

Environmental Permit Requirements for Utility Service Connections

To help avoid delays in your electric or gas service connection project, it is important to obtain all required environmental permits and approvals before construction begins.

Customer Responsibility

You are responsible for obtaining all environmental permits and approvals required for the proposed utility service connection to your property. This may include approvals from local, state, or federal environmental agencies, including the local Conservation Commission.

We cannot obtain these permits on your behalf.

Site Plan Requirements

You must provide copies of all applicable environmental permits and the approved site plan associated with those permits.

The approved site plan must clearly demonstrate that the proposed National Grid electric and/or gas facilities are authorized as part of the approved project.

If Utility Facilities Are Not Shown on the Approved Plan

If National Grid's proposed utility facilities are not clearly identified on the approved site plan, additional approval may be required from the permitting agency. Depending on the agency's requirements, this may include:

- Written confirmation that the proposed utility facilities are authorized
- An amendment to an existing permit
- A new permit application

Recommended Next Step

Once the design has been finalized, you should promptly review the design with the appropriate environmental permitting agency to determine whether additional approvals are needed.

Obtaining any required approvals as early as possible can help prevent delays to the service connection schedule.

Documents Required by National Grid

Before construction can proceed, please provide your National Grid Customer Connections representative with:

- Copies of all required environmental permits
- The approved site plan
- Any written agency approvals or permit amendments related to National Grid's proposed utility facilities

Need Assistance?

If you have questions about National Grid's design or the documentation required for your project, please contact your National Grid Customer Connections representative.

Please note: Environmental permitting requirements vary by municipality and permitting agency. You are responsible for ensuring that all required approvals are obtained prior to construction.
