

Electric Vehicle Charging Station Make-Ready Program

We're helping Upstate New York Electric Business customers receive funding to install EV Charging Stations at little to no cost.

National Grid's Make-Ready Program will fund up to 100 percent of electric infrastructure installation costs associated with new electric vehicle charging stations. Our program managers will also reduce your organization's time investment by providing a dedicated point of contact and streamlined, step-by-step experience installing your electric vehicle charging stations.

Partner with National Grid to build your business by installing electric vehicle charging stations. Your investment will attract and retain employees by providing a valued benefit, increase sales by attracting more customers, keeping them at your business longer, and increase property values by enhancing tenant amenities.

When you add electric vehicle charging stations to your business, parking lot, or multifamily residence, you're not just providing customers, employees, and tenants with convenience and connectivity, **you're demonstrating your sustainability** commitment to the entire community.

STEP 1

Information & Application

Review program information and find an approved contractor at ngrid.com/takechargeuny

STEP 2

Design

Work with your approved contractor and National Grid on charging station selection and site design.

STEP 3

Application Review

Your approved contractor submits the Make-Ready Funding Application and National Grid reviews eligibility and site information, assessing costs and feasibility.

STEP 4

Construction

National Grid and your approved contractor build your "Make-Ready" infrastructure to the designated parking area.

STEP 5

Activation

Once your charging stations are installed and activated, National Grid receives documentation and provides payment.

		Make-Ready Program Components
