk/consultations/skills-strategy-northern-ireland-skills-10x-economy-ni.gov.uk/consultations/skills-strategy-northern-ireland-skills-10x-economy-</a>

food production <sup>94</sup> . The Resources and Waste Strategy <sup>95</sup> sets out England's plans to move away from a linear economy, towards a more circular and sustainable economy in which natural resources are used efficiently and waste is minimised. The UK Environment Act 2021 further provides the powers to significantly change the way that waste is managed and take forward a number of the proposals from the Resources and Waste Strategy and the Net Zero Strategy.
The Scottish Government recognises the transition to net zero will require significant lifestyle changes. Scotland's Heat in Buildings Strategy <sup>96</sup> sets out the pathway to achieving net-zero emissions from Scotland's buildings, and making them warmer, greener and more efficient, by 2045. Scotland's National Transport Strategy <sup>97</sup> embeds the sustainable travel hierarchy in decision making, enabling people to make sustainable travel choices and improve the lives of future generations by promoting health and wellbeing. Scotland's Making Things Last Strategy <sup>98</sup> sets out priorities for achieving a move towards a more circular economy – where products and materials are kept in high value use for as long as possible. The Scottish Government has recently consulted on proposals for a Circular Economy Bill <sup>99</sup> which includes proposals for a duty to publish a Scottish Circular Economy Strategy every five years.
The Welsh Government has consulted on a new Circular Economy Strategy <sup>100</sup> . This proposed a range of actions which seek to keep resources in use for longer and avoid waste. The final Strategy will be published in the coming months. The Welsh Government is

also stimulating innovation through its Circular Economy Funds, awarding around £40m to businesses and publicly funded bodies to date.
Northern Ireland published the second iteration of the national Waste Prevention Programme Stopping Waste in its Tracks <sup>101</sup> in 2019. The programme aims to decouple waste from growth and the actions contained within are designed to help Northern Ireland transition to a low-carbon circular economy. A Northern Ireland Circular Economy Strategy is being developed that proposes to design out waste and manage resources to preserve value. It is scheduled to go out for consultation in autumn 2022.
Health and air pollution
Air pollution is the top environmental risk to human health in the UK. The UK's Clean Air Strategy <sup>102</sup> sets out how the UK will tackle all types of air pollution, making the air healthier to breathe and protecting nature. This will save lives and reduce health inequalities, in line with protecting the right to health as set out in the Paris Agreement.
The Scottish Government published its Cleaner Air for Scotland strategy <sup>103</sup> in 2015 setting out a series of actions for improving air quality across a wide range of policy areas. Following an independent review of the strategy in 2019 <sup>104</sup> , which made recommendations for additional action on air pollution, a new strategy - Cleaner Air for Scotland 2: Towards a Better Place for Everyone - was published in July 2021 <sup>105</sup> . This sets out Scotland's air quality policy framework for the period 2021 to 2026 with a continued focus on delivery of co-benefits for air pollutant and greenhouse gas reductions.

<sup>&</sup>lt;sup>105</sup> Cleaner Air for Scotland 2 - Towards a Better Place for Everyone <u>https://www.gov.scot/publications/cleaner-air-scotland-2-towards-better-place-everyone/</u>

		The Clean Air Plan for Wales: Healthy Air, Healthy Wales sets the Welsh Government's commitment and long-term ambition to improve air quality, and the steps it will take to deliver this <sup>106</sup> . In 2020, Department for Agriculture, Environment and Rural Affairs issued a Discussion Document on Northern Ireland's first Clean Air Strategy to public consultation <sup>107</sup> . A synopsis of the responses has now been published and an inter-departmental working group has been established to further develop proposals and identify policies for cross-departmental consideration. The Draft Clean Air Strategy will be subject to further public consultation which is planned for December 2022, in advance of seeking NI Executive approval.
b	Specific information applicable to Parties, including regional economic integration organizations and their member States, that have reached an agreement to act jointly under Article 4, paragraph 2, of the Paris Agreement, including the Parties that agreed to act jointly and the terms of the agreement, in accordance with Article 4, paragraphs 16–18, of the Paris Agreement	Not applicable.

 <sup>&</sup>lt;sup>106</sup> The Clean Air Plan for Wales: Healthy Air, Healthy Wales (2020) <u>https://gov.wales/clean-air-plan-wales-healthy-air-healthy-wales</u>
 <sup>107</sup> Northern Ireland's Clean Air Strategy Discussion Document <u>https://www.daera-ni.gov.uk/clean\_air\_strategy\_discussion\_document</u>

С	How the Party's preparation of its nationally determined contribution has been informed by the outcomes of the Global Stocktake, in accordance with	In Paris, 2015, it was agreed that Parties would take stock of their collective efforts in a Facilitative Dialogue in 2018, later called the Talanoa Dialogue. It was decided that the Talanoa Dialogue would play a role in informing the next round of NDCs, and this was reinforced in Decision 1/CP.24 <sup>108</sup> .
	Article 4, paragraph 9, of the Paris Agreement	Several Talanoa events took place in the UK in 2018, including one involving the Fijian COP23 Presidency. The UK found this process valuable thanks to the rich and open exchanges and learnt from the experiences and solutions shared by others, which alongside the latest science, informed UK approaches on the way forward.
		Following the Talanoa Dialogue, the UK took note alongside other Parties of the Call for Action <sup>109</sup> which Parties were invited to consider when preparing their NDCs. The UK recognises the need for the global community to go further to mitigate the harmful effects of climate change. The UK's NDC has been prepared using the best available science, in the spirit of the Talanoa Dialogue, including the IPCC Special Report on Global Warming of 1.5C <sup>110</sup> and the 6 <sup>th</sup> Assessment Report <sup>111</sup> .
		The UK is actively engaged in the first Global Stocktake and looks forward to considering its outcomes in the implementation of its NDC in due course.
d	-	rmined contribution under Article 4 of the Paris Agreement that consists of adaptation action plans resulting in mitigation co-benefits consistent with Article 4, paragraph 7, of the Paris on:

## UK's Nationally Determined Contribution – updated September 2022

d(i)	How the economic and social consequences of response measures have been considered in developing the nationally determined contribution	Not applicable.	
d(ii)	Specific projects, measures and activities to be implemented to contribute to mitigation co- benefits, including information on adaptation plans that also yield mitigation co-benefits, which may cover, but are not limited to, key sectors, such as energy, resources, water resources, coastal resources, human settlements and urban planning, agriculture and forestry; and economic diversification actions, which may cover, but are not limited to, sectors such as manufacturing and industry, energy and mining, transport and communication, construction, tourism, real estate, agriculture and fisheries	Not applicable.	
5. As	5. Assumptions and methodological approaches, including those for estimating and accounting for anthropogenic		

greenhouse gas emissions and, as appropriate, removals

а	Assumptions and methodological approaches used for accounting for anthropogenic greenhouse gas emissions and removals corresponding to the Party's nationally determined contribution, consistent with decision 1/CP.21, paragraph	In accordance with the modalities, procedures and guidelines outlined in Decisions 4/CMA.1 and 18/CMA.1 of the Paris Rulebook, the UK will publish an annual National Inventory Report and Biennial Transparency Report by 31 December 2024 at the latest, and biennially thereafter, to the UNFCCC. The National Inventory Report will account for UK anthropogenic GHG emissions and removals, and the Biennial Transparency Report will report on progress towards the UK's NDC through the use of a structured summary. To account for the UK's NDC, the UK will compare achieved net GHG emissions (in MtCO2e values) with the UK's NDC target for 2030.
	31, and accounting guidance adopted by the CMA	The UK will comply with future UNFCCC reporting guidelines on tracking, and reporting on, progress against the UK's NDC. This will help inform future Global Stocktakes.
		For the IPCC methodologies and metrics that will be used to account for the UK's NDC, see Section 5(d). Final accounting towards the target will take place in 2032. It will be based on the 1990-2030 UK GHG Inventory, and compare 2030 net GHG emissions to a 1990 reference year for CO2, CH4 and N2O and a 1995 reference year for HFCs, PFCs, SF6 and NF3 <sup>112</sup> .
		The UK intends to meet its NDC target through domestic emissions reductions. If the UK were to use voluntary cooperation under Article 6 of the Paris Agreement, such use would be accounted for in accordance with relevant decisions adopted by the Conference of the Parties serving as the meeting of the Parties to the Paris Agreement (the "CMA").

<sup>&</sup>lt;sup>112</sup> As stated in Section 1(a), these reference years are consistent with the UK's Climate Change Act (2008), domestic carbon budgets and the UK's Kyoto Protocol commitment. In 2020, F-gases made up 3% of UK net emissions (based on 1990-2020 inventory). 37

b	Assumptions and methodological approaches used for accounting for the implementation of policies and measures or strategies used in the nationally determined contribution	Not applicable.
С	Information on how the Party will take into account existing methods and guidance under the Convention to account for anthropogenic emissions and removals, in accordance with Article 4, paragraph 14, of the Paris Agreement.	The UK's current GHG Inventory is submitted in accordance with decision 24/CP.19 and utilises the 2006 IPCC Guidelines for National Greenhouse Gas Inventories, 2013 IPCC Kyoto Protocol Supplement and 2013 IPCC Wetlands Supplement. The UK looks forward to implementing methodologies introduced by the 2019 Refinement to the 2006 IPCC Guidelines in the future.
d	IPCC methodologies and metrics used for estimating anthropogenic greenhouse gas emissions and removals.	The 2006 IPCC Guidelines for National Greenhouse Gas Inventories, 2013 IPCC Kyoto Protocol Supplement and 2013 IPCC Wetlands Supplement will be used for estimating GHG emissions and removals for the UK's NDC. The UK looks forward to implementing methodologies introduced by the 2019 Refinement to the 2006 IPCC Guidelines in the future. Values listed in table 8.A.1 of the IPCC's 5th Assessment Report on the Global Warming Potentials for a 100-year time horizon (without climate-carbon feedback) will be used to calculate CO2 equivalents of GHG emissions.
е	Sector-, category- or activity-spe as applicable:	cific assumptions, methodologies and approaches consistent with IPCC guidance, including,

e(i)	Approach to addressing emissions and subsequent removals from natural disturbances on managed lands	All emissions and removals reported in the UK GHG Inventory are included in the NDC, with no specific approach to exclude emissions from natural disturbances.
e(ii)	Approach used to account for emissions and removals from harvested wood products	The UK will reflect emissions and removals resulting from changes in the carbon pool of harvested wood products using a production approach.
e(iii)	Approach used to address the effects of age-class structure in forests	Not applicable.
f	Other assumptions and methodological approaches used for understanding the nationally determined contribution and, estimating corresponding emissions and removals, including:	
f(i)	How the reference indicators, baseline(s) and/or reference level(s), including, sector-, category- or activity-specific reference levels, are constructed, including, for example, key parameters, assumptions, definitions, methodologies, data sources and models used	Final reference year and target year emissions will be based on the 1990-2030 UK GHG Inventory submitted to the UNFCCC in 2032. Emissions estimates in the UK GHG Inventory are made using methodologies outlined in the 2006 IPCC Guidelines for National Greenhouse Gas Inventories and subsequent IPCC guidelines (see Section 5(d)). The Inventory is revised annually and undergoes extensive review processes.

f(ii)	For Parties with nationally determined contributions that contain non-greenhouse-gas components, information on assumptions and methodological approaches used in relation to those components, as applicable	Not applicable.
f(iii)	For climate forcers included in nationally determined contributions not covered by IPCC guidelines, information on how the climate forcers are estimated	Not applicable.
f(iv)	Further technical information, as necessary	Not applicable.
g	The intention to use voluntary cooperation under Article 6 of the Paris Agreement	While the UK intends to meet its NDC target through reducing emissions domestically, it reserves the right to use voluntary cooperation under Article 6 of the Paris Agreement. Such use could occur through the linking of the UK emissions trading scheme to another emissions trading system or through the use of emissions reductions or removals units.

6. Ho	6. How the Party considers that its NDC is fair and ambitious in the light of its national circumstances		
а	How the Party considers that its NDC is fair and ambitious in the light of its national circumstances	In its NDC the UK commits to reducing economy-wide greenhouse gas emissions by at least 68% by 2030 compared to 1990 levels. This requires the fastest rate of reduction in greenhouse gases between 1990 and 2030 of all major economies. It remains a fair and ambitious contribution to global action on climate change.	
		In determining the target level and revisiting it in light of the Glasgow Climate Pact, BEIS led work across HM Government departments to identify the UK's highest possible ambition, taking account of a range of factors including the temperature goal and principle of equity in the Paris Agreement, the latest available science, robust analysis of domestic decarbonisation potential, the UK's legally binding net zero commitment and guidance from the Climate Change Committee (CCC).	
		In guidance published in December 2020, the CCC stated that a 2030 target of at least 68% below base year levels "would constitute a decisive commitment to a net zero emissions trajectory, consistent with the Paris Agreement" and "would place the UK among the leading countries in climate ambition." <sup>113</sup>	
		In its Progress Report to Parliament in June 2022, the Climate Change Committee reiterated that "the UK NDC is ambitious and consistent with the Paris temperature goal." <sup>114</sup> The CCC did not recommend a change to the headline target but recommended that the UK should focus on delivery of the current NDC.	

https://www.theccc.org.uk/publication/letter-advice-on-the-uks-2030-nationally-determined-contribution-ndc/
 https://www.theccc.org.uk/publication/2022-progress-report-to-parliament/

b	Fairness considerations, including reflecting on equity	The UK's NDC target was determined taking account of the temperature goal of the Paris Agreement and in particular the principles of equity and "common but differentiated responsibilities and respective capabilities, in the light of different national circumstances".
		There is no international consensus on which indicators should be used, and so the UK considered a range of internationally recognised effort sharing metrics and took into account other independent assessments of the level of ambition of the UK's NDC.
		The Glasgow Climate Pact recognises the need for deep and sustained reductions in global greenhouse gas emissions. The UK's previous NDC submission referred to evidence set out in the Intergovernmental Panel on Climate Change's (IPCC) Special Report on Global Warming of 1.5°C, including the need for global greenhouse gas emissions to fall by around 45% by 2030 relative to the 2010 level. Based on estimates set out in the UK's latest (1990-2020) GHG inventory, the NDC target would achieve a reduction of around 57% over the same period.
		In its more recent Sixth Assessment Report (AR6) Working Group III, the IPCC highlighted global emissions reductions between 2019 and 2030, with the median 1.5°C pathway showing a reduction in greenhouse gas emissions of at least 41% by 2030 on 2019 levels <sup>115</sup> . The UK's NDC is estimated to imply a reduction of around 42% over this period, following significant reductions already achieved between 2010 and 2019.
		Based on latest estimates, the UK's NDC suggests that emissions per person in 2030 would be below 4tCO2e, which is of a comparable level (3.5-4 tCO2e) to estimates for the global

<sup>&</sup>lt;sup>115</sup> This estimate is based on the C1a subset of global emissions pathways which limit warming by 2100 to 1.5°C with limited or no overshoot and which achieve net zero GHG emissions before 2100, aligning with the goal of the Paris Agreement. The wider C1 set of 1.5°C with limited or no overshoot pathways imply a similar reduction of 43% over 2019-30

		average implied by the IPCC's median pathways consistent with limiting warming to 1.5 degrees <sup>116</sup> . The NDC is also on the trajectory to net zero greenhouse gas emissions by 2050, which the Climate Change Committee and other independent external commentators consider to be aligned with a least-cost global pathway to keep the global temperature rise below 1.5°C.
C	How the Party has addressed Article 4, paragraph 3 of the Paris Agreement	The UK's NDC target was determined taking account of the temperature rise below 1.5 C. The UK's NDC target was determined taking account of the temperature goal of the Paris Agreement and in particular the principles of equity and "common but differentiated responsibilities and respective capabilities, in the light of different national circumstances". HM Government has a well-established process involving all relevant departments to regularly review domestic greenhouse gas abatement potential, as part of the framework to deliver on carbon budgets and net zero under the Climate Change Act. Having revisited its NDC through this process in line with the Glasgow Climate Pact, HM Government has determined that the target to reduce greenhouse gas emissions by at least 68% by 2030 on 1990 levels represents its highest possible ambition. As set out in the UK's previous NDC communication, the target in the UK's NDC represents a significant progression on the UK's previous contribution to the EU's then joint Intended NDC (INDC) from 2015, which was estimated by the CCC to imply a 53% reduction in UK emissions by 2030 on 1990 levels. In line with the Glasgow Climate Pact, the UK has been through a process to revisit its NDC and ensure it remains aligned with the Paris Agreement temperature goal. The UK has also strengthened its NDC in several ways, including by clarifying how the NDC will be delivered by 2030, by updating on the progress made in expanding the territorial scope of the NDC to

<sup>&</sup>lt;sup>116</sup> Global population projections from 2022 Revision of World Population Prospects, UK population projections from 2020 based Interim principal projection

		include the UK's Crown Dependencies and Overseas Territories, and by including more information on the UK's approach to gender, green skills, Just Transition and public engagement.
d	How the Party has addressed Article 4, paragraph 4, of the Paris Agreement	<ul> <li>The UK's NDC is an economy-wide absolute emissions reduction target in compliance with Article 4.4 of the Paris Agreement.</li> <li>During its COP Presidency, the UK has been encouraging all Parties to revisit and strengthen their NDCs as necessary to align with the Paris Agreement temperature goal, in line with the Glasgow Climate Pact.</li> </ul>
		The UK recognises the importance of supporting developing country parties in implementing the Paris Agreement. The UK is a core funder and, alongside Jamaica, 2021-22 co-chair of the Nationally Determined Contributions Partnership (NDC Partnership). The UK has committed £27m to the NDC Partnership from 2019–25, supporting developing country members to turn NDCs from stand-alone documents into national policies and plans. As set out in the UK's International Development Strategy <sup>117</sup> (May 2022), the UK has doubled its total International Climate Finance (ICF) to £11.6 billion between 2021/22 and 2025/26, ensuring a balanced split between mitigation and adaptation finance. A major focus of ICF programming will be on accelerating the clean energy transition in developing countries and

<sup>&</sup>lt;sup>117</sup> UK International Development Strategy <u>https://www.gov.uk/government/publications/uk-governments-strategy-for-international-development</u>

		<ul> <li>at least £3bn of ICF between 2021-22 and 2025-26 will be invested in climate change and poverty reduction solutions that protect, restore, and sustainably manage nature.</li> <li>In line with expectations in the Paris Agreement and UNFCCC, the UK's International Climate Finance contributions are explained in detail in the UK's 8<sup>th</sup> National Communication, 5<sup>th</sup> Biennial Report and Finance Biennial Communication. The UK will submit its second Finance Biennial Communication by the end of 2022.</li> </ul>
е	How the Party has addressed Article 4, paragraph 6, of the Paris Agreement	Not applicable.
7. Ho Articl		tribution contributes towards achieving the objective of the Convention as set out in its
а	How the nationally determined contribution contributes towards achieving the objective of the Convention as set out in its Article 2	The UK's NDC represents the UK's contribution to the objectives of Article 2 of the Convention to stabilise GHG concentrations in the atmosphere at a level that would prevent dangerous anthropogenic interference with the climate system. Sections 4 and 6 detail the UK's mitigation ambition that will contribute to achieving Article 2 of the Convention.
b	How the nationally determined contribution contributes towards Article 2, paragraph 1(a), and Article 4, paragraph 1, of the	See Section 4 and 6 on the UK's legislated commitment to reach net zero emissions by 2050 and how the UK's NDC contributes to that goal.

## United Kingdom of Great Britain and Northern Ireland's 2035 Nationally Determined Contribution (NDC)

Halfway through this critical decade for tackling climate change, the world is off-track to limiting global warming to 1.5°C. We are facing a triple planetary crisis of climate change, biodiversity loss and pollution posing critical threats to the UK's national interests across security, resilience, health, the economy and partnerships with other countries. That is why the UK is re-establishing itself as a climate leader on the global stage.

On 12 November 2024 at COP29, the Prime Minister announced the UK's ambitious and credible NDC target **to reduce all greenhouse gas emissions by at least 81% by 2035, compared to 1990 levels** (excluding international aviation and shipping emissions) – three months ahead of the 10 February deadline. In compliance with Article 4, paragraph 8 of the Paris Agreement and Decision 4/CMA.1, the UK now submits this information to facilitate clarity, transparency and understanding of its ambitious 2035 NDC.

The target is in line with the advice from the Climate Change Committee who state that it is a credible contribution towards limiting warming to 1.5 °C and it sits within a range of Parisconsistent equity metrics<sup>1</sup>. The target is also in line with the UK's Carbon Budget 6 which is set in domestic legislation (this carbon budget includes international aviation and shipping emissions). The NDC is informed by the outcomes of the COP28 Global Stocktake (GST) - it is a 1.5°C aligned, economy-wide target, covering all greenhouse gases, sectors and categories, informed by the latest science.

Making Britain a clean energy superpower is one of the five national missions of this government. In December 2024, we published the Clean Power 2030 Action Plan: A new era of clean electricity, setting out how we will deliver clean power in Great Britain by 2030. Additionally, we have lifted the onshore wind ban, consented large amounts of solar, delivered a record-breaking renewables auction, launched Britain's carbon capture industry and set out plans to increase the energy efficiency of rented homes to take a million households out of fuel poverty. The UK also has launched Great British Energy with £8.3bn over this Parliament, as well as committing £3.4bn for Warm Homes and a further £1bn for public sector decarbonisation over the next three years.

There is no global stability without climate stability. The UK has demonstrated it is back in the business of climate leadership - resetting at home and reconnecting abroad. At home and in line with the outcomes of the GST, the UK is committed to transitioning away from

<sup>&</sup>lt;sup>1</sup> CCC Advice on the UK's 2035 Nationally Determined Contribution (NDC)

fossil fuels to achieve net zero by 2050. In September 2024 the UK was the first G7 economy to achieve coal power phase out and we will consult on not issuing new oil and gas licenses to explore new fields.

We are committed to delivering the benefits of the net zero transition. Looking ahead, we will deliver an updated cross-economy plan to meet our climate targets in due course, with full detail of policy packages for all sectors. This will outline the policies and proposals needed to deliver carbon budgets 4-6 and the 2030 and 2035 NDCs on the pathway to net zero by 2050.

We can only deliver energy security and good jobs for today's generations if we deliver clean energy. And we can only deliver climate security for future generations if we show global leadership. In November 2024 the UK launched the Global Clean Power Alliance<sup>2</sup> - uniting countries to speed up the clean energy transition globally. At COP29 in Baku, alongside being the first G7 economy to announce a 2035 NDC, the UK established new partnerships and funding to help speed up the global clean energy transition, tackle illegal deforestation and support indigenous people.

The UK is committed to delivering climate finance to help vulnerable countries adapt to climate impacts and support a transition to low-carbon economies. We have reaffirmed the existing commitment to spend £11.6bn in International Climate Finance by 2025/2026, including at least £3bn on nature. The new finance goal (NCQG) was a priority outcome for the UK at COP and along with an agreement in Baku on carbon markets, and the mobilisation of the private sector, collectively, these are the essential elements for ensuring a roadmap to the \$1.3 trillion of finance for developing countries, set out in the COP29 deal.

The finance and adaptation pillars of the Paris Agreement are vital. In compliance with Article 9.5 of the Paris Agreement, the UK submitted its third Biennial Finance Communication<sup>3</sup> to the UNFCCC in December 2024 which sets out our forward-looking action on the support components of the Paris Agreement.

The UK submitted its first Adaptation Communication<sup>4</sup> to the UNFCCC in December 2020. The Communication sets out the UK's plans to prepare for the impacts of climate change in the UK and to support climate change adaptation overseas. An update to the Adaptation Communication was published in 2021 in compliance with Decision 9/CMA. 1. The UK will submit an updated Adaptation Communication in due course.

<sup>&</sup>lt;sup>2</sup> Prime Minister Launches Global Clean Power Alliance as UK Leads the Global Energy Transition

<sup>&</sup>lt;sup>4</sup> The UK's Adaptation Communication to the UNFCCC 2020

## Information to facilitate clarity, transparency and understanding (ICTU)

### 1. Quantified information on the reference point

a.	Reference year(s), base year(s), reference period(s) or other starting point(s);	The base year is 1990 for carbon dioxide (CO2), methane (CH4) and nitrous oxide (N2O) and 1995 for hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), sulphur hexafluoride (SF6) and nitrogen trifluoride (NF3).
b.	Quantifiable information on the reference indicators, their values in the reference year(s), base year(s), reference period(s) or other starting point(s), and, as applicable, in the target year	The reference indicator is total net greenhouse gas (GHG) emissions and removals. Current base year estimate: 817.1 MtCO2e. Current target year level estimate: 155.3 MtCO2e.
C.	For strategies, plans and actions referred to in Article 4, paragraph 6, of the Paris Agreement, or policies and measures as components of nationally determined contributions where	Not applicable <sup>5</sup> .

<sup>&</sup>lt;sup>5</sup> The use of not applicable acknowledges that certain guidelines are not always relevant to a Party's NDC depending on the type of NDC target that has been set.

	paragraph 1(b) above is not applicable, Parties to provide other relevant information	
d.	Target relative to the reference indicator, expressed numerically, for example in percentage or amount of reduction;	The target year level is an at least 81% reduction in total net GHG emissions and removals in 2035 compared to the base year.
e.	Information on sources of data used in quantifying the reference point(s);	Current base year and target year level estimates are based on the UK National Inventory Document <sup>6</sup> (NID) submitted to the UNFCCC in 2024.
f.	Information on the circumstances under which the Party may update the values of the reference	The UK revises its total net emissions and removals estimates annually to incorporate new data, improved methods and changes to international guidelines. Details of these revisions are set out in each UK NID.
	indicators.	Achievement of the UK's NDC will be assessed by comparing total net GHG emissions and removals in 2035 with the target year level. Final base year and target year level estimates will be based on the UK NID submitted to the UNFCCC in 2037.

<sup>&</sup>lt;sup>6</sup> United Kingdom 2024 National Inventory Document (NID)

### 2. Time frame

a. Time frame and/or period for implementation, including start and end date, consistent with any further relevant decision adopted by the Conference of the Parties serving as the meeting of the Parties to the Paris Agreement	1 January 2031 - 31 December 2035.
b. Whether it is a single-year or multi-year target, as applicable.	Single-year target in 2035.

## 3. Scope and coverage

	General description of the target	Economy-wide absolute emission reduction. The target year level is an at least 81% reduction in total net GHG emissions and removals in 2035 compared to the base year.
a r c	Sectors, gases, categories and pools covered by the nationally determined contribution, including, as applicable, consistent with	<b>Geographic scope</b> : The NDC for the United Kingdom of Great Britain and Northern Ireland encompasses emissions and removals from England, Scotland, Wales and Northern Ireland. The UK's NDC also includes emissions and removals from the UK Crown Dependencies and Overseas Territories included within the UK's ratification of the Paris Agreement – this is currently the Bailiwick of

Intergovernmental Panel on	Jersey, Guernsey <sup>7</sup> , Isle of Man and Gibraltar. The UK welcomes interest from all Crown Dependencies
Climate Change (IPCC)	and Overseas Territories on the extension of the UK's ratification of the Paris Agreement.
guidelines.	
	Sector scope: Energy (including transport); Industrial Processes and Product Use (IPPU); Agriculture;
	Land-use, Land-Use Change and Forestry (LULUCF); and Waste.
	International Aviation and Shipping emissions (IAS)
	Emissions from IAS are not included in the scope of this NDC, in line with advice from the Climate
	Change Committee (CCC), the UK's independent advisory body for tackling climate change. The UK
	currently reports these emissions as a memo item in the UK's GHG Inventory in line with IPCC
	guidance. The UK is supportive of efforts to reduce these emissions through action under the
	International Civil Aviation Organization (ICAO) and the International Maritime Organization (IMO) and
	has played a leading role in securing positive negotiated outcomes in these fora in recent years. This
	includes ICAO's 2022 adoption of a long-term aspirational goal (LTAG) for international aviation <sup>8</sup> , and
	agreement of the 2023 IMO Greenhouse Gas Strategy <sup>9</sup> . The UK is fully committed to contributing to
	urgent global action at ICAO and IMO to address these emissions and put both sectors on pathways
	aligned with their respective net zero goals.
	The UK government is clear that aviation and shipping must contribute to achieving net zero like the
	rest of the UK economy. The UK's share of international aviation and shipping emissions will be within
	scope of the UK's domestic legally binding Carbon Budget 6 (2033-37) as we approach our economy-
	wide target of net zero by 2050.

<sup>&</sup>lt;sup>7</sup> The UK's ratification of the Paris Agreement was extended to Guernsey in 2023 at their request but has not yet been extended to the whole Bailiwick of Guernsey which includes the islands of Alderney and Sark. The UK government remains committed to working with Alderney and Sark on their potential future inclusion in the Paris Agreement.

<sup>&</sup>lt;sup>8</sup> Consolidated Statement of Continuing ICAO Policies and Practices Related to Environmental Protection

<sup>&</sup>lt;sup>9</sup> The Marine Environment Protection Committee on Its Eightieth Session

<ul> <li>c. How paragraphs 31(c) and</li> <li>(d) of decision 1/CP.21 were</li> <li>taken into consideration</li> </ul>	<ul> <li>Pools covered: All LULUCF pools are included in the NDC: above ground biomass, below ground biomass, litter, deadwood soil organic carbon and stocks of harvested wood products.</li> <li>Gas scope: CO2, CH4, N2O, HFCs, PFCs, SF6 and NF3.</li> <li>The UK includes emissions and removals from all sectors and gases and will continue to include them.</li> </ul>
d. Mitigation co-benefits resulting from Parties' adaptation actions and/or economic diversification plans, including description of specific projects, measures and initiatives of Parties' adaptation actions and/or economic diversification plans	Not applicable <sup>10</sup> .

<sup>&</sup>lt;sup>10</sup> Not applicable to the UK's target type – which is a quantified, economy-wide, emission reduction target. The UK recognises that adaptation actions can provide co-mitigation benefits – see section 4a(i) Land-use, Land-use change and Forestry (LULUCF) section, for example.

### 4. Planning processes

a(i). Information on the planning processes that the Party undertook to prepare its nationally determined contribution and, if available, on the Party's implementation plans, including, as appropriate:

a(i). Domestic institutional arrangements, public participation and engagement with local communities and indigenous peoples, in a gender-responsive manner	<b>Domestic institutional arrangements</b> The UK's NDC represents a single, economy-wide emissions reduction target for England, Scotland, Wales and Northern Ireland and for those Crown Dependencies and Overseas Territories included within the UK's ratification of the Paris Agreement (see section 3b for geographic scope of the NDC).
	The UK employs a range of institutional structures – at national, sub-national and local level - to enable economy-wide emissions mitigation, as well as numerous policies and measures to underpin delivery of the NDC. Climate policy is devolved to Scotland, Wales and Northern Ireland and to the Crown Dependencies and Overseas Territories. The approaches taken by each government will differ, drawing on the range of powers at their disposal.
	The Department for Energy Security and Net Zero (DESNZ) is responsible for the strategic oversight of the UK's international and domestic climate and energy policy.
	The Climate Change Act (2008) <sup>11</sup> sets a legal framework for the UK to reduce GHG emissions and build capacity to adapt and strengthen resilience to climate risks – and commits the UK to a legally-binding target of net zero emissions by 2050, on a 1990 baseline, set on a whole-economy basis. The Climate Change Act introduced carbon budgets for the UK, which cap emissions over successive five-year

Local government
The Climate Change Act also established the Climate Change Committee (CCC) – the independent statutory body that advises the UK government and devolved governments on climate change mitigation and adaptation, including emissions reduction targets. The UK asked the CCC for advice on the target and scope ahead of setting the 2035 target <sup>14</sup> . The CCC also provides progress reports to Parliament <sup>15</sup> , which include recommendations on how the UK can make further progress in adapting to the impacts of climate change, and against its emissions reduction targets including the UK's NDCs.
The Climate Change Act also requires the UK to report, as part of a 5-year cycle, on its assessment of climate change risks facing the UK and its adaptation plans to address those risks. The UK's third National Adaptation Programme <sup>12</sup> (NAP3) was published on 17 July 2023 and covers the five years up to 2028. As part of the COP28 outcome on the global goal on adaptation, the UK government adopted the UAE Framework for Global Climate Resilience <sup>13</sup> . Examples of our implementation, as well as the challenges faced, can be found in NAP3 and supporting annexes. We are considering a range of options to further strengthen the government's approach to climate change adaptation and to accelerate progress. The next National Adaptation Programme (NAP4) is expected to be published in 2028.
periods and must be set 12 years in advance. The first six carbon budgets cover the period from 2008- 37. By June 2026 we will set Carbon Budget 7, which will cover the period from 2038-2042 in line with our statutory duties. This will set out the next phase of our pathway to net zero and policies to further decarbonise the UK economy.

<sup>&</sup>lt;sup>12</sup> UK's Third National Adaptation Programme 2023. NAP3 covers those areas falling within scope of the UK government's responsibilities in relation to England, and its non-devolved functions in relation to the rest of the UK. The devolved governments lead and produce their own National Adaptation Plans.

 <sup>&</sup>lt;sup>13</sup> <u>Framework for Global Climate Resilience</u>
 <sup>14</sup> <u>Letter from the Secretary of State to the CCC Asking for Advice</u> on the 2035 NDC

<sup>&</sup>lt;sup>15</sup> Climate Change Committee Progress Reports

<sup>&</sup>lt;sup>16</sup> The Warm Homes Plan

<sup>&</sup>lt;sup>17</sup> English Devolution White Paper

<sup>&</sup>lt;sup>18</sup> Examples of ambitious action that Core Cities are taking on net zero can be found here: <u>https://www.corecities.com/news-insights/how-core-cities-are-leading-net-zero</u>
The UK government and the devolved governments have established governance arrangements at ministerial and official level to co-ordinate the approach to meeting net zero.

**Northern Ireland's** Climate Change Act (2022) includes a net-zero greenhouse gas emissions reduction target by 2050, and an interim emissions reduction target of 48% by 2030. The Act required the Department of Agriculture, Environment and Rural Affairs (DAERA) to set a 2040 emissions reduction target through Regulations, which were approved by the NI Assembly on 10 December 2024, setting an emissions reduction target of 77%<sup>19</sup> by 2040 against 1990 greenhouse gas levels. The Act also required that DAERA brought forward regulations to set the first three carbon budgets for Northern Ireland, covering consecutive five-year periods with the first carbon budget covering 2023-2027. Regulations were approved by the Assembly on 10 December 2024, setting the first three carbon budgets at an average reduction of 33%, 48% and 62% consecutively<sup>20</sup>. DAERA will publish five-yearly Climate Action Plans which will set out how each carbon budget period will be achieved with the input of all Departments. DAERA will produce an interim progress report and lay it before the NI Assembly before the end of the third year of the given carbon budget period and produce a final statement by the end of the second year after each carbon budget period.

The statutory framework for reducing greenhouse gas emissions in **Scotland** is set out in the Climate Change (Scotland) Act 2009<sup>21</sup>. In 2019, the Climate Change (Emissions Reduction Targets) (**Scotland**) Act<sup>22</sup> amended the 2009 Climate Change (Scotland) Act and established Scotland's target of net zero

<sup>&</sup>lt;sup>19</sup> Northern Ireland: <u>The Climate Change (2040 Emissions Target) Regulations</u>

<sup>&</sup>lt;sup>20</sup> Northern Ireland: <u>The Climate Change (Carbon Budgets 2023-2037) Regulations (Northern Ireland) 2024</u>

<sup>&</sup>lt;sup>21</sup> Scotland: <u>Climate Change Act 2009</u>

<sup>&</sup>lt;sup>22</sup> Scotland: <u>Climate Change (Emissions Reduction Targets) Act 2019</u>

emissions by 2045. The Climate Change (Emissions Reduction Targets) (Scotland) Act 2024 <sup>23</sup> amends
the 2009 Climate Change Act, replacing the annual emissions reduction target framework with five-
yearly carbon budgets. The target of net zero emissions in 2045 remains unchanged, and Ministers are
still required to produce annual reports on emissions progress. The new Act enables the levels of
carbon budgets to be set once the latest advice has been received from the Climate Change
Committee. Scotland's next Climate Change Plan will cover the period 2026-2040.
Wales's emission targets are set through the Environment (Wales) Act (2016) <sup>24</sup> . In March 2021, the
Senedd formally committed Wales to achieving net zero emissions in 2050. It also passed regulations in
relation to Carbon Budgets 2 and 3, and the 2030 and 2040 interim targets, as follows; Carbon Budget 2
(2021-25): 37% average reduction (with no international offsets); Carbon Budget 3 (2026-30): 58%
average reduction; 2030: 63% reduction; 2040: 89% reduction. Before the end of the second year after
each carbon budget, the Welsh Government must publish a final statement on progress against that
budget. The Climate Change Committee must then publish its own progress report, with the Welsh
Government required to respond to that report in the Senedd.
Crown Dependencies and Overseas Territories
Jersey's Carbon Neutral Roadmap <sup>25</sup> (2022) commits them to net zero emissions by 2050 and 68%
reduction by 2030 and 78% by 2035 based on 1990 levels. <b>Guernsey</b> 's Climate Change Policy and
Action Plan (2020) <sup>26</sup> sets a target to be carbon neutral by 2050, with an interim target of reducing
emissions by 57% on 1990 levels by 2030. The Isle of Man has a statutory emissions reduction target
of 45% by 2035, set in accordance with target setting criteria in the Climate Change Act 2021 <sup>27</sup> .
or to 70 by 2000, set in accordance with target setting chiefia in the Oninate Onange Act 2021

<sup>&</sup>lt;sup>23</sup> Scotland: <u>Climate Change (Emissions Reduction Targets) Act 2024</u>

<sup>&</sup>lt;sup>24</sup> Wales: Environment Act (2016)

 <sup>26</sup> Guernsey: <u>States of Guernsey Climate Change Policy and Action Plan</u>

<sup>&</sup>lt;sup>27</sup> Isle of Man: <u>Climate Change Act 2021</u>

Gibraltar's Climate Change Act (2019) <sup>28</sup> sets legally binding carbon emissions reduction targets against
a 1990 baseline of 42% by 2030 and 100% by 2045. Gibraltar is looking to set a 2035 interim target.
Planning process
The ICTU was prepared in collaboration with UK government departments, the devolved governments and Crown Dependencies and Overseas Territories included within the UK's ratification of the Paris Agreement.
Policies and measures
The UK submitted the Net Zero Strategy <sup>29</sup> as the UK's Long-Term Low-Emissions Development Strategy (LTLEDS) to the UNFCCC in 2021, under Article 4, paragraph 19 of the Paris Agreement. It set out how the UK would deliver Carbon Budgets 4, 5 and 6, and the 2030 NDC, as well as net zero greenhouse gas emissions by 2050. The UK will set out an updated cross-economy plan on policies and proposals to meet carbon budgets 4-6 and the 2030 and 2035 NDCs in due course.
Strategies are supported by sector-specific and enabling plans. The following section provides a high- level overview of the domestic sector-specific policies and plans involved in delivering emissions reductions in the sectors covered by the NDC (as outlined in section 3b) but is not exhaustive. Full details can be found in the respective sectoral strategies referenced and in the forthcoming plans.
Energy (including transport)
Since July 2024, the UK government has established a mission-led approach, with the intention to make Britain a Clean Energy Superpower as one of five national missions – delivering clean power by 2030 and

 <sup>&</sup>lt;sup>28</sup> Gibraltar: <u>Climate Change Act 2019</u>
 <sup>29</sup> <u>Net Zero Strategy: Build Back Greener</u>

accelerating to net zero across the economy. In December 2024, the UK published the Clean Power 2030
Action Plan <sup>30</sup> setting out a pathway to a clean power system by 2030. The UK government also
announced the creation of Great British Energy, which will be at the heart of our mission to make Britain a
clean energy superpower. This will be a publicly owned energy company with a mission to drive clean
energy deployment to boost energy independence, create jobs and ensure that UK taxpayers, billpayers,
and communities reap the benefits of clean, secure, home-grown energy. This government has also
committed to the Warm Homes Plan <sup>31</sup> to improve energy efficiency and to support the conversion to low carbon heating in British buildings.
Delivering greener transport is a priority for the UK Department for Transport, including beginning the overhaul of public transport services and better integrating transport networks to make the sustainable choice the most convenient choice through the Passenger Railway Services (Public Ownership) Act <sup>32</sup> and Bus Services Bill <sup>33</sup> . The UK's Zero Emission Vehicle (ZEV) mandate <sup>34</sup> is the world's most ambitious national level regulatory framework of its kind, with annual minimum targets for the proportion of new cars and vans sold in the UK from 2024 rising to 80% of cars and 70% of vans by 2030 on a pathway to 100% by 2035. The UK is also committed to phasing out new cars relying solely on internal combustion engines by 2030, and on 24 December 2024 published a consultation seeking views on which type of
hybrid car can be sold from 2030-2035 <sup>35</sup> . We will consult on our commitment to not issue new oil and gas licenses to explore new fields. Further emissions reductions from upstream oil and gas will be delivered through decarbonisation measures set

 <sup>&</sup>lt;sup>30</sup> <u>Clean Power 2030 Action Plan</u>
 <sup>31</sup> <u>Help to save households money and deliver cleaner heat to homes</u>
 <sup>32</sup> <u>Passenger Railway Services (Public Ownership) Act 2024</u>

 <sup>24</sup> <u>Environment Mathematican Action Plane Laboration</u>

 <sup>&</sup>lt;sup>34</sup> Zero Emission Vehicle Mandate and CO<sub>2</sub> Regulations
 <sup>35</sup> Phasing Out Sales of New Petrol and Diesel Cars From 2030 And Supporting the ZEV Transition

out in the North Sea Transition Authority's 2024 OGA Plan <sup>36</sup> , such as ending routine flaring and venting by 2030 and platform electrification. The UK oil and gas sector has one of the lowest upstream methane emission intensities globally, having achieved the Oil and Gas Climate Initiative's 0.2% intensity target for 2025 early <sup>37</sup> .
Industrial Processes and Product Use (IPPU)
The UK government is committed to publishing a new Industrial Decarbonisation Strategy by 2026, which alongside the Industrial Strategy <sup>38</sup> , will support the transition towards our net zero target across the economy.
On 4th October 2024, the government reached commercial agreement with the private sector and announced up to £21.7bn of available funding over 25 years to launch the UK's new carbon capture, usage and storage (CCUS) and hydrogen industries to make the UK an early leader in these two growing global sectors. We expect this funding to support up to 4,000 direct jobs, with CCUS as a whole supporting up to 50,000 jobs when the sector matures into the 2030s.
The UK is committed under the 2016 Kigali Amendment to the UN Montreal Protocol to phase down hydrofluorocarbon (HFC) consumption, the most common type of F-gas, by 85% by 2036. We are currently reviewing our domestic (Great Britain) F-gas Regulation, with the aim of consulting in 2025 on options for reform.
Agriculture
The government is committed to working with farmers and industry to reduce emissions in the farming

 <sup>&</sup>lt;sup>36</sup> OGA Plan 2024
 <sup>37</sup> <u>https://www.nstauthority.co.uk/news-publications/emissions-monitoring-report-2024/</u>

sector. The transition to more climate friendly practices does not need to come at the expense of our
food security or farm productivity. We will support farmers to adopt low carbon farming practices,
increasing the carbon stored on their land while boosting profitability through our Environmental Land
Management schemes (ELMs) and associated grant schemes. These schemes provide a powerful
vehicle for achieving net zero, and wider environmental goals, while supporting our rural economy. For
example, the Sustainable Farming Incentive <sup>38</sup> pays farmers and land managers to take up or maintain
sustainable farming and land management practices that protect and enhance the natural environment,
support food production and boost farm productivity and resilience. We are continuing the rollout of the
Sustainable Farming Incentive.
Countryside Stewardship Higher Tier and Landscape Recovery (which are the other two ELM schemes)
are also continuing. We are optimising our farming schemes, so they work efficiently for farmers, food
security and the environment. ELMs and capital grants will continue to support farmers to take up low
carbon practices and technologies to reduce inputs (e.g. integrated pest management, reducing soil
compaction, precision farming and feeding).
The UK's Methane Memorandum <sup>39</sup> was published in November 2022, taking stock of previous progress
in tackling methane emissions and future plans. We are exploring measures including new and innovative
technologies to improve abatement potential in the agriculture sector.
Land Use, Land Use Change and Forestry (LULUCF)
Action to protect, restore and sustainably manage forests and high-carbon, biodiversity rich ecosystems
like peatlands can deliver a significant and cost-effective contribution to mitigation and to adaptation. A

 <sup>&</sup>lt;sup>38</sup> Sustainable Farming Incentive
 <sup>39</sup> United Kingdom Methane Memorandum

statutory target to increase woodland and tree canopy cover to at least 16.5% of land area in England by 2050 was legislated for in 2023.

The government is committed to create or restore at least 45,000 miles of managed hedgerows in England by 2050, which will maintain healthy soils and grow cover crops. The government will continue supporting farmers and landowners in their low-carbon practices. We will restore hundreds of thousands of hectares of peatland and are developing long term delivery mechanisms for peatland restoration. In November 2024, the government launched a national tree planting taskforce<sup>40</sup>. The government will also publish a Land Use Framework for England which will outline the government's commitment to stewardship of land use change and codesign of land use policy.

#### Waste

The government is committed to delivering a Deposit Return Scheme (DRS) for drinks containers in England, Northern Ireland and Scotland in October 2027. Simpler Recycling in England, which will further minimise waste going to landfill, will be implemented on a phased timeline - beginning from March 2025 for non-household premises in scope and March 2026 for households. Regulations underpinning Extended Producer Responsibility for packaging (pEPR) came into force on 1 January 2025. These regulations introduce new obligations transferring the costs of managing household packaging waste from local authorities to producers who place that household packaging on the market. Together, these reforms constitute a significant step towards meeting our 25 Year Environment Plan commitment to eliminate avoidable waste by 2050 and will help towards meeting our recycling ambition of 65% of municipal (household-like) waste to be recycled by 2035. It will enable us to make significant carbon savings and is key to meeting our net zero ambitions. We are also developing policies across the UK to achieve the near elimination of biodegradable municipal wastes being sent to landfill.

<sup>&</sup>lt;sup>40</sup> Government launches Tree Planting Taskforce to Oversee Planting of Millions of Trees Across our Four Nations

### Trade

#### UK Emissions Trading Scheme (ETS)

The UK ETS is an essential part of our approach to cutting emissions and driving green investment. By setting a limit – the cap – on emissions and creating a carbon price for the power sector, heavy industry and aviation, the scheme incentivises investment in decarbonisation. We have reduced the cap on emissions, aligning it with the UK and devolved government climate targets, including net zero by 2050 and our NDCs, to ensure the sectors covered decarbonise at the pace required to contribute to achieving our climate goals.

The alignment of the cap with our climate targets followed a public consultation in 2022 on developing the UK ETS. We have also consulted on expanding the scheme to domestic maritime transport from 2026, and energy from waste and waste incineration from 2028. This will bring more sectors under the scheme's cap and therefore ensure they decarbonise in line with our climate targets. We will also include engineered greenhouse gas removals in the UK ETS in the future, subject to further consultation.

## <u>Carbon Leakage</u>

There is a risk that the objective of the UK's decarbonisation – to reduce global emissions – could be undermined by carbon leakage. Carbon leakage is the movement of production and associated emissions from one country to another due to different levels of decarbonisation effort through carbon pricing and climate regulation. The UK is acting internationally and domestically to seek to address carbon leakage, including working with international partners in the Organisation for Economic Co-operation and Development (OECD), UN, World Trade Organisation (WTO) and the Climate Club.

In December 2023, the government announced its intention to introduce a UK Carbon Border

Adjustment Mechanism (CBAM) from 1 January 2027. As set out in the consultation on the detailed
design and implementation of a UK CBAM, published in March 2024, a CBAM will mitigate carbon
eakage by ensuring that highly traded, carbon intensive goods from overseas face a comparable
carbon price to that incurred by UK-based production. In October 2024, the government issued a
response <sup>41</sup> to the March 2024 UK CBAM consultation, confirming that from 1 January 2027, the CBAM
will apply to emissions embodied in imports for specified goods in the following sectors at risk of carbon
eakage: aluminium, cement, fertilisers, hydrogen, and iron and steel. The UK CBAM will require both
primary and secondary legislation. The government intend to publish all legislation in draft ahead of
ntroduction before Parliament. This will allow interested stakeholders to review the legislation and
ensure it meets the policy intent.
International commitments
In addition to delivering on our domestic policies to meet the NDC, as set out above, the UK has
aunched, built international support for, and signed up to, a range of sectoral pledges and initiatives –
demonstrating our commitment to working with other countries to collectively meet the goals of the Paris
Agreement.
For example, in November 2024, the UK launched the Global Clean Power Alliance <sup>42</sup> – uniting countries
to speed up transition globally. And at COP29, the UK:
<ul> <li>signed the Global Energy Storage and Grids Pledge<sup>43</sup>, which targets a sixfold increase in</li> </ul>
to triple renewables by 2030.
global energy storage to 1500GW and expanding or upgrading 25 million kilometers of grids by 2030 – critical for decarbonising the power sector and building on the agreement at COP28

 <sup>&</sup>lt;sup>41</sup> <u>Government response</u> to the consultation on the introduction of a UK CBAM
 <sup>42</sup> <u>Global Clean Power Alliance</u>

<sup>&</sup>lt;sup>43</sup> Global Energy Storage and Grids Pledge

<ul> <li>joined the international Coalition on Phasing Out Fossil Fuel Incentives Including Subsidies<sup>44</sup> which is a coalition of governments working together to remove barriers and facilitate transparency toward the phase-out of fossil fuel subsidies.</li> <li>announced £5 million to help developing countries tackle methane emissions in their fossil fuel sectors – this is part of our efforts to support collective delivery of the Global Methane Pledge<sup>45</sup> launched at COP26.</li> </ul>
The UK continues to engage with a number of international initiatives dedicated to accelerating climate action, including: the Breakthrough Agenda - accelerating international collaboration to deliver clean energy by 2030 through Breakthroughs in the road transport, steel, power, hydrogen, agriculture (all of which the UK co-leads), buildings and cement and concrete sectors <sup>46</sup> ; the Powering Past Coal Alliance <sup>47</sup> ; the Energy Transition Council; the Green Grids Initiative <sup>48</sup> ; Just Energy Transition Partnerships (JETPs); the Zero Emission Vehicles Transition Council <sup>49</sup> ; the Clean Energy Innovation Facility (CEIF) <sup>50</sup> ; the Accelerate to Demonstrate Facility (A2D) <sup>51</sup> ; the Clean Energy Transition Partnerships <sup>52</sup> , linked to which the UK continues to implement its policy on aligning international public support for the clean energy transition.
The UK also remains committed to a number of pledges and statements that it has signed,including: the Global Coal to Clean Power Transition Statement <sup>53</sup> ; the Glasgow Leaders Declaration on Forests

<sup>45</sup> Global Methane Pledge

and Land Use <sup>54</sup> - which set a precedent for shared commitments to halt and reverse deforestation and
forest degradation by 2030 recalled by Parties to the First Global Stocktake; the Zero Emission Vehicles
(ZEVs) Declaration <sup>55</sup> ; the Product Efficiency Call to Action <sup>56</sup> ; the COP28 Global Renewables and
Energy Efficiency Pledge; and the Tripling Global Nuclear Pledge.
Devolved governments' policies and measures
Northern Ireland's Climate Change Act (2022) requires that some Northern Ireland Departments must
develop and publish Sectoral Plans which set out how the 2030, 2040 and Net Zero targets will be met
by the sectors specified in the Act. The Green Growth Strategy, which was consulted on in October
2021 <sup>57</sup> , is the Northern Ireland Executive's multi-decade strategy which seeks to balance climate, the
environment and the economy in Northern Ireland. Additionally, The Energy Strategy - Path to Net Zero
Energy <sup>58</sup> is Northern Ireland's current energy strategy which sets a long-term vision of net zero carbon
and affordable energy for Northern Ireland by 2050. DAERA's Farm Support and Development
Programme is introducing schemes that will be essential levers in contributing to Northern Ireland's
statutory obligations under the Climate Change Act. In March 2020, DAERA announced a 'Forests for
Our Future' programme which aims to create 9,000 hectares of new woodland by 2030 mainly through
operating its Forestry Grant Schemes. In the longer term, working within the scope of the NI Forestry
Strategy, the NI aim is to achieve 12% woodland cover by 2050. In the longer term, working within the
scope of the NI Forestry Strategy, the NI aim is to achieve 12% woodland cover by 2050. In January
2025, Northern Ireland introduced the Vehicle Emissions Trading Schemes (VETS) Order 2023, aligning
with England, Scotland and Wales. The VETS legislation will be key in meeting the 2030, 2040 and Net
Zero targets for all the sectors specified in the Climate Change Act (Northern Ireland) 2022.

<sup>&</sup>lt;sup>54</sup> Glasgow Leaders Declaration on Forests and Land Use

 <sup>&</sup>lt;sup>56</sup> Product Efficiency Call to Action
 <sup>57</sup> Northern Ireland: <u>Consultation on the draft Green Growth Strategy for Northern Ireland</u>

<sup>&</sup>lt;sup>58</sup> Northern Ireland: Energy Strategy - Path to Net Zero Energy

The <b>Scottish Government</b> remains absolutely committed to ending Scotland's contribution to global emissions as soon as possible, and by 2045 at the latest (through a statutory net zero target). The Scottish Government consulted <sup>59</sup> on proposals for a Heat in Buildings Bill and a Social Housing Net Zero standard that would require landlords to improve fabric efficiency and install clean heating where it is technically feasible and cost-effective to do so. In January 2024, Scotland introduced the Vehicle Emissions Trading Schemes Order 2023, alongside England and Wales, and extended to Northern Ireland in 2025. The VETS legislation is seen as the single most important measure to deliver net zero for the automotive sector. Additionally, the Scottish Government is transforming the way we support farming and food production in Scotland to deliver our Vision for Agriculture <sup>60</sup> and become a global leader in sustainable and regenerative agriculture. On 18 April 2024, the Scottish Government announced an accelerated package of new climate action measures to support Scotland's just transition to net zero <sup>61</sup> .
The <b>Welsh</b> Government has taken the first step towards a net zero pathway for 2050 by publishing Net Zero Wales <sup>62</sup> , in October 2021, covering Wales's second carbon budget period 2021–25. It contains 123 policies and proposals across all ministerial portfolios and looks beyond to start building the foundations for Wales's third carbon budget (2026-2030) and 2030 interim target. In 2025, following advice from the Climate Change Committee, the Senedd will be asked to agree the targets for Carbon Budget 4 (2031-2035). <b>Crown Dependencies and Overseas Territories' policies and measures</b>

<sup>&</sup>lt;sup>61</sup> Scotland: Climate change action: policy package - gov.scot

<sup>62</sup> Wales: Net Zero Wales

<b>Guernsey's</b> energy Policy <sup>63</sup> and Electricity Strategy <sup>64</sup> includes plans to decarbonise the electricity sector with additional interconnection and on island renewables by 2035. Guernsey's Integrated Transport Strategy <sup>65</sup> aims to reduce the number of car journeys and increase participation in active travel <sup>66</sup> and Guernsey's Waste Strategy <sup>67</sup> and Waste Management Plan <sup>68</sup> aims to reduce emissions from transporting organic waste to the green waste site, and from associated processing.
<b>Jersey's</b> decarbonisation policies are described in the Carbon Neutral Roadmap (2022). The focus is on the electrification of on-Island heating and transport, including proposed legislation to prohibit both the importation and registration of fossil fuel vehicles new to the Island and the installation of fossil fuel boilers as well as incentive schemes for low carbon heating, electric vehicles and the installation of charging points. Jersey's Economic Framework for the Rural Environment <sup>69</sup> set outs emissions reduction strategies for the agriculture industry.
The <b>Isle of Man</b> has a statutory emissions reduction target of 45% by 2035, set in accordance with target setting criteria in the Climate Change Act 2021. Delivery of those targets is supported by the Act's requirement to have a climate plan in place at all times and by actions contained within the Isle of Man Climate Change Plan 2022-2027 <sup>70</sup> . Headline actions include 100% decarbonisation of the Island's fossil fuel electricity supply by 2030 and a ban on the registration of Internal Combustion Engine vehicles in 2030 and hybrids in 2035.

<sup>&</sup>lt;sup>63</sup> Guernsey: Energy Policy

<sup>&</sup>lt;sup>64</sup> Guernsey: <u>Electricity Strategy</u>

 <sup>&</sup>lt;sup>65</sup> Guernsey: <u>Integrated Transport Strategy</u>
 <sup>66</sup> Guernsey: <u>First Periodic Review of the Integrated Transport Strategy</u>

<sup>&</sup>lt;sup>67</sup> Guernsey: Waste Strategy – pp427

 <sup>&</sup>lt;sup>68</sup> Guernsey: <u>Waste Management Plan</u>
 <sup>69</sup> Jersey: <u>Economic Framework for the Rural Environment</u>

<sup>&</sup>lt;sup>70</sup> Isle of Man: <u>Climate Change Plan 2022-2027</u>

<b>Gibraltar's</b> Climate Change Strategy <sup>71</sup> looks to reduce emissions across the energy, buildings, waste and transport sectors. It includes the commitment to deliver 50% of all electricity from renewables by 2030, the introduction of a carbon tax to discourage multiple vehicle ownership and to only allow first registration of electric vehicles as from 2035.
Collectively, these strategies, pledges, policies and measures will support delivery of the UK's NDC by 2035.
Just Transition
The UK is dedicated to supporting workers, communities and businesses to transition to net zero. As part of the Clean Power Mission to reach clean power by 2030, the UK has established an Office for Clean Energy Jobs ("the Office") to explore what is needed to ensure our workforce can deliver the dramatic pace of change needed to reach this goal. The Office is dedicated to ensuring that clean energy jobs are not only abundant, but also of high quality, focussing on fair pay, favourable terms, and good working conditions.
The government is creating <b>Skills England</b> - a new national body to bring together key partners to meet the skills needs of the next decade across all the regions of England and create a shared national ambition to boost the nation's skills. This new body will support a just transition, ensuring workers benefit from the economic opportunities of our transition to net zero, while enabling employers to source the critical skills they need. Through continued investment in training and education, strong partnerships with industry, active engagement with Trades Unions, collaboration with local authorities, and targeted government policies, Skills England will unify the skills landscape to ensure the system is clear, navigable for employers, and delivers the training required to power economic growth. The government is also reforming the apprenticeships offer into a new levy-funded growth and skills offer. This will deliver

<sup>71</sup> Gibraltar: Climate Change Strategy

greater flexibility for learners and employers in England, aligned with the government's industrial strategy creating routes into good, skilled jobs in growing industries, including in clean energy industries. The government will also accelerate the delivery of an <b>Energy Skills Passport</b> to support oil and gas workers to transition to renewable energy.
The UK supports and leads several high-profile multilateral alliances and declarations, including the Powering Past Coal Alliance, Clean Energy Transition Partnership, Energy Transition Council and Green Grids Initiative, which seek to increase clean energy investment and set clear pathways for a secure, just transition from the use of fossil fuels.
At COP26, the UK brought forward the International Just Transition Declaration <sup>72</sup> which sets out how Donor countries would ensure that overseas funding is playing its part to create good, green jobs through their international climate finance (ICF) and Official Development Assistance (ODA) programmes in developing and emerging economies.
The UK continues to support energy transition internationally through a range of mechanisms including the Just Energy Transition Partnerships (JETPs). The JETPs offer bespoke country-led platforms to support governments' ambitious energy transition plans to drive inclusive and resilient growth and mitigate the impact on the most vulnerable members of society.
Gender-responsive action
The UK recognises that women and girls – alongside other marginalised people – are disproportionately impacted by climate change and are also critical leaders and agents of change in climate action. Public authorities must fulfil responsibilities set out under the UK's Equality Act (2010) <sup>73</sup> , which covers a range

 <sup>&</sup>lt;sup>72</sup> Supporting the Conditions for a Just Transition Internationally
 <sup>73</sup> UK Equality Act (2010)

of protected characteristics when implementing policies to meet the 2035 NDC.
The UK is dedicated to promoting equality and inclusion, including women's empowerment, gender equality and the implementation of the UNFCCC work programme on gender, following extension of the Enhanced Lima Work Programme on Gender at COP29. At COP28, the UK endorsed the Gender-Responsive Just Transitions Partnership Pledge <sup>74</sup> which aims to increase efforts to mainstream gender-just considerations across the transition to a low-carbon and sustainable economy in international and domestic approaches.
The UK also supports the POWERful Women initiative and other energy sector groups in their work towards increasing gender equality in the clean energy sector. This includes supporting Women in Nuclear, which encourages girls and women into the nuclear industry. The UK is a signatory to the Clean Energy Ministerial Equality in Energy Transitions, which aims to advance women's participation in the clean energy revolution and enable greater gender diversity in the clean energy professions. The UK is also a signatory to Equal by 30, the Clean Energy Ministerial Campaign to work towards equal pay, equal leadership, and equal opportunities for women in the clean energy sector by 2030. The UK is a strongly supportive and engaged member of the International Energy Agency (IEA) Gender Advisory Council, which is intended to guide work on gender diversity and improve equal opportunities in the energy sector. It will help to take forward the IEA Gender Diversity Initiative and will strengthen collaboration with the CEM Equality Initiative and Equal by 30.
The UK has provided funding and support to widen participation including the full, meaningful, and equal participation and leadership of women in all aspects of the UNFCCC. The UK also continues to work with delivery partners to capture the impacts of International Climate Finance (ICF) programmes on certain groups of people and to embed gender mainstreaming into every stage of the programme cycle.

<sup>&</sup>lt;sup>74</sup> Gender-Responsive Just Transitions Partnership Pledge

The UK's Climate Ambition Support Alliance (CASA) <sup>75</sup> has provided funding for the active participation of women in international climate negotiations from the Alliance of Small Island States, the Least Developed Countries Group and the High Ambition Coalition. The UK PACT (Partnering for Accelerated
Climate Transitions) <sup>76</sup> programme has developed gender equality and social inclusion (GESI) guidance <sup>77</sup> . As part of its commitments under the Generation Equality Forum's Action Coalition on
Feminist Action for Climate Justice <sup>78</sup> , the UK will strengthen collection and use of data on gender, inclusion and climate.
Public Participation
As agreed at COP26, the Glasgow Work Programme on Action for Climate Empowerment (ACE) highlights the key role that a broad range of stakeholders - such as youth, national, regional and local governments, non-governmental organisations, scientists, women and indigenous peoples - play in fostering greener economies and that these people are all important decision-makers who can drive climate action and are agents of change. The UK is also a Party to the Aarhus Convention, a United Nations Economic Commission for Europe (UNECE) Treaty which provides for access to information, public participation in decision making and access to justice in environmental matters.
The UK is committed to ensuring that everyone has the opportunity to contribute to the transition to net zero, supporting people and communities to take action and demonstrating the benefits of the transition. A Net Zero Public Participation Strategy will be published in 2025. This will include how we support
people to adopt new technologies, as well as opportunities to ensure that public views are considered in the development of policy towards meeting net zero and including meeting our 2030 and 2035 NDCs.

<sup>75</sup> CASA

 <sup>&</sup>lt;sup>76</sup> <u>UK PACT</u>
 <sup>77</sup> <u>UK PACT GESI Guidance</u>

<sup>&</sup>lt;sup>78</sup> Gender Equality Forum's Action Coalition on Feminist Action for Climate Justice

When setting the 2035 NDC target and scope, the government discussed the approach with a variety of stakeholders, such as civil society, business groups and academics to capture their views. The 2035 NDC was covered in correspondence and parliamentary questions with representatives of these groups and interested Parliamentarians and relevant Select Committees. The government also considered written briefings on the NDC provided by Climate Action Network-UK (CAN-UK), We Mean Business, Worldwide Fund for Nature UK (WWF), Royal Society for the Protection of Birds (RSPB), Grantham Institute, World Resources Institute, Global Renewables Alliance and the United Nations Children's Fund (UNICEF) amongst others. A copy of the UK's 2035 NDC ICTU will be laid in the UK's Houses of Parliament.
Youth and Children
The Glasgow Climate Pact urges Parties and stakeholders to ensure meaningful youth participation and representation in multilateral, national and local decision-making processes. Young people are integral to the net zero transition, both through the choices they make and their support for wider changes in their lives. It is vital that net zero decision-making takes into account their views and needs.
At COP29, the UK endorsed the Universal Youth Clause in NDCs <sup>79</sup> . In line with this, the UK recognises the importance of ensuring young people are engaged in both the design and implementation of climate-related policies where relevant and that young people are important drivers of climate action and agents of change. The UK also recognises the importance of providing children and young people with the knowledge, skills and behaviours, to understand and develop a connection to the natural world, access green careers and enable them to thrive in life and work in a world with a changing climate.

<sup>79</sup> Universal Youth Clause in NDCs

In April 2022 in England, the Department for Education published 'Sustainability and climate change: a strategy for the education and children's services systems' <sup>1</sup> . To emphasise the importance of education as an essential tool to mitigate and adapt to climate change, we are committing to review and update our strategy in 2025. DfE also appointed two Youth Focal Points for Sustainability and Climate Change <sup>80</sup> in 2023, in partnership with Students Organising for Sustainability UK (SOS-UK), for a two-year term (from 2023-25) to work with the DfE to feed into the implementation and evaluation of the Strategy. Beyond this, we will continue to elevate youth voices in developing climate change policy and ensure a
role for young people to feedback and challenge our progress. And as part of our Net Zero Public Participation strategy, to be published in 2025, we will consider the important role of young people.
Please see section 4a(ii)c for more information about education and skills.
Devolved government's public participation
Devolved governments also engage in public participation, for example – as part of the legislative development process of <b>Northern Ireland's</b> Climate Change Act (2022), a public consultation was launched <sup>81</sup> , which provided the opportunity for both public and stakeholder engagement. There is a legislative requirement in <b>Scotland</b> , established under the Climate Change Act (Scotland) 2009, to publish a public engagement strategy for climate change - the Scottish Government's current Public Engagement Strategy for Climate Change (2021-2026) <sup>82</sup> recognises the vital role of public and community engagement in facilitating a societal transition to a net zero and climate resilient nation. The <b>Welsh</b> Government's Engagement approach around Climate Change 2022-26 <sup>83</sup> was published in June

<sup>&</sup>lt;sup>80</sup> Youth Focal Points for Sustainability and Climate Change

 <sup>&</sup>lt;sup>81</sup> Northern Ireland: <u>Discussion Document on a Climate Change Bill</u>
 <sup>82</sup> Scotland: <u>Government's Public Engagement Strategy</u>

<sup>&</sup>lt;sup>83</sup> Wales: Engagement approach around Climate Change (2022-26)

2022 and provides a framework for working with Team Wales partners around the delivery of Net Zero
Wales (Carbon Budget 2) <sup>84</sup> .
Crown Dependencies and Overseas Territories public participation
A people-powered approach was prioritised through the development of the Carbon Neutral Roadmap in <b>Jersey</b> . This included Jersey's first citizens' assembly held on climate change alongside a public campaign, the 'Climate Conversation' carried out in 2021. This informed the level of ambition of the roadmap and led to the second most responded to consultation in Jersey. There is a specific climate change and sustainability engagement team within the Jersey Government who continues to engage with key stakeholders, industry, and the public. Climate change duties for public bodies set out in the <b>Isle of Man's</b> Climate Change Act 2021 include support for the just transition and climate justice principles. As part of statutory guidance for Manx public bodies the Isle of Man issued the Fair Change Framework <sup>85</sup> which encourages participatory policy development. <b>Gibraltar's</b> environment and climate policies are discussed with non-governmental organisations and relevant business representatives before publication. Future revisions of Gibraltar's climate change strategy will be open to full public
participation.
Businesses
Businesses play a pivotal role in the net zero transition, not only by driving innovation and investment but also by decarbonising their operations and investing in the low-carbon solutions needed to transform their sectors and supply chains to deliver systemic change. They are also at the forefront of developing and deploying transformative low-carbon technologies, from renewable energy solutions to nature- based approaches. With more than 90% of global GDP now covered by net zero targets and a growing demand for low-carbon products and services, businesses are uniquely positioned to lead this

 <sup>&</sup>lt;sup>84</sup> Wales: <u>Net Zero Wales (Carbon Budget 2)</u>
 <sup>85</sup> Isle of Man: <u>Fair Change Framework</u>

transformation. The global 'Race to Zero' <sup>86</sup> campaign exemplifies this leadership, with over half of its business and financial signatories, as of mid-2024, being UK-based.
The benefits of this transition are clear: businesses that take early action to reduce emissions can benefit from lower energy costs, improve energy security, and strengthen their public reputation. However, realising these opportunities requires strong partnerships between businesses, government, and civil society. We have relaunched the Net Zero Council, deepening our partnership with the private sector and civil society. The Council will provide strategic leadership to help address cross-economy challenges and maximise the opportunities of the transition.
Supporting small and medium-sized enterprises (SMEs), which make up the backbone of the economy, is vital in this endeavour. We support the UK Business Climate Hub which provides advice to support SMEs to reduce their emissions. Larger businesses can play a critical role by supporting SMEs to decarbonise their operations and engaging across global supply chains to align sustainability standards.
Businesses also play an important role in advocating for ambitious policy frameworks, driving sustainable finance, and committing to transparent emissions reporting and science-based targets. By aligning ambition with action, businesses and policymakers can jointly ensure the effective delivery of the UK's 2035 NDC.
Civil Society
Civil society plays a pivotal role in advocating for robust climate policies, mobilising public opinion, providing valuable scientific evidence, knowledge, strategies, and resources, and engaging in dialogue with decision-makers. In preparing the 2035 NDC, DESNZ has greatly valued discussions and input from civil society organisations, such as Climate Action Network-UK and its members, who play an

<sup>&</sup>lt;sup>86</sup> The global 'Race to Zero' Campaign

invaluable role in bringing together a wide range of organisations with a common purpose of addressing
climate change and highlighting the voices and experiences of people most affected. We will continue to
engage and seek views from civil society organisations on the implementation of the NDC.

# a(ii). Contextual matters, including:

a(ii)a. National circumstances, such as geography, climate, economy, sustainable development and poverty eradication	For the UK's national circumstances, including climate, population, and economy, please see the UK's 1 <sup>st</sup> Biennial Transparency Report <sup>87</sup> . The UK is committed to the implementation of the UN Sustainable Development Goals (SDGs). For more information about the UK's approach to international development (currently undergoing an external review), please see the Minister for Development's October 2024 speech at Chatham House <sup>88</sup> .
a(ii)b. Best practice and experience related to the preparation of the nationally determined contribution.	The UK's NDC follows the rules for transparency and understanding set out in Decision 4/CMA.1. As described in Section 4a(i), development of the NDC has been closely linked with the UK's domestic processes for delivery of the net zero commitment under the framework of the Climate Change Act. In determining the target level, DESNZ has led work across UK government departments to identify the UK's highest possible ambition, taking account of a range of factors including outcomes from the Global Stocktake – in particular analysis on alignment with 1.5°C, requirements and principles in the Paris Agreement, the latest available science, robust analysis of domestic decarbonisation potential, the UK's legally binding net zero commitment and advice from the Climate Change Committee. <sup>89</sup>
	Overseas Territories included within the UK's ratification of the Paris Agreement were involved in setting

 <sup>&</sup>lt;sup>87</sup> <u>UK's 1st Biennial Transparency Report</u>
 <sup>88</sup> <u>Minister for Development's October 2024 speech at Chatham House</u>

<sup>&</sup>lt;sup>89</sup> CCC Advice Letter on the UK's 2035 NDC Target

	the UK's economy-wide emissions reduction target and the development of this ICTU. This is crucial, given that ownership of the policies required to reduce emissions is spread across government. Going forward, the UK will continue to follow UNFCCC guidelines and use domestic governance and engagement to track progress against the NDC. For more information on the UK's domestic institutional structures and GHG inventory governance, see Section 4a(i).
a(ii)c. Other contextual aspirations and priorities acknowledged when joining the Paris Agreement	In line with the opening paragraphs of the Paris Agreement, the UK continues to make progress on several priority policy areas that are crucial to the UK's overall approach to climate action: including on nature and biodiversity, ocean and marine environment, food security, sustainability, health and air pollution, education and skills. This section includes further detail on the UK's progress in these areas, where not already covered in the ICTU.
	The UK recognises the crucial role of the protection, sustainable management and restoration of nature, including forests and the ocean, for mitigating and adapting to climate change. The UK also recognises the importance of joining up approaches to tackling the triple planetary crises of climate change, biodiversity, and pollution, including by improving coordination between international conventions (such as the UNFCCC, the Paris Agreement, the UN Convention on Biological Diversity (CBD) and its Kunming-Montreal Global Biodiversity Framework (GBF), and the UN Convention to Combat Desertification) and through nature-based solutions and joined-up design and delivery of NDCs, National Biodiversity Strategic Action Plans (NBSAPs), National Adaptation Plans (NAPs), and other relevant strategies.
	To ensure synergy and coordination on these, DESNZ, the Department for Environment, Food and Rural Affairs (Defra) and the Foreign, Commonwealth and Development Office (FCDO) work together, with other departments, to jointly develop and deliver the government's international and domestic priorities across climate, nature and energy. These priorities are kept under review and are updated taking account of progress made internationally.

e UK's Environment Act 2021 (EA 2021) requires the government to have an Environmental provement Plan (EIP) for England, to significantly improve the natural environment. The 25 Year vironment Plan (25YEP) was the first EIP. A statutory review of the EIP must be completed at least
ery 5 years. Its first revision, in January 2023, included 13 legally binding environmental targets set
der the EA 2021, which cover air quality, water, biodiversity, resource efficiency and waste reduction, e and woodland cover, and Marine Protected Areas. In July 2024 the government announced a
view and revision of the EIP to protect and restore our natural environment, that will focus on cleaning
our waterways, reducing waste across the economy, planting millions more trees, improving air ality and halting the decline in species by 2030. It will include delivery information to help meet each
our ambitious EA 2021 targets.
e Environmental Principles <sup>90</sup> duty of the Environment Act 2021 also underscores the government's mmitment to leaving the environment in a better state for future generations: it requires ministers to ve due regard to the Environmental Principles Policy Statement when making policy. When veloping interventions to reduce greenhouse gas emissions, the UK government gives due nsideration to impacts on air pollution and public health, as well as to other wider environmental tcomes. This approach ensures that wider environmental effects (positive and negative) are given due nsideration when policy is drafted.
odiversity and nature
e UK has committed to protect 30% of our land and sea by 2030. Our 30by30 commitment sits at the
ry heart of our aim to ensure nature's recovery. Delivering this target on land in England means suring that our most important and wildlife-rich habitats are benefiting from effective, long-term
nservation and management, supporting their resilience to climate change. 30by30 will also support the

<sup>&</sup>lt;sup>90</sup> Environmental Principles duty of the Environment Act 2021

nature-based solutions that will help us achieve our net zero target, such as peatland restoration <sup>91</sup>. Reaching this target will be supported by our continued commitment to deliver on our legally binding targets within the Environment Act 2021.

The UK submitted its National Targets to the Convention on Biological Diversity on 1st August 2024<sup>92</sup>. These commit the UK to achieving each of the 23 global targets under the Kunming-Montreal Global Biodiversity Framework at home. This includes our commitment to achieve Target 8 of the Global Biodiversity Framework, which commits us to minimise the impacts of climate change on biodiversity and build resilience including through nature-based solutions. These UK National Targets are underpinned by a robust set of specific commitments and policies at UK and national level to halt and reverse the loss of biodiversity. Further details on how the UK will deliver against these National targets will be set out in our full UK National Biodiversity Strategy and Action Plan (NBSAP), which will be published in due course.

The UK also endorsed the COP28 Joint Statement on Climate, Nature and People<sup>93</sup> which affirmed that there is no path to achieving the Paris Agreement or the Global Biodiversity Framework (GBF) without urgently addressing climate change, biodiversity loss and land degradation together in a synergistic and coherent manner. We will continue to support better policy coherence between climate and biodiversity at the national and international level, in line with the recent Decision 16/22 from the Convention on Biological Diversity. In addition, the UK supports an integrated approach to scaling up climate and nature finance from all sources, and to aligning financial flows with the Paris Agreement and the GBF, recognising the synergies and need to maximise the co-benefits.

<sup>&</sup>lt;sup>91</sup> 30 by 30 on land in England: Confirmed Criteria and Next Steps

<sup>&</sup>lt;sup>92</sup> National Targets to the Convention on Biological Diversity

<sup>93</sup> COP28 Joint Statement on Climate, Nature and People

The UK is signatory to a range of international environmental agreements covering not only climate
change and nature loss, but also those aimed at tackling pollution, including chemicals, waste, and
plastics. The UK remains fully committed to fulfilling its responsibilities and leading progress under these.
DAERA published <b>Northern Ireland's</b> first Environmental Improvement Plan in September 2024 <sup>94</sup> . The
Plan contains a commitment on DAERA to develop and publish a new Nature Recovery Strategy. It is
intended that the new Strategy will be published in 2025. DAERA has also taken forward the
development of a Northern Ireland Peatlands Strategy 2022-2040 <sup>95</sup> . The draft strategy sets out the
strategic objectives and associated targets and actions to conserve and restore peatlands in Northern
Ireland. DAERA's Farm Support and Development Programme will include a Farming with Nature
Package that aims to contribute to the delivery of many of DAERA's strategic environmental outcomes
by supporting farmers and land managers to make substantial contributions to environmental
improvements and sustainability.
The <b>Scottish Government</b> is committed to delivering improved and enduring benefits to the natural
environment through the Environment Strategy for Scotland <sup>96</sup> . Sitting beneath this, the Scottish
Biodiversity Strategy published in November 2024 <sup>97</sup> takes into account the new post-2020 global
biodiversity framework and targets for the Convention on Biological Diversity's 2050 vision. The Scottish
Biodiversity Programme <sup>98</sup> has been created to coordinate all activity on biodiversity including the
development of a future strategic framework for biodiversity that compromises both terrestrial and marine
aspects.
The Nature Deservent Action Dian (NDAD) is the National Biadiversity Strategy and Action Dian for
The Nature Recovery Action Plan (NRAP) is the National Biodiversity Strategy and Action Plan for

<sup>&</sup>lt;sup>94</sup> Northern Ireland: Environmental Improvement Plan for Northern Ireland (2024)

<sup>&</sup>lt;sup>95</sup> Northern Ireland: Peatland Strategy 2022-2040

<sup>&</sup>lt;sup>96</sup> Scotland: <u>The Environment Strategy for Scotland: Vision and Outcomes</u>

<sup>&</sup>lt;sup>97</sup> Scotland: Biodiversity Strategy

<sup>&</sup>lt;sup>98</sup> Scotland: <u>Biodiversity Programme</u>

<b>Wales</b> <sup>99</sup> , and was refreshed for 2020-2021. It sets out how the Convention on Biological Diversity's Strategic Plan for Biodiversity and the associated Aichi Biodiversity Targets are addressed in Wales. Relevant actions include developing the new Sustainable Land Management scheme and the National Forest for Wales, work to improve the condition of Protected Sites Network, and the National Peatland Action Programme.
<b>Guernsey's</b> Strategy for Nature <sup>100</sup> sets out a framework to enable the long-term management of nature in Guernsey. It also seeks to maximise biodiversity and ensure its resilience to a changing climate. <b>Jersey</b> is protecting on-Island carbon sinks through the Island Plan <sup>101</sup> and natural area protection and enhancement programmes, such as the Jersey National Park, Ramsar sites, Biodiversity action plan, tree strategy and LEAF (Linking Environment and Farming) programme. <b>Isle of Man's</b> Biodiversity Strategy 2015 – 2025 <sup>102</sup> remains in effect and is under review to determine what additional commitments can be made to deliver the targets in the CBD Global Biodiversity Framework. <b>Gibraltar's</b> Nature Reserve Management Plan <sup>103</sup> sets out the key conservation objectives for the territory, including an ambitious rewilding programme.
Ocean and marine environment
The UK's vision is for clean, healthy, safe, and biologically diverse ocean and seas. Our efforts to deliver that vision are underpinned by the UK Marine and Coastal Access Act (2009) <sup>104</sup> , Environment Act

 <sup>&</sup>lt;sup>99</sup> Wales: <u>Nature Recovery Action Plan</u>
 <sup>100</sup> Guernsey: <u>Strategy for Nature</u>

<sup>&</sup>lt;sup>101</sup> Guernsey: Island Plan

 <sup>&</sup>lt;sup>102</sup> Isle of Man: <u>Biodiversity Strategy 2015 – 2025</u>
 <sup>103</sup> Gibraltar: <u>Nature Reserve Management Plan</u>

<sup>&</sup>lt;sup>104</sup> UK Marine and Coastal Access Act (2009)

(2021) <sup>105</sup> , Fisheries Act (2020) <sup>106</sup> , UK Marine Policy Statement <sup>107</sup> , UK Marine Strategy <sup>108</sup> , and Joint
Fisheries Statement <sup>109</sup> . These responsibilities will help build a resilient marine environment that supports
coastal communities to adapt to the impacts of climate change.
The UK's third National Adaptation Programme sets out extensive plans to adapt to the risks of a
warming climate in the marine environment. It includes plans to protect, restore and create coastal and
marine habitats and manage the risks and opportunities to marine species, habitats and fisheries.
Approximately 90% of saltmarsh and 70% of seagrass habitats in the UK are within marine protected
areas. Coastal and marine habitats such as these play an important role in supporting mitigation of and
adaptation to climate change. We have embedded in law their value as wildlife rich habitats in the
Environment Act and our focus is on ensuring these are effectively protected. The UK funds restoration
of these habitats directly – including through ELMs – and we are working to drive private investment into
their creation and restoration through initiatives like the Nature Investment Standards programme. The
UK has committed to filling the evidence gaps that currently prevent the inclusion of coastal wetlands
(including saltmarsh habitats) for mitigation purposes in our Greenhouse Gas Inventory. To achieve this
goal, we are working with administrations from across the UK, through the UK Blue Carbon Evidence
Partnership.
The UK recognises that robust scientific knowledge underpins effective mitigation and adaptation action
in the marine environment. We invest in the UK's world-leading ocean science community and work in
partnership, including through the Marine Climate Change Impacts Partnership and UN Decade of
Ocean Science for Sustainable Development, to further our understanding of the impacts of climate

- <sup>105</sup> UK Environment Act (2021)
- <sup>106</sup> UK Fisheries Act (2020)

<sup>109</sup> Joint Fisheries Statement

 <sup>&</sup>lt;sup>107</sup> UK Marine Policy Statement
 <sup>108</sup> UK Marine Strategy: UK updated assessment and Good Environmental Status

change and ocean acidification on the marine environment, options for adaptation, and the benefits and risks of ocean-based mitigation strategies. The UK is committed to managing our fisheries sustainably. We will work in partnership with the seafood sector to co-develop climate adaptive fisheries measures to support a sustainable fishing industry alongside a healthy and productive marine environment. The Climate Change Objective in the Fisheries Act ensures that fisheries management policy considers climate change mitigation and adaptation where appropriate. Fisheries administrations have introduced policies to achieve this objective through the legally binding Joint Fisheries Statement and Fisheries Management Plans. As part of the UK Seafood Fund, grant funding has been provided to help purchase new, more fuel-efficient engines to reduce emissions. These marine and fisheries policies, plans and actions will also contribute towards the UK's NBSAP and National Targets. The draft Marine Plan for **Northern Ireland**<sup>110</sup>, published in April 2018, supports the UK Marine Policy Statement, the UK Marine Strategy and Vision. The plan facilitates the sustainable development of Northern Ireland's marine area and is further underpinned by the Marine Act (Northern Ireland) 2013<sup>111</sup> and the Marine and Coastal Access Act 2009<sup>112</sup>. The NI Marine Plan currently being prepared for adoption in early 2025, will include Climate Change as a critical consideration by decision makers. In 2021, DAERA commenced the development of the Blue Carbon Action Plan<sup>113</sup> for Northern Ireland, with the intent to publish it by March 2025. The first Marine protected Area (MPA) was published in 2014, which has now been reviewed, with DAERA consulting on the MPA Strategy <sup>114</sup> for Northern Ireland Inshore Area 2024-2030 between April 2024 and August 2024. The intent is to publish the MPA Strategy in 2025.

<sup>&</sup>lt;sup>114</sup> Northern Ireland: <u>Consultation on the Northern Ireland Marine Protected Areas (MPAs) Strategy Review</u>

The <b>Scottish</b> Government has set out a new Blue Economy vision for the sustainable management of Scotland's seas, establishing long term outcomes to 2045 and including a dedicated climate outcome to support ecosystem health, improved livelihoods, economic prosperity, social inclusion and wellbeing. New actions to increase protection of the marine environment include introducing fisheries management measures across the offshore Marine Protected Area (MPA) network by 2025, and to consult on the inshore MPA network during the current programme for government and introduction of a Scottish Wild Salmon Strategy. New evidence is also being delivered through the Scottish Blue Carbon Forum, building upon actions set out in the second Scottish Climate Change Adaptation Programme <sup>115</sup> to address Scotland's marine climate risks.
In November 2019 the <b>Welsh</b> Government published the first Welsh National Marine Plan <sup>116</sup> . This sets out policy for the next 20 years to achieve healthy and resilient seas and marine ecosystems, in support of a thriving, sustainable economy. The Plan provides the strategic framework to enable renewable energy generation at sea.
<b>Jersey's</b> Carbon Neutral Roadmap <sup>117</sup> sets an ambition to promote Jersey as a centre of excellence for blue carbon sequestration. The Jersey Marine Spatial Plan <sup>118</sup> , was agreed in October 2024 and sets out how Jersey territorial waters should be utilised and protected to ensure the correct balance of competing uses. <b>Guernsey</b> aims to publish a marine spatial plan by the end of 2025, which will include setting out the sustainable use of the island's marine environment and informing the potential for marine carbon sequestration. The <b>Isle of Man's</b> 'The Manx Blue Carbon Project' <sup>119</sup> began in 2022, working with Bangor and Swansea Universities, as well as with the UK National Oceanography Centre to research and map

<sup>&</sup>lt;sup>115</sup> Scotland: <u>Climate Ready Scotland: Climate Change Adaptation Programme 2019-24 (2019)</u>

<sup>&</sup>lt;sup>116</sup> Wales: Welsh National Marine Plan (2019)

blue carbon stores in the Isle of Man territorial sea. The project aims to develop a comprehensive blue
carbon management plan to maximise carbon sequestration and maintain and restore related biodiversity
and wider ecosystem services. <b>Gibraltar's</b> updated Marine Monitoring Programme <sup>120</sup> focuses on
strategies to increase biodiversity and reduce marine litter and underwater noise among others. Gibraltar
is also looking to promote blue carbon sequestration, and the Department of the Environment,
Sustainability, Climate Change and Heritage is supporting non-governmental organisation, the Nautilus
Project, on its Darwin Plus Local funded <sup>121</sup> project to restore local seagrass habitats along Gibraltar's
coastline.
Food security
The UK is committed to delivering a sustainable food system, ensuring that everyone has access to
nutritious and healthier food <sup>122</sup> . The UK's Agriculture $Act^{123}$ obligates the UK government to produce a
report on UK food security every three years. The UK published its first UK Food Security Report
(UKFSR) under the Agriculture Act in December 2021 <sup>124</sup> . The second UKSFR <sup>125</sup> was published in
December 2024. The UKFSR provides an analysis of statistics across a wide range of areas affecting
food security and is an evidence base for policy and public understanding. This includes analysis of the
impacts of climate change on food supply on domestic and international levels.
The UK endorsed the COP28 Declaration on sustainable agriculture, resilient food systems and climate
action <sup>126</sup> . The UK is committed to achieving the UN Sustainable Development Goals (SDGs), including
Goal 2 on ending hunger.

 <sup>122</sup> <u>National food strategy (2022)</u>

<sup>&</sup>lt;sup>126</sup> COP28 Declaration on Sustainable Agriculture, Resilient Food Systems and Climate Action

The first **Northern Ireland** Food Strategy Framework was published in November 2024<sup>127</sup> - and is a new strategic collaborative approach around food that will help to improve economic, environmental, health and social outcomes for Northern Ireland. The agreed Food Strategy Framework sets the direction of travel for cross-departmental working around food in Northern Ireland. Work is ongoing to develop a cross-departmental action plan for publication in mid-2025. DAERA ran a public consultation on Future Agricultural Policy Proposals for Northern Ireland from December 2021 to February 2022<sup>128</sup>. The Future Agricultural Policy Framework Portfolio set out a series of proposals around four key outcomes of increased productivity, environmental sustainability, improved resilience and an effective functioning supply chain. The Future Agricultural Policy Decisions for Northern Ireland<sup>129</sup> informed the development of DAERA's Farm Support Development Programme that sits alongside the NI Food Strategy Framework with the supply chain component of the Programme acting as a bridge between the two to ensure a cohesive joined up approach.

**Scotland's** Food and Drinks industry strategy<sup>130</sup> outlines the sector's aims and ambitions over the next 10 years, including with Scottish Government funding this year to support activity in a number of areas which will support resilience, our food security and supply, including supply chains. The Scottish Government also created a Food Security Unit, following the report of the Short-life Food Security and Supply Taskforce that Scottish Ministers set up together with industry to monitor possible supply chain disruption in the immediate wake of the conflict in Ukraine. These approaches recognise that there are increasing risks to Scotland's food security, including from climate change. Scotland's Good Food Nation (Scotland) Act 2022<sup>131</sup> provides an over-arching framework for clear, consistent and coherent future

<sup>&</sup>lt;sup>127</sup> Northern Ireland: Northern Ireland Food Strategy Framework

<sup>&</sup>lt;sup>128</sup> Northern Ireland: <u>Consultation on Future Agricultural Policy Proposals for Northern Ireland</u>

<sup>&</sup>lt;sup>129</sup> Northern Ireland: <u>Future Agricultural Policy Decisions for Northern Ireland</u>

<sup>&</sup>lt;sup>130</sup> Scotland: <u>https://www.gov.scot/news/long-term-food-and-drink-stability/</u>

<sup>&</sup>lt;sup>131</sup> Scotland: Good Food Nation - Food and drink - gov.scot

Scottish food policy. This represents a fresh approach to food policy and embeds long-term strategic transformation into decision making on food policy at both the national and local levels.
<b>The Welsh Government</b> has a long-term strategy to develop the food and drink manufacturing and processing industry under which it pursues a range of business support programmes which include supply chain development, business networking, and adoption of best practice and standards. All these activities can contribute to improved industry security and are part of a wider strategic agenda for food which the Welsh Government is undertaking across portfolios and is summarised in Food Matters – Wales <sup>132</sup> .
<b>Jersey's</b> Rural Economic Framework 2022 <sup>133</sup> sets out policies for the management of the Jersey countryside that embrace the responsibility in the care of our resources with regard to the production and supply of food, water security and the quality of our natural environment. The Island Plan <sup>134</sup> safeguards productive agricultural land to increase the security of local food supplies, while supporting the long-term maintenance of the agricultural industry, and diversification of the rural economy.
<b>Isle of Man's</b> inter-linking Food Security Plan <sup>135</sup> and Agricultural Strategy <sup>136</sup> were approved in November 2024 and set out the Island's high-level principles and objectives in relation to food security and the future of the agricultural industry.
Sustainable lifestyles and sustainable patterns of consumption and production
As part of its manifesto, the government set their commitment for England to move towards a more

 <sup>&</sup>lt;sup>132</sup> Wales: <u>Food Matters – Wales</u>
 <sup>133</sup> Jersey: <u>Rural Economic Framework</u> 2022

 <sup>&</sup>lt;sup>134</sup> Jersey: <u>Island Plan</u>
 <sup>135</sup> Isle of Man: <u>Food Security Plan</u>

<sup>&</sup>lt;sup>136</sup> Isle of Man: Agricultural Strategy

circular and sustainable economy in which natural resources are used efficiently and waste is minimised. The UK Environment Act 2021 <sup>137</sup> provides powers which will allow us to significantly change the way that waste is managed.
The Defra Secretary of State convened a Small Ministerial Group on Circular Economy in autumn 2024, and established a taskforce of experts from industry, academia, civil society, and the civil service to develop a Circular Economy Strategy for England and a series of roadmaps detailing the interventions that the government will make on a sector-by-sector basis; supporting government's Missions to kickstart economic growth and make Britain a clean energy superpower.
Reducing and preventing food waste can bring significant environmental benefits to the resources, land, soil and water saved that would have otherwise been wasted. This government will work with business to drive down food waste. We continue to support the Waste and Resources Action Programme <sup>138</sup> (WRAP) and their work to drive down food surplus and waste in homes and businesses. This includes supporting the Food Waste Reduction Roadmap <sup>139</sup> and the key tool to Target Measure and Act on waste.
Our ambitious food strategy will set and deliver clear long-term outcomes that create a healthier, fairer, and more resilient food system. This strategy will act to provide more easily accessible healthy food to tackle obesity; helping to give children the best start in life and help adults live longer healthier lives. We will provide further information in 2025 including details of how the process will operate, how stakeholders can engage, and what the milestones will be.
The Northern Ireland Executive published the Northern Ireland 'Waste Prevention Programme

 <sup>&</sup>lt;sup>137</sup> <u>UK Environment Act 2021</u>
 <sup>138</sup> <u>Waste and Resources Action Programme</u>

<sup>&</sup>lt;sup>139</sup> Food Waste Reduction Roadmap

	Stopping Waste in its tracks' <sup>140</sup> in 2020, which set out a range of policies and actions focused on waste
p	prevention in line with the waste hierarchy with a focus on reducing waste and supporting the principles
o	of a circular economy. The Department for the Economy (DfE) has worked in collaboration across both
ti	he public and private sector, including a cross-departmental steering group and a Circular Economy
C	Coalition (an advisory panel established in 2021) to drive forward progress on a Circular Economy
S	Strategy. The draft Circular Economy Strategy for Northern Ireland was published for consultation in
J	lanuary 2023. The Strategy which requires Ministerial and NI Executive approval is expected to be
fi	inalised and approved later in 2025. It sets out a vision to create an innovative, sustainable and
n n	egionally balanced economy focused on People, Planet and Prosperity, where responsible production
a	and consumption is at its core.
S	Scotland's Circular Economy Act 2024 <sup>141</sup> passed unanimously by the Scottish Parliament establishes a
le	egislative framework to support Scotland's transition to a zero waste and circular economy, significantly
ir	ncrease reuse and recycling rates, and modernise and improve waste and recycling services. The Act
r	equires that Scottish Ministers publish a statutory circular economy strategy and make regulations to
s	set circular economy targets, which will build on Scotland's earlier Making Things Last strategy. <sup>142</sup>
Π 1	The <b>Welsh</b> Government has consulted on a new Circular Economy Strategy <sup>143</sup> . This proposed a range
o	of actions which seek to keep resources in use for longer and avoid waste. The final Strategy will be
p	published in the coming months. The Welsh Government is also stimulating innovation through its
C	Circular Economy Funds, awarding around £40m to businesses and publicly funded bodies to date.

 <sup>&</sup>lt;sup>140</sup> Northern Ireland: <u>Waste Prevention Programme Stopping Waste in its tracks</u>
 <sup>141</sup> Scotland: <u>Circular Economy (Scotland) Act 2024</u>
 <sup>142</sup> Scotland: <u>Making Things Last: a circular economy strategy for Scotland (2016)</u>

<sup>&</sup>lt;sup>143</sup> Wales: <u>Circular Economy Strategy</u>

Jersey's Carbon Neutral Roadmap makes a commitment to behavioural change campaigns to consider and reduce all emissions associated with Islanders' lives. Jersey-specific carbon literacy training has been developed, one specific focus of work is the plan for zero avoidable waste in construction. Biosphere Isle of Man run sessions for schools on all aspects of sustainability throughout the year and offer support in the formation of student-led eco-councils and sustainability initiatives. The Biosphere IOM Partner programme encourages businesses and other organisations to pledge their commitment to Biosphere objectives – conservation of biodiversity and culture, sustainable human and economic development, and research and learning – aiming to create a ripple effect with those organisations' employees and clients. Biosphere IOM also oversees the Sustainable Mann initiative, which includes an annual series of workshops covering various aspects of sustainability (e.g. waste and recycling, biodiversity, emissions reduction) and the freely available Sustainable Mann toolkit<sup>144</sup> to support organisations on their sustainability journey. Both programmes are provided for free. Gibraltar is committed to delivering deliver a Materials Sorting Facility to maximize separation and recycling of waste and contribute to the circular economy. The 25 Year Environment Plan,<sup>145</sup> which is currently out for public consultation, includes a chapter on healthy and sustainable cities, focusing on active travel and sustainable development. Health and air pollution The UK government will introduce a comprehensive Clean Air Strategy to deliver existing statutory targets including a series of interventions to reduce emissions, which supports promotion of the right to health, as referenced in the Paris Agreement.

<sup>&</sup>lt;sup>144</sup> Isle of Man: <u>Sustainable Mann toolkit</u>

<sup>&</sup>lt;sup>145</sup> Gibraltar <u>25 Year Environment Plan</u>
The UK government's work to decarbonise transport as set out in section 4a(i) will deliver significant reductions in air pollution and improve people's health. The UK government continues to work with local authorities to deliver air quality measures to meet legal limits for nitrogen dioxide (NO <sub>2</sub> ) and improve the health of their residents.
In relation to emissions from industrial installations, the UK government will continue to use the mechanism of UK Best Available Techniques (BAT) <sup>146</sup> , to prevent and reduce emissions to air, water and land. The BAT approach ensures pollution, including by greenhouse gases, is reduced over time by defining the available techniques which are the best for preventing or minimising emissions and impacts on the environment which then shape environmental permits for industry.
DAERA launched a consultation on a Discussion Document on a Clean Air Strategy for <b>Northern</b> <b>Ireland</b> <sup>147</sup> in November 2020 and published the synopsis of responses <sup>148</sup> in June 2022. Work is ongoing to develop Northern Ireland's first Clean Air Strategy taking into account the consultation responses.
The <b>Scottish</b> Government published its Cleaner Air for Scotland strategy <sup>149</sup> in 2015 setting out a series of actions for improving air quality across a wide range of policy areas. Following an independent review of the strategy in 2019 <sup>150</sup> , which made recommendations for additional action on air pollution, a new strategy, Cleaner Air for Scotland 2: Towards a Better Place for Everyone, was published in July 2021 <sup>151</sup> which sets out Scotland's air quality policy framework for the period 2021 to 2026 with a continued focus on delivery of co-benefits for air pollutant and greenhouse gas reductions.

<sup>&</sup>lt;sup>151</sup> Scotland: Cleaner Air for Scotland 2 - Towards a Better Place for Everyone

The Clean Air Plan for **Wales**: Healthy Air, Healthy Wales sets the Welsh Government's commitment and long-term ambition to improve air quality, and the steps it will take to deliver this<sup>152</sup>.

A long-term vision for **Jersey** was produced in 2017 through the 'Island Outcome Indicators'<sup>153</sup> and includes clean air within its statement. In 2019, **Guernsey's** Environmental Pollution (Air Pollution) Ordinance<sup>154</sup> was enacted, which sets local ambient air quality standards and allows greater environmental regulation of point source emitters including, but not limited to, through licensing prescribed operations, placing limits on the sulphur content of fuels and restricting burning in the open air. **Isle of Man's** air quality monitoring increased to include NO2 and SO2 at over 60 sites around the Island, with data published monthly. Isle of Man's electricity and transport decarbonisation plans are expected to improve air quality which is currently monitoring network<sup>156</sup> in place which shows that there has been a steady decline in concentrations<sup>157</sup> of all pollutants since its inception. Roll out of the Active Travel Strategy<sup>158</sup> is intended to lower pollution levels and improve public health more generally. Gibraltar will publish its 25 Year Environment Plan in early 2025 which sets out a wide range of initiatives in line with the relevant UN Sustainable Development Goals<sup>159</sup>.

## Education and skills

Education is fundamental to tackling climate change, whether through skills for the energy transition, or simply having an informed citizenry - without a strong contribution from education there can be no net

<sup>&</sup>lt;sup>152</sup> Wales: The Clean Air Plan for Wales: Healthy Air, Healthy Wales (2020)

<sup>&</sup>lt;sup>153</sup> Jersey: <u>Island Outcome Indicators</u>

<sup>&</sup>lt;sup>154</sup> Guernsey: Environmental Pollution (Air Pollution) Ordinance

<sup>&</sup>lt;sup>155</sup> Isle of Man: <u>2023-2025 Air Quality Monitoring Plan</u>

<sup>&</sup>lt;sup>156</sup> Gibraltar: <u>Air Quality Monitoring Network</u>

<sup>&</sup>lt;sup>157</sup> Gibraltar: <u>Decline in Concentrations</u>

<sup>&</sup>lt;sup>158</sup> Gibraltar: <u>Active Travel Strategy</u>

<sup>&</sup>lt;sup>159</sup> UN Sustainable Development Goals

<sup>&</sup>lt;sup>160</sup> <u>'Sustainability and climate change: a strategy for the education and children's services systems'</u>

economy – a skills perspective' <sup>161</sup> , which focused on investigating the workforce skills required for a
transition to an advanced zero emission, indigenous, diverse, energy secure and circular economy in
Northern Ireland. Based on the recommendations of the skills audit report, NI have developed a Green
Skills Action Plan which outlines the actions required to develop the skills system to meet the future
green skills demand. Skill UP is a flexible skills programme that offers a range of free training
opportunities to support upskilling and reskilling – including in green technologies.
<b>Scotland's</b> National Strategy for Economic Transformation <sup>162</sup> sets out the priorities for Scotland's economy and shows that a skilled population is fundamental to business productivity and economic prosperity. Scotland's Purpose and Principles <sup>163</sup> sets out the framework for decision making for post-school education, skills and research to ensure that the system is fit for the future, delivering the best outcomes for learners, employers and public investment. Scotland's Green Industrial Strategy <sup>164</sup> identifies areas of strength and opportunity for Scotland to grow globally competitive industries in the transition to net zero and outlines what government and partners will do to support stakeholders to create an enabling environment for investment and growth. Scotland's refreshed and strengthened Learning for Sustainability Action Plan was published in 2023 setting a vision that by the end of this
decade all 3-18 education settings will be sustainable education settings.
The <b>Welsh</b> Government is investing in people to develop the skills needed for a low-carbon, circular
economy, including reskilling workers in existing industries. The Welsh Government will seek to exploit
the opportunities of this transition to secure greater added value in sectors like energy and housing
(timber in construction and modular housing). The new Curriculum for Wales <sup>165</sup> for 3–16-year-olds,
which commenced roll-out in 2022, prepares Welsh learners for a changing world. One of its four

<sup>&</sup>lt;sup>161</sup> Northern Ireland: <u>Transitioning to a greener economy – a skills perspective</u>

<sup>&</sup>lt;sup>162</sup> Scotland: <u>Scotland's National Strategy for Economic Transformation</u>

<sup>&</sup>lt;sup>163</sup> Scotland: <u>Scotland's Purpose and Principles</u>

<sup>&</sup>lt;sup>164</sup> Scotland: Green Industrial Strategy

<sup>&</sup>lt;sup>165</sup> Wales: Curriculum for Wales

purposes is to develop our young people as ethical, informed citizens, ready to be active citizens of Wales and the world, with building understanding of climate change and sustainability mandatory. In 2023, the Welsh Government published its Net Zero Skills Action Plan <sup>166</sup> which provides practical steps towards understanding where and how skills needs will change over time and indicates how the Welsh Government this transition.
<b>Jersey's</b> Future Economy <sup>167</sup> work programme sets out actions to develop a more resilient supply chain and increase skills in Jersey. Under the Island's COP26 Education Pledge a review of climate change across education provision has been completed and the recommendations continue to be implemented.
As part of the Key Stages 1, 2 and 3 of education in <b>Guernsey</b> , raising awareness and learning about climate change, energy efficiency and sustainability are included in the Bailiwick of Guernsey Curriculum.
The <b>Isle of Man's</b> Retrofit and Low Carbon Skills Analysis <sup>168</sup> was produced in 2022. Section 2 of the Isle of Man Climate Change Plan 2022-2027 <sup>169</sup> includes a commitment to upskill the construction industry in low carbon heating technologies. A review of the Island's core curriculum is being undertaken which will consider whether climate and sustainability should be made mandatory content, and two bespoke geography units (climate change and coastal erosion) are being drafted for IOM secondary schools. University College Isle of Man has added sustainability and climate related courses into full-time and apprenticeship programmes. All schools are Biosphere IOM Partners, pledging active commitment to Biosphere IOM values of conservation, sustainable development, and research and learning. Carbon Literacy training is being rolled out across all Manx public bodies.

<sup>&</sup>lt;sup>166</sup> Wales: Net Zero Skills Action Plan

 <sup>168</sup> Isle of Man: <u>Retrofit and Low Carbon Skills Analysis</u>

<sup>&</sup>lt;sup>169</sup> Isle of Man: Isle of Man Climate Change Plan 2022-2027

	<b>Gibraltar</b> has amended its Education & Training Act <sup>170</sup> to include a commitment to making learning about the environment and climate justice a fundamental principle of education policy. Teachers and learning support staff have been undertaking Carbon Literacy Training in conjunction with the Carbon Literacy Project <sup>171</sup> and Gibraltar's Department of Education is working on a bespoke climate curriculum to sit alongside the national curriculum content for primary education. It is hoped that this will be piloted during the 2025/2026 Academic Year.
<ul> <li>b. Specific information applicable to Parties, including regional economic integration organizations and their member States, that have reached an agreement to act jointly under Article 4, paragraph 2, of the Paris Agreement, including the Parties that agreed to act jointly and the terms of the agreement, in accordance with Article 4, paragraphs 16–18, of the Paris Agreement</li> </ul>	Not applicable.

<sup>&</sup>lt;sup>170</sup> Gibraltar: <u>Education & Training Act</u> <sup>171</sup> Gibraltar: <u>Carbon Literacy Project</u>

c. How the Party's preparation of its nationally determined contribution has been informed by the outcomes of the Global Stocktake, in accordance with Article 4, paragraph 9, of the Paris Agreement	The UK's 2035 NDC is informed by the UAE Consensus as the outcomes of the first Global Stocktake (GST) <sup>172</sup> at COP28. The UK NDC is a 1.5°C aligned, economy-wide absolute emissions reduction target, covering all greenhouse gases, sectors and categories, and is informed by the latest science. The target is estimated to reduce UK emissions by more than 60% between 2019 and 2035. This aligns with the reductions in the IPCC's global pathways which limit warming to 1.5°C with low or no overshoot. See section 6 for more detail on 1.5 alignment and fair share.
	Paragraph 28 of the GST sets out global goals, commitments and efforts that countries should contribute to on a range of sectors, including tripling renewable energy capacity globally and doubling the global average annual rate of energy efficiency improvements by 2030, accelerating efforts towards the phase-down of unabated coal power, transitioning away from fossil fuels in energy systems, accelerating zero and low-emission technologies, accelerating and substantially reducing non-CO2 emissions including in particular methane by 2030, accelerating the reduction of emissions from road transport, and phasing out inefficient fossil fuel subsidies. Paragraph 33 calls on Parties to commit to halting and reversing deforestation and forest degradation by 2030.
	The UK is fully committed to the outcomes of Paragraph 28 and 33 of the GST, including contributing toward these global goals, commitments and efforts, and this is reflected in the action taken to achieve our NDC. Much of the UK's domestic action on these outcomes is set out in section 4a(i) of the ICTU, as well as in relevant sectoral strategies and plans. To summarise, in line with the outcomes of these paragraphs of the GST the UK is:
	<ul> <li>Committed to contributing toward the global goals to triple renewable energy capacity globally and doubling the global average annual rate of energy efficiency improvements by 2030, and to accelerating efforts globally towards net zero emission energy systems, utilizing zero and low-carbon fuels well before or by around mid-century:</li> </ul>

<ul> <li>In December 2024, the UK government published the Clean Power 2030 Action Plan. The government will work with the private sector to radically increase the deployment of onshore wind, solar and offshore wind so that electricity generated by renewables and nuclear power will be the backbone of a clean electricity system by 2030. In a typical weather year, the 2030 power system will see clean sources produce at least as much power as Great Britain consumes in total over the whole year, and at least 95% of Great Britain's generation; reducing the carbon intensity of our generation from 171gCO2e/kWh in 2023 to well below 50gCO2e/kWh in 2030.</li> <li>The Warm Homes Plan will incentivise the transition to low carbon heating for homes and buildings and deliver warmer, more energy-efficient homes. As the first steps, the government has committed an initial £3.4 billion towards heat decarbonisation and household energy efficiency over the next three years. To support the most vulnerable with energy efficiency and low carbon heating, the government has announced Wave 3 of the Warm Homes: Social Housing Fund<sup>173</sup>, to support social housing providers and tenants, as well as launched the Warm Homes: Local Grant<sup>174</sup> to support low-income homeowners and private tenants.</li> <li>To support the installation of low carbon heating, the government is making heat pumps more efficient and easier to install. In addition to removing planning rules which previously required heat pumps to be installed within 1m of a property boundary, the government is consulting on product energy efficiency standards<sup>175</sup>. Furthermore, funding for the Boiler Upgrade Scheme<sup>176</sup> will be increased to £295m for 2025/26, supporting households to</li> </ul>	
<ul> <li>wind, solar and offshore wind so that electricity generated by renewables and nuclear power will be the backbone of a clean electricity system by 2030. <ul> <li>Transitioning away from fossil fuels in energy systems, in a just, orderly and equitable</li> </ul>
manner:
<ul> <li>The UK is committed to clean power by 2030 and we have already made significant progress in transitioning away from fossil fuels. The UK has halved its emissions, having cut them by around 53% between 1990 and 2023. We will consult on not issuing new oil and gas licenses to explore new fields. A <b>just transition</b> is central to the government's approach, further details on this, and on UK action to transition away from fossil fuels can be seen in section 4a(i) and other relevant sectoral strategies and plans.</li> </ul>
<ul> <li>Accelerating efforts towards the phase-down of unabated coal power:</li> </ul>
<ul> <li>In September 2024, the UK was the first G7 economy to achieve coal power phase out. We will continue to share our experiences internationally, particularly through the UK co-chaired Powering Past Coal Alliance.</li> <li>The UK, Germany, France, Canada and the EU commission launched a Call to Action on</li> </ul>
No New Coal (CTA on NNC) where upcoming national policies and NDCs are developed on the basis of No New Coal given that the science sets out that new coal is not aligned with the Paris Agreement or response to the Global Stocktake. Both developed and developing countries have joined this CTA on NNC and coal pipeline countries are encouraged to join ahead of COP30. This sends an important signal that these countries are open to receiving support to scale up energy transitions and reduce emissions.
<ul> <li>Accelerating zero and low-emission technologies:</li> </ul>
<ul> <li>On 4th October 2024, the government reached commercial agreement with the private sector and announced up to £21.7bn of available funding over 25 years to launch the UK's new carbon capture, usage and storage (CCUS) and hydrogen industries to make the UK an early leader in these two growing global sectors.</li> </ul>
<ul> <li>Accelerating and substantially reducing non-carbon-dioxide emissions globally, including</li> </ul>
methane emissions by 2030:
$_{\odot}$ The UK is taking domestic action across the agriculture, waste, and fossil fuel sectors to

	duce methane emissions and deliver on our NDC and Carbon Budgets as set out in
	ction 4a(i). The UK has also taken action internationally to deliver on the Global Methane
Pl	edge – to collectively reduce global methane emissions by at least 30% by 2030
co	mpared to 2020 levels. This includes by sharing knowledge and technical expertise from
the	e UK's oil and gas decarbonisation and providing funding to support developing countries
	adopt cost-effective measures to reduce methane emissions in their fossil fuel sectors.
Accelera	ting the reduction of emissions from road transport:
o As	s set out in section 4a(i), the UK's Zero Emission Vehicle (ZEV) mandate <sup>178</sup> is the world's
m	ost ambitious national level regulatory framework of its kind, with annual minimum targets
fo	r the proportion of new cars and vans sold in the UK from 2024 rising to 80% of cars and
70	% of vans by 2030 on a pathway to 100% by 2035. The UK is also committed to phasing
	It new cars relying solely on internal combustion engines by 2030, and on 24 December
	24 published a consultation seeking views on which type of hybrid car can be sold from
	030-2035 <sup>179</sup> .
	out inefficient fossil fuel subsidies:
	COP29, the UK joined the international Coalition on Phasing Out Fossil Fuel Incentives
	cluding Subsidies (COFFIS) which commits the UK to being transparent on fossil fuel
	bsidies (FFS) by publishing a national inventory on the UK's FFS and incentives by
	OP30. It also commits the UK to contributing to international efforts to develop a
	omprehensive methodological framework' for defining a FFS as well as identifying
	ernational barriers preventing the phase-out of FFS, and contributing to international
	alogue to share lessons learned.
	ne UK supports international efforts to reform inefficient fossil fuel subsidies and has been
	longstanding supporter of multilateral efforts to promote fossil fuel subsidy reform since
	ese were first proposed in 2009, including through the G7, G20, Coalition of Finance

 <sup>&</sup>lt;sup>178</sup> Zero Emission Vehicle Mandate and CO<sub>2</sub> Regulations
 <sup>179</sup> Phasing Out Sales of New Petrol and Diesel Cars From 2030 And Supporting the ZEV Transition

from all sources, enhance governance and tackle illegality, and drive progress together with producer, consumer countries and the private sector to decouple agricultural commodity production from deforestation, forest and land degradation.
---

d. Each Party with a nationally determined contribution under Article 4 of the Paris Agreement that consists of adaptation action and/or economic diversification plans resulting in mitigation co-benefits consistent with Article 4, paragraph 7, of the Paris Agreement to submit information on:

5. Assumptions and methodological approaches, including those for estimating and accounting for anthropogenic greenhouse gas emissions and, as appropriate, removals.

a. Assumptions and methodological approaches used for accounting for anthropogenic greenhouse gas emissions and removals corresponding to the Party's nationally determined contribution, consistent with decision 1/CP.21, paragraph 31, and accounting guidance adopted by the CMA.	The UK accounts for emissions and removals in accordance with methodologies and common metrics assessed by the IPCC and adopted by the CMA.
<ul> <li>b. Assumptions and methodological approaches used for accounting for the implementation of policies and measures or strategies used in the nationally determined contribution</li> </ul>	Not applicable. <sup>181</sup>

<sup>&</sup>lt;sup>181</sup> Assumptions and methodological approaches for the implementation of some of the policies and measures towards the achievement of the UK's NDC can be found in Annex D of the UK's Energy and Emissions Projections: <u>https://www.gov.uk/government/publications/energy-and-emissions-projections-2023-to-2050</u>. The policies included in the projections are those that have already been implemented or those that are planned where the level of funding has been agreed, and the design of the policy is near final.

c. If applicable, information on how the Party will take into account existing methods and guidance under the Convention to account for anthropogenic emissions and removals, in accordance with Article 4, paragraph 14, of the Paris Agreement.	The UK's current GHG Inventory is submitted in accordance with decision 24/CP.19 and utilises the 2006 IPCC Guidelines for National Greenhouse Gas Inventories, 2013 IPCC Kyoto Protocol Supplement, and 2013 IPCC Wetlands Supplement.
d. IPCC methodologies and metrics used for estimating anthropogenic greenhouse	IPCC methodologies: 2006 IPCC Guidelines for National Greenhouse Gas Inventories.
gas emissions and removals.	2013 Supplement to the 2006 IPCC Guidelines for National Greenhouse Gas Inventories: Wetlands (where indicated in the UK NIR).
	2019 Refinements to the 2006 IPCC Guidelines for National Greenhouse Gas Inventories (where indicated in the UK NIR).
	<b>IPCC metrics:</b> 100-year GWPs listed in table 8.A.1 of the IPCC Fifth Assessment Report (AR5).

e. Sector, category, or activity specific assumptions, methodologies and approaches consistent with IPCC guidance, including, as applicable:

e(i). Approach to addressing emissions and subsequent removals from natural disturbances on managed lands	All emissions and removals reported in the UK GHG Inventory are included in the NDC, with no specific approach to exclude emissions from natural disturbances.
e(ii). Approach used to account for emissions and removals from harvested wood products	The UK reflects emissions and removals resulting from changes in the carbon pool of harvested wood products using a production approach.
e(iii). Approach used to address the effects of age-class structure in forests	Forest carbon stock changes and fluxes are modelled by CARBINE, the Forest Research Forest carbon stock and carbon balance model. In that model, growth rates of forests are taken into account via an expansion factor when determining the effects of tree-age.

f. Other assumptions and methodological approaches used for understanding the nationally determined contribution and, estimating corresponding emissions and removals, including:

f(i). How the reference	No other assumptions or methodological approaches have been used in the construction of the
indicators, baseline(s) and/or	reference indicator.
reference level(s), including,	
sector-, category- or activity-	
specific reference levels, are	
constructed, including, for	
example, key parameters,	
assumptions, definitions,	
methodologies, data sources	
and models used	

f(ii). For Parties with nationally determined contributions that contain non-greenhouse-gas components, information on assumptions and methodological approaches used in relation to those components, as applicable	Not applicable.
f(iii). For climate forcers included in nationally determined contributions not covered by IPCC guidelines, information on how the climate forcers are estimated	Not applicable.
f(iv). Further technical information, as necessary	Not applicable.
g. The intention to use voluntary cooperation under Article 6 of the Paris Agreement	The UK does not currently intend to use cooperative approaches that involve the use of internationally transferred mitigation outcomes (ITMOs) under Article 6 of the Paris Agreement towards its NDC. While the UK intends to meet its NDC through domestic emissions reductions and removals, it reserves the right to use cooperative approaches under Article 6 of the Paris Agreement. Such cooperative approaches may include international emissions reductions or removals, such as Article 6.4 Emissions Reductions or those which result from linking the UK Emissions Trading System to another emissions trading scheme. If the UK were to use cooperative approaches, such use would be accounted for in accordance with relevant decisions adopted by the CMA.

## 6. How the Party considers that its NDC is fair and ambitious in the light of its national circumstances

а	. How the Party considers that its NDC is fair and ambitious in the light of its national circumstances	The UK's 2035 NDC is a fair and ambitious contribution to global action on climate change. The target is consistent with many 'economically efficient' or cost-effective 1.5°C pathway estimates provided by independent external organisations and was broadly welcomed by business and civil society stakeholders in the UK and internationally.
		In determining the target level, DESNZ led work across UK government departments to identify the UK's highest possible ambition, taking account of a range of factors including the temperature goal and principle of equity in the Paris Agreement, the latest available science, the Global Stocktake, robust analysis of domestic decarbonisation potential, the UK's legally binding net zero commitment and advice from the Climate Change Committee (CCC). In its advice to government on the UK 2035 target in October 2024, the Climate Change Committee said that a target of 81% "makes a credible contribution towards limiting warming to 1.5°C above pre-industrial levels in line with the Global Stocktake and Paris Agreement". The CCC also reiterated that "the UK NDC is a steppingstone on an ambitious and deliverable pathway to Net Zero GHGs by 2050 – ahead of when global Net Zero is reached in IPCC scenarios that limit warming to close to 1.5°C". <sup>182</sup>
b	. Fairness considerations, including reflecting on equity	The UK's NDC target was determined taking account of the temperature goal of the Paris Agreement, the Global Stocktake and the principles of equity and "common but differentiated responsibilities and respective capabilities, in the light of different national circumstances". The NDC is also on the trajectory to UK net zero greenhouse gas emissions by 2050, which the Climate Change Committee and other

<sup>&</sup>lt;sup>182</sup> <u>CCC advice letter on the UK's 2035 NDC</u>

	independent external commentators consider to be aligned with a least-cost global pathway to keep global temperature rise below 1.5°C.
	There is no international consensus on which indicators should be used, and so the UK considered a range of internationally recognised effort sharing metrics and took into account other independent assessments of the level of ambition of the UK's NDC. In its Sixth Assessment Report (AR6) Working Group III, the IPCC highlighted global emissions reductions between 2019 and 2035, with the median 1.5°C pathway showing a reduction in greenhouse gas emissions of at least 60% by 2035 on 2019 levels. The UK's NDC target is currently estimated to reduce UK emissions by more than 60% between 2019 and 2035.
	Based on latest estimates, the target would imply UK emissions per person in 2035 would be 2.1tCO2e which is in line with estimates for the global average implied by the IPCC's median pathways consistent with limiting warming to 1.5°C. Although this figure excludes emissions from international aviation and shipping, advice from the CCC shows that UK per capita emissions would remain in line with the required global average even when accounting for these emissions.
c. How the Party has addressed Article 4, paragraph 3 of the Paris Agreement	The UK's NDC target was determined taking account of the temperature goal of the Paris Agreement, the Global Stocktake and the principles of equity and "common but differentiated responsibilities and respective capabilities, in the light of different national circumstances".
	The UK government has a well-established process involving all relevant departments to regularly review domestic greenhouse gas abatement potential, as part of the framework to deliver on carbon budgets and net zero under the Climate Change Act. The UK's 2035 NDC target to reduce economy-wide greenhouse gas emissions by at least 81% on 1990 levels represents our highest possible ambition and is aligned with limiting warming to 1.5°C. In its guidance, published on 26 October, the CCC advised that this target is our highest possible ambition and that it represents a clear progression beyond the UK's 2030 NDC commitment.

d. How the Party has	The UK's NDC is an economy-wide absolute emissions reduction target in compliance with Article 4.4 of
addressed Article 4, paragraph	the Paris Agreement. The UK recognises the importance of supporting developing country parties in
4, of the Paris Agreement	implementing the Paris Agreement. Through the NDC Partnership, the UK is working with international
	partners to support developing countries to develop and strengthen their NDCs. Based on national
	circumstances, NDC Partnership members are supporting developing countries to move towards
	economy-wide emission reduction targets. The UK is a core funder of the NDC Partnership and has
	committed £25m to support up to 40 countries to strengthen the ambition and quality of their NDCs
	ahead of COP30, in line with the core principles of the Paris Agreement.
	The NDC Partnership also supports developing countries to develop and strengthen their planning,
	policies and capacity for NDC implementation. This includes support for the development of national NDC
	implementation and investment plans. Countries' NDC plans inform the UK's international climate finance,
	supporting alignment of development assistance with countries' priorities.
	The UK is committed to delivering climate finance to keep 1.5°C alive in line with our international
	commitments. This is why we are honouring the existing commitment to spend £11.6bn in International
	Climate Finance between April 2021 and March 2026 including at least £3bn on nature, from which
	£1.5bn will be dedicated to protecting and restoring forests. We will also treble our finance for adaptation
	to £1.5bn in 2025. The Spending Review published in Autumn 2024 confirmed sufficient funds were
	available to ensure the £11.6bn target can be achieved. The second phase of our Spending Review for
	budgets from 26/27 onwards is expected to conclude in Spring 2026 and will include our climate finance
	spending plans over this period.
	From April 2011 to March 2024, it is estimated that the UK's International Climate Finance (ICF)
	programmes have reduced or avoided 105 million tonnes of greenhouse gas emissions (equivalent to

	over a quarter of the emissions produced by the UK in 2022 <sup>183</sup> ) and expect to reduce or avoid 1.4 billion tonnes of greenhouse gas emissions over the lifetime of ICF programmes.
	The UK submitted its third Biennial Finance Communication <sup>184</sup> in December 2024.
e. How the Party has addressed Article 4, paragraph 6, of the Paris Agreement	Not applicable.

7. How the nationally determined contribution contributes towards achieving the objective of the Convention as set out in its Article 2

a.	How the nationally	The UK's NDC represents the UK's contribution to the objectives of Article 2 of the Convention to
	determined contribution	stabilise GHG concentrations in the atmosphere at a level that would prevent dangerous anthropogenic
	contributes towards	interference with the climate system. Sections 4 and 6 detail the UK's mitigation ambition that will
	achieving the objective of	contribute to achieving Article 2 of the Convention.
