DRC.1	INTRODUCTION	 Formatted: Font color: Auto
	The <b>Data Registration Code</b> (" <b>DRC</b> ") presents a unified listing of all data required by <b>NGET</b> from <b>Users</b> and by <b>Users</b> from <b>NGET</b> , from time to time under the <b>Grid Code</b> . The data which is specified in each section of the <b>Grid Code</b> is collated here in the <b>DRC</b> . Where there is any inconsistency in the data requirements under any particular section of the <b>Grid Code</b> and the <b>Data Registration Code</b> the provisions of the particular section of the <b>Grid Code</b> shall prevail.	
DRC.1.2	The DRC identifies the section of the Grid Code under which each item of data is required	 Formatted: Font color: Auto
DRC.1.3	The Code under which any item of data is required specifies procedures and timings for the supply of that data, for routine updating and for recording temporary or permanent changes to that data. All timetables for the provision of data are repeated in the <b>DRC</b> .	
Issue 5 Revision 15	DRC 03 February 2016 4 of 105	

DRC.1.4	Various sections of the Grid Code also specify information which the Users will receive from		Formatted: Font color: Auto
	NGET. This information is summarised in a single schedule in the DRC (Schedule 9).		
DRC.1.5	The categorisation of data into DPD I and DPD II is indicated in the DRC below.		
DRC.2	OBJECTIVE		
	The objective of the <b>DRC</b> is to:		
DRC.2.1	List and collate all the data to be provided by each category of UserofUser, to NGET under		Formatted: Font color: Auto
	the Grid Code.		
DRC.2.2	List all the data to be provided by NGET to each category of User of User under the Grid		Formatted: Font color: Auto
	Code.		
DRC.3	<u>SCOPE</u>		
DRC.3.1	The DRC applies to NGET and to UserstoUsers, which in this DRC means:-		Formatted: Font color: Auto
	<ul> <li>(a) Generators (including those undertaking OTSDUW and/or those who own and/or operate DC Connected Power Park Modules);</li> </ul>		
	(b) Network Operators;	1	
	(c) DC Converter Station owners and HVDC System Owners;		Formatted: Font color: Auto
	(d) Suppliers;		Formatted: Font color: Auto
	(e) Non-Embedded Customers (including, for the avoidance of doubt, a Pumped Storage		Formatted: Font color: Auto
	Generator in that capacity);		
	(f) Externally Interconnected System Operators;		
	(g) Interconnector Users; and		
	(h) BM Participants.		
DRC.3.2	For the avoidance of doubt, the DRC applies to both GC Code Users and EU Code Users	1	
	User's.		
<b>_</b>			Formatted: Font color: Auto
DRC.4	DATA CATEGORIES AND STAGES IN REGISTRATION		
DRC.4.1.1	Within the <b>DRC</b> each data item is allocated to one of the following three categories:		
	(a) Standard Planning Data (SPD)	I	
	(b) Detailed Planning Data (DPD)		
	(c) Operational Data		
			Formatted: Font color: Auto
	▲		

- DRC.4.2 <u>Standard Planning Data (SPD)</u>
- DRC.4.2.1 The **Standard Planning Data** listed and collated in this **DRC** is that data listed in Part 1 of the Appendix to the **PC**.
- DRC.4.2.2 Standard Planning Data will be provided to NGET in accordance with PC.4.4 and PC.A.1.2.
- DRC.4.3 Detailed Planning Data (DPD)
- DRC.4.3.1 The **Detailed Planning Data** listed and collated in this **DRC** is categorised as **DPD I** and **DPD II** and is that data listed in Part 2 of the Appendix to the **PC**.
- DRC.4.3.2 **Detailed Planning Data** will be provided to **NGET** in accordance with PC.4.4, PC.4.5 and PC.A.1.2.
- DRC.4.4 Operational Data
- DRC.4.4.1 **Operational Data** is data which is required by the **Operating Codes** and the **Balancing Codes**. Within the **DRC**, **Operational Data** is sub-categorised according to the Code under which it is required, namely **OC1**, **OC2**, **BC1** or **BC2**.
- DRC.4.4.2 **Operational Data** is to be supplied in accordance with timetables set down in the relevant **Operating Codes** and **Balancing Codes** and repeated in tabular form in the schedules to the **DRC**.

#### DRC.5 PROCEDURES AND RESPONSIBILITIES

DRC.5.1 Responsibility For Submission And Updating Of Data

In accordance with the provisions of the various sections of the **Grid Code**, each **User** must submit data as summarised in DRC.6 and listed and collated in the attached schedules.

### DRC.5.2 Methods Of Submitting Data

- DRC.5.2.1 Wherever possible the data schedules to the **DRC** are structured to serve as standard formats for data submission and such format must be used for the written submission of data to **NGET**.
- DRC.5.2.2 Data must be submitted to the **Transmission Control Centre** notified by **NGET** or to such other department or address as **NGET** may from time to time advise. The name of the person at the **User Site** who is submitting each schedule of data must be included.
- DRC.5.2.3 Where a computer data link exists between a <u>UseraUser</u> and NGET, data may be submitted via this link. NGET will, in this situation, provide computer files for completion by the User containing all the data in the corresponding DRC schedule.

Data submitted can be in an electronic format using a proforma to be supplied by **NGET** or other format to be agreed annually in advance with **NGET**. In all cases the data must be complete and relate to, and relate only to, what is required by the relevant section of the **Grid Code**.

- DRC.5.2.4 Other modes of data transfer, such as magnetic tape, may be utilised if **NGET** gives its prior written consent.
- DRC.5.2.5 Generators, <u>HVDC System Owners</u> and <u>DC Converter Station</u> owners submitting data for a <u>Power Generating Module</u>, <u>Generating Unit</u>, <u>DC Converter</u>, <u>HVDC System</u>, <u>Power</u> Park Module (including <u>DC Connected Power Park Modules</u>), or <u>CCGT Module</u> before the issue of a <u>Final Operational Notification</u> should submit the <u>DRC</u> data schedules and compliance information required under the <u>CP</u> electronically using the <u>User Data File</u> <u>Structure</u> unless otherwise agreed with NGET.

DRC 6 of 105

#### DRC.5.3 Changes To Users' Data DRC.5.3.1 Whenever a UseraUser, becomes aware of a change to an item of data which is registered Formatted: Font color: Auto with NGET the User must notify NGET in accordance with each section of the Grid Code. The method and timing of the notification to NGET is set out in each section of the Grid Code DRC 54 Data Not Supplied DRC.5.4.1 Users and NGET are obliged to supply data as set out in the individual sections of the Grid Code and repeated in the DRC. If a User fails to supply data when required by any section of the Grid Code, NGET will estimate such data if and when, in the NGET's view, it is necessary to do so. If NGET fails to supply data when required by any section of the Grid Code, the User the User to whom that data ought to have been supplied, will estimate such Formatted: Font color: Auto data if and when, in that User's view, it is necessary to do so. Such estimates will, in each case, be based upon data supplied previously for the same Plant or Apparatus or upon corresponding data for similar Plant or Apparatus or upon such other information as NGET or that User that User, as the case may be, deems appropriate. Formatted: Font color: Auto DRC.5.4.2 NGET will advise a UseraUser, in writing of any estimated data it intends to use pursuant to Formatted: Font color: Auto DRC.5.4.1 relating directly to that User's Plant or Apparatus in the event of data not being supplied. DRC.5.4.3 A User AUser, will advise NGET in writing of any estimated data it intends to use pursuant to Formatted: Font color: Auto DRC.5.4.1 in the event of data not being supplied. DRC.5.5 Substituted Data DRC.5.5.1 In the case of PC.A.4 only, if the data supplied by a UseraUser, does not in NGET's Formatted: Font color: Auto reasonable opinion reflect the equivalent data recorded by NGET, NGET may estimate such data if and when, in the view of NGET, it is necessary to do so. Such estimates will, in each case, be based upon data supplied previously for the same Plant or Apparatus or upon corresponding data for similar Plant or Apparatus or upon such other information as NGET deems appropriate. DRC.5.5.2 NGET will advise a UseraUser, in writing of any estimated data it intends to use pursuant to Formatted: Font color: Auto DRC.5.5.1 relating directly to that User's Plant or Apparatus where it does not in NGET's reasonable opinion reflect the equivalent data recorded by NGET. Such estimated data will be used by NGET in place of the appropriate data submitted by the User pursuant to PC.A.4 and as such shall be deemed to accurately represent the User's submission until such time as the User provides data to NGET's reasonable satisfaction. DRC.6 DATA TO BE REGISTERED DRC.6.1 Schedules 1 to 19 attached cover the following data areas. DRC.6.1.1 Schedule 1 -- Power Generating Module, Generating Unit (Oror, CCGT Module), Power Park Formatted: Font color: Auto Module (Including including DC Connected Power Park Module and Power Park Unit)-And), Formatted: Font color: Auto HVDC System and DC Converter Technical Data. Formatted: Font color: Auto Comprising Power Generating Module, Generating Unit (and CCGT Module), Power Formatted: Font color: Auto Park Module (including DC Connected Power Park Module and Power Park Unit) and DC Formatted: Font color: Auto Converter fixed electrical parameters. Formatted: Font color: Auto DRC.6.1.2 Schedule 2 - Generation Planning Parameters Comprising the Genset parameters required for Operational Planning studies. DRC.6.1.3 Schedule 3 - Large Power Station Outage Programmes, Output Usable And Inflexibility Information. Comprising generation outage planning, Output Usable and inflexibility information at timescales down to the daily BM Unit Data submission. DRC 03 February 2016 Issue 5 Revision 15 7 of 105

DRC.6.1.4	Schedule 4 - Large Power Station Droop And Response Data.	
	Comprising data on governor <b>Droop</b> settings and <b>Primary</b> , <b>Secondary</b> and <b>High Frequency Response</b> data for <b>Large Power Stations</b> .	
DRC.6.1.5	Schedule 5 – User's System Data.	Formatted: Font color: Auto
	Comprising electrical parameters relating to <b>Plant</b> and <b>Apparatus</b> connected to the <b>National Electricity Transmission System</b> .	
DRC.6.1.6	Schedule 6 - Users Outage Information.	Formatted: Font color: Auto
	Comprising the information required by <b>NGET</b> for outages on the UsersUser, System, including outages at <b>Power Stations</b> other than outages of <b>Gensets</b>	Formatted: Font color: Auto
DRC.6.1.7	Schedule 7 - Load Characteristics.	
	Comprising the estimated parameters of load groups in respect of, for example, harmonic content and response to frequency.	
DRC.6.1.8	Schedule 8 - BM Unit Data.	
DRC.6.1.9	Schedule 9 - Data Supplied By NGET To Users.	
DRC.6.1.10	Schedule 10 - Demand Profiles And Active Energy Data	
	Comprising information relating to the <b>Network Operators'</b> and <b>Non-Embedded</b> <b>Customers'</b> total <b>Demand</b> and <b>Active Energy</b> taken from the <b>National Electricity</b> <b>Transmission System</b>	
DRC.6.1.11	Schedule 11 - Connection Point Data	
	Comprising information relating to <b>Demand</b> , demand transfer capability and the <b>Small</b> <b>Power Station</b> , <b>Medium Power Station</b> and <b>Customer</b> generation connected to the <b>Connection Point</b>	
DRC.6.1.12	Schedule 12 - Demand Control Data	
	Comprising information related to Demand Control	
DRC.6.1.13	Schedule 13 - Fault Infeed Data	
	Comprising information relating to the short circuit contribution to the National Electricity	
	Transmission System from Users other than Generators, <u>HVDC System Owners</u> and DC Converter Station owners.	Formatted: Font color: Auto
DRC.6.1.14	Schedule 14 - Fault Infeed Data (Generators Including Unit And Station Transformers)	
	Comprising information relating to the Short Circuit contribution to the <b>National Electricity</b> <b>Transmission System</b> from <b>Generators</b> <u>HVDC System Owners</u> and <b>DC Converter</b> <b>Station</b> owners.	Formatted: Font color: Auto
DRC.6.1.15	Schedule 15 – Mothballed Power Generating Module, Mothballed Generating Unit,	Formatted: Font color: Auto
	Mothballed Power Park Module, (including Mothballed DC Connected Power Park Modules),	Formatted: Font color: Auto
	Mothballed HVDC Systems, Mothballed HVDC Converters-At-A, Mothballed DC Converters at a DC Converter Station Andand Alternative Fuel Data	Formatted: Font color: Auto
		Formatted: Font color: Auto
	Comprising information relating to estimated return to service times for Mothballed <u>Power</u> <u>Generating Modules</u> , <u>Mothballed</u> <u>Generating Units</u> , <u>Mothballed</u> <u>Power</u> Park Modules	Formatted: Font color: Auto
	(including Mothballed DC Connected Power Park Modules), Mothballed HVDC Systems,	Formatted: Font color: Auto
	Mothballed HVDC Converters and Mothballed DC Converters at a DC Converter Station and the capability of gas-fired Generating Units to operate using alternative fuels.	Formatted: Font color: Auto
DRC.6.1.16	Schedule 16 – Black Start Information	
5110.0.1.10	Comprising information relating to <b>Black Start</b> .	
	Schedule 17 – Access Period Schedule	
DRC.6.1.17		

DRC 8 of 105

Comprising Access Period information for Transmission Interface Circuits within an Access Group.

Issue 5 Revision 15

#### DRC.6.1.18 Schedule 18 – Generators Undertaking OTSDUW Arrangements

Comprising electrical parameters relating to OTSDUW Plant and Apparatus between the Offshore Grid Entry Point and Transmission Interface Point.

DRC.6.1.19 Schedule 19 – User Data File Structure

Comprising information relating to the User Data File Structure.

#### DRC.6.2 The **Schedules** applicable to each class of **User** are as follows:

User	<u>Schedule</u>
Generators with Large Power Stations	1, 2, 3, 4, 9, 14, 15, 16, 19
Generators with Medium Power Stations (see notes 2, 3, 4)	1, 2 (part), 9, 14, 15, 19
Generators with Small Power Stations directly connected to the National Electricity Transmission System	1, 6, 14, 15, 19
Generators undertaking OTSDUW (see note 5)	18, 19
All Users connected directly to the National Electricity Transmission System	5, 6, 9
All Users connected directly to the National Electricity Transmission System other than Generators	10,11,13,17
All Users connected directly to the National Electricity Transmission System with Demand	7, 9
A Pumped Storage Generator, Externally Interconnected System Operator and Interconnector Users	12 (as marked)
All Suppliers	12
All Network Operators	12
All BM Participants	8
All DC Converter Station owners	1, 4, 9, 14, 15, 19

Formatted: Font color: Auto

Notes:

- (1) Network Operators must provide data relating to Small Power Stations and/or Customer Generating Plant Embedded in their Systems when such data is requested by NGET pursuant to PC.A.3.1.4 or PC.A.5.1.4.
- (2) The data in schedules 1, 14 and 15 need not be supplied in relation to Medium Power Stations connected at a voltage level below the voltage level of the Subtransmission System except in connection with a CUSC Contract or unless specifically requested by NGET.
- (3) Each Network Operator within whose System an Embedded Medium Power Station not subject to a Bilateral Agreement or Embedded DC Converter Station not subject to a Bilateral Agreement is situated shall provide the data to NGET in respect of each such Embedded Medium Power Station or Embedded DC Converter Station<u>or</u> <u>HVDC System</u>.

DRC 10 of 105

- (4) In the case of Schedule 2, Generators, <u>HVDC System Owners</u>, DC Converter Station owners or Network Operators in the case of Embedded Medium Power Stations not subject to a Bilateral Agreement or Embedded DC Converter Stations not subject to a Bilateral Agreement, would only be expected to submit data in relation to Standard Planning Data as required by the Planning Code.
- (5) In the case of Generators undertaking OTSDUW, the Generator will need to supply User data in accordance with the requirements of Large or Small Power Stations (as defined in DRC.6.2) up to the Offshore Grid Entry Point. In addition, the User will also need to submit Offshore Transmission System data in between the Interface Point and its Connection Points in accordance with the requirements of Schedule 18.

## SCHEDULE 1 — <u>POWER GENERATING MODULE</u>, GENERATING UNIT (OR CCGT MODULE), POWER PARK MODULE, <u>DC CONNECTED POWER PARK MODULE</u>, <u>HVDC SYSTEM</u> AND DC CONVERTER TECHNICAL DATA PAGE 1 OF 19

### SCHEDULE 2 - GENERATION PLANNING PARAMETERS PAGE 1 OF 3

This schedule contains the **Genset Generation Planning Parameters** required by **NGET** to facilitate studies in **Operational Planning** timescales.

For a Generating Unit including those within a Power Generating Module (other than a Power Park Unit) at a Large Power Station the information is to be submitted on a unit basis and for a CCGT Module or Power Park Module at a Large Power Station the information is to be submitted on a module basis, unless otherwise stated.

Where references to **CCGT Modules** or **Power Park Modules** at a **Large Power Station** are made, the columns "G1" etc should be amended to read "M1" etc, as appropriate.

#### NOTES:

I

Formatted: Font color: Auto

- (1) To allow for different groups of Gensets within a Power Station (eg. Gensets with the same operator) each Genset may be allocated to one of up to four Synchronising Groups. Within each such Synchronising Group the single synchronising interval will apply but between Synchronising Groups a zero synchronising interval will be assumed.
- (2) The run-up of a Genset from synchronising block load to Registered <u>Capacity or Maximum</u> Capacity is represented as a three stage characteristic in which the run-up rate changes at two intermediate loads, MWL1 and MWL2. The values MWL1 & MWL2 can be different for each Genset.

Issue 5 Revision 15

## SCHEDULE 5 - USERS SYSTEM DATA PAGE 1 OF 10

The data in this Schedule 5 is required from Users who are connected to the National Electricity Transmission System via a Connection Point (or who are seeking such a connection). Generators undertaking OTSDUW should use DRC Schedule 18 although they should still supply data under Schedule 5 in relation to their User's System up to the Offshore Grid Entry Point.

DATA DESCRIPTION UNITS DATA to RTL DATA CATEGORY CUSC CUSC Contract App. Form USERS SYSTEM LAYOUT (PC.A.2.2) A Single Line Diagram showing all or part of the User's System is SPD required. This diagram shall include:all parts of the User's System, whether existing or (a) proposed, operating at Supergrid Voltage, and in Scotland and Offshore, also all parts of the User System operating at 132kV, (b) all parts of the User's System operating at a voltage of 50kV, and in Scotland and Offshore greater than 30kV, or higher which can interconnect Connection Points, or split bus-bars at a single Connection Point, all parts of the User's System between Embedded (c) . Medium Power Stations or Large Power Stations or Offshore Transmission Systems connected to the User's Subtransmission System and the relevant Connection Point or Interface Point, (d) all parts of the User's System at a Transmission Site. -The Single Line Diagram may also include additional details of the User's Subtransmission System, and the transformers connecting the User's Subtransmission System to a lower voltage. With NGET's agreement, it may also include details of the User's System at a voltage below the voltage of the Subtransmission System. This Single Line Diagram shall depict the arrangement(s) of all of the existing and proposed load current carrying Apparatus relating to both existing and proposed Connection Points, showing electrical circuitry (ie. overhead lines, underground cables, power transformers and similar equipment), operating voltages. In addition, for equipment operating at a Supergrid Voltage, and in Scotland and Offshore also at 132kV, circuit breakers and phasing arrangements shall be shown.

#### SCHEDULE 5 - USERS SYSTEM DATA PAGE 8 OF 10

Information for Transient Overvoltage Assessment (DPD I) (PC.A.6.2 CUSC Contract)

The information listed below may be requested by **NGET** from each **User** with respect to any **Connection Site** between that **User** and the **National Electricity Transmission System**. The impact of any third party **Embedded** within the **Users System** should be reflected.

- (a) Busbar layout plan(s), including dimensions and geometry showing positioning of any current and voltage transformers, through bushings, support insulators, disconnectors, circuit breakers, surge arresters, etc. Electrical parameters of any associated current and voltage transformers, stray capacitances of wall bushings and support insulators, and grading capacitances of circuit breakers;
- (b) Electrical parameters and physical construction details of lines and cables connected at that busbar. Electrical parameters of all plant e.g., transformers (including neutral earthing impedance or zig-zag transformers if any), series reactors and shunt compensation equipment connected at that busbar (or to the tertiary of a transformer) or by lines or cables to that busbar;
- (c) Basic insulation levels (BIL) of all Apparatus connected directly, by lines or by cables to the busbar;
- (d) Characteristics of overvoltage **Protection** devices at the busbar and at the termination points of all lines, and all cables connected to the busbar;
- (e) Fault levels at the lower voltage terminals of each transformer connected directly or indirectly to the **National Electricity Transmission System** without intermediate transformation;
- (f) The following data is required on all transformers operating at Supergrid Voltage throughout Great Britain and, in Scotland and Offshore, also at 132kV: three or five limb cores or single phase units to be specified, and operating peak flux density at nominal voltage.
- (g) An indication of which items of equipment may be out of service simultaneously during **Planned Outage** conditions.

#### Harmonic Studies (DPD I) (PC.A.6.4 CUSC Contract)

The information given below, both current and forecast, where not already supplied in this Schedule 5 may be requested by **NGET** from each **User** if it is necessary for **NGET** to evaluate the production/magnification of harmonic distortion on the **National Electricity Transmission System** and **User's** systems. The impact of any third party **Embedded** within the **User's System** should be reflected:

- (a) Overhead lines and underground cable circuits of the **User's Subtransmission System** must be differentiated and the following data provided separately for each type:
  - Positive phase sequence resistance
  - Positive phase sequence reactance
  - Positive phase sequence susceptance
- (b) for all transformers connecting the User's Subtransmission System to a lower voltage:
  - Rated MVA
  - Voltage Ratio
  - Positive phase sequence resistance
  - Positive phase sequence reactance

Formatted: Font color: Auto

Formatted: Font color: Auto

DRC 55 of 105

#### SCHEDULE 5 - USERS SYSTEM DATA PAGE 9 OF 10

(c) at the lower voltage points of those connecting transformers:

Equivalent positive phase sequence susceptance

Connection voltage and MVAr rating of any capacitor bank and component design parameters if configured as a filter

The minimum and maximum **Demand** (both MW and MVAr) that could occur

Harmonic current injection sources in Amps at the Connection voltage points

Details of traction loads, eg connection phase pairs, continuous variation with time, etc.

(d) an indication of which items of equipment may be out of service simultaneously during **Planned Outage** conditions

Formatted: Font color: Auto

#### Voltage Assessment Studies (DPD I) (PC.A.6.5 CUSC Contract)

The information listed below, where not already supplied in this Schedule 5, may be requested by **NGET** from each **User** with respect to any **Connection Site** if it is necessary for **NGET** to undertake detailed voltage assessment studies (eg to examine potential voltage instability, voltage control co-ordination or to calculate voltage step changes). The impact of any third party **Embedded** within the **Users System** should be reflected:

- (a) For all circuits of the User's Subtransmission System:
  - Positive Phase Sequence Reactance
  - Positive Phase Sequence Resistance

Positive Phase Sequence Susceptance

- MVAr rating of any reactive compensation equipment
- (b) for all transformers connecting the **User's Subtransmission System** to a lower voltage:
  - Rated MVA
  - Voltage Ratio
  - Positive phase sequence resistance
  - Positive Phase sequence reactance
  - Tap-changer range
  - Number of tap steps
  - Tap-changer type: on-load or off-circuit
  - AVC/tap-changer time delay to first tap movement
  - AVC/tap-changer inter-tap time delay

DRC 56 of 105

### SCHEDULE 5 - USERS SYSTEM DATA PAGE 10 OF 10

(c) at the lower voltage points of those connecting transformers:-

Equivalent positive phase sequence susceptance

MVAr rating of any reactive compensation equipment

Equivalent positive phase sequence interconnection impedance with other lower voltage points

The maximum **Demand** (both MW and MVAr) that could occur

Estimate of voltage insensitive (constant power) load content in % of total load at both winter peak and 75% off-peak load conditions

#### Short Circuit Analyses:(DPD I) (PC.A.6.6 CUSC Contract)

The information listed below, both current and forecast, and where not already supplied under this Schedule 5, may be requested by **NGET** from each **User** with respect to any **Connection Site** where prospective short-circuit currents on equipment owned by a **Transmission Licensee** or operated or managed by **NGET** are close to the equipment rating. The impact of any third party **Embedded** within the **User's System** should be reflected:-

(a) For all circuits of the User's Subtransmission System:

Positive phase sequence resistance
Positive phase sequence reactance
Positive phase sequence susceptance
Zero phase sequence resistance (both self and mutuals)
Zero phase sequence reactance (both self and mutuals)
Zero phase sequence susceptance (both self and mutuals)
for all transformers connecting the User's Subtransmission System to a lower voltage:
Rated MVA

Voltage Ratio

(b)

Positive phase sequence resistance (at max, min and nominal tap)

Positive Phase sequence reactance (at max, min and nominal tap)

Zero phase sequence reactance (at nominal tap)

Tap changer range

Earthing method: direct, resistance or reactance

Impedance if not directly earthed

(c) at the lower voltage points of those connecting transformers:-

The maximum **Demand** (in MW and MVAr) that could occur

Short-circuit infeed data in accordance with PC.A.2.5.6(a) unless the **User's** lower voltage network runs in parallel with the **Subtransmission System**, when to prevent double counting in each node infeed data, a  $\pi$  equivalent comprising the data items of PC.A.2.5.6(a) for each node together with the positive phase sequence interconnection impedance between the nodes shall be submitted.

#### SCHEDULE 9 - DATA SUPPLIED BY NGET TO USERS PAGE 1 OF 1

(Example of data to be supplied)

CODE	DESCRIPTION
сс	Operation Diagram
сс	Site Responsibility Schedules
РС	Day of the peak National Electricity Transmission System Demand
	Day of the minimum National Electricity Transmission System Demand
OC2	Surpluses and OU requirements for each Generator over varying timescales
	Equivalent networks to Users for Outage Planning
	Negative Reserve Active Power Margins (when necessary)
	Operating Reserve information
BC1	Demand Estimates, Indicated Margin and Indicated Imbalance, indicative Synchronising and Desynchronising times of Embedded Power Stations to Network Operators, special actions.
BC2	Bid-Offer Acceptances, Ancillary Services instructions to relevant Users, Emergency Instructions
BC3	Location, amount, and <b>Low Frequency Relay</b> settings of any <b>Low Frequency</b> <b>Relay</b> initiated <b>Demand</b> reduction for <b>Demand</b> which is <b>Embedded</b> .

- No information collated under this Schedule will be transferred to the **Relevant Transmission** Licensees

#### DATA TO BE SUPPLIED BY NGET TO USERS

#### PURSUANT TO THE TRANSMISSION LICENCE

1. The **Transmission Licence** requires **NGET** to publish annually the **Seven Year Statement** which is designed to provide **Users** and potential **Users** with information to enable them to identify opportunities for continued and further use of the **National Electricity Transmission System**.

When <u>aan</u> **User** is considering a development at a specific site, certain additional information may be required in relation to that site which is of such a level of detail that it is inappropriate to include it in the **Seven Year Statement**. In these circumstances the\_**User** may contact **NGET** who will be pleased to arrange a discussion and the provision of such additional information relevant to the site under consideration as the **User** may reasonably require.

 The Transmission Licence also requires NGET to offer terms for an agreement for connection to and use of the National Electricity Transmission System and further information will be given by NGET to the potential User in the course of the discussions of the terms of such an agreement.

## NOTES:

- 1. 'F. yr.' means 'Financial Year'
- 2. Demand and Active Energy Data (General)

Demand and Active Energy data should relate to the point of connection to the National Electricity Transmission System and should be net of the output (as reasonably considered appropriate by the User) of all Embedded Small Power Stations, Medium Power Stations and Customer Generating Plant. Auxiliary demand of Embedded Power Stations should be included in the demand data submitted by the User at the Connection Point. Users should refer to the PC for a full definition of the Demand to be included.

- 3. Demand profiles and Active Energy data should be for the total System of the Network Operator, including all Connection Points, and for each Non-Embedded Customer. Demand Profiles should give the numerical maximum demand that in the User's opinion could reasonably be imposed on the National Electricity Transmission System.
- 4. In addition the demand profile is to be supplied for such days as **NGET** may specify, but such a request is not to be made more than once per calendar year.

Issue 5 Revision 15

### SCHEDULE 11 - CONNECTION POINT DATA PAGE 3 OF 3

#### NOTES:

- 1. 'F.Yr.' means 'Financial Year'. F.Yr. 1 refers to the current financial year.
- All Demand data should be net of the output (as reasonably considered appropriate by the User) of all Embedded Small Power Stations, Medium Power Stations and Customer Generating Plant. Generation and / or Auxiliary demand of Embedded Large Power Stations should not be included in the demand data submitted by the User. Users should refer to the PC for a full definition of the Demand to be included.
- 3. Peak Demand should relate to each Connection Point individually and should give the maximum demand that in the User's opinion could reasonably be imposed on the National Electricity Transmission System. Users may submit the Demand data at each node on the Single Line Diagram instead of at a Connection Point as long as the User reasonably believes such data relates to the peak (or minimum) at the Connection Point.

In deriving **Demand** any deduction made by the **User** (as detailed in note 2 above) to allow for **Embedded Small Power Stations**, **Medium Power Stations** and **Customer Generating Plant** is to be specifically stated as indicated on the Schedule.

- NGET may at its discretion require details of any Embedded Small Power Stations or Embedded Medium Power Stations whose output can be expected to vary in a random manner (eg. wind power) or according to some other pattern (eg. tidal power)
- 5. Where more than 95% of the total Demand at a Connection Point is taken by synchronous motors, values of the Power Factor at maximum and minimum continuous excitation may be given instead. Power Factor data should allow for series reactive losses on the User's System but exclude reactive compensation network susceptance specified separately in Schedule 5.
- 6. Where a **Reactive Despatch Network Restriction** is in place which requires the generator to maintain a target voltage set point this should be stated as an alternative to the size of the **Reactive Despatch Network Restriction**.

### SCHEDULE 12 - DEMAND CONTROL PAGE 1 OF 2

The following information is required from each **Network Operator** and where indicated with an asterisk from **Externally Interconnected System Operators** and/or **Interconnector Users** and a **Pumped Storage Generator**. Where indicated with a double asterisk, the information is only required from **Suppliers**.

DATA DESCRIPTION	UNITS		UPDATE TIM	Ξ

## SCHEDULE 13 - FAULT INFEED DATA PAGE 1 OF 2

The data in this Schedule 13 is all **Standard Planning Data**, and is required from all **Users** other than **Generators** who are connected to the **National Electricity Transmission System** via a **Connection Point** (or who are seeking such a connection). A data submission is to be made each year in Week 24 (although **Network Operators** may delay the submission until Week 28). A separate submission is required for each node included in the **Single Line Diagram** provided in Schedule 5.

## SCHEDULE 14 - FAULT INFEED DATA (GENERATORS INCLUDING UNIT TRANSFORMERS AND STATION TRANSFORMERS) PAGE 1 OF 5

The data in this Schedule 14 is all **Standard Planning Data**, and is to be provided by **Generators**, with respect to all directly connected **Power Stations**, all **Embedded Large Power Stations** and all **Embedded Medium Power Stations** connected to the **Subtransmission System**. A data submission is to be made each year in Week 24.

#### Fault infeeds via Unit Transformers

A submission should be made for each **Generating Unit** <u>(including those which are part of a</u> <u>Synchronous Power Generating Module)</u> with an associated **Unit Transformer**. Where there is more than one **Unit Transformer** associated with a **Generating Unit**, a value for the total infeed through all **Unit Transformers** should be provided. The infeed through the **Unit Transformer(s)** should include contributions from all motors normally connected to the **Unit Board**, together with any generation (eg **Auxiliary Gas Turbines**) which would normally be connected to the **Unit Board**, and should be expressed as a fault current at the **Generating Unit** terminals for a fault at that location.

## SCHEDULE 14 - FAULT INFEED DATA (GENERATORS INCLUDING UNIT TRANSFORMERS AND STATION TRANSFORMERS) PAGE 2 OF 5

#### Fault infeeds via Station Transformers

A submission is required for each **Station Transformer** directly connected to the **National Electricity Transmission System**. The submission should represent normal operating conditions when the maximum number of **Gensets** are **Synchronised** to the **System**, and should include the fault current from all motors normally connected to the **Station Board**, together with any Generation (eg **Auxiliary Gas Turbines**) which would normally be connected to the **Station Board**. The fault infeed should be expressed as a fault current at the hv terminals of the **Station Transformer** for a fault at that location.

If the submission for normal operating conditions does not represent the worst case, then a separate submission representing the maximum fault infeed that could occur in practice should be made.

DATA DESCRIPTION	UNITS	F.Yr.	DATA	to							
		0	1	2	3	4	5	6	7	RTL	
(PC.A.2.5)										CUSC Contract	CUSC App. Form
Name of Power Station											•

## SCHEDULE 14 - FAULT INFEED DATA (GENERATORS INCLUDING UNIT TRANSFORMERS AND STATION TRANSFORMERS) PAGE 3 OF 5

#### Fault infeeds from Power Park Modules

A submission is required for the whole **Power Park Module** and for each **Power Park Unit** type or equivalent. The submission shall represent operating conditions that result in the maximum fault infeed. The fault current from all motors normally connected to the **Power Park Unit's** electrical system shall be included. The fault infeed shall be expressed as a fault current at the terminals of the **Power Park Unit**, or the **Common Collection Busbar** if an equivalent **Single Line Diagram** and associated data as described in PC.A.2.2.2 is provided, and the **Grid Entry Point**, or **User System Entry Point** if **Embedded**, for a fault at the **Grid Entry Point**, or **User System Entry Point** if **Embedded**.

Should actual data in respect of fault infeeds be unavailable at the time of the application for a **CUSC Contract** or **Embedded Development Agreement**, a limited subset of the data, representing the maximum fault infeed that may result from all of the plant types being considered, shall be submitted. This data will, as a minimum, represent the root mean square of the positive, negative and zero sequence components of the fault current for both single phase and three phase solid faults at the **Grid Entry Point** (or **User System Entry Point** if **Embedded**) at the time of fault application and 50ms following fault application. Actual data in respect of fault infeeds shall be submitted to **NGET** as soon as it is available, in line with PC.A.1.2

DATA DESCRIPTION	<u>UNITS</u>	<u>F.Yr.</u> 0	<u>F.Yr.</u> 1	<u>F.Yr.</u> 2	<u>F.Yr.</u> <u>3</u>	<u>F.Yr.</u> <u>4</u>	<u>F.Yr.</u> <u>5</u>	<u>F.Yr.</u> <u>6</u>	<u>F.Yr.</u> 7		A to

BLACK START INFORMATION		
The following data/text items are required from each <b>Generator</b> for each <b>BM Unit</b> at a <b>Large Power Station</b> as detailed in PC.A.5.7. Data is not required for <b>Generating Units</b> that are contracted to provide <b>Black Start Capability</b> , <b>Power <u>Generating Modules Power</u> Park Modules</b> or <b>Generating Units</b> that have an <b>Intermittent Power Source</b> . The data should be provided in accordance with PC.A.1.2 and also, where possible, upon request from <b>NGET</b> during a <b>Black Start</b> .	ailed in PC.A.5.7 les Power Parl and also, where	<ul> <li>Cata is not</li> <li>Modules or</li> <li>possible, upon</li> </ul>
Data Description (PC.A.5.7) (■ CUSC Contract)	Units	Data <b>_</b> Category
Assuming all <b>BM Units</b> were running immediately prior to the <b>Total Shutdown</b> or <b>Partial Shutdown</b> and in the event of loss of all external power supplies, provide the following information:		
a) Expected time for the first and subsequent <b>BM Units</b> to be <b>Synchronised</b> , from the restoration of external power supplies, assuming external power supplies are not available for up to 24hrs	Tabular or Graphical	
b) Describe any likely issues that would have a significant impact on a BM Unit's time to be Synchronised arising as a direct consequence of the inherent design or operational practice of the Power Station and/or BM Unit, e.g. limited barring facilities, time from a Total Shutdown or Partial Shutdown at which batteries would be discharged.	Text	II DAD
Block Loading Capability:		
c) Provide estimated <b>Block Loading Capability</b> from 0MW to <b>Registered Capacity</b> of each <b>BM Unit</b> based on the unit being 'hot' (run prior to shutdown) and also 'cold' (not run for 48hrs or more prior to the shutdown). The <b>Block Loading Capability</b> should be valid for a frequency deviation of 49.5Hz – 50.5Hz. The data should identify any required 'hold' points.	Tabular or Graphical

## SCHEDULE 18 - OFFSHORE TRANSMISSION SYSTEM DATA PAGE 10 OF 24

Information for Transient Overvoltage Assessment (DPD I) (PC.A.6.2 
CUSC Contract)

The information listed below may be requested by **NGET** from each **User** undertaking **OTSDUW** with respect to any **Interface Point** or **Connection Point** to enable NGET to assess transient overvoltage on the **National Electricity Transmission System**.

- (a) Busbar layout plan(s), including dimensions and geometry showing positioning of any current and voltage transformers, through bushings, support insulators, disconnectors, circuit breakers, surge arresters, etc. Electrical parameters of any associated current and voltage transformers, stray capacitances of wall bushings and support insulators, and grading capacitances of circuit breakers;
- (b) Electrical parameters and physical construction details of lines and cables connected at that busbar. Electrical parameters of all plant e.g., transformers (including neutral earthing impedance or zig-zag transformers if any), series reactors and shunt compensation equipment connected at that busbar (or to the tertiary of a transformer) or by lines or cables to that busbar;
- (c) Basic insulation levels (BIL) of all Apparatus connected directly, by lines or by cables to the busbar;
- (d) Characteristics of overvoltage Protection devices at the busbar and at the termination points of all lines, and all cables connected to the busbar;
- (e) Fault levels at the lower voltage terminals of each transformer connected to each Interface Point or Connection Point without intermediate transformation;
- (f) The following data is required on all transformers within the **OTSDUW Plant and Apparatus**.
- (g) An indication of which items of equipment may be out of service simultaneously during **Planned Outage** conditions.

#### Harmonic Studies (DPD I) (PC.A.6.4 CUSC Contract)

The information given below, both current and forecast, where not already supplied in this Schedule 14 may be requested by **NGET** from each **User** if it is necessary for **NGET** to evaluate the production/magnification of harmonic distortion on **National Electricity Transmission System**. The impact of any third party **Embedded** within the **User's System** should be reflected:-

(a) Overhead lines and underground cable circuits (including subsea cables) of the User's OTSDUW Plant and Apparatus must be differentiated and the following data provided separately for each type:-

Positive phase sequence resistance Positive phase sequence reactance Positive phase sequence susceptance

(b) for all transformers connecting the OTSDUW Plant and Apparatus to a lower voltage:-

Rated MVA Voltage Ratio Positive phase sequence resistance Positive phase sequence reactance

## SCHEDULE 18 - OFFSHORE TRANSMISSION SYSTEM DATA PAGE 11 OF 24

(c) at the lower voltage points of those connecting transformers:-

Equivalent positive phase sequence susceptance

Connection voltage and MVAr rating of any capacitor bank and component design parameters if configured as a filter

Equivalent positive phase sequence interconnection impedance with other lower voltage points The minimum and maximum **Demand** (both MW and MVAr) that could occur Harmonic current injection sources in Amps at the Connection Points and Interface Points

(d) an indication of which items of equipment may be out of service simultaneously during **Planned Outage** conditions

Voltage Assessment Studies (DPD I) (PC.A.6.5 
CUSC Contract)

The information listed below, where not already supplied in this Schedule 14, may be requested by **NGET** from each **User** undertaking **OTSDUW** with respect to any **Connection Point** or **Interface Point** if it is necessary for **NGET** to undertake detailed voltage assessment studies (eg to examine potential voltage instability, voltage control co-ordination or to calculate voltage step changes on the **National Electricity Transmission System**).

(a) For all circuits of the User's OTSDUW Plant and Apparatus:-

Positive Phase Sequence Reactance Positive Phase Sequence Resistance Positive Phase Sequence Susceptance MVAr rating of any reactive compensation equipment

(b) for all transformers connecting the User's OTSDUW Plant and Apparatus to a lower voltage:-

Rated MVA Voltage Ratio Positive phase sequence resistance Positive Phase sequence reactance Tap-changer range Number of tap steps Tap-changer type: on-load or off-circuit AVC/tap-changer time delay to first tap movement AVC/tap-changer inter-tap time delay

(c) at the lower voltage points of those connecting transformers

Equivalent positive phase sequence susceptance MVAr rating of any reactive compensation equipment Equivalent positive phase sequence interconnection impedance with other lower voltage points The maximum **Demand** (both MW and MVAr) that could occur Estimate of voltage insensitive (constant power) load content in % of total load at both winter peak and 75% off-peak load conditions

Issue 5 Revision 15

DRC 100 of 105

## SCHEDULE 18 - OFFSHORE TRANSMISSION SYSTEM DATA PAGE 12 OF 24

Short Circuit Analyses: (DPD I) (PC.A.6.6 
CUSC Contract)

The information listed below, both current and forecast, and where not already supplied under this Schedule 14, may be requested by **NGET** from each **User** undertaking **OTSDUW** with respect to any **Connection Point or Interface Point** where prospective short-circuit currents on equipment owned by a **Transmission Licensee** or operated or managed by **NGET** are close to the equipment rating.

(a) (a) For all circuits of the **User's OTSDUW Plant and Apparatus**:-Positive phase sequence resistance Positive phase sequence reactance Positive phase sequence susceptance Zero phase sequence resistance (both self and mutuals) Zero phase sequence reactance (both self and mutuals) Zero phase sequence susceptance (both self and mutuals)

(b) for all transformers connecting the User's OTSDUW Plant and Apparatus to a lower voltage:-

Rated MVA Voltage Ratio Positive phase sequence resistance (at max, min and nominal tap) Positive Phase sequence reactance (at max, min and nominal tap) Zero phase sequence reactance (at nominal tap) Zero phase sequence reactance (at nominal tap) Tap changer range Earthing method: direct, resistance or reactance Impedance if not directly earthed

(c) at the lower voltage points of those connecting transformers:-

The maximum **Demand** (in MW and MVAr) that could occur Short-circuit infeed data in accordance with PC.A.2.5.6(a) unless the **User's OTSDUW Plant and Apparatus** runs in parallel with the **Subtransmission System**, when to prevent double counting in each node infeed data, a  $\pi$  equivalent comprising the data items of PC.A.2.5.6(a) for each node together with the positive phase sequence interconnection impedance between the nodes shall be submitted. **Formatted:** Numbered + Level: 1 + Numbering Style: a, b, c, ... + Start at: 1 + Alignment: Left + Aligned at: 0.63 cm + Indent at: 1.48 cm

Issue 5 Revision 15

DRC 101 of 105

### SCHEDULE 18 - OFFSHORE TRANSMISSION SYSTEM DATA PAGE 13 OF 24

Fault infeed data to be submitted by **OTSDUW Plant and Apparatus** providing a fault infeed (including **OTSDUW DC Converters**) (PC.A.2.5.5)

A submission is required for OTSDUW Plant and Apparatus (including OTSDUW DC Converters at each Transmission Interface Point and Connection Point. The submission shall represent operating conditions that result in the maximum fault infeed. The fault current from all auxilaries of the OTSDUW Plant and Apparatus at the Transmission Interface Point and Connection Point shall be included. The fault infeed shall be expressed as a fault current at the Transmission Interface Point and also at each Connection Point.

Should actual data in respect of fault infeeds be unavailable at the time of the application for a **CUSC Contract** or **Embedded Development Agreement**, a limited subset of the data, representing the maximum fault infeed that may result from the **OTSDUW Plant and Apparatus**, shall be submitted. This data will, as a minimum, represent the root mean square of the positive, negative and zero sequence components of the fault current for both single phase and three phase solid faults at each **Connection Point** and **Interface Point** at the time of fault application and 50ms following fault application. Actual data in respect of fault infeeds shall be submitted to **NGET** as soon as it is available, in line with PC.A.1.2.

DATA DESCRIPTION	<u>UNITS</u>	<u>F.Yr.</u> 0	<u>F.Yr.</u> <u>1</u>	<u>F.Yr.</u> 2	<u>F.Yr.</u> 3	<u>F.Yr.</u> <u>4</u>	<u>F.Yr.</u> 5	<u>F.Yr.</u> 6	<u>F.Yr.</u> 7	DATA t	o RTL
