

Monitoring-Based Commissioning (MBCx)

nationalgrid

Ensure your building continues to operate at optimal efficiency through continuous data monitoring and analysis.

The MBCx program provides incentives to reduce the cost of installing an MBCx system and accelerates your return on investment through payback based on the energy reduction achieved. Our network of Qualified Service Providers (QSPs) will conduct a no-cost energy audit, install an MBCx system, and monitor your building's performance to ensure peak system performance and real, long-term energy savings.

MBCx process

What is a Monitoring-Based Commissioning (MBCx) System?

An MBCx system works with your existing building automation system to identify operational improvements that optimize energy performance in commercial or industrial buildings.

Get started today!

- 1. Choose a Qualified Service Provider:** Enhance existing systems
Visit ngrid.com/mbcx to identify a Qualified Service Provider who will help you determine eligibility and enroll in the program.
- 2. Install an MBCx system:** Your service provider performs a no-cost energy audit and installs an MBCx system.
- 3. Implement improvements and see results:** Your service provider helps you implement improvements and monitors your system to maximize results.

Eligibility requirements

- Facility must use at least 2,500,000 kWh or 300,000 Therms annually.
- Customer must be willing to implement reasonable measures identified by the MBCx system.
- No major changes to the building use are expected within one year of the installation.
- Facility must have an existing, functional Building Automation System.
