

Storage Facility Operators Participation Participation Requirements

The Storage Connection Agreement between National Grid and the Storage Facility Operator will permit the NEMT to give increase/decrease, import/export instructions and require the Storage Operator to comply.

The Storage Operators will be requested to respond to Storage availability and deliverability time information requests from the NEMT and provide information on the status of their facilities by completing and returning the emergency pro formas.

Data provided in the requests should be based upon actual on-the-day data rather than pre-determined exercise data.

National Grid will inform the Storage Operators of the emergency and any direction to amend flow, upon being informed of an emergency the recipient must brief all relevant personnel as to the existence and nature of the emergency.

National Grid will inform storage operators and shippers simultaneously to ensure co-operation on amended flow instructions.
