

Explore the benefits of our Commercial Gas Weatherization Program

Heating and cooling can be one of the largest contributors to energy bills. You could save energy with building envelope improvements, including installing energy-efficient windows, adding air sealing, insulating the roof, walls and pipes, and replacing exterior doors. Take advantage of financial incentives for your weatherization projects. Weatherization can help you achieve total building comfort.

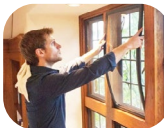

Program Benefits

- Improve the efficiency of your HVAC systems by keeping the cold air out in winter and the cool air in during summer.
- Increase the sustainability of your building and decrease your maintenance costs.
- Save energy and create a more productive living and working environment.
- Receive assistance from planning through the design phase.

Program Requirements (Natural Gas)

- Must be a National Grid customer on a qualifying commercial gas rate code that pays the System Benefits Charge (SBC).
- Review the Program Application for detailed product eligibility criteria.

Programs and Financial Incentives (Commercial Gas)

							
Pipe Insulation Up to \$4/therm	Air Sealing Up to \$6/linear ft	Window Replacement Up to \$8/sq ft	Window Inserts Up to \$3.50/sq ft	Roof/Wall Insulation Up to \$2/sq ft	Exterior Door Replacement Up to \$17/sq ft	Radiator Radiant Barriers \$20/unit	Air Curtains Up to \$3,000/unit

More weatherization measures, such as storm windows, floor insulation, and duct sealing, are available through the custom program. Additional incentives may be available for disadvantaged communities. Contact your National Grid representative for more information.

Create an energy-efficient, more comfortable environment.
