

Industrial Emissions Directive

Working with you to develop our strategy

Ops Forum
June 11th 2014

EU Industrial Emissions Directive (IED)

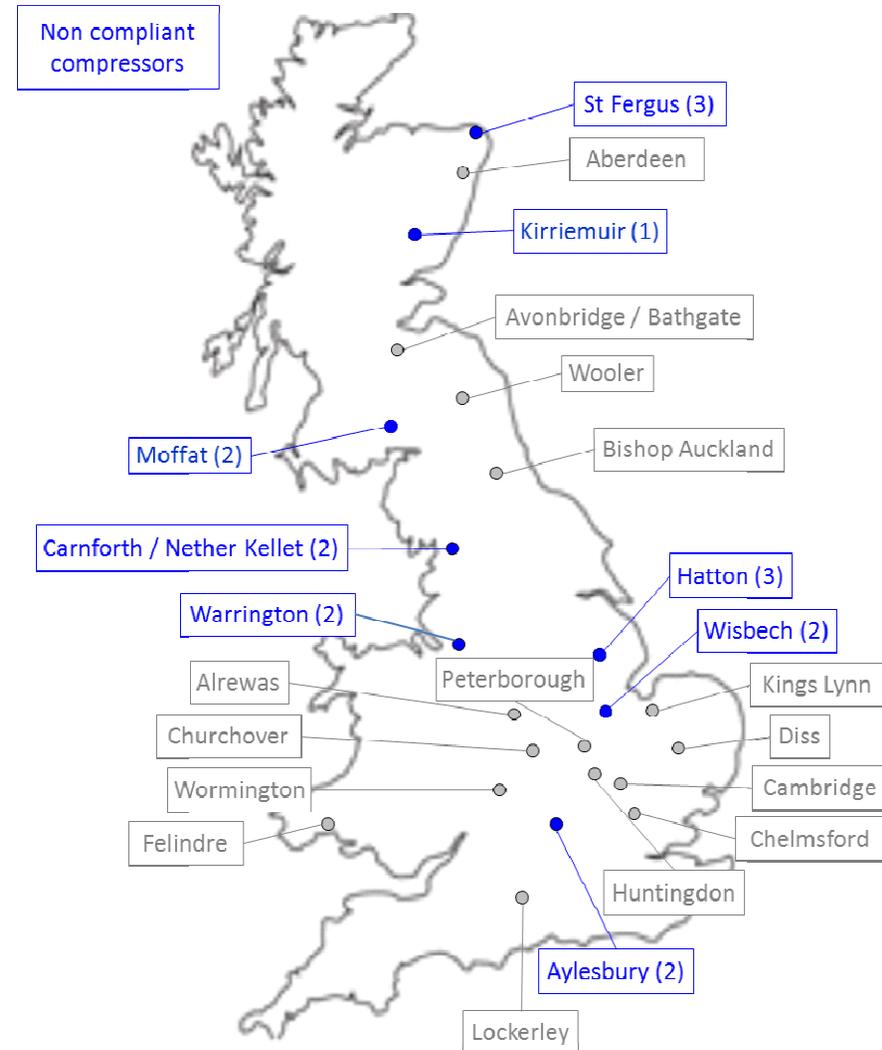

nationalgrid

- IED brought together 7 existing emissions related Directives into one.
- Two of these have an impact on Gas Transmission
 - Large Combustion Plant (LCP) Directive
 - Integrated Pollution Prevention & Control (IPPC)
- Affects many different industry sectors including power generation

Why is it important?

- Gas compressors maintain pressures and move gas around the network
- IED impacts 17 individual compressor units at 8 sites across the UK
- We will not be able to operate them as we currently do by 2023, which will impact network capability, e.g. capacity, offtake pressures, etc.
- We need to develop an investment plan for these units
- There are a range of options, replacement, commercial regime, decommission, etc.

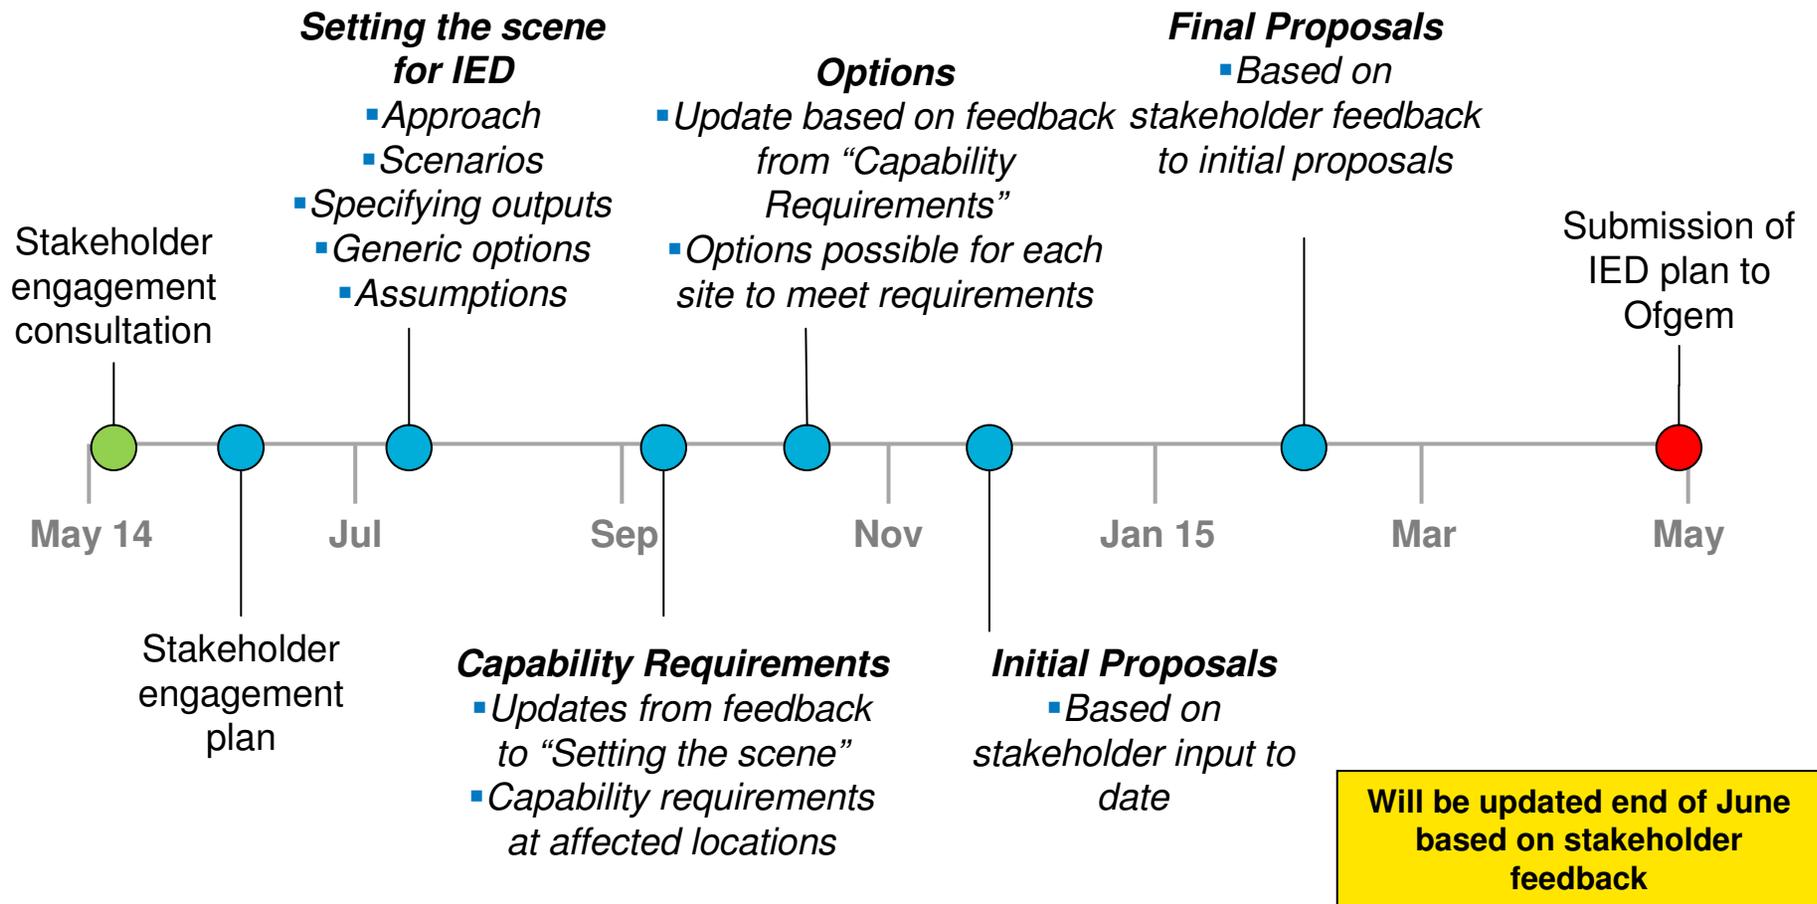

Working with you

- What are your priorities?

Indicative Stakeholder Engagement
