9A. Traffic and Movement Baseline

9A.1 Introduction

9A.1.1 This appendix presents the baseline Traffic and Movement data utilised for the purposes of the Preliminary Environmental Information (PEI) Report. Baseline traffic data is presented for all Sections of the Grimsby to Walpole Project (the Project), given that a number of identified construction traffic routes will be shared by traffic generated within multiple Sections of the Project. As such, highway links used by construction traffic are not Section specific.

9A.2 Baseline Data

- 9A.2.1 **PEI Report Volume 3 Sections 1-7 Appendix 9A Traffic and Movement Baseline** presents baseline traffic information for key highway links including type of link, traffic flows, congestion rating, collision clusters and sensitive receptors.
- 9A.2.2 **Table 9A.1** summarises each of the column headings and the corresponding information presented.

Table 9A.1 Column headings and corresponding data for ‘Appendix 9A: Baseline’ data sheet

Column Heading	Corresponding Data
S.No	This is a unique project specific link reference to differentiate between different sections of a route. The relevant link is shown on PEI Report Volume 2 Part B Sections 1-7 Figure 9.2 Primary Access Routes (PAR) and Workers Access Routes that accompanies the PEI Report.
Road Name	Identifiable road name/number.
Local Highway Authority	Local Highway Authority area the road is located within. This is also the Local Highway Authority responsible for maintaining the road except where the road is identified as part of the Strategic Road Network (SRN) in which case the road is maintained by National Highways.
Department for Transport (DfT) Annual Average Daily Traffic (AADT) Ref	The DfT traffic count site number.
2023 DfT AADT	The Annual Average Daily Traffic count (all vehicles) appearing on the DfT database in 2023. A value of ‘0’ indicates that no data is available and not a value of zero.
2023 DfTHGVs	The Annual Average Daily Traffic Heavy Goods Vehicles (HGV) count appearing on the DfT database in 2023. A value of ‘0’ indicates that no data is available and not a value of zero.

Column Heading	Corresponding Data
Tempro Factor 2023-2024	The growth factor applied to the DfT's 2023 count to align to a 2024 baseline value.
2024 DfT AADT Calculated	The calculated 2024 baseline traffic count (all vehicles). A value of '0' indicates that data has not been obtained and not a value of zero.
2024 DfT HGV Calculated	The calculated 2024 baseline traffic count of HGVs only. A value of '0' indicates that data has not yet been obtained and not a value of zero.
Surveyed Oct 2024 AADT	The surveyed traffic count (all vehicles) recorded in October 2024. A value of '0' indicates that data has not yet been obtained and not a value of zero.
Surveyed Oct 2024 HGV	The surveyed traffic count of HGVs recorded in October 2024. A value of '0' indicates that data has not yet been obtained and not a value of zero.
Congestion	A congestion rating based on Google traffic flow categories where a value of 0 is typically free-flowing traffic and a value of 3 is stop-start or stationary traffic. Congestion along the whole link has been considered and where congestion varies along the link or over different time periods a judgement has been made for the overall link rating.
Collision Cluster	A 'yes' denotes that a collision cluster has been identified along the relevant section of road, i.e. a location where there are nine or more injury collisions occurring within a junction or a 100 m stretch; and/or a location with four or more fatal and/or serious collisions happening either within a junction or within a 100 m stretch.
Collision Cluster Location	Identifies where a collision cluster has been identified (if applicable).
Sensitive Receptors	Receptors identified in accordance with the Institute for Environmental Management and Assessment (IEMA) guidance. Sensitive receptors include users of highway links including drivers, walkers, cyclists, horse riders and public transport passengers. Sensitive areas comprise urban areas where there are likely to be more people including vulnerable users (younger, older, socially disadvantaged people) and include residential properties, retail areas, schools and hospitals.
Sensitivity Rating	The assigned rating based on the IEMA guidance. The sensitivity of a link has been determined based on the identified receptors, an assessment of each highway link's congestion rating and any associated collision clusters. The ratings are classified as Negligible, Low, Medium, High and Very High.
Impact	The applicable IEMA impact criteria to be applied for assessment, i.e. Rule 1 which applies a threshold of 30 per cent increase in traffic above the baseline count or Rule 2 which includes highway links of high or very high sensitivity and applies a threshold of 10 per cent increase in traffic above the baseline count.

9B. Preliminary Construction Information

9B.1 Introduction

- 9B.1.1 This appendix provides preliminary construction traffic information for the substations, construction compounds and bellmouths that will provide access to the on-site construction haul roads. This information comprises projected construction Heavy Goods Vehicles (HGVs) and construction staff/worker traffic flows which have informed the preliminary assessments included within the **PEI Report Volume 2 Part B Section Specific Assessments**.
- 9B.1.2 Traffic data is presented for all Sections of the Grimsby to Walpole Project (the Project), given that a number of identified construction traffic routes will be shared by traffic generated within all Sections of the Project. As such, highway links used by construction traffic are not Section specific.
- 9B.1.3 The data presented in **PEI Report Volume 3 Sections 1-7 Appendix 9B Preliminary Construction Information** can be broadly separated into two groups:
- i. (1) trip generation and assignment of trips via the Primary Access Routes (PAR), generally relating to trips that can be feasibly managed and monitored; and
 - ii. (2) trip generation and assignment of trips, typically cars and Light Goods Vehicles (LGVs) via the wider road network, such as for construction workers when commuting to site.

9B.2 Construction Trip Generation

- 9B.2.1 Construction traffic forecasts are based on initial high-level estimates (of two-way trips) for each bellmouth (to be used to access the overhead line corridor) or substation site. These are shown on ‘Appendix 9B1: Applied Construction Traffic Trip Generation’ data sheets contained in **PEI Report Volume 3 Sections 1-7 Appendix 9B Preliminary Construction Information**.
- 9B.2.2 **Table 9B.1** summarises each of the row headings and the corresponding information on the ‘Appendix 9B1: Applied Construction Traffic Trip Generation ’ data sheets for bellmouths.

Table 9B.1 Row headings and corresponding data for bellmouths on ‘Appendix 9B1: Applied Construction Traffic Trip Generation ’ data sheets

Row Heading	Corresponding Data
Bellmouth	Access points for all vehicular types to enter and egress overhead line haul road.
Staff Install	High level estimate of annual average daily vehicle traffic movements for staff during the installation activities, such as construction of haul road, temporary works and pylons.

Staff Reinstall	High level estimate of annual average daily vehicle traffic movements for staff during the reinstatement activities, such as removal of haul road and temporary works.
Heavy Goods Vehicle (HGV) Install	High level estimate of annual average daily HGV traffic movements for staff during the installation activities, such as construction of haul road, temporary works and pylons.
HGV Reinstall	High level estimate of annual average daily HGV traffic movements for staff during the installation activities, such as construction of haul road, temporary works and pylons.
Total Annual Average Daily Traffic (AADT)	High level estimate of average daily all vehicle traffic movements over the construction programme.
Peak DT	Estimated average daily movements for the most active month over the construction programme. This provides an indication of the difference of flows between the peak value (over the most active month) and average annual daily traffic flow over the most active 12 month period.

9B.2.3 Similarly initial high-level construction traffic forecasts are provided for substations. **Table 9B.2** summarises each of the row headings and the corresponding information on the 'Appendix 9B1: Applied Construction Traffic Trip Generation' data sheets for substations.

Table 9B.2 Row headings and corresponding data for substations on 'Appendix 9B1: Applied Construction Traffic Trip Generation' data sheets

Row Heading	Corresponding Data
Bellmouth	The substation that the access/traffic values relate to.
HGV	High level estimate of annual average daily HGV construction traffic movements over most active 12 month period (for total movements).
Cars/LGVs	High level estimate of annual average daily car or Light Goods Vehicles (LGV) construction traffic movements over most active 12 month period (for total movements).
Total AADT	High level estimate of annual average daily all vehicle traffic movements over the construction programme over the most active 12 month period.
Peak DT	Estimated average daily movements for the most active month over the construction programme. This provides an indication of the difference of flows between the peak value (over the most active month) and average annual daily traffic flow over the most active 12 month period.
AAHGVT	High level estimate of average daily HGV traffic movements for the most active month over the construction programme.

9B.3 Assignment of Construction Traffic onto the Primary Route Network

- 9B.3.1 Forecast traffic flows from the 'Appendix 9B1: Applied Construction Traffic Trip Generation' data sheets have been assigned to Primary Access Routes forming the Study Area and shown on **PEI Report Volume 2 Part B Sections 1-7 Figure 9.2 Primary Access Routes and Workers Access Routes** included in the PEI Report.
- 9B.3.2 The assignment of traffic flows to the Primary Access Routes is summarised on 'Appendix 9B2: HGV Primary Access Route Assignment' data sheets. **Table 9B.3** summarises each of the column headings and the corresponding information on the 'Appendix 9B2: HGV Primary Access Route Assignment' data sheets.

Table 9B.3 Column headings and corresponding data for 'Appendix 9B2: HGV Primary Access Route Assignment' data sheets

Column Heading	Corresponding Data
Bellmouth ID	Bellmouth reference or substation location as shown on PEI Report Volume 2 Part B Sections 1-7 Figure 9.2 Primary Access Routes and Workers Access Routes .
Type	An Access allows turning movements for all vehicles to enter and egress the haul road from the highway. A Crossover allows for crossing of the highway only as a straight ahead movement between two sections of haul road.
Note	Any pertinent notes such as if the Access serves a compound.
Working Assumptions	Any pertinent notes for the assignment of traffic, i.e. whether the traffic passing at the Crossover enters the haul route.
Route Assignment	The proportion of trips generated by the Bellmouth that is assigned to Primary Access Route.
PAR ID	Primary Access Route links onto which traffic from the Bellmouth is assigned. These correspond with links shown on PEI Report Volume 2 Part B Sections 1-7 Figure 9.2 Primary Access Routes and Workers Access Routes .

9B.4 Assignment of Construction Worker Traffic

- 9B.4.1 The forecast traffic flows from the ‘Appendix 9B1: Applied Construction Traffic Trip Generation’ data sheets for construction workers/staff (i.e. cars and Light Goods Vehicles) have been distributed using a gravity model – the methodology of which is set out in the **PEI Report Part A Appendix 4A Technical Assessment Methodologies and Scope Traffic and Movement**. Construction worker traffic has been considered to be able to utilise both the Primary Access Route (PAR) and Worker Access Routes as shown on **PEI Report Volume 2 Part B Sections 1-7 Figure 9.2 Primary Access Routes and Workers Access Routes**.
- 9B.4.2 The data sheets showing the assignment of construction worker traffic by substation is summarised in **Table 9B.4**.

Table 9B.4 Traffic assignment data sheets by substation

Substation	Data Sheet showing Route Assignment
New Grimsby West Substation	Appendix 9B3: Grimsby Substation Construction Worker Access Route Assignment
New Lincolnshire Connection Substation (LCS) A	Appendix 9B5: LCS A & B Substation Construction Worker Access Route Assignment
New LCS B	Appendix 9B5: LCS A & B Substation Construction Worker Access Route Assignment
New Weston Marsh A and B	Appendix 9B6: Weston Marsh Substation Construction Worker Access Route Assignment
New Walpole B Substation	Appendix 9B4: Walpole Substation Construction Worker Access Route Assignment

- 9B.4.3 **Table 9B.5** summarises each of the column headings and the corresponding information relating to the above data sheets for substations.

Table 9B.5 Column headings and corresponding data for substation traffic assignment data sheets

Column Heading	Corresponding Data
Census Area	Census output area within the catchment of the traffic distribution model.
Route Assignment	The proportion of trips relating to the Census Area that is assigned to the Primary Access Route and/or Worker Access Route.
PAR ID	Primary Access Route or Worker Access Route links onto which traffic from the Census Area is assigned to access the relevant substation. These correspond with links shown on PEI Report Volume 2 Part B Sections 1-7 Figure 9.2 Primary Access Routes and Workers Access Routes .

9C. Traffic and Movement Future Baseline and Impact Analysis

9C.1 Introduction

- 9C.1.1 This appendix presents the future baseline Traffic and Movement data for key highway links which are relevant to the preliminary assessment reported within the Preliminary Environmental Information (PEI) Report.
- 9C.1.2 The assessment findings is presented for all Sections of the Grimsby to Walpole Project (the Project), given that a number of identified construction traffic routes will be shared by traffic generated within all Sections of the Project. As such, highway links used by construction traffic are not Section specific.

9C.2 Future Baseline and Impact Analysis Data

- 9C.2.1 **PEI Report Volume 3 Sections 1-7 Appendix 9C Traffic and Movement Future Baseline and Impact Analysis** presents the findings of the traffic analysis, including calculated future baseline and forecast construction traffic flows, to determine the likely percentage change in traffic flows on key highway links as a result of the Project. This is used to determine whether the impact (change) meets the threshold for more detailed assessment based on the sensitivity of the links.
- 9C.2.2 The information presented in **PEI Report Volume 3 Sections 1-7 Appendix 9C Traffic and Movement Future Baseline and Impact Analysis** builds on the baseline information presented in **PEI Report Volume 3 Sections 1-7 Appendix 9A Traffic and Movement Baseline**, considering the traffic distribution and assessment from **PEI Report Volume 3 Sections 1-7 Appendix 9B Preliminary Construction Information**, with some replication of columns to provide continuity and ease of following calculations.
- 9C.2.3 **Table 9C.1** summarises each of the column headings and the corresponding information presented.

Table 9C.1 Column headings and corresponding data for ‘Appendix 9C: Appraisal’ data sheet

Column Heading	Corresponding Data
S.No	This is a unique project specific link reference to differentiate between different sections of a route. The relevant link is shown on PEI Report Volume 2 Part B Sections 1-7 Figure 9.2 Primary Access Routes (PAR) and Workers Access Routes that accompanies the PEI Report. This information is the same as that in PEI Report Volume 3 Sections 1-7 Appendix 9A Traffic and Movement Baseline .
Road Name	Identifiable road name/number.

Column Heading	Corresponding Data
	This information is the same as that in PEI Report Volume 3 Sections 1-7 Appendix 9A Traffic and Movement Baseline .
Local Highway Authority	Local Highway Authority area the road is located within. This is also the Local Highway Authority responsible for maintaining the road except where the road is identified as part of the Strategic Road Network (SRN) in which case the road is maintained by National Highways. This information is the same as that in PEI Report Volume 3 Sections 1-7 Appendix 9A Traffic and Movement Baseline .
2024 Department for Transport (DfT) Annual Average Daily Traffic (AADT) Calculated	The calculated 2024 baseline traffic count (all vehicles). A value of '0' indicates that no data is available and not a value of zero. This information is the same as that in PEI Report Volume 3 Sections 1-7 Appendix 9A Traffic and Movement Baseline .
2024 DfT Heavy Goods Vehicle (HGV) Calculated	The calculated 2024 baseline traffic count of Heavy Goods Vehicles (HGVs) only. A value of '0' indicates that no data is available and not a value of zero. This information is the same as that in PEI Report Volume 3 Sections 1-7 Appendix 9A Traffic and Movement Baseline .
Surveyed Oct 2024 AADT	The surveyed traffic count (all vehicles) recorded in October 2024. A value of '0' indicates that no data is available and not a value of zero. This information is the same as that in PEI Report Volume 3 Sections 1-7 Appendix 9A Traffic and Movement Baseline .
Surveyed Oct 2024 HGV	The surveyed traffic count of HGVs recorded in October 2024. A value of '0' indicates that no data is available and not a value of zero. This information is the same as that in PEI Report Volume 3 Sections 1-7 Appendix 9A Traffic and Movement Baseline .
Applied AADT	The traffic count (for all movements) taken forward for assessment from either the 2024 DfT count baseline or the October 2024 survey.
Applied HGV	The traffic count (for HGV movements) taken forward for assessment from either the 2024 DfT count baseline or the October 2024 survey.
TEMPRO 2024 - 2031	The growth factor applied to the 'Applied' count to forecast a 2031 baseline value.
2031 Future Baseline All Veh	The calculated 2031 baseline traffic count (all vehicles). A value of '0' indicates that data has not been obtained and not a value of zero.
2031 Future Baseline HGV	The calculated 2031 baseline traffic count of HGVs only. A value of '0' indicates that data has not been obtained and not a value of zero.
Construction Traffic All Vehicles	Forecast annual average daily construction traffic movements generated by the Project for the most active 12 month period.
Construction Traffic HGV	Forecast annual average daily HGV construction traffic movements generated by the Project as a proportion of the 'Construction Traffic All Vehicles' flows.

Column Heading	Corresponding Data
Construction Traffic AAHGV	Forecast annual average daily construction HGV traffic movements generated by the Project for the most active 12 month period. This value may not be for the same 12 month period as 'Construction Traffic All Vehicles' flows. In some instances, this value is greater than the 'Construction Traffic All Vehicles' value.
Total All (Future traffic + Construction traffic)	Addition of the 'Construction Traffic All Vehicles' value to the '2031 Future Baseline All Veh' value to provide the combined number of trips on the road in 2031.
Total HGV (Future traffic + Construction traffic)	Addition of the 'Construction Traffic AAHGV' value to the '2031 Future Baseline HGV' value to provide the combined number of HGV trips on the road in 2031.
Per cent difference in traffic flow All Veh	The percentage increase in traffic flows from the 2031 baseline with the additional Project related construction traffic.
Per cent difference in traffic flow HGV	The percentage increase in HGV traffic flows from the 2031 baseline (for HGVs) with the additional Project related HGV construction traffic.
Impact – Rule 1 or Rule 2	The applicable Institute for Environmental Management and Assessment (IEMA) impact criteria to be applied for assessment, i.e. Rule 1 which applies a threshold of 30 per cent increase in traffic above the baseline count or Rule 2 which includes highway links of high or very high sensitivity and applies a threshold of 10 per cent increase in traffic above the baseline count. This information is the same as that in PEI Report Volume 3 Sections 1-7 Appendix 9A Traffic and Movement Baseline.
Meets/Exceeds Criteria	Identifies whether the addition of either construction (all vehicle) flows or construction HGV flows exceeds the applicable impact (i.e. Rule 1 or Rule 2). A 'yes' denotes that the applicable threshold has been exceeded.
Further Assessment Required	Identifies whether further assessment should be considered for the identified increase in Project related construction traffic. The requirement for further assessment is to be discussed and agreed with the relevant Highway Authority.
