

Eastern Green Link 3 (EGL 3) and
Eastern Green Link 4 (EGL 4)

Section Leaflet 2

April 2026

Location reference: Candlesby to Midville

Eastern Green Link 3 (EGL 3) and Eastern Green Link 4 (EGL 4) are two proposed high voltage electricity links which will run mostly undersea between Scotland and England.

We have held two stages of consultation on EGL 3 and EGL 4. The first stage of consultation took place in 2024, followed by a second in 2025.

Following the close of the Stage 2 consultation, we reviewed and considered all feedback received in order to refine our proposals. We have also continued to carry out further assessments and survey work. As a result, we have identified some additional land required to build the Projects.

We are therefore launching a new and more targeted consultation on the proposed works within this additional land. We would greatly welcome your views.

Our targeted consultation will open on **Thursday 9 April** and end on **Monday 11 May 2026**.

What we are proposing to change in this area

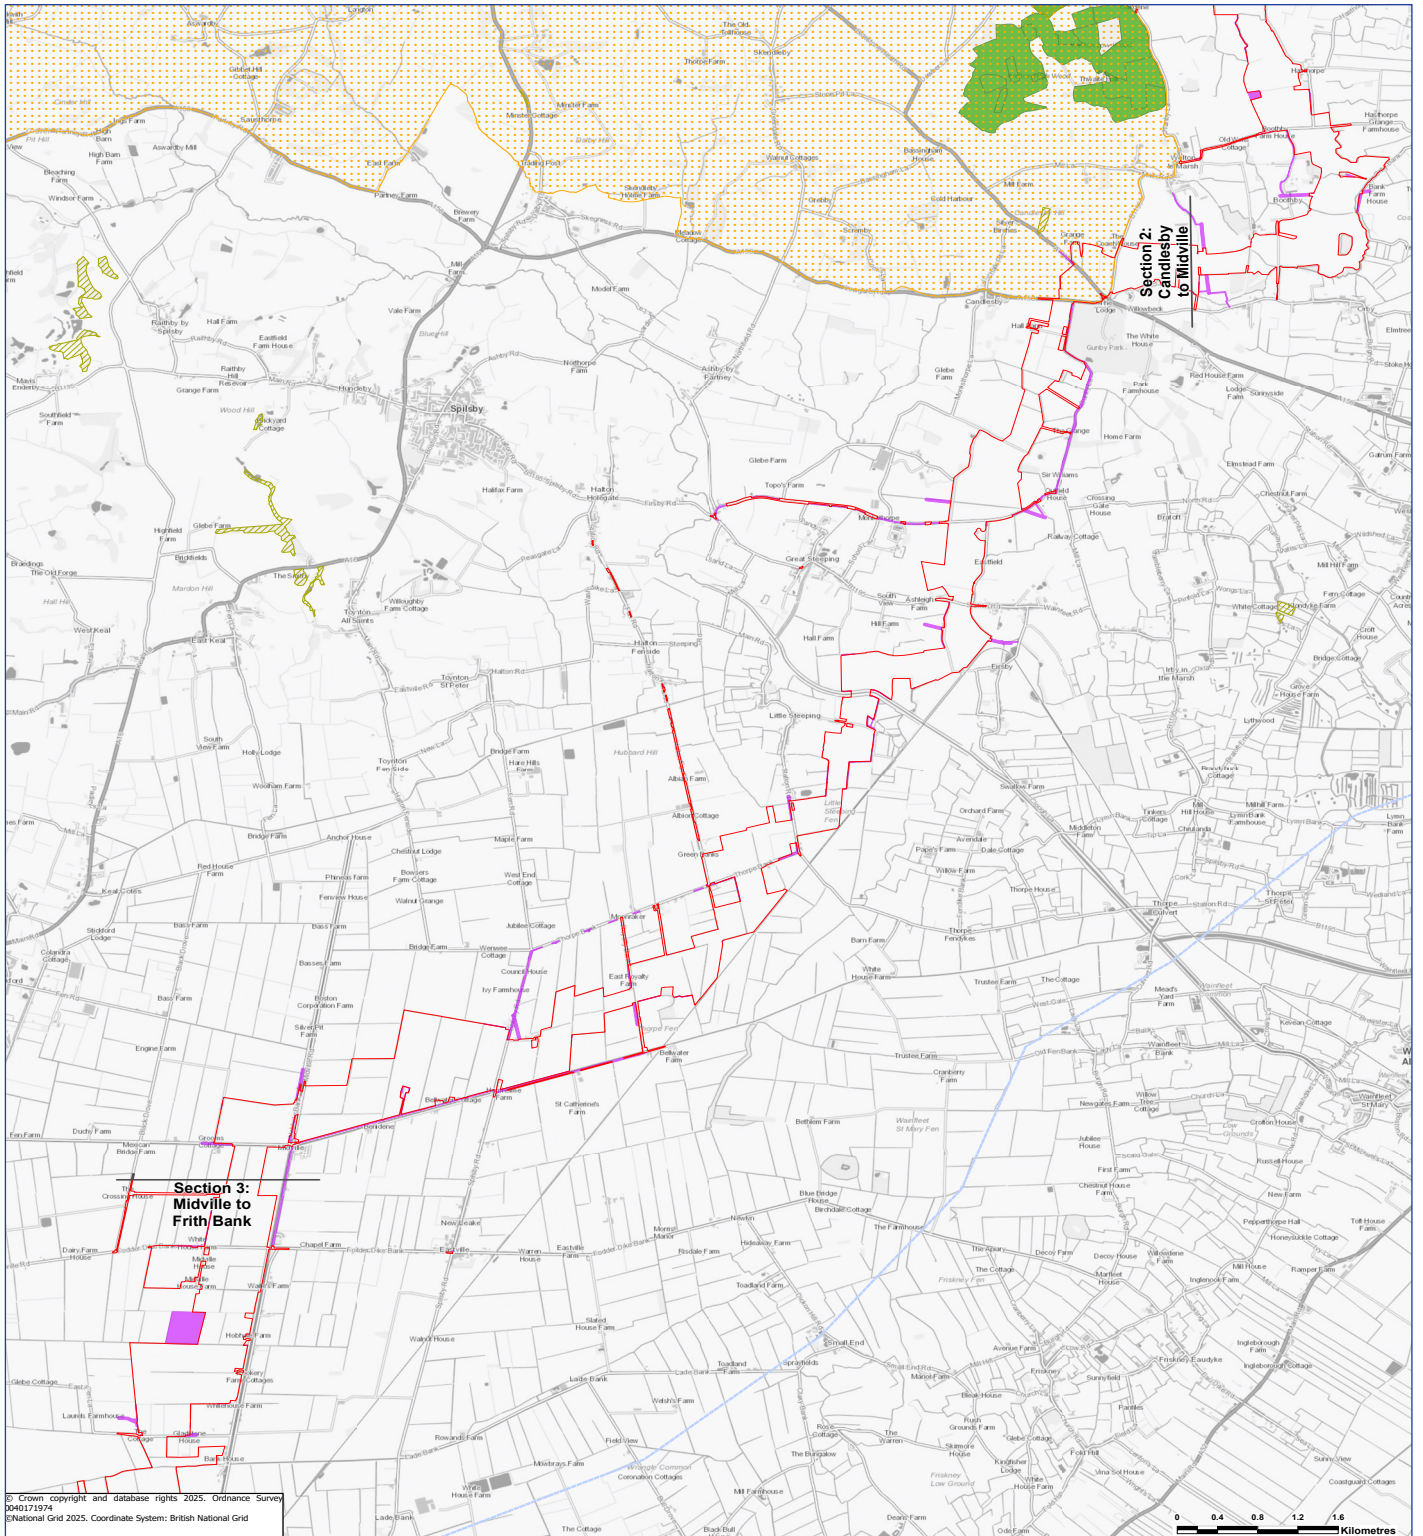

From Candlesby to Midville, the newly identified land required to build EGL 3 and EGL 4 will be used:

- for works on existing electricity utilities affected during the construction phase. This will include temporary and permanent works on existing overhead lines to allow for construction access
- for highway works. This includes road widening, creation of passing bays and vegetation clearance to assist the movement of construction vehicles and the delivery of large equipment
- for the use and extension of existing access tracks to facilitate construction and future maintenance of the Projects' underground cables and surrounding area
- for the installation of temporary access tracks and haul roads
- works to the existing field and land drainage.

Scan this QR code to visit our projects website, where you will be able to view more detailed maps and an interactive map.

Our proposals from Candlesby to Midville, including the proposed changes

Key

- Draft Order Limits from Stage 2 consultation 2025
- Additional Areas for Targeted Consultation 2026
- Existing 132kV Linear Electrical Infrastructure
- Existing 400kV Linear Electrical Infrastructure
- National Landscape
- Sites of Special Scientific Interest (England)
- Ancient Woodland (England)

What are the environmental implications of the proposed changes?

The proposed changes would not materially change the conclusions that were reported within the Preliminary Environmental Information Report (PEIR) published as part of our Stage 2 consultation.

For more information on environmental implications, please see the Environmental Implications of Change Document for this section, this can be found on our Projects website nationalgrid.com/egl3andegl4
